or scratch, however slight. Apply ABSORBINE JR. at once, full strength. Use it for bruises or sprains. It relieves the pain and soreness. Keep ABSORBINE JR. at hand, at home, in the car, in camp, and when traveling. It is a reliable first aid. It relieves pain. It keeps the muscles in condition—particularly after severe exercise or a long drive in the car.

At all Druggists, $1.25. Hospital size, $2.50. Send for free trial bottle

W. F. YOUNG, Inc., SPRINGFIELD, MASS.

The vacuum-cleaner law is brand-new, the town of Fairfield, Iowa, being its trail blazer. In Fairfield, all housewives who make use of electrical appliances in their daily work must have said work completed before noon each day. If, after the noon hour, their washing machines, vacuum cleaners, or electric dishwashers interfere with another citizen's radio reception, owner of said appliance is liable to arrest and a fine of not more than $100, or thirty days in jail. The town law permits physicians to use the X-ray in emergency while the ban is on, the forbidden hours being from noon until midnight. And the law is popular.

AS TO the automobile and highway laws, "wise and heavily burdened with his knowledge is the driver who knows half of them." In Ohio, for example, more than six hundred laws of a general nature relating to highways alone have been enacted during the past century—and Ohio is no exception among the states.

I mentioned to a New Yorker who had owned an automobile since 1910 that New York City had no fewer than nine variations of the speed law, copies of which are obtainable free at any police station. He had heard of no more than one, which he confessed to breaking almost daily. In New York, the legal speed varies according to where you are going and what you are doing. It begins at four miles an hour, and rises by easy stages through eight, ten, twelve, fifteen, eighteen, twenty, and twenty-two to a maximum of twenty-five miles an hour.

The New Yorker is allowed four miles an hour in crossing a sidewalk to or from a lot, alley, or building—such as at the Vanderbilt Avenue entrance to Grand Central Station. The maximum of twenty-five miles is permitted on Ocean Parkway, Brooklyn, and "in the outlying and sparsely settled sections of the city." To observe the speed laws of this one city you need a street directory, an indexed copy of the law, and a qualified legal adviser. Incidentally, any pedestrian has absolute right of way over all motor cars. Cross the street when or where he will, the majesty of the law is with the pedestrian whether he believes it or not. Motorists are permitted on the streets only by his sufference. That's the law.

Step over into Pennsylvania and you and your motor car bump into new laws. Here you are allowed four varieties of speed, between ten miles and thirty-five miles an hour, but there are twelve specific exceptions to these for commercial vehicles. And when it comes to right or left turns, especially left, you are hopelessly lost.

A Virginia town has banned all directing signs that might aid the motorist to pass through it without stopping to ask questions as to the way. The chief burgess explains, "Motorists who stop to inquire as to road directions are of more financial benefit to a town than those who are speeded through by signs." The idea is spreading. Highway routes which once took the traveler through the outskirts are being diverted to embrace Main Street. It makes for better business.

Then there is the law which makes the motorist liable for damages resulting from any injuries to a passenger in his car. That is to say, that if you give a wayfarer

Digitized by Google Original from UNIVERSITY OF IOWA

a lift and then accidentally upset your car into a ditch, with injury to said wayfarer, you are legally responsible for such injuries and must foot the doctor bill and possibly pay a damage claim to boot.

And you *may* be arrested for operating a motor car, or any type of conveyance, on Sunday. Nearly every state in the Union has some kind of Sunday laws, and at least twenty of the states have Sunday laws of the old-fashioned variety. Many forbid motoring on Sunday.

The Sunday laws, often called the Blue Laws, are very much an active issue with our lawmakers. During the past quarter century, despite the agitation for an "open" Sunday, twenty-nine states have refused to alter their Sunday laws whatsoever, sixteen have weakened them, and three have strengthened them.

In New Jersey it is contrary to law to engage in "dancing, singing, fiddling, or other music for merriment, or playing at football, ninepins, bowls, fives, long bullets, or quoits" on Sunday. Persons found "traveling, fishing, fiddling, shooting, hunting, sporting, or going to or returning from any market with carts, wagons, or sleds" may be detained by the constable until Monday and then dealt with according to law. Railroads may run only one passenger train each way on Sunday. Traveling excludes going to church within a radius of two miles, going for a physician, or carrying the mail. No stage or stages, which in modern parlance are busses, "shall be driven through the state except it be done in cases of necessity or mercy."

A FEW years ago Perth Amboy, New Jersey, attempted to enforce the Sunday law. It was insisted that modern amendments to the law had made it enforceable. Hundreds were arrested. The chief of police, who was directing the campaign, was among them. A motorcycle police man, serving a summons, was another violator. One woman was found guilty of "erecting a clothes pole in her rear yard." Twenty-one nearby towns also joined in the campaign, but by the third Sunday the authorities were exhausted, and threw up their hands.

Journey to Massachusetts on a Sunday and you will find the theatres and "movies" open but regulated by a stern Sunday law. During six days of the week, local authorities are in charge and pass on what goes on in the playhouses. But when Sunday dawns the state steps in and local law takes a back seat until Monday. What might not be harmful on a week day is a cat of another hue on Sunday.

For example:

In the motion picture, "The Thief of Bagdad," the thief hero steals a purse from a rich man; but Massachusetts refused to let the theft occur in any films exhibited on Sunday. In another picture, two robbers plundered a bank after gaining entrance to it from the second floor, but how they got into the bank had to be deleted for Sunday, though by returning Monday you could find out all about it. And to comply with the Sunday law the hero of a war-time romance had to be married twice to the same girl—once in the opening of the film story and once again in the close. However, on all days excepting Sunday one marriage was deemed enough.

"Say, Doc, you don't happen to have a prescription that will keep a fellow cool this weather, do you?"
"Sure—Kelly-Springfield tires."

"You Must Have Spent *Years* on Shorthand"

"No; *I Learned it in 6 WEEKS!*"

HER employer laughed aloud. "*Six weeks!* You're joking, Miss Baker. No one could learn shorthand in six weeks. You have been with us about a month and you are by far the most competent secretary I ever had. Surely you don't expect me to believe that you gained your present speed and accuracy in only six weeks! Why—a great many of our stenographers have studied shorthand ten months or a year or more and still they make a great many errors."

"That isn't their fault, Mr. Chapman. Old-fashioned shorthand requires months of hard study and practice, and even when it is mastered it is difficult to read. But Speedwriting is very easy. I—"

"Speedwriting? What's that?"

For answer the girl handed the big business man her notebook.

"Why, this is remarkable, Miss Baker. It's in simple A, B, C's!"

"Yes, surely. That's how I learned it so quickly. *Any one* can learn Speedwriting. There are only a few easy rules. There are no hooks or curves; every 'character' you use is a letter you already know—one that your hand needs no special training to make."

"Well, that's the most remarkable thing I ever heard of. I could use that myself at board meetings and a dozen other places. You can write it rapidly, too!"

"One boy I know who studied Speedwriting *in his own home* took *court testimony* at the rate of 106 words a minute after only 15 hours of study."

"Miss Baker, where can I get some literature on Speedwriting? I really believe I'll take it up myself!"

Two months later Mr. Chapman and all his stenographers were *Speedwriters!*

Speedwriting
The NATURAL SHORTHAND

Tens of thousands have been freed from the drudgery of the old-fashioned methods of learning and writing shorthand by this marvelous new system, which may be written with a pencil or on a typewriter; can be learned in a third the time needed to master any other system; is more accurate, and can be written with amazing rapidity.

Mail the coupon tonight. It will bring you an illustrated book full of examples and stories of successful Speedwriters all over the world. No matter *what* your need for shorthand may be—you can fill that need *better* with Speedwriting.

Name .....

Address .....

City ..... *State* .....

In New York you may see Sunday performances of various types and the motion-picture palaces do a record business. But be not misled. What you are "seeing" is a "concert"; permitted by law. Any "show" becomes a "concert" in New York if the curtain is not raised or lowered and the actors are clad in street or evening clothes. So the Sunday law has been interpreted.

But Pennsylvania tolerates no evasions. Theatres are dark on Sunday and ball parks are closed. Not long ago a church organization produced a serious type of motion picture dealing strictly with Biblical subjects and attempted to have it exhibited in Philadelphia churches on Sunday evening in lieu of the usual sermon. The Sabbath enforcement association threatened arrests and the picture was withdrawn.

These are but a few samples of Sunday laws to be found on the law books of a majority of the states. A church society interested in the subject has estimated that at least 64,450,000 Americans are guilty of breaking these laws weekly.

However, the law has not neglected to look after our week-day morals either. Texas and North Dakota and maybe other states prohibit swearing over the telephone. It is illegal to smoke in public restaurants in Nebraska, Idaho, and North Dakota. Kansas, Arkansas, and South Dakota have prohibitory tobacco laws. The campaign is on for a Nineteenth Amendment.

There are countless "bathing suit" laws, but despite them and beach censorship the bathing suits have shrunk with each passing year.

Idaho has seen fit to legislate against joy riding, and under its law lazy husbands may be forced to work if the wife makes complaint. Virtually all states censor the motion picture and stage, as well as the literature permitted to their citizens. South Dakota makes it unlawful to exhibit scenes "illustrating illicit love, infidelity in family relations, or striking an officer of the law." In Delaware it is against the law to ridicule a clergyman. In three states and in most towns to "peep" through a neighbor's window is a serious crime. Indiana makes *all* looking of a clandestine nature punishable by fine or imprisonment. And if the taxicab drivers of Maine, Pennsylvania, Delaware, Louisiana, Wisconsin, West Virginia, or North Dakota suspect that a passenger is going to an improper rendezvous, it is the driver's duty under the law to stop his cab and tell the passenger that he must walk.

THERE are innumerable laws against gambling. Ohio prohibits gambling even to "bets on elections" but excepts stock-market speculation. And in the event that the first law is violated, the Ohio laws provide that "if a person, by playing a game, or by a bet or wager, loses to another money or any other thing of value and pays or delivers it, or a part thereof" he may sue for recovery. The law thus protects the lawbreaker.

Foretelling the future is either a crime or a misdemeanor in most states, though newspapers daily publish horoscopical predictions, along with detailed prognostications on the possible winners of horse races. Prize-fight films may not be transported from one state into another, by federal law, but there is no law on the federal books to prohibit their exhibition once they are transported.

FREAK laws! There are several classics of this type which any well-informed lawyer can quote to you. The palm for the most famous again goes to Kansas, the statutes of which provide: that "when two trains approach each other at a crossing they shall both come to a full stop and neither shall start until the other is gone."

And in Tennessee the law declares that "it shall be unlawful for the owner or keeper of horses, mules, cattle, sheep, goats, and hogs to run at large." The animals, presumably, may do so.

These laws are only of significance to the extent that they show how easily foolish laws may get into our statute books. They are jammed through in the closing hours of a busy legislative session, signed by a governor who has time only to read the title, and once in the books they usually stay there.

As court decisions have in a sense, the effect of law, a few of the lighter of these might also be in order.

A California court decided a very weighty matter that may have bothered some of us. It ruled that: "If a strong man has a weak man in his power and gives his victim the choice of being kicked or cuffed, he cannot defend his battery on the ground that the injured man consented."

"Where an unauthorized person," decided a North Carolina judge, "forcibly throws a woman's freshly washed and ironed clothes on the floor, it is a question for the jury whether she could lay hands on him more gently than by means of a baseball bat applied to the back of his head."

Another North Carolina court declared that "a person is not bound to stand quietly by and be bitten by a dog, nor to give the dog what might be called a fair fight among men."

A Georgia court advised "Those who shoot at their friends for amusement ought to warn them first that it is mere sport."

According to an estimate made in 1922, and the only one I could find of record, New Jersey leads the procession of states with the greatest number of words in her law books, that number being at the time 5,500,000. By the same estimate, Pennsylvania was second, Colorado was third, and Michigan fourth. The latter state then had 4,200,000 words in her books.

Something must be wrong with our legislative system!

NEXT month before you have caught your breath from reading one thrilling adventure in Barrett Willoughby's article, "The Champion White Water Pilot of the North," you will be deep in another. Not only are there the lure and fascination of the reckless, intoxicating, gold-seeking Klondike days in this article; it further grips your attention with marvelous stories of daring feats performed by Captain Sydney Barrington on the swift, treacherous, and often "unnavigable" rivers of the Far North.

Sunset Pass

(*Continued from page 61*)

"Thiry, why did you—do that?"

"I—I don't know. What must you think of me?"

"Reckon I think all that's wonderful and beautiful. But I think, also, I'm entitled to an explanation."

"Trueman, how can I explain what I scarcely realize?" she said, with pathos. "I'd been hours with Dad and Ash. Oh, it was sickening. We begged—we prayed Ash to give up . . . plans he has. He was a fiend. So was Dad. But I kept trying till I was exhausted. It must be two o'clock. As I came across to my cabin I was thinking of how you met that Half Moon outfit. How you resented suspicion against Dad! I was wondering how I should thank you—tomorrow. Then you rose right out of the black ground. What fright you gave me! And when you spoke I—I just—"

She faltered and broke off, leaving him to guess the rest. Rock's compassion overcame his more powerful emotions.

"Thiry, you've explained how upset you were, and why. But that would not make you fling your arms 'round my neck."

"I'm guilty," she replied distantly. "If you can't be understanding—generous—then take it how you will. . . . After all, I belong to the Preston outfit."

THESE words, tinged with bitterness, accompanied by the withdrawal of her hand from his, gave Rock the cue. He grasped her arm, not gently, and pulled her closer to him, and he told her:

"You stay here. Reckon I might remind you that Ash is not the only bad hombre on the range."

To judge from her shrinking, and the trembling of her arm, his speech both frightened and angered her.

"Very well, if you detain me by force," Thiry said coldly. "Why were you waiting for me at this unheard-of hour?"

"I saw you go into Ash's cabin, and I thought I'd wait till you came out."

"Then you were spying on me—on us?"

"Reckon so, if you want to use hard words. But, sure, my strongest motive was just to see you, talk to you a minute."

"Well, since you've done that, please let me go."

"Thiry, you upset everythin' when you put your arms round my neck," he said.

"Don't harp on that!" she flashed hotly. "I never did such a thing before. I—I couldn't to any other man. It just happened. If you want to spare me, let me forget it."

"Reckon I'll never let you," rejoined Rock stubbornly. "I love you. Tell me what weighs so upon you. Tell me your secret."

"I—I have no secret!"

"Don't you trust my love?"

"Oh, I would, if I dared," she whispered, in poignant pain.

Rock had wrenched that truth from her. Therein lay her weakness, the vulnerable spot upon which he must remorselessly make his attack. He would not stifle his conscience; but every moment he became more convinced that, in

Barbasol vs. the field!

USE BARBASOL ON ONE SIDE—ANY SHAVING SOAP ON THE OTHER

—Let your face decide

You have your shaving hobby. Maybe you've stayed with the same soap or other preparation for years. Pretty hard to get you off it.

Yet you may be missing the shaving bet of your life by not playing BARBASOL. We *know* BARBASOL is *faster, smoother, cleaner, closer.*

Why not match BARBASOL against your pick of the field? All you have to do is

Make This 3-day Test

Use any shaving soap just the way soap has to be favored—lather up, rub in, hot towel, lather again, give Soap & Co. all the breaks—but *only on one side* of your face.

Now wet down *the other side*—with hot water or cold, so long as it's wet—and spread on a film of creamy, cooling Barbasol. No brush. No lathering. No rub-in. Just shave! Like this:

1—Wash the face (and leave it wet).
2—Spread on Barbasol (but don't rub in).
3—Shave!

Do this for three successive days, and—

Let Your Face Decide

Notice the difference in favor of Barbasol—how easily the whiskers were whisked away, no pull or burn or after-smart or sting.

Feel how silky soft and cool the BARBASOL side is—because Barbasol is a 100% beard softener—no air bubbles—and the natural oils are left right in the skin. Your face will tell you that BARBASOL is *Faster, Smoother, Closer.*

We know the winner!

Barbasol's a great protector and relief from sunburn, wind-burn, chap. *And here's something New!* Barbasol Skin Freshener, a great pick-up for the tired skin. Use it after shaving, after bathing, any time.

Let your face know Barbasol! Big tube of Barbasol 35c and 65c. Barbasol Skin Freshener 65c. All Druggists.

THE BARBASOL COMPANY
Indianapolis Indiana

order to save her, he must play upon her weakness, force her to confession, betray his knowledge of her guilty sharing of Preston's secret.

"Thiry, you might dare anythin' on my love," he began.

"Oh, no—no. If it were only myself!"

"Thiry, there are only two people in all the world—you and me."

"How silly! Trueman, you *are* selfish."

"Well, if it's selfish to love you, worship you, to want your burdens on my shoulders, to save you from trouble, disgrace—to make you happy—then indeed I am sure selfish."

What a delicate instrument she was for sensibility! Through her wrist, which he held, he felt the intermittent slight quiverings, then at the words "disgrace" a distinct shock. Hurriedly she rose, and all but released herself.

"Do you speak of love and—and, disgrace, in one breath?"

"Yes. And you understand," he replied sharply. "Thiry darling, I can forgive your falsehood to all except me."

It did not take much of a pull to get her into his arms, and in another moment he had her helpless, lifting her from the ground, her face close under his.

"Thiry, don't you love me a very little?" he asked, deep tenderness thrilling in his voice.

"No! Oh, let me go," she implored.

"Thiry, I love you so wonderfully. Ever since that minute you stepped in Winter's store. Didn't you like me then—or afterward?"

"I suppose I did. But what's the use to talk of it. You are holding me in a—a—most shameless manner. Let me go."

"Reckon I'll hold you this way a long time. Till you say you love me a little."

She essayed to free herself, but her strength fell far short of her spirit.

"Oh—please—please! Trueman, this is outrageous!"

"It sure is. 'Most as outrageous as your deceivin' me."

"How have I deceived you?" she demanded, vibrating to that.

"For one thing—carin' about me a little. You do, don't you, Thiry?"

"Care about you? I suppose I—I did. But what's caring? It certainly doesn't give you license to hold me against my will."

"Well, I reckon that depends on what you mean by care. I'm arguin' you love me a little bit. But, I must make sure. Reckon, first off, I'll kiss you a couple of thousand times, and see if I can tell by that."

"You wouldn't dare!"

"Wouldn't I, though? Sure I'm a reckless cowboy. Now, watch me."

AND with action at strange variance with his bantering words, he bent to kiss her hair again and again and again, and then her ear, and last her cheek, that changed its coolness under his lips.

"There!" he whispered, and drew her head back on his shoulder. "Sure *they* were only worshipful kisses. Do you hate me for them?"

"I couldn't hate you. Please let that do—let me go—before it's too—"

"It *is* too late, Thiry, for both of us," he whispered passionately, and he kissed her lips—and then again, with all the longing that consumed him.

"Now will you confess you love me . . . a little?" he asked huskily.

"Oh, God help me, I do, I do!" Her eyes seemed deep accusing gulfs.

"More than a little? Thiry, I didn't expect much. Sure I don't deserve it. . . . But tell me."

"Yes, more." And she twisted to hide her face, while her left arm slowly crept up his shoulder, and went half 'round his neck. "That's what was the matter with me."

"When did you know?" he asked, amazed in his incredulity.

"Just now. But I knew there was something wrong before."

"Thiry, bless you! . . . If this's not a one-sided affair, kiss me."

"No—no—if I give up—we're ruined," she whispered tragically.

"Sure, we're ruined if you don't. So let's have the kisses anyhow."

"Trueman, since I never can—marry you—I—I mustn't kiss you."

"Darling, one thing at a time. By and by we'll tackle the marryin' problem. I'd go loco if I thought you'd be my wife some day. But just now make this dream come true. I want your kisses, Thiry. I'll compromise. I'll be generous. Just one—but not like that fairy kiss you gave me on Winter's porch."

"Trueman, if I give *one*—it means all," she said tremulously.

"Dear, I'll save the nine hundred and ninety-nine thousand, and so forth. . . . Come."

And lifting her head he turned her face to his.

"You are wrong to—to master me this way," she rejoined mournfully. "If you knew—you might not want it."

"Master nothin'. I am *your* slave. But, kiss me. Settle it forever!"

How slowly she lifted her pale face, with eyes like black stars! In the sweet fire of her lips Rock gained his heart's desire.

THEN she lay in his arms, her face hidden, while he gazed out into the stormy night, across the black Pass to the dim flares along the battlements of the range. His victory brought happiness and sorrow commingled. But the precious form in his arms, the mortal flesh that embodied and treasured an infinitely more precious gift—her love—lifted his spirit, and bade him go on.

"Now, Trueman, explain what you meant by my—falsehood to all?" she asked, presently.

"Are you quite prepared? Sure it's not easy to rush from joy to trouble."

She sat up startled, with hands nervously releasing their hold.

"Thiry, you are keepin' Ash's and your father's secret from all."

"Trueman!" she cried, as if her own mind had deceived her ears.

"They are cattle thieves. Beef thieves. So are your brothers Range, Scoot, and Boots, along with them!"

"Oh, my God! You know!" she almost screamed, and slipped to her knees before him.

"Hush! Not so loud! You'll wake someone," he said, sternly, placing a firm hand over her mouth. "Get up off your knees."

But she only leaned forward clutching him, peering up into his face.

"Trueman, how do—you know?"

"I suspected it when I first came. I found signs. Quicklime! That made me suspicious. Slagle's well is half full of hides. Sure, those hides have not the Preston brand. Then over near where they butchered last I came on the same boot track that I'd seen down near the slaughter-house. I trailed that track. It led under a culvert. There I found hundreds of hides, tied up in burlap sacks. I opened one. That hide had a Half Moon brand! Down here at your barn, one day, after the dance, I measured Ash's boot track. It was the same as that one I'd trailed. But, for real proof, I heard your Dad and Ash talking together. They gave it all away."

"I knew—it would come. It will—kill me," she wailed brokenly. "Oh, to make love to me, while you were spying on my brother—my father!"

"Little girl, I told you to speak low. Reckon it does look pretty bad to you. But it's not so bad as it looks—so far as I'm concerned. But, Thiry, you're in this secret, and you would be held guilty in some degree in court if your part in it was found out. And, let me tell you, Ash would hold no secret. And there's the danger for you."

"Court! Danger? You mean they'll be arrested—and I will be dragged in with them?"

"Reckon that is liable to happen," he replied, wanting to impress upon her once and for all the peril of the situation.

"You'd betray us!" Swift as a striking snake, her hand darted out and snatched his gun as it rested against his thigh. Leaning back, she extended it with both hands. "I'll kill you!"

"Thiry, if you believe I could betray you or them—shoot!" he replied swiftly.

"You will not tell?" she flashed.

"Never. You sure got me wrong."

She gave vent to a shuddering sound. The gun fell from her hands. She swayed. He could see her eyes were tight shut. Then she sank forward, her face on his knees, and clinging to him she broke into low sobs, every one of which was like a knife thrust to Rock.

He let her have it out, and stroked her hair. She did not recover soon, though presently the sobs gave way to soft weeping. Then he held her closer, scarcely seeing her or the black pine-streaked gloom, or the stretching flares of yellow light along the horizon. He was seeing something blacker than the night, more sinister than the shadows.

AS a last resource, to save her and her father, he could kill Ash Preston. But for Ash, this blundering, thieving work could be halted in time to prevent discovery. Preston already saw the error of his ways. He would be amenable to any plan. Ash was the stumbling block.

At this brooding juncture of Rock's meditations he became aware that Thiry was stirring. She rose from her knees, while still clinging to him, and she sank beside him on the bench, to lean against him, face uplifted.

"Can you forgive me?" she whispered. "I was out of my head. I should have known you would never betray us. Everything went but a hot, terrible fury. Oh, Trueman, I am a Preston."

"Well, I reckon I don't want you anybody else."

Take one back with you . . . to school or college

Look at all these colors

Geo. S. Parker Offers Also, Pressureless Touch, Non-Breakable Barrel, and *a *Guarantee Forever Against All Defects*

Never before have modern style and efficiency been so combined in a fountain pen.

Here are 35 years' experience, 47 improvements, 32 pen patents represented in this one pen. And all these surpassing features are encased in *non-breakable* barrels finished in *five, modern, flashing colors!*

These barrels are 28% *lighter than rubber,* yet many times as strong.

But that isn't all. Through Pressureless Touch, a Duofold eliminates all effort. The feather-light weight of the *pen itself* starts and keeps it writing. No pressure from the fingers—no strain—no fatigue.

Take a Duofold back with you to school or college to write your notes, themes and letters.

Take a Duofold Pencil to match the Pen—of the same smart color and design. Or a Parker Desk Set.

On each barrel *find and read the imprint,* "Geo. S. Parker—DUOFOLD." That is the only way to *be sure* that you have the genuine.

*To prove Parker Duofold is a pen of lifelong perfection, we offer to make good any defect provided complete pen is sent by the owner direct to the factory with 10c for return postage and insurance.

In a special test in 55 colleges the Parker was voted the favorite pen. You'll agree when you've tried the modern Duofold. Do it now, at a near pen counter.

Parker Duofold Over-size Pen, $7; Junior or Lady Size, $5; Parker Pencils to match pens, $3, $3.50 and $4.

"Can *anything* be done to save us?" she queried appealingly.

"It must be done, Thiry. Sure, I don't know what. My mind's not workin' any better than yours."

"I dare not breathe a word of this. They would kill you."

"Never give Ash a hunch that I know. Don't tell your father anythin'. There's no great hurry. We've got time. I'll find some way."

"Oh, Trueman, you are my one hope. To think I've tried to drive you away! That I nearly shot you. How little I know myself. But I do know this—if you stop this selling of stolen beef—if you prevent it before they're arrested—I'll—I'll love you with all my heart and soul!"

"Darling, I will do it somehow," promised Rock.

"I'll go now," she said, rising and swaying unsteadily.

He lifted her in his arms, and walked toward her cabin. At the door of the cabin he set her gently upon her feet. She still held him with one clinging hand, and that unconscious act was balm to Rock's distracted heart.

"I'm glad now you came to Sunset Pass," she whispered; "but you've added to my fears. It's now you, too, who might fall under the Preston shadow."

"Did you read my letter—that I slipped under your door before I left?"

"It is here," she said, touching her breast.

"Read it again. Be brave, Thiry. Don't give up. Never lose faith in me. Good night," he concluded, and loosing her hand he kissed it, and fled silently into the darkness.

FORTY-EIGHT hours later Rock rode into Wagontongue, the old True Rock of earlier and wilder range days. But no day of his life had ever seen the passion, the will to invent and achieve, that one single moment now embodied.

When Rock dropped in to see Winter, it was not with any definite purpose; but that night he and his old friend locked themselves in a room at the hotel. There were range channels open to Winter to which Rock had no access. The Preston situation was graver; actual accusations had been made, it seemed. But by whom was not manifest. Winter talked while Rock listened. It did not take long to impart information that was endless in its possibilities.

"Sol, old-timer, I'm in deep," said Rock, at the conclusion of Winter's confidence, and he opened his palms expressively. "Thiry loves me!"

"Shore," replied Winter, sagely wagging his head. "But you wouldn't take her an' leave the country?"

"Reckon I couldn't think of that yet."

"Do you know anythin' thet makes Preston's guilt shore?"

"Yes; but I promised Thiry not to tell it."

"But you can go to Preston an' tell *him* you know. Scare him to sense."

"Yes, I can. More—I know I can stop him."

"Good. Thet seems a solution. It's not too late. Go back pronto."

"Sol, Gage Preston can't call his soul his own. I reckon Ash led him into this, and nothin' on earth or in heaven can stop Ash Preston."

"Nothin'?" echoed Winter.

"Nothin' but lead."

"Ahuh! Wal, I never yet seen thet kind of a hombre miss meeting it. Leave him out. Now, Rock, I've an idee. If Dabb an' Lincoln know what I know—they will *tell* you. Thet obviates any broken promise on your part. An' they rule the Cattle Association. Hesbitt is only president. What Dabb an' Lincoln say is law. Now, you go to them."

"But, Sol, good heavens! What for?" queried Rock impatiently.

"Son, you are so deep in love thet you ain't practical. If you can get Dabb and Lincoln to sympathize with you an' Thiry, thet'll be sympathizin' with Preston. Ten years ago, there was a case somethin' like this. Wal, his friends got him to make good what he'd stole, an' saved him from jail, if no worse. I've grown gray here. I've been raised with these ranchers. I know them. . . . If you've got the nerve an' the wit you can keep Preston from ruin an' Thiry from a broken heart."

Rock leaped up, inspired, suddenly on fire with the vision Winter's sagacity had conjured up. He pushed aside table and chair, and hugged his startled friend.

"Old-timer, I've sure got the nerve, and you've supplied the wit."

ROCK presented himself at Dabb's office the next morning.

"Hello, Rock, you sure look rocky," replied Dabb, in answer to his greeting. "Hope you haven't been drunk."

"No. Only worried."

"Too bad. Have a chair and a cigar. What's the trouble, Rock? Things goin' bad out there?"

"They've gone from bad to worse. John, I told you I was in love with Thiry. Well, *that* wasn't so bad. But now she's in love with me."

"Man, you've only yourself to blame. You were advised not to go. I myself told you not to stay."

"I loved the girl," replied Rock, simply.

"Humph," said Dabb, chewing at his cigar. "You fell in love with Thiry before you went out there?"

"Of course. Otherwise, do you suppose I'd have gone?"

"Probably not. Well, that puts another light on it. Rock, are you goin' to stick out there? And go under with Preston?"

"Reckon I must—*if* he goes under."

"Naturally, you have your hopes. . . . Rock, some of us cattlemen know you haven't looked for anythin' shady about Preston."

"How do you know?" asked Rock, curiously.

"Well, that question came up the other night at our Association meeting. Hesbitt gave you a hard rub. Over this Preston scandal. Tom Lincoln an' I an' one or two others took exception to Hesbitt. We claimed you not only weren't in with Preston on anythin' crooked, but you hadn't trailed around lookin' for it. The reason, of course, was you were sweet on Thiry Preston."

"John, that was darned good of you," returned Rock warmly. "You an' Lincoln figured that if I had looked for shady work, I'd have found it?"

"Sure. We knew that. No outfit could fool you."

"Well, what then?"

"Not so easy. But personally I believed you'd have come to me for advice an' help. Now, tell me what's worryin' you, Rock?"

"Hesbitt's outfits are after Preston," replied Rock, and he gave Dabb a detailed account of Dunne's maneuver at the Notch camp, and what had come of it.

"Rock, that was a bold move an' a wise one. Reckon it was the only way any honest range-rider could meet such a raw deal. But suppose you meet this Dunne again, in more favorable circumstances for him, an' he shows fight?"

"I'd hate it, but I'll sure go through with my call. No cowman can insult me like that. He'll either crawl again, as he did then, or shoot."

"Rock, I'm darn glad you told me this. Reckon it didn't seem important to you—But it *is* important."

"How so?" asked Rock curiously.

"Well, in the first place, it vindicates Lincoln an' me in our stand for you. An' it will stump Hesbitt."

"Ahuh! Then this new rancher is dead set against Preston?"

"Is he? Well, I guess! An' he has his outfits rarin'. Rock, the strange thing is, Hesbitt has been losin' a good deal of stock—most Half Moon brand—an' his men can't locate them. Hide nor hair! But other men have!"

"Dabb, what're you tellin' me?"

"Don't yell, cowboy. Walls have ears," admonished Dabb. "Rock, now listen: You once rode for Jem Slagle. You know him. Preston ruined Slagle. An' Slagle has hung around out here to get even. Reckon he's in a fair way to do it. For he has tracked the Prestons down. But he wants to get his money back, or some of it. Sure, he knows if he threatens Preston with exposure he'll only get shot for his pains. So he came to me."

"Aw, this is awful!" groaned Rock. "Jem Slagle! An' he has tracked Preston down? What to, John?"

"FRESH Half Moon hides hidden close to where Preston last butchered. He can show these any time. I called Tom Lincoln in to talk it over. We advised Slagle to keep mum an' wait."

"What was the idea in that?" demanded Rock.

"Well, we're all ranchers, you know," replied Dabb meditatively, as if the query had before presented itself to him. "In a little way, more or less, we've all appropriated cattle not our own. Reckon we hate to make a move. The stolen cattle were not ours, you see. It'll mean a fight. An' we've passed the buck to Hesbitt."

"No, John, by heaven, you've passed it to me," returned Rock, with passion.

"Now, Rock, you don't want to take this deal on your shoulders," protested Dabb.

"Would you? I put it up to you straight," demanded Rock eloquently: "Suppose you loved Thiry. Suppose she loved you, and you'd found out what a sweet girl she is. . . . That if her father went to jail it'd break her heart—or kill her. Now, what would you do?"

"Rock, I'm darned if I know," replied Dabb, red in the face, and he slammed his unsmoked cigar to the floor. "It's a cropper. An' I hate to be beaten by anythin' in the cattle line."

BERRY'S BRUSHING LACQUER

Usher new life and beauty into your home with these gay colors

Deep the joy of her who restores an attic treasure to new charm and beauty with a gay coat of Berry Brothers' Brushing Lacquer. How gratifying it is to know that a few minutes spent with a brush and these lacquer colors will restore old things to fresh usefulness.

Now rich color of your own choosing can adorn and brighten your home. Yours the lasting pleasure of giving free rein to your creative urge. Beneath your eyes color works its stirring miracles. Dark corners become airy and inviting—gloomy spots are rendered light and cheery.

Nothing could be easier or more fascinating than this new decorative art. The lacquer flows on smoothly and dries free from brush marks when you're through. Just follow the simple directions on the can and you are assured most satisfying results.

Berry's Brushing Lacquer dries to a softly beautiful eggshell finish that can be rubbed to a high polish if you wish. But wear and use will effect the same result in time.

Furniture, woodwork, floors, linoleum and many, many other things instantly respond to these fresh colors. The delightful transformation is immediate and lasting. For, like all other Berry products, this lacquer *wears*.

Your dealer has Berry Brothers' Brushing Lacquer in a variety of delightful hues* —or can obtain it for you if you wish. It is worth while to *insist*.

*Colors available include: Chinese red, jade green, turquoise blue, French gray, coral pink, ivory, etc.

SPECIAL HALF-PRICE TRIAL OFFER

Berry Brothers, Inc., 211 Leib St., Detroit, Mich.

Enclosed is 25 cents in stamps for ¼-pint can Berry Brothers' Brushing Lacquer, retail price 50 cents. (One can to a family.) Also send color chart containing instructions for obtaining superior results.

Detroit, Michigan 1858—*70th Anniversary*—1928 *Walkerville, Ont.*

"Dabb, here's what I'll do, and I'm sure thankin' you for the hunch: I'll buy Slagle's silence. I've five thousand dollars in the bank. I'll stop Gage Preston's stealin' before it's too late. And, if I have to, I'll call Ash Preston out!"

"No! No!" exclaimed Dabb violently. "Not that last, anyway. . . . Rock, will you never settle down to peaceful ranchin'? You might be a credit to this range. And you'd lose the girl and ruin her happiness, sure."

"Well, it might be the only way out," returned Rock.

"Suppose you come to my house for dinner tonight. I'll have Tom Lincoln. We'll talk it over."

IT WAS dusk when Rock walked out to the mansion that was John Dabb's home, and was admitted to a cheerful library and the presence of Dabb and Lincoln.

"Howdy, Rock," was Dabb's greeting. "Glad you came early. Tom, you remember True Rock, don't you?"

Lincoln was a little gray, withered cattleman, bright of eye, lean of face, not apparently a day older than when Rock had last seen him. He looked like a Texas ranger, and had been one in his day.

"I shore do," replied Lincoln, extending a lean hand. "Howdy, Rock."

"Sit down, friends, an' smoke while I talk," said Dabb. "Now, Rock, I've talked your trouble over with Tom, an' here's his angle. I'm bound to say, I think it is a solution to a nasty problem. At that it hinges most on you. Go back to Preston, an' tell him the truth. That he's found out by some cattlemen, an' he must quit his butcherin' stolen cattle before Hesbitt gets on to him.

"Tell him he's to come before the Cattle Association. We'll keep the deal out of court an' Preston out of jail, provided he pays Slagle off, an' squares Hesbitt for the stock he has lost. Then, Preston, an' his four sons, especially this Ash Preston, who's the ringleader, no doubt, must leave the country."

"Wonderful fair and fine of you gentlemen," returned Rock instantly, his set face breaking. "Reckon I couldn't find words to thank you. I won't try."

"Wal, Rock, it's aboot this heah way," put in Lincoln, with his slow Southern accent. "We don't want the range slandered by such a raw case. Who'd ever think the Prestons would stoop to that? Mrs. Preston is a nice woman and the girls are ladies. Shore, they cain't be in the secret. We'd like to keep Preston out of jail for their sake."

"All right, Rock; what do you say?" queried Dabb. "Will you settle it?"

"Yes, with one reservation," replied Rock grimly.

"An' what's that?"

"I can manage Preston. But when Ash finds out, he'll fight. He can't be persuaded or frightened."

"Shore. An' your reservation is you'll have to kill him," interposed the imperturbable Texan, as he flicked the ashes off his cigar, his bright eyes on Rock.

Rock did not make any reply.

"Darn tough on the girl. My wife says she loves this particular brother," added Dabb, regretfully.

"Reckon it's tougher on Rock, but

Digitized by Google Original from UNIVERSITY OF IOWA

quien sabe? You shore cain't ever tell aboot a woman," rejoined Lincoln.

BEFORE sundown of another day Rock reined his horse in front of Slagle's cabin, and dismounted to approach that individual, who had come to the door.

"Slagle, I want to talk Dutch to you," said Rock. "Dabb told me you'd come to him with proof of Preston's guilt."

"The thunder he did!" ejaculated Slagle.

"Yes; and my business with you is to buy your silence."

Slagle showed further amazement and interest. He listened intensely to Rock's story.

"Say, cowboy, air you makin' this offer on your own hook?" he queried.

"Sure. I told only Sol Winter, who had my money banked."

"What on earth fer? Rock, excuse me, but it looks darn queer."

"Jem, I'm honest. I'm not in on the Preston steal, and you sure know that I'm tryin' to stall the thing off. Now I figure you as pretty sore, and I don't blame you. What'll you take to keep mum?"

"Rock, this hyar don't set right on me. Lord knows I need money; but I ain't so low down I'd take a cowboy's savin's. What's your idea? You shore can't care thet much about Preston."

"Jem, you're wastin' my time. I love Thiry Preston, and I'm goin' to save her dad because of that."

"I savvy. Shore call it decent of you. Makes me want to act square with you. An' the fact is, Rock, I couldn't prove anythin' on Preston now. The Half Moon hides have been moved from where I found them."

"Well, no matter. You did find them, and your word would convince ranchers, if not a court. My offer stands. What'll you take?"

"Rock, hev you got backin'?"

"No. I've my own money. Cash! Five thousand."

"Wal, I hate to take you up, Rock, an' I wouldn't if I didn't feel shore you'll get it back, or some anyhow. Say, I take half of what you got—twenty-five hundred. Preston will have to pay you. An', Rock, I'll pack an' rustle out of hyar pronto."

"That's fine, and better. It may be a long time till somebody else gets proof on Preston. And it's time I'm gamblin' on. Here's your money, Jem. I'm askin' two promises: Keep Preston's secret, and don't get drunk before you leave."

"Reckon that's easy. Rock, I'm much obliged to you. I've got another chance in life."

"I hope you'll be successful," returned Rock, stepping over to his horse and mounting. Slagle followed him, and laid a red-haired hand on Rock's chaps. His eyes held a scintillating, prophetic light.

"Rock, I'd be willin' to bet all this hyar money, five to one, thet if you save Gage Preston, you'll hev to kill Ash."

Spurring Egypt sharply, Rock swore lustily at the vindictive homesteader, and galloped away.

THOUGH Rock put the white horse to a finish that concluded a wonderful day's travel, it was well after dark when they reached the Pass. Lights were burning in all the Preston cabins. At the barn,

"What's Andy Blair doing now?"

Bill—"Haven't you heard? He's the new sales-manager for Hess & Schoble and they say his salary is $7500 a year."

Tom—"He certainly has come up fast. He wasn't getting over $50 a week the last time I saw him. How'd he do it?"

Bill—"Took up a course with the I.C.S. and studied at night. That's why the old crowd hasn't seen so much of him in the last few years. I wish I'd had the sense to do it too. I'd be making more money right now if I had."

Why don't *you* study and get ready for promotion too? We'll be glad to help you if you will only make the start.

Thousands of men have happy, prosperous homes because they had the foresight to prepare themselves for advancement through the home-study courses of the International Correspondence Schools. Hundreds of them report salary increases of $10, $15 and $25 a week. Many are earning $75, $100 and $150 a week. Some have doubled and even tripled their salaries. Some are earning $10,000 and $15,000 a year. Others have become owners of businesses of their own.

If the I. C. S. can help other men to raise their salaries, it can help you. At least find out how. It won't obligate you to ask for our Free Booklets, but that one simple act may change your entire life. Do it now. Do it for HER!

Soft Gums *need more than* nice flavor

This sterilized powder puts *results* ahead of taste . . . .

DESPITE faithful brushing with flavored pastes, gum troubles are steadily on the increase. Soft, easily-irritated gums need a dentifrice that concentrates on *results* instead of taste. Pyrozide Powder has been doing this for twenty-two years. To-day, largely on dentists' prescriptions, more people than ever before are turning to it for gum protection.

This sterilized powder is not flavored. It contains *only* those ingredients that dental clinics have proved the most effective gum-stimulating and tooth-cleansing agents. It is medicated with Dentinol, used by dentists to promote gum healing.

Pyrozide's distinctive taste comes from its Dentinol medication. It may not be pleasing to you the first two or three times (although you soon grow to like it). But in a short time your gums—as well as your teeth—will show the greater effectiveness of this scientifically-compounded powder.

Regular brushing with Pyrozide Powder allays irritated gums. It aids in making soft gums firm and resistant. It keeps the teeth clean and white—removes the daily secretion of salivary deposits that harden and form tartar. Its use is economical—the dollar package contains six months' supply. At all drug stores.

Free sample sent on request.

The Dentinol & Pyrozide Co., Sole Distributors, 1472 Broadway, New York City.

Rock encountered one of the Mexican lads, and turned Egypt over to him. With that he stalked back through the grove. Peering into the kitchen door he espied Mrs. Preston and Alice and Lucy at their evening chores.

"Howdy, folks. Is it too late for a bite and a cup of coffee? I've had nothin' since yesterday. Starved isn't the word!"

"Why, Mr. Rock, you sure look it," replied Alice, gayly.

"Cowboy, it's never too late in this chuck-house," returned Mrs. Preston. "Come in and sit down."

Heavy boot-thuds out on the porch attested to the approach of men. Rock certainly did not keep his back to the door.

"Who come in, Ma?" queried Preston, outside.

"A poor starved cowpuncher," replied his wife.

"Dad, it's only Mr. Rock," added Alice quickly.

OUTSIDE, someone violently slapped what sounded like a pair of gloves on the table.

"Pa, didn't I tell ye?" growled Ash Preston's unmistakable voice. "Thet hombre can't keep away from Thiry!"

Footfalls, sharp and quick, rang off the porch to thud on the ground. Then Preston's dragging steps approached. The doorway framed his burly form.

"Howdy, Boss," greeted Rock.

"Back so soon? Reckoned you'd stay out your leave," replied the rancher with gloomy penetrating gaze on Rock.

"I rustled back," said Rock, meaningly.

"Bad news?"

"Reckon all I got is good."

"Ahuh. Wal, come in, soon as you want to," concluded Preston.

Alice and her mother set before Rock a bounteous meal, and while he gave ample evidence of appreciating it they asked questions about the town. Rock imparted all the information he could muster.

"Oh, yes, I near forgot," he added presently, with a wink at Alice. "Yesterday I run into your beau, Charlie. He shore pumped me about you."

"My beau! Trueman Rock, I—I—he's not that," exclaimed Alice, blushing furiously. The mother's quick look was not lost on Rock.

"Excuse me, Allie. I just naturally thought he was, from the way he talked. Sure does need two to make a beau, doesn't it?"

"You wretch!" whispered Alice, as her mother went out the back door for something. "Mother thinks I'm too young. And I'm crazy to go to that next dance."

"I'm sure stupid, Allie. Lucky boy! Heigho! I wish I could go."

"Can't we all, Trueman? Thiry spoke of it today." Alice bent close to Rock's ear. "She's crazy about you."

"Allie—*you* wretch! It can't be true."

"It is so. I accused her of being."

Rock leaned closer to the tempting lips, as if they were dispensing music.

"Well?"

"Thiry denied it. But she got red as fire—then mad!"

The entrance of Mrs. Preston put an end to this whispered exchange. Soon afterward Rock strode out to seek Preston.

On the porch he halted, and, gazing out at the spectral pines and up at the blinking stars, and across the thick void toward Thiry's bright window, he called on all the passion and wisdom that might come through hope and prayer.

The moment he confronted Preston, the climax of this situation would have been set in motion.

(*To be concluded*)

One-Night Stands on the Air

(*Continued from page 21*)

dramatization of short stories. But ultimately the perfect radio play is going to be worked out. We are experimenting, changing, learning all the time. The Great Moments in History and the Bible Dramas are the most successful radio plays, because they have been worked over more. Remember, the radio play has one disadvantage: A Broadway show usually does not appear on Broadway until after weeks of rehearsal and also two, three, or more weeks on the road in small towns in what might be called laboratory performances. Changes, deletions, additions are possible until the show appears on Broadway ready for its first night. And then, later on, many other improvements are made after the reactions of the audience are studied. But a radio play is produced once. It has its first night and that is its last night. It must go down with all its imperfections on its head.

The radio stage director, however, has a great advantage. In the theatre the director remains behind the scenes. In the radio play he can be both out front and behind the scenes. He sits in the control-room where he can see the actors. They are standing around the mike reading their parts. Their parts are held on music stands before them. The director can see them and also hear the play coming over the radio in the control-room. He can signal to the players or he can step outside to direct the action of the piece.

We must have time. A great deal has been accomplished already. Remember, Station WJZ, the first Eastern station, was established in 1921 and already it is spoken of as "old WJZ."

I WANT to tell now about an absolutely new experience I have had. The radio is constantly producing new experiences. Wonderfully as it has developed, it has a great distance yet to travel, and it is this constant moving into new territory that makes the life of a radio announcer interesting. I have just had the unusual experience of broadcasting to a radio audience in Baltimore a horse race that was run in England. Nothing of this sort had ever been attempted before. We had broadcast the opening of the Pan-American Congress at Havana. But crossing the Florida Straits is one thing and crossing the Atlantic Ocean is quite another. This race was radioed to the Baltimore audi-

Digitized by Google Original from UNIVERSITY OF IOWA

ence because a great Baltimore horse took part in it. But while the race itself of course attracted widespread attention in this country, little has been heard of the extraordinary feat of broadcasting it. The race, the Grand National Sweepstakes, was run at Aintree, England. It is a great turf classic over there; drew into it more than sixty horses and was run over a hurdle course of four and a half miles. There were three hundred thousand people massed at the famous Aintree track.

But Baltimore, too, three thousand miles away, was alive with interest because the great horse, Billy Barton, born and educated in Baltimore, was not only to run but was also the outstanding favorite. The Baltimore "Sun" made the arrangements for the radio report, and I went to Baltimore to relay the report to Baltimoreans for the "Sun."

THESE arrangements were enormously expensive. A reporter was stationed on top the grand-stand at Aintree, England. I was located at a microphone in the "Sun" building at Baltimore. Outside the "Sun" building was a great crowd of people waiting for the start of a race three thousand miles away. When the barrier fell at Aintree and the big crowd of jumping horses leaped away with Billy Barton in the lead, at that very instant a shout went up in Sun Square, Baltimore. To me at the microphone there was an unexpected kick in that shout. I had on my head a receiver which brought the voice of the reporter at the track to my ear. The moment he said, "They're off—Billy Barton in the lead," I repeated it through my microphone, and back, on the instant, came the shout of the crowd outside. For the moment my mind was on the English track, and if the shout had come back to me from Aintree I would not have been more surprised. I was really listening to a show that was going on on two continents—the performers in England, the audience in America—and in the same instant I could hear the reporter in Aintree, and the crowd cheering in a Baltimore street.

Throughout the broadcasting I could hear the crowd outside. At times there was cheering and then would follow that low rumbling murmur which comes from a great throng of people. Billy Barton, the Baltimore horse, was leading. Then suddenly came the report that Billy Barton had fallen in taking a water jump. As I said this there was a sudden chilling silence outside. Then came the report that the American horse was up, remounted by his courageous jockey, Cullinan, and was off again in second place. Then went up another mighty shout in Baltimore.

Here is the way this report was worked out: The reporter atop the Aintree grand-stand had a telephone transmitter in his hand. When he spoke his message was carried to Liverpool by a special wire and then fed into the regular telephone lines of the British Post Office, which controls the telephone system in England. From there it went to London to the office of the United Press and then to Rugby. At this point it leaped into the air to be borne across the ocean in its long flight through the air, where it was picked up at Houlton, Maine, and then routed by wire to Balti-

Painted clean *to stay clean!*

Ordinary Flat Finish—White Paint

Barreled Sunlight Gloss Finish

The microscope shows the difference!

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

THERE is something about white or light-tinted walls and woodwork—a certain bright freshness, a wholesome cleanliness—which nothing else can ever quite replace.

But it is one thing to *paint* them clean and another to *keep* them clean! Hence the widespread use of Barreled Sunlight today. *So smooth it washes like tile.*

Extremely beautiful, too. A rich enamel finish with a "depth" peculiar to itself.

Guaranteed to remain white longest.

Exactly the tint to match any scheme of interior decoration can easily be obtained by adding oil colors to Barreled Sunlight. (Ask your dealer about the Barreled Sunlight Tinting Colors in handy tubes.)

Gloss, Semi-Gloss and Flat finishes. Cans and drums. For priming, use Barreled Sunlight Undercoat.

Also ask about the new exterior painting product, Outside Barreled Sunlight.

U. S. Gutta Percha Paint Co., 33-E Dudley Street, Providence, R. I.—Branches: New York—Chicago—San Francisco. Distributors in principal cities. Over 7000 retail dealers.

I will Train You at Home to Fill a Big-Pay Radio Job!

Radio, new big industry wants trained men. Its rapid growth has created many fine jobs paying up to $250 a week. You can learn at home in spare time. High school education unnecessary. I will train you to be a Radio Expert. I know exactly what is needed. I have trained hundreds of men.

J. E. SMITH, President

Extra Money While Learning

K. W. Griffith, 2320 Maple St., Little Rock, Ark., made $894 in spare time while studying. I'll also show you how to make spare time money beginning soon after you enroll. Find out what Radio offers you. Write for "Rich Rewards in Radio," 64-page book. It tells you how you can quickly qualify as a Radio Expert. No Obligation. National Radio Institute, Dept. 9 B. Washington, D. C.

You can build 100 circuits with the six big outfits of Radio Parts given you for practical experience while learning.

Here's one you build

Eat and Be Well!

A condensed set of health rules—many of which may be easily followed right in your own home, or while traveling. You will find in this little book a wealth of information about food elements and their relation to physical welfare.

CONTROL YOUR WEIGHT WITHOUT DRUGS OR TIRESOME EXERCISES

Effective weight control diets, acid and bland diets, laxative and blood-building diets, and diets used in the correction of various chronic maladies.

The book is for FREE circulation. Not a mail order advertisement. Name and address on card will bring it without cost or obligation.

Health Extension Bureau

214 Good Health Building, Battle Creek, Michigan

more. But this is only half the story. In order to make the report possible, it was necessary for us to be in direct communication with the reporter at the track. And so a second line was opened from the Baltimore "Sun" to Aintree. This, however, took a different route. Our talk in Baltimore went by underground cable to New York and then to Rocky Point, where it hopped into the air to speed over the Atlantic and be caught at Cupar, Scotland, from where it went by the British postal lines to our reporter. Thus, when he spoke to me, his voice came by way of Liverpool, London, Rugby, and Maine, and when I answered, my voice went by way of New York, Rocky Point, and Cupar, Scotland. And all without any more interval between question and answer than if we were in adjoining rooms.

The installation of this complicated circuit was difficult as a bit of radio and telephone engineering. But the technical problems were not so great as the human ones. When the "Sun" set out to make its arrangements it ran up against the rock of British official conservatism. It was necessary to put a telephone on top of the grand-stand at Aintree. But, replied the postal authorities, this could not be done. And why not? Well, it had never been done. But the American press men were insistent and the thing was done. Billy Barton, by the way, finished the race in second place.

The Kind of Radio Hour I Would Like to Put On

Prize Contest Announcement

SUPPOSE the director of one of the big broadcasting stations came to you and said: "You've been listening in on the radio for several years; you know what you like and what you don't like on the air. How about mapping out what, to you, would be an ideal program—one that you would prefer to listen to above all others?" . . . Wouldn't you jump at the chance?

Well, consider THE AMERICAN MAGAZINE as a broadcasting director asking your views on this subject, and write us a letter embodying your ideal program. There are just one or two rules to follow: The program should be one suited to any hour between eight and eleven P. M. It should not include a prize fight, convention, or any other special feature. You are to make it up from the ordinary "run-of-the-mill" stuff which is at the disposal of all big broadcasting stations at all times.

For the best five-hundred-word letter we offer the following prizes: $50, first prize; $30, second prize; $20, third prize. Competition closes September 20th. Winning letters will appear in the December issue.

Address "Radio" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Colonel Braxton Hears the Silent Voices

(*Continued from page 19*)

be cross-examined on it. If at the scene of the criminal act he had possessed the foresight to keep wholly silent, the State, to convict him, must depend on other sources of evidence.

It had this little from Harris.

But it had nothing from the girl.

She had been inexplicably silent.

She had said no word, uttered no sound, when the police entered to find Cruger dead. She stood there in the drawing-room beside Harris, motionless and silent, a tragic figure out of some bloody drama of the Book of Kings.

The prosecuting attorney built up his case carefully with his collateral evidence. Then he put the police officer on the stand. He established that the man was officially the chief of police, but, in fact, a sort of watchman who himself went about.

"Where were you on the night of the seventeenth of November?"

"In North Washington Street."

"The street of this city on which the residences of Duncan Cruger and Fairfield Harris are situated?"

"Yes; the houses are nearly opposite."

"What kind of a night was it?"

"A bad night. There had been a drizzling cold rain, and about dark it began to fall heavy."

"Did you see the decedent, Duncan Cruger, and his wife that night?"

"Yes, they drove up to the house about nine o'clock. They had a hired carriage. They got out and went in. The carriage went back to the livery stable."

"Then what happened?"

"A little later, not long, maybe half an hour, maybe fifteen minutes, Mrs. Cruger rushed out of the front door and across the street to the Harris house. She didn't go in. Mr. Harris came to the door. They talked a little, and then he went back across the street into the Cruger house with her."

"What did you do?"

"I came down the street by the house. But it was raining so heavy that I went on."

"DID you hear anything as you passed the house?"

"Yes. I heard loud voices, a quarrel. I'd say a violent quarrel. But I didn't stop then; I went on down the street. I stopped farther down in the shelter of a door; there was no porch over the Cruger door."

"Why did you wait there, instead of coming on in to your police headquarters?"

The police chief hesitated.

"Well," he said, "I thought there was going to be trouble, and I'd better hang around."

"Exactly; and there was trouble. What happened next?"

"I heard a shot in the Cruger house. I was too far away to tell exactly where. But it was somewhere in that house. I ran up the street and into the house. The front door was not locked. There is no hall. It opens directly into the drawing-room. It's a big drawing-room, going entirely across the end of the house."

1000 Hotel Positions Open!

Hotels, Restaurants, Clubs, Apartments, Institutions, Schools, Colleges, Hospitals, etc., Everywhere, Need Trained Men and Women. Over 70,000 High-class Positions Paying $2,500 to $10,000 a Year Are Open Each Year in the Hotels of the United States. Nearly One and Three-quarter Billions of Dollars' Worth of New Hotels, Clubs, Restaurants and Institutions Built This Year Will Need Over 200,000 Trained Men and Women.

I Absolutely Contract to Teach You

In my home-study course on hotel work what the leading experts know about the business—men earning from $5,000 to $50,000 a year—and at any time there are over 1,000 hotel positions open in this industry.

I Put My Students in Touch with Positions

All over the United States they are eagerly sought by the biggest and best hotels. Hotels start you at salaries up to $3,500 a year with your living usually included. If you want a steady, permanent position, with quick advancement, big pay and fine living, which also usually includes free meals and apartment—you can find it in hotel work.

No Previous Experience Needed

You need no previous experience when you take the Lewis Course. We train you by mail in your spare time at home with the Lewis Simplified Study Plan, and put you in touch with big opportunities. All of your training will be under the personal supervision of Clifford Lewis, former U. S. Govt. Hotel and Restaurant Expert, now Managing Consultant for over 225 hotels throughout the United States.

"What did you see?"

"I saw Mr. Fairfield Harris carrying Mr. Cruger. He put him down on the sofa as I came in. Mr. Cruger had been shot. He was dead. Mrs. Cruger was standing near the front door. She didn't say anything. She never said anything."

"What did Fairfield Harris say?"

"He said just what you told the jury."

"Did you believe it?"

The chief of police hesitated.

"No," he said.

The whole court-room was astonished. Not at the reply, but from the fact that the attorney for the prisoner did not protest against this examination. The questions were leading, and this last one obviously improper. The whole inquiry contravened the most elementary rules of evidence. The judge on his own volition should have stopped it. But it was his custom to act only on objection. He permitted any course, in such a trial, that was not challenged by the defense.

And the prosecuting attorney, finding himself thus unhampered, went on:

"Why didn't you believe it?"

"Well," replied the man, "I didn't believe it for the same reason that the Grand Jury didn't believe it. You see, there had been a quarrel, a shot, and here was Mr. Harris carrying the dead man to a sofa. There were only three persons in the house at the time.

"It looked this way to me: When Harris shot Cruger, the man ran across the drawing-room to get out at the door on the other side. Harris and Mrs. Cruger were between him and the front door. But he couldn't go far. The doctor said the bullet cut a big artery. Cruger fell when he got to the door that opens into the alley. Harris ran after him and carried him back to the sofa. He was putting him down on the sofa when I came in. . . . That's the way I put it together."

"Did you find the pistol?"

"No; it was not in the room."

"Did you search Harris?"

The witness made an apologetic gesture.

"Well," he said, "you see, Mr. Harris was not arrested that night. He was not arrested until after the Grand Jury convened. I had to get a doctor."

"Then you did not search the prisoner here for the weapon on that night?"

"No."

The prosecuting attorney, given an inch, took now a mile.

"The reason you could not find the pistol was because Harris took it away with him?"

"He either took it, or—"

THE witness stopped short. But every man listening in the court-room could have finished the sentence. The allusion was to the girl, motionless beside Colonel Braxton. But the witness stopped before he named her and the prosecuting attorney brushed him past the point. He shot another query at him, formed and fitted for his assent.

"It's your theory," he said, "that Harris took a pistol with him when he went into Cruger's house. Now, Mr. Scally, tell the jury why you know that Cruger ran across the drawing-room to that far door at the other end of it, after he was shot."

The witness turned toward the jury.

"It's certain," he began, "for several reasons: In the first place, Mr. Cruger had no weapon on him. There wasn't any in the house; he was unarmed. He had no way to defend himself, and after the shot he tried to get away. He couldn't get out the front door because this prisoner here was between him and that door. So, naturally, he ran in the only direction that he could get out; he ran to the other door at the far end of the drawing-room, which opened into the alley.

"The doctor said that while the bullet cut a big artery, the man did not die instantly; he died of hemorrhage. He died of loss of blood. He would have the strength to run that distance, as the doctor said. We've all seen it in animals. If the bullet doesn't strike the brain or spine or heart, and the animal is alarmed, it will run—it will run until it falls from loss of blood.

"Now, that's what happened to Mr. Cruger; that's exactly what happened to him. He ran clear across that drawing-room after he was shot. We know that for certain; that's certain."

He paused, as for a point of emphasis.

"There was a line of blood drops clear across the drawing-room from where Mr. Cruger and Harris had been standing, to the door at the far end of that drawing-room where it opened out into the alley. A line of blood drops—"

HE WAS interrupted. Colonel Braxton was looking at him. He had said no word. The only sound that he uttered was a curiously inflected, "Ah!" As of one who after long searching has chanced on the hidden thing. The exclamation of surprise. It was a queer, drawling expletive. But it seemed to single out that particular fact; to select it; to disentangle it from any other thing; to thrust it prominently before the eye; to make it the one dominating factor among a mass of trivialities.

The attitude, and this exclamation of the attorney for the defense, fastened the whole attention of the court and jury on this single fact.

The prosecution marked it, and turned toward him.

"You seem to think this is important, Colonel."

The lawyer did not change his posture, but his voice when he spoke was decisive.

"I do," he said. "It is the one important thing in the whole case. It is the one decisive thing. On it, and on it alone, turns the guilt or innocence of the prisoner."

The prosecuting attorney was not disturbed by this decisive statement. He was quite certain that he understood the thing upon which Colonel Braxton depended. He had discussed this likely theory of the defense with the police chief and the surgeons. He was equipped with a conclusive rebuttal to it. He was, then, willing, even anxious, to accept the decisive importance of this fact.

"That's right, Colonel," he said. "And that's the reason we took so much trouble to preserve this line of blood drops precisely as they were on the hard-wood floor of Cruger's drawing-room. You helped us, Colonel. The chief of police here went to see you that very evening to ask you how to do it."

"He did," replied Colonel Braxton. "He came to me, Alfred, like Nicodemus, in the night."

Again there was an amused murmur in the court-room.

The prosecuting attorney endeavored to ignore it. He went about the question before him:

With the aid of the police officer he took a number of small panes of glass out of a box on his table and laid them down, in a line, on the scrubbed oak floor of the court-room. They extended from the jury to the judge's bench. Each blood drop as it appeared on the hard-wood floor of the Cruger drawing-room had been preserved for evidence by the simple device of placing one of these sheets of glass over it, tracing the outline, and reproducing it in ink.

The reproduction had been very carefully and precisely done. The exact splash and aspect of each drop was accurately copied. Each pane of glass had been numbered and designated, by the signature of the prosecuting attorney, the chief of police, and Colonel Braxton, so that, by placing them in line, in their marked order, as an arrow of direction on them indicated, the whole line of telltale blood drops, extending from where Harris and the girl had stood to the door at the end of the drawing-room, opening onto the alley, would be as definitely and accurately before the trial court as if they were looking at the floor of the drawing-room.

The prosecuting attorney now indicated the line of glass extending across the oak floor to the judge's bench.

"Gentlemen of the jury," he said, "you can see for yourselves the exact trail of blood drops made by Cruger as he fled from Harris's pistol to the door at the farther end of his drawing-room. Let us say that the judge's bench is where Harris stood, and the end of the line where you gentlemen sit, the door opening on the alley, through which the wounded man hoped to escape."

He turned to his opponent.

"Is that right, Colonel?"

"YOUR facts are right," replied the attorney. "The conclusion, Alfred—let us leave the conclusion to the jury."

He stood up, resting his hands on the table as though to support his big shoulders.

"I accept the challenge of that exhibit. I accept the narrow issue to which it reduces all the evidence in this case. It's a single issue. It's the simplest issue in the world: If that line of blood drops was made by a wounded man moving from the judge's bench toward the jury, then my client is guilty. If it was made by a wounded man moving from the jury to the judge's bench, then my client is innocent. . . . That is all there is to this case."

And he sat down.

The line of defense upon which Colonel Braxton depended began now to dawn upon the spectators in the court-room, as early in the preparation of his case it had occurred to the prosecuting attorney. He did not intend to permit Colonel Braxton to spring it suddenly on the jury, with a dramatic gesture in his argument. He proposed to discount it now. And he went forward in that intention.

"Gentlemen of the jury," he said, "it may occur to some of you that when Harris carried Cruger back across the drawing-room to the sofa, there would

have been another line of blood drops from the wounded man. But this would not be the case. The wound was in the chest, and with the body doubled up in Harris's arms, the clothing of the wounded man would have taken up the hemorrhage. It would have soaked into the clothing and consequently not dropped on the floor. I will establish this by the surgeon who examined the body, as it is a feature of the case upon which the defense will depend."

The reply of Colonel Braxton amazed the man as it amazed the court-room: "It is not a feature of the case upon which I depend."

The prosecuting attorney swung 'round on his heel toward him.

"Then you admit that there would be only one line of blood drops?"

Colonel Braxton took his unlighted cigar out of his mouth and put it down on the table.

"Yes," he said. "If you wish, I will admit it. It is quite likely that if one were carrying such a wounded person, what you say about it would occur. The hemorrhage would be soaked up by the clothing, and not drip on the floor."

There was silence.

Even Mr. Dabney Mason, the clerk of this circuit court, accomplished in the divining of defenses, was astonished. This strange admission removed the one doubt in the case, the one hole in the wall through which it was possible for the prisoner to escape conviction. Eliminating it, the chain of circumstantial evidence against the prisoner seemed complete.

THE case for the State was clear now as an open road—an open road with the gallows for the prisoner at the end of it.

Never in his experience had the prosecuting attorney had his way so easily, and so unquestioned. He had held the chief of police for his concluding witness. He had put on all the others, introduced all his collateral evidence, and built up his case at his will, and as he pleased, with no objection from Colonel Braxton.

That attorney had put no query.

He had taken no exception, made no move against him. And, to make doubly sure, the prosecuting attorney had discounted in advance all defenses that it seemed possible to array against him. He had gone, even, to the length of bringing out, himself, the dissolute character of Cruger, his known relations with a questionable woman of the town, and the very course that the decedent had taken to end that relation: his payment of a sum of money, and his message of dismissal to her on the morning of the marriage; all this to negative the peril of an impassioned speech for the defense. And to show how Cruger, entering this marriage, had turned away from his former life—cut it clear away, irrevocably and forever from him.

And to this Colonel Braxton gave the assent of silence.

He went even farther. The record could show, as fact, the attorney's statement. He did not contend.

And, thus, as he liked, the prosecuting attorney had made his case.

It was complete, buttressed at every point, and unassailable.

There remained that Delphic pronouncement of Colonel Braxton, in the opening of the trial. But that, after all these admissions, could be only a gesture, as I have written.

The prosecuting attorney stood up with an air of victory.

He addressed the court.

"Your Honor," he said, "the State rests!"

Then he turned to his opponent.

"NOW, Colonel," he added, "bring out your big hidden defense!"

Colonel Braxton had been sitting relaxed in his chair, his eyes closed, his body sagging as though devitalized, like one overcome with ennui, or in the vague borderland of sleep.

He moved now at the words, as though awakened.

"Alfred," he drawled, "are you going on, like that captain of the host of Syria, looking for a *great* thing? . . . I shall not come out and stand and call on the name of the Lord against you."

Again the audience in the court-room was diverted by this citation from the book it knew.

Then he got up slowly:

"The thing that I depend on is a *small* thing. And it is, as I have stated, in the custody of the clerk of this circuit court."

Then he paused, as though to gather his wandering wits and his relaxed vitality.

"Your Honor," he said, "there is only one fact in this case to be determined . . . one isolated fact. Everything else is subservient and ancillary to it. For this reason I have paid no attention to the mass of evidence introduced by the State. For all that evidence depends on this single fact, for value. It stands on the issue of this fact. If the issue of this fact fails, all this evidence fails with it. The whole case for the State is like an arch depending on a keystone: if the keystone crumbles, the whole arch goes to pieces of itself. . . . There is no need to encompass it 'round about with a scaffolding to pull it down."

He turned toward the jury.

"Gentlemen," he said, "if you will decide one fact here, you can omit all the other facts. The defendant is guilty and should be hanged, or he is innocent and should go free—as you decide this fact!"

He indicated the line of glass laid out on the oak floor from the jury to the judge's bench.

"The whole case stands on that line of blood drops!

"If that line of blood drops was made by a wounded man moving from the direction of the judge's bench toward the jury, the prisoner is guilty and his statement is false. If it was made by a wounded man moving from the direction of the jury toward the judge's bench, then the prisoner is innocent, and all the carefully built up theory of the State is false.

"For that line of glass is laid down correctly. It shows precisely the track of the wounded man across the drawing-room on that fatal night. The end toward the judge's bench is the end toward the front door of that drawing-room where Harris stood; the end toward the jury is the end toward the far door opening into the alley. In which direction was Cruger going when he made that track?"

He paused.

"When we know this, we shall know the whole truth about the murder."

The prosecuting attorney interrupted.

"But how can the jury know that? How can anybody know that?"

Colonel Braxton looked down at the man as in a sort of wonder.

"Why, Alfred," he said, "it will tell itself! Every one of these blood drops is a voice crying out the truth!"

Then his body lifted and seemed to take on volume.

"It is one of the inexplicable mysteries of God, that every event that happens carries its own authenticity on its face; the truth about it is always there. We have only to look closely to know the truth. It cannot lie. The truth is always stamped on its face. *It will tell itself!*"

He turned toward the judge.

"And now, Your Honor, I will ask your permission to borrow an article in the custody of the circuit clerk."

There was utter silence. The jury and the people in the court-room looked on at the man in a profound wonder. What was he about?

Colonel Braxton went over to the clerk's table, took up the stone bottle of red ink, crossed to the judge's bench, and, moving swiftly along the panels of glass to the jury, spilled out a line of ink drops on the hard oak floor; then, turning, he moved swiftly back, spilling out a parallel line of drops, from the direction of the jury to the judge's bench.

"YOUR Honor," he said, "look how this line of blood drops cries out the truth about this murder!

"The direction in which a wounded man is going can always be told by the appearance of the blood drops that fall as he moves. The spray or splash of the drop will tell. These spray fragments of the blood drop are always thrown forward of the drop itself. They are always carried forward of the main drop, in the direction that the wounded man is going.

"The reason, Your Honor, is self-evident. Gravity and air resistance cause the greater globule of the drop to fall first, for it is heavier than the lighter spray of the drop. And, consequently, the light spray, falling more slowly, reaches the earth after the heavier body of the blood drop, and, consequently, lies before it in the direction that the wounded man is going.

"Look, Your Honor, at the two lines of ink drops that I have spilled out. As I moved from your bench to the jury, the spray is ahead of each drop in the direction toward the jury. As I moved from the jury toward your bench the spray is ahead of the drop in the direction toward your bench."

His voice took on weight and violence:

"And so it is with the blood drops on the glass. The spray is before every drop in the direction from the jury toward Your Honor."

He stood up, big, dominant. His voice filled the court-room.

"And so we know the truth. Duncan Cruger was shot, as Fairfield Harris said, when he went out at the far door of the drawing-room to see who it was that knocked there; and he fled from that assassin, back across the drawing-room; fell, and was lifted by Harris onto the sofa! . . ."

There was confusion: The judge came down from the bench. The jury from its

"A medicine for every dog ailment"

chairs. The audience crowded against the rail. The evidence was clear, plain, apparent to all; established, proved, decided by this demonstration.

The girl stood up with a high face, young Harris beside her, illumined, vitalized by this swift, utter, incomparable victory. His word, his honor, established beyond question: his liberty, his life secure to him. . . . The two were outlined as in a nimbus.

The prosecuting attorney arose, but he remained silent by his table. He had been thrown violently, on the instant, and without warning. And he was confused and puzzled.

If Harris had not killed Cruger, who had killed him?

That mystery remained.

But it did not remain forever. In time, its explanation arrived; but not in time to have saved Colonel Braxton's client from the gallows. A year later, the woman of the town whom the decedent had paid off and dismissed on the day of his marriage died in a hospital of the city. At the end, when death was on her, she confessed the truth. She had returned, in the night, in the rain, to the alley behind the house, knocked on the door to the drawing-room, and when the man opened it, she shot him.

And in a manner she died also with the man, for from the cold and rain she contracted a complication of pneumonia that, in the end, removed her out of life.

My Debt to Prince

(*Continued from page 33*)

ground where, for more than two centuries, the negroes of the place had been interred. There the mighty pines towered tallest; there the live oaks stood Druid-like; there the jasmines rioted freely over hollies and sweet myrtles, tossing their saffron showers high in air. As children, Prince and I dreaded this place; and I can remember going along this dusky road many a time, my love for him taking me farther from home than my reason warranted; and his love for me overmastering his fear of the graveyard, so that often he used to come with me all the way to the plantation gate. We used to walk that road holding hands; and even now I can remember how the hands of those children, one black and one white, used to tighten as a dewy strange wind gushed by us, or as an owl would begin his haunting twilight note. (We are still holding hands, Prince and I, as we go down the mysterious road of life; and the grip tightens, as it did of old, whenever we feel that danger and the unknown are near.)

ALL things human change; and the time came when a temporary parting was inflicted upon Prince and me. I was sent away to school and to college; he remained in his old wild free life. His prospect looked to me as halcyon as mine was forboding. It was years before we were able to renew our companionship. When opportunity was once more afforded us to be together, we were both grown. Whatever, in a deeper sense, my growth had been, I do not think that essentially it was very far in advance of his; and certainly in physical development he had immeasurably surpassed me.

Whence got he those mighty shoulders? Whence came that iron grasp? Whence got he that huge and rugged forearm, that splendid depth of chest? Though not of great height, his stature, leonine and massive, would set all the athletic coaches of America agog if they could see it. While I had been delicately pursuing French verbs to their dim lairs, and trying with many a headache to determine whether Pragmatism was a true philosophy and Relativity a true scientific theory, Prince had been felling forests, digging canals, driving mule teams, and, with the sun at about 115°, he had been plowing down knee-high crab grass, shouting and singing as he worked. Standing to the thighs in fetid, snake-haunted swamp water, all day long he had sawed hugh cypress logs, he and his fellows laughing and joking as they toiled. Or out in the lonely forest of yellow pine, from daylight to dark he had brought thundering to earth the giant trees, tall as the masts of brigantines, and full of nameless aërial melodies in their crowns.

Black, rugged, independent, Prince was a man long ere I became one. Years and other matters had parted us; but when we met, we clasped hands with the old affection, and perhaps understood each other as perfectly as two human beings ever do. Death's is not the only veil through which we cannot see; impalpable arras separate most of us. The human soul seems a shrouded thing, and most solitary. Love alone is capable of destroying isolation and of breaking down every barrier.

That Prince is a real psychological study I have, of late years, come deeply to appreciate. There is, for example, his mastery of animals, which has in it a spiritual legerdemain fascinating to behold. No man who watches this negro with dogs or mules can be persuaded that magic is dead. On occasions that are literally countless I have shamelessly referred to him dogs that were of the most incorrigible sort, dogs that would not even make up with me. Immediately he would establish a definite relationship with them, partly by firmness, partly by kindness, but chiefly by an occult and complete fathoming of the dog's mentality. I recall how he made Blossom mind him when she would pay me not the slightest attention.

THIS hound was new and strange, and Prince and I took her into the woods for a ramble. Young, diffident, headstrong, she was prone to race pell-mell after any alluring scent that assailed her delicate nostrils from the damp sandy road. We were in wild country; and to have her escape on a trail would have been serious. I was about to suggest that we put her in a leash when she suddenly left the road on a dead run. A fresh buck track explained her joyous haste.

At thirty yards a shout from Prince brought her to a bickering halt. She was too far away for him to catch her, or even

"When Jimmy Went to School"

"HIS Dad and I had talked about Jimmy's education ever since he came to us. I recall our saying, 'When the boy is old enough for preparatory school, we'll be all ready to meet expenses. We'll bank $10 a month for him.' We meant it, too—but never were we able to save that money. Until—

"I joined our Pin Money Club! Now Jimmy is away at school, and I am so happy! The five and ten-dollar bills earned by me since last September have grown into a sufficient sum to pay for Jimmy's first term.

"How surprised his dad was! The dear man had been so worried about our boy, it was a temptation not to tell him sooner. Oh, I am so thankful I could help to educate Jimmy!"

✿ ✿

THIS was a recent letter from Mrs. L———, a Pennsylvania member. We have thousands of busy mothers in the Club who, in their precious few spare moments, earn the extra dollars that keep up their cheery spirits and help them buy necessary things and real happiness for their families.

If you are a "married girl," and extra money would help you send your boy or your girl to school or college—

Or if you are a business girl, or a schoolteacher, or a schoolgirl!—then *you* will be interested in our fascinating Club of money-makers, too.

Join us today. It doesn't cost a penny—and you'll begin earning money right away. Write at once for our beautiful new booklet called, "That Pleasant Feeling of Independence." It explains about our work, and shows you how you, too, can carry it on right at home. Address your letter to:

Margaret Clarke

Secretary, Pin Money Club,
THE AMERICAN MAGAZINE
Department W
250 Park Avenue, New York City

to threaten her effectively with the long lash that he carried. The hound did not want to come back. Yet, while ignoring me, she deigned to give Prince a bright, undetermined look, as if inquiring politely the reason for his impertinent interruption of her urgent business. Knowing that it would be a vain thing for me to try to lure the dog, I left it all to him—I usually leave anything to him that's difficult—watching closely to discover by what mental artful sleight he would accomplish the miracle. Clearly, it was to be a spiritual, not a physical, struggle.

"Blossom," he called, "come here, chile. Here, Blossom, come here to me. You is the prettiest, fines', most 'bedient houn' I ever did see. That's a good girl; come on now. Come on, honey Blossom. I know you wouldn't leave me here in the road all by myself. That's a sweet Blossom."

Flattering wiles, couched in tones that reached the hound's very soul, accomplished what force and anger and less delicate deception could never have done. But there was more than that to the performance. Into the immense solitude environing the individual Prince had suavely obtruded himself. All creatures will, I suppose, respond to blandishments; but they must be of the intimate and understanding variety. The hound Blossom was completely taken by Prince's tones. She turned toward us; then she approached step by step, a little contritely. At last she made a little run, frisked about Prince, leaped up on him affectionately, licked his hand. I had had, in college, a course in Practical Psychology, and one in Animal Psychology. But my knowledge had left me helpless, whereas Prince knew what to do without ever having been taught.

WATCHING Prince handle the biggest, stubbornest mules in a timber camp, I have come to believe that the secret of his mastery over them arises from his ability subtly to establish in them a definite conception of their inferiority. He then takes it for granted that they will work, his attitude being objective, hale, and natural. He talks to them also, as it were, in their own tongue, and to his raillery they respond with astonishing willingness. To manage mules should be accounted something of an artistic *tour de force*.

I remember the first time I ever saw Prince operate on a stubbornly planted mule. It happened down in a little seacoast village near home. A farmer's mule, hitched to an infirm and staggering wagon, loaded heavily with a Saturday's purchases, had made up his mind that the prospect of seven long sandy miles ahead did not appeal to him. The animal balked in the middle of the village street, right between the post office and the general store, so that the performance created a considerable stir. At such a time, all local and loafal celebrities are exceedingly fertile in advice. To this scene of hopeless *status quo* Prince and I arrived after some very heroic measures had been used without the slightest response on the part of the immobile mule. He had been cruelly beaten; his harness had been taken off. The wagon had been rolled back. But there he stood violently rooted, with a certain exasperatingly virtuous expression on his countenance. Curses and shouts left him unmoved. Even a small fire built

A 900% Increase is what N. S. T. A. Training meant to C. W. Birmingham of Dayton, O. Raised his pay from $15 a week to $7500 a year.

Record Earnings of $525 in a week for Wm. Shore, former cow-puncher of Neenach, Cal. Earned $3000 first 5 months after finishing training.

Raised His Pay from $1200 to over $7200 a year, says F. J. Walsh, Springfield, Mass., who gives N. S. T. A. full credit.

~and They Started By Reading This Amazing Book!

Now—For a Limited Time—This Remarkable Man-Building, Salary-Raising Volume Is Offered FREE to Every Ambitious Man. Read it Without Fail!

Where Shall We Send Your Copy FREE?

A Book! Just seven ounces of paper and printer's ink—but it contains the most vivid and inspiring message any ambitious man can ever read! It reveals facts and secrets that have led hundreds of men to success beyond their fondest expectations! No wonder a famous business genius has called it "The Most Amazing Book Ever Printed!"

This vital book—"Modern Salesmanship"—contains some surprising and little-known facts about the highest paid profession in the world. It blasts dozens of old theories, and explains the science of selling in simple terms. And not only that—it outlines a simple plan that will enable almost any man to master scientific salesmanship without spending years on the road—without losing a day or dollar from his present position.

What This Astonishing Book Has Done!

The achievements of this remarkable book have already won world-wide recognition. The men who have increased their earning capacities as a direct result of reading it are numbered in the thousands. For example there is E. G. Kinzie of Michigan. "Modern Salesmanship" opened his eyes and he quickly raised his salary from $8 to $100 a week. L. A. Tinnes of Minneapolis made over $600 his first month after he had mastered Salesmanship. And F. L. Real of West Virginia, a former cigar maker, stepped into a position that pays him $4600 a year drawing account alone.

Big Demand for Trained Salesmen

Salesmanship is just like any other profession. It has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet. And through an exclusive feature of the N. S. T. A. System of SALESMANSHIP training—you can acquire the equivalent of actual experience while studying.

City and traveling positions are open in hundreds of lines and for years thousands of employers have called on us to supply them with salesmen. Employment service is free to both employers and members, and thousands have secured positions through this Service.

Free to Every Man

If we were asking two or three dollars a copy for "Modern Salesmanship" you might hesitate. But it is now FREE. We can not urge you too strongly to see for yourself what it can do for you, too. No matter what your opinion is now, "Modern Salesmanship" will give you a new insight into this fascinating and highly-paid profession. Mail the coupon now!

under him had had no effect at all as a persuader to progress. The city fathers had become less assured of tone as one after another of their solvents for balkiness failed. The affair had come to a state of impasse when Prince stepped quietly forward, while I watched fascinated. Approaching the mule with gentle assurance, he insinuated one arm around the stubborn neck. His touch was affectionate. Putting his mouth to the mule's left ear, he said something to the miserable statue. Instantly the creature's rigidity relaxed, and almost blithely the mule stepped forward from the position which for more than an hour he had sullenly maintained. When Prince came back to me, I asked him what he had said to his friend. The negro only laughed, for he never seems to take seriously any of his feats with animals. But his must have been the magic words having the exact wave length of the dull creature's obscure and baffled soul.

FOR many years I had searched in vain for a specimen of the black fox squirrel, a variant in color of the gray. It is in reality a color due to a condition known as melanism. Mentioning to Prince one day my wish, I was surprised to have him say, "I show you one today." Together forthwith we went to the woods. It was mid-March, and the leaves gave the forest an emerald-misty look.

Prince took me up a long watercourse through the woods where grow many tupelos, gums, and redbud maples. Ere we had gone a half mile we had seen gray fox squirrels, big handsome fellows. Each one was in a maple tree. At last my companion pointed to what I should have taken for a spray of dead Spanish moss. It hung almost drifting from among the ruby buds of a maple. It was a fox squirrel, black as ebony.

"How did you know it was here?" I asked.

"He been here las' summer," Prince answered, "and the year befo', when he was a baby. A fox squirrel," he added, "this time of the year will come a mile or mo' to get the redbud."

Woodcraft of this kind Prince gathered during those years when he was a worker of turpentine; and no kind of toil is more exacting in the matter of compelling the worker to traverse almost every foot of the forest. He must literally go from tree to tree. Being a keen and accurate observer, and not only seeing but actually entering into the lives of the children of the wild, he has gathered an astonishing amount of first-hand information about nature, and this knowledge, like all information acquired through experience, has become a part of his character. Many men use their knowledge of nature merely as an intellectual decoration; this negro guides his life by that knowledge and by those ancient laws. Because he does live by those laws, ordinary physical obstacles have for him no substantial existence. Long since he has learned, without any mechanical device, how to annihilate distance.

One afternoon I said to Prince that he and I ought to go deer hunting the next day at daylight. I could see that my request embarrassed him a little. But he said he would join me, adding, "I will be back by then."

Digitized by Google
Original from UNIVERSITY OF IOWA

"Back?" I asked. "Where are you going?"

"I have to step up to Jamestown," he answered.

This place is twenty-three miles from home, and swamp miles, too, over corduroy roads which are usually inundated. Prince walked the forty-six miles, most of them in the dark; and at daylight the following morning was in the plantation back yard before I was up. In fact, what woke me was the joyous yowling of the hounds which announced the arrival of their beloved lord and master. Prince thinks nothing of walking twenty miles to buy a plug of tobacco, a pound of bacon, a sack of flour. And usually in making his journeys he does not follow roads; as short cuts he knows all the animal paths through the forest. When he needs wood, taking his ax he will go to the pine lands, perhaps a mile or more from his cabin, and will return with a massive section of a lightwood log on his shoulder. He does things directly, quietly, in nature's way. When I read stories of negroes who are little more than minstrels, I do not recognize in them blood brothers to my Black Prince. Though superstitious in a piquant way, as all elemental human beings are, he is not afraid of the dark. Moreover, without being able to name a single star, he can guide himself by them; and, lacking starlight, he retains an uncanny sense of direction even in the deepest woods at night. Well I remember the time that he and I, taking an acetylene lamp, went to the forest to try to discover and to count the deer that we could "shine" with the light.

IT WAS late October; the dying year was beautiful only as lovely things departing can be beautiful. It had rained that afternoon; and as we set out on our expedition, a sodden yellow evening with sallow lights was faintly gilding the ruined trees. Pale lilac gleams suffused the fading woods. By the time we had left the inner plantation bounds, night had come down, starless, occult, mysterious. Before we had gone a mile farther, our blazing light had disclosed for us five deer, airy shapes of the fabulous darkness, delicately roaming the forest. I was wearing the lamp as a headlight; and it disclosed to us not only the deer but our own surroundings as well. Prince said he knew where we were, though we were in virgin timber, a long way from any road. On we went, deeper and deeper into the double night of the forest and of the darkness. I heard the muffled joyous gurgling of a stream; the earth deliciously exhaled dewy odors. Other odors there were too, strange and pungent. Suddenly on my arm the hand of my woodsman closed like a vise.

"Cap'n," his soft voice said, "step back this way."

I obeyed, knowing that he had detected something that I had not.

"I smell a rattlesnake," he said; "I think he is in them huckleberry bushes ahead. We must go around him."

It may be that I owed my life to Prince that night; but I doubt if he even remembers what I so vividly recall. I can still feel his hand, hear his voice. It is a voice I infallibly trust. It is a human voice that has never deceived me. Its tones are akin to the tones of nature.

Not far from that patch of bushes that

New Vigor *from* Food Iron

HERE'S a delightful solution to the problem of getting enough food iron into your children's diet. You know how they need it. And how the very foods richest in iron are so seldom palatable.

Food Ferrin is a vitalizing, palatable food. So rich that one tablespoonful gives as much food iron as a whole pound of fresh spinach. Naturally it enriches the blood and makes the children grow. Red lips and rosy cheeks are quickly apparent. By building up the blood, the living forces of the body are built up. The whole body flourishes and every function is improved.

Being a purely vegetable food, the effects of Food Ferrin are always beneficial. Digestion and elimination proceed with normal regularity.

Not only children, but adults benefit from Food Ferrin. Mothers especially need this organic iron. By building up their reserve strength, their dispositions remain sweeter, they enjoy their children so much more.

You will find Food Ferrin at your local Health Food Center—usually the leading grocer—where all of the Battle Creek Sanitarium Health Foods are sold. Start today to learn how delicious health foods can be.

Just write your name and address on the margin of this ad and mail it today for a copy of "*Healthful Living.*" This 60 page illustrated booklet written by a leading nutrition expert, outlines with recipes the famous Battle Creek Diet System.

BATTLE CREEK DIET SYSTEM HEALTH FOODS for Everybody

Food iron makes the whole body flourish and improves its every function.

Corns Vanish
after this amazing liquid

Acts like an anaesthetic
Stops pain in 3 seconds

INSTANTLY and at once, you can wear tight shoes, dance, walk in comfort. Then soon the corn or callus shrivels up and loosens.

You peel it off with your fingers like dead skin. No more dangerous paring.

Professional dancers by the score use this remarkable method. Acts instantly, like a local anaesthetic. Doctors approve it. Removes the whole corn, besides stopping pain at once.

Ask your druggist for "Gets-It." **Satisfaction guaranteed.** Works alike on any corn or callus—old or new, hard or soft.

"GETS-IT" *World's Fastest Way*

Came the dawn

YES, it finally came. Touring last summer, driving late one night trying to make the next town. Loose wire, short circuit, no lights. Box of matches didn't last long. Well, the family finally walked four miles to a farmhouse and I spent the night in the car. Believe me, there's a flashlight in the side pocket of that car NOW. And one that's dependable—an Eveready. Ever ready to help me out in the dark because I keep it primed for action with the best there are—Eveready Batteries. Here's a straight tip to tourists and don't pass it up. Get the flashlight habit.

we wisely avoided, my light began to sputter. Then something behind the glass flared, blinked, and was gone. In vain I tried to rekindle the flame. We were in abysmal darkness, there in the far-off silent woods, inhabited by creatures less appealing than deer. I was as lost as if an airplane had dropped me in the Brazilian wilderness. But I did not have the sense of being lost, for I had with me an infallible guide.

"Do you know where we are, Prince?" I asked.

"Yes, sah, I know."

"Can you find the road?"

"Yes, sah."

"How do you know which way to go?"

"My mind done tell me."

By the expression "my mind" a negro does not mean his thinking capacity, nor yet his knowledge. He seems to mean his prescience. At any rate, in a half-hour we were back in the familiar plantation road. It was not that we had been actually delivered from any special peril, for with daylight we could have found our way; it was rather that Prince demonstrated to me that he had a sense of direction that would function even in the profoundest darkness; and there's always something miraculous in one person's doing what a supposed superior cannot. Here, indeed, is a child of nature. And there is no more pretense in Prince than there is in a good black furrow or in a boulder or in a sunrise.

OF HIM as a spiritual human being, I have no misgivings. I know his heart too well. But most wives are exceedingly dubious concerning the state of their husbands' souls. It is so with Prince's wife. She unburdened herself to me one day.

"Prince is good," she said, in her gentle, compassionate voice, "but he cannot acclaim himself a Christian."

"Why not?" I asked, surprised.

"Because," she said thoughtfully, "he is a deer hunter. With Prince, deer hunting is religion."

But her subdued indictment of her husband was delivered with a faint smile, with a patient delicate tinge of humor, as if the future state of her sinful deer hunter did not seriously alarm her. As a matter of fact, Prince's faith would put to shame the religion of many a supposed pillar of the church. The faith of this humble negro is aboriginal, complete. How often have I heard him say simply, without a trace of professional unction, things like these: "God is good enough to do anything;" "The weather is so dry that I have a doubt mind, but if we trust in God, He will help us;" "God don't take no care of a man if he don't take no account of God;" "Cap'n, we gwine understand everything when we done reach the Promised Land."

About such a human being there is an atmosphere of permanence. He is one of the true inheritors of nature's bounty. When I go home now after all these years and find him there, he impresses me with his changeless unspoiled quality, like that of a sentinel pine, or of the primal pagan night. Much of life is a matter of waiting, and partly for that reason we yearn toward the things in nature which, like mountains and forests, wait with a lordly patience. Surely for the wild mortal heart to await quietly is an illustrious achievement. Prince has the ancient patience of the pioneer.

Digitized by Google Original from UNIVERSITY OF IOWA

Some of the language that Prince uses would not be easily apprehended by the ordinary listener. I have made little attempt in this article to give his tones. They are musical and soft; and in addition to the "gullah" of the Carolina coastal negro, he uses a few words as strange as any ever heard in America. These are of genuine African origin, as their sound will connote. For example, when he says, "Cap'n, I yeddy one madindie in dem jubrocroo," he means that he hears a cottontail rabbit in the gallberry bushes. "De wedder giffie" means that the weather is uncertain. "Machinchie" means small; "bungiewala" means a dragon fly; "bofemba" means a swamp rabbit. It would hardly seem credible, and yet it is true, that Prince used often to say to me, when we were boys, "Let we go hunt dem machinchie bofemba an' dem blue bungiewala."

I OWE to Prince what I hope is a fair understanding of life's deeper values. I hear him say, "When I take a man into my heart, I can't hate him no mo'." I find him in a freezing drizzle, far from home and at dusk, making easy in the lonely wood the bed of an old cow that is sure to die that night, and I know that such a man's religion is a living thing, prompting him to act. I hear him going through the ghostly woods at night, whooping in a voice so melodious that it would set jaded operagoers tingling, and I know that his spirit is wild and free and joyous. To get on into middle life retaining a free spirit is a thrilling accomplishment. To range the wildwoods singing, and with the heart singing, is no light thing; for to do this is to be a child of God.

That I enjoy the companionship of Prince must be apparent from all that I have said; but there are those of my acquaintances who cannot understand what I see in this humble man that so deeply endears him to me. To begin with, he has all the reticences that make comradeship possible. His life refutes the common but abysmal error that to be obscure and lowly is to be gross in word, thought, and act. We are, of course, united by memories of old; we have always loved and understood each other. What better bases for true affection can exist than sympathy and understanding? We belong to alien races. But we are brotherly. As I take it, the truest affection may exist between those who, naturally or adventitiously, are far removed in life's stations. In matters of the heart, all distinctions are impostures; but other distinctions are necessary.

And if a man shall openly doubt the depth of affection that I feel for this modest comrade of mine, I am going to refer him to John Randolph of Roanoke, who, after a long and distinguished career, declared that he knew no deeper and purer human affection than that existing between himself and the negroes on his old Virginia plantation. That I, of a later and a far different day in the South, am sharing his experience is not (as I wish it might be!) a testimony of my spiritual kinship with Randolph, but to the essential humility, downright goodness, unfaltering faithfulness of the heart of the plantation negro, as I have known and loved that type of humanity in Prince.

The World, by Test, Likes Energine Best

FROM Boston to Bombay, from New York to Nagasaki, particular people prefer Energine. Why? Because *you* buy it. *You* test it. *You* like it. You tell somebody else. *He* buys it. *He* tests it. *He* likes it.

For nearly twenty-five years these ever increasing tests have been made by the thousands. By the millions! Now Energine is the world's largest selling brand of cleaning fluid.

Easy to use. Quick to clean. Leaves no clinging odor. No ring! Follow directions on the can. And you'll have no trouble removing dirt and grease spots.

There is only one Energine. Ask for it by name. Be sure you get the genuine—and avoid disappointment.

Large 10 oz. can 35c; 20 oz. family size, 60c. All druggists!

LEAVES NO ODOR

Women-an income of your own!

Gifts, Bridge Prizes, Gay Playthings and Home Decorations

Cabinets, book-shelves, wall plaques, hanging shelves, magazine baskets, lamp bases, lamp shades, table runners, beautiful bits of etched copper, batik drapes, lovable little playthings, picture frames and endless varieties of similar things. Think of the fun of decorating them, and then of having ready buyers for them—*right at home*—at a good profit.

Right at Home

The secret thrill of a new dress or hat. The inner longing for useful and interesting activity. The growing, glowing desire to keep brilliant the youth-giving side of character. Haven't you felt them all? Hasn't every woman? And hasn't the stumbling block always been the same—Money?

Here is the answer to that question—the happy solution that thousands of women have found. It has put new joy into many a woman's heart. And it is so delightfully simple!

No special ability or skill needed

Decorating giftwares! That has always been for people with artistic skill, until M. Gabriel Andre Petit, Art Director of Fireside Industries, developed the simple "3-Step" method. Now the delights of this work are open to every woman who desires a broader, finer, more cultured life—with a good profit in sight. No tedious books. No tiresome, nerve-straining study. No memorizing!

We Show You How

Thousands of women, wishing and hoping, just like you, have found the way to new income through our method. Now they are members of this happy group known as Fireside Industries. Their wishes came true, their hopes realized. They have an income of their own right at home.

Our help to each member is not alone in the decoration of these delightful things but we also help you find ready buyers for them **without canvassing or soliciting**—right at home.

Miss Leah Ramsdell made $350 in 1 week, and the only reason she didn't make more, was that she sold out her stock—had no more to sell. Miss Ramsdell started with Fireside without any special ability, without skill. She has made good in a big way. The same opportunity is offered to you.

Your Art Ability ANALYZED FREE

Here is your opportunity to find out how much talent you have. This simple, scientific test shows your natural sense of design, proportion, color, perspective, etc. It may show you the way to a bigger future—a real career.

Federal Students are Successful

Many Federal School students are making $2,000, $4,000, $5,000 and $6,000 yearly. The Federal Schools is recognized everywhere by employers of artists and by buyers of art work. Big prices are paid for drawings.

Learn Commercial Art at Home

If you like to draw, an almost sure indication of talent, the Federal Course will quickly develop your ability to earn money. Some students earn more than the cost of the course while studying. Many nationally known artists have contributed exclusive, illustrated lessons to the Federal Course. No previous training is needed. You will receive personal, individual criticism on your work.

Send TODAY for Questionnaire!

Just fill out and mail the coupon. There is no cost or obligation to you.

What Do You Hate Most to Pay Out Money For?

FIRST PRIZE

Gee, How I Hate to Buy Fish Bait!

IT JUST gets my goat to have to put out money for fish bait and tackle. When I was a barefoot kid in Florida, the main sport, profession, and business was fishing. No matter which classification a fellow came under, he took it out in fishing. The sport ate his fish or gave 'em to his friends; the professional showed greenhorns how to catch 'em; and the business man caught 'em and sold 'em. Nobody bought any bait and comparatively nothing was spent on tackle; but we got the fish.

I fished in all its branches, and when I felt the need of a change, I fished at night. Sometimes I forgot to say my prayers or wash my feet, but I never neglected to tie a string to my big toe for the first fellow up to yank.

Shrimp, prawn, fiddlers, and live minnows abounded. Bait was so plentiful I often left it in my pockets until its gentle odor attracted my mother's attention. Fish poles grew in every yard, and a dime covered line and assorted hooks.

Later, in Georgia, it was the same. Plenty of worms by the mule trough, woods full of "jacket" nests and young bees, a million crickets under the straw pile, and the branch full of shiners. The swamps were full of canes, and a spool of black flax cost a dime; but there were a hundred yards of it. A nickel still covered the hooks.

Now, to be in style, the proper layout is a couple of fifteen-dollar rods; two twenty-five-dollar reels; several different lines at two dollars per; fifteen dollars' worth of assorted lures in a five-dollar tackle-box; a five-dollar bait bucket full of ten-cent live minnows; two dollars for "jacket" nests, and a dollar for worms.

Not for me! It may take thirty dollars' worth of time, but I'll get my own bait; and, as a concession to the new standard I'll go fifteen cents for tackle.

I don't mind paying out money for anything else I want. I'll even buy fish. But buying expensive bait and tackle spoils the fun for me. R. P. M.

SECOND PRIZE

It Tortures Me to Tip

PAYING out money for tips causes me more mental travail than any other form of disbursement.

All through my adult years my hatred of the bestowing of gratuities has detracted from the savor of well-cooked meals and has caused travel to lose somewhat of its charm. It has made me shrink from visits to the barber and the bootblack, and has reduced the mileage I have ridden in taxicabs to less than one half of what it would have amounted to in the absence of the custom of tipping the driver.

I do not believe that my friends and associates rate me as a penurious person; but if they should suspect the secret suffering I endure when, with seeming nonchalance, I toss a tip to a menial, they would call me the champion tightwad.

I was born in the early eighties and spent my youth in a small town. To myself and my boyish contemporaries five cents was a whole lot of money, and ten cents was a fortune. We engaged in strenuous competition for odd jobs. In those days I would jump at the chance to mow a lawn the size of a tennis court for a nickel, and would cheerfully remove a heavy fall of snow from fifty feet of brick sidewalk for a dime. My outstanding financial achievement of those days was the whitewashing of an immense area of board fence. The quarter that I received for this service gave me a standing that was the envy of all my friends.

My hatred for the custom of tipping has its origin in these incidents of my boyhood. When I give a bootblack a five-cent tip it recalls the boundless acreage of the lawns I mowed in my youth. A ten-cent tip to a hat-check bandit brings back the snow-shoveling and the other labors.

These comparisons enrage me. They do more: they cause me to despise myself for not having sufficient strength of character to defy a custom that I hate so heartily. E. F. M.

THIRD PRIZE

It Hurts Me Most to Pay Interest

WHEN we were first married we went to live on a farm, and the first year we lost a prize animal, not yet paid for. The rest of the time we lived there we were paying for that animal, already dead.

That, exactly, is the way it feels to pay out *interest*. The thing above all others I hate to pay out money for is interest on borrowed money, interest on back debts. Let one of the children have a sudden attack of appendicitis, and the hospital bills pile up, the doctor's fees grow menacing. Well, you say, there are the loan companies. We'll just borrow a hundred to bridge the gap between the amount on check and the amount we must pay. On that hundred, we'll pay three per cent per month, thirty-six dollars per year, for interest."

All our married lives we have been paying somebody interest money, interest that would have paid for Dorothy's music, for Jack's camping trip that he had to give up, for Jean's dancing-school, for painting the house, for screening the porch, for a fireplace!

"It does seem," says the man I get supper for, "as though forty dollars a week could be budgeted to cover daily food and shelter for the six of us."

"Yes; doesn't it!" I reply pleasantly. "Have you counted the interest on the mortgage, and the interest on that note at the bank, and the interest for the loan company, and the interest on the back debts?"

Current expenses are not really so bad. One could manage—or go without. But the dreadful Unforeseens! The calamities! Do all families have two or three complete knock-outs per annum? And then one must borrow. And then there's the interest. M. B. H.

The Advantages of Marrying an Older Man

(*Continued from page 29*)

taken out of the "complaint," and I am much more likely to heed it than I would a scolding, irritated rebuff. Parents might find corrections of their children easier if they adopted this method.

One of the biggest advantages an older man brings to marriage is that he has had time to get over "bunk." Young people do not, and believe in and seriously fight for many things which, years later, they realize were bunk. I remembered a sculptor friend who was staying with us in Italy. We had been talking of marriage and what made it go and what made it fail.

"I ruined my early married life and damaged all the rest of it through my bunk ideas," said the sculptor bitterly. "I—we both—believed in 'freedom.' I was an artist and young, and everyone said domesticity ruins an artist. So I used to go out at night with the other painters, and we'd play around the cafés, and walk the streets half the night; and my young wife—herself a designer—would sit at home waiting for me with a supper she had put all her artistry into; she didn't like cooking, either. I did so want to go home; but, no! I must be firm; what would the other fellows say if I fell!

And so, in the days we should have been living life together and I should have been helping clean and tidy the studio and wash the dishes, I wandered the streets alone, and she sat alone waiting for me. There we were, eating our hearts out with loneliness for each other. Finally, she gave up cooking for me, and I no longer needed the feel of a hearth to come home to. We had learned to do without the intimate companionship which is one of the chief joys of young married life."

Then he turned on me savagely: "And you," he cried, "you! You're just lucky. If you'd married a young man you'd have had the same false ideas! You'd have thought you must leave each other 'free.' Your marriage has saved you ten years of foolishness, and a lifetime of regret."

Besides less "bunk," an older man is likely to have less regard for what other people say and think about one's personal affairs. My maturer husband's independence has buoyed me up, and also helped me to achieve independence of thought and action.

I HAVE just had a striking example of the harm that may come from caring too much for other people's opinions. A young girl-journalist of my acquaintance married, in California, an actor. After working in Hollywood for six months they decided to go to New York. They had written and produced a play together, and worked hard for the movies. Just before starting the husband was stricken with an acute illness which necessitated a quick operation. Due to overwork in Hollywood, his convalescence was slow.

His wife went on East ahead, and after some weeks, when he was still so weak that a ten-minute walk exhausted him,

FAMOUS FEET

© B. & B., 1928

how they're kept free from corns

CLAIRE LUCE'S *Famous Feet*

"Misery loves company. And a corn is misery's best pal, until Blue-jay comes along and breaks up the beautiful friendship." So writes Claire Luce, première danseusé in Ziegfeld's "Follies."

. . .

Million dollar feet cannot afford to take chances with dangerous self-paring . . . Leading stage stars, dancers, and athletes use Blue-jay because it is both safe and sure . . . The medication is "controlled"; you cannot put on too much or too little . . . The relief is immediate, for the velvety plaster relieves shoe-pressure and pain at once . . . The corn usually ends with one plaster, invariably with the second or third . . . . The new Blue-jay with the new style white pad is now at all drug stores ....*For calluses and bunions use Blue-jay Bunion and Callus Plasters.*

Instant relief for eyes irritated by

Sports

When you return from golf, tennis, swimming, motoring or other outdoor activities with eyes that are hot, strained and bloodshot, apply a few drops of cooling, soothing *Murine*. It instantly relieves the tired, burning feeling, and soon ends the bloodshot condition.

Men find *Murine* invaluable for clearing up their eyes in the morning and refreshing them during business. Women use it to impart new beauty to their eyes. A month's supply of this harmless lotion costs only 60c. Get acquainted with its benefits.

Write Murine Co., Dept. 103, Chicago, for FREE books on Eye Beauty and Eye Care

MURINE FOR YOUR EYES

Gives You All these Features

Patented Snap-on Pads—the greatest improvement for beauty of tone — easy to replace, no more cementing. Found only on the Buescher.

Patented Automatic Octave Key, always positive.

Perfect Scale Accuracy; every tone always full, clear and true.

"Greatest Sax"

Harry Dixon Loes, Three Rivers, Mich., wrote: "By the advice of a friend, I bought a Buescher Saxophone. I know now I made the right choice. Its beauty, easy action and latest improvements make it the greatest Sax on the market."

FREE BOOK

Illustrates all the various models, and contains pictures of many famous professionals — also first lesson chart. Send name for copy or ask for circular on any other instrument in which you are interested.

6 Days' Trial in your own home on any Buescher Saxophone, Cornet, Trumpet, Trombone or other instrument.

Buescher Band Instrument Co.
2564 Buescher Block Elkhart, Indiana

she had a theatrical manager wire him an offer and wrote herself, asking, with the tiniest note of impatience (which he detected), whether he was not yet well enough to come. Her friends were all asking to see him, for none of them had met him yet. Where was this young husband of hers, who had done such great work, and whom none of them had even laid eyes on, was their recurrent query. The young wife began to hear doubt in their voices. Her husband, guessing her troubled state, chose to neglect his weakness, accepted the manager's offer and went to her immediately. After a month of strenuous day and night rehearsals, and the restlessness of New York life, he had a bad relapse; and they do not know now whether he will recover sufficiently to work for a very long time.

Cases such as this, where two young people deliberately sacrifice their own welfare for the sake of "what people may say" are not at all rare. I was myself often tempted to do things contrary to our real interest, for the sake of appearances; but my husband's superior independence won.

WITH the greater independence of an older man, usually goes the valuable characteristic of doing things for their own sake, for the sheer pleasure they may bring, and not for the sake of convention or tradition. The older man, who already has an assured place in life, does not have to worry, as so many young husbands do, on "how his little family is figuring out in society." He does not have to impress other people; he can afford to be himself (and so, incidentally, impresses them more; but few young people know that truth). Above all, the family can choose its friends for pure liking; it does not "have to keep up with people in case they may be useful to me later on."

I know a young girl who has artistic tastes and gifts; but she can have very few artists at her house because her husband, a "rising" young lawyer, has to entertain business friends and acquaintances; he cannot afford to let the staid colleagues of his profession suspect that his family is not as theirs are—safe and respectable and willing to tread in the known paths of routine and advancement. And so this girl has to go more and more away from her home to satisfy her tastes, and she and her husband have to take their pleasures more and more apart.

An appreciation of things for their own sake, a recognition of the importance of details, willingness to be tolerant while the partner makes her mistakes, are very useful qualities in a life-companion. They make bearable, even interesting, many of the most ordinary tasks a woman has to undertake. Housekeeping, for instance. And shopping. I have seen many men shopping with their wives, and they usually either look bored (it is masculine not to take an interest in "women's fripperies"); or they are counting the cost, with glances of venom at the saleslady for each new and tempting "creation" she produces.

But when a man is mellow enough to have forgotten personal poses, and to realize that every human manifestation, even if it be only a woman's desire to look nice, has deeper causes than the superficial vanity and frivolity usually ascribed to it, he becomes a very pleasant shopping companion. The philosophy of clothes is too long a subject to go into now; but one can say that clothes not only express the character and personality of their wearer —they may help to bring that personality out.

I was a serious-minded young "intellectual" before I married. I did not care about clothes, said so, and meant it. I had more important matters to think about than what dresses to wear. None of my crowd at college cared how we dressed, and we derided the empty-headed girls who did.

One of the first things my husband did was to take me "window-shopping." On these walks he would point out to me the effect of the different dresses, the ones that were too loud, the ones that were too definite, the ones that brought out flippancy and frivolity rather than dignity and pride, and—his favorite distinction—the ones that would make everyone say, when a woman came into the room, "Look at that dress!" rather than, "What a pretty girl—why, no, it's only her dress!" These ideas, and others, aroused my interest. My husband would put it differently. I have heard him tell people: "Of course she had vanity! Only, she had been brought up to think it 'vain' and wrong to look in a mirror, and so she thought of vanity as sinful, instead of its being one of the excellent basic qualities with which you can train even a child to self-respect and taste, and a woman to beauty."

Whatever his method (and there was some flattery in it, for, after all, we were considering me, however objectively and scientifically), results were pleasant. We went shopping at any time, and when we had nothing to buy we went "window-shopping." My husband hated only to buy when I really needed a certain frock. "If you know what you want, you can't be tempted," he would say. "And then you'll take anything—something that will merely do, instead of the frock that can't be resisted."

Naturally, I learned to like shopping. And I liked the pleasure and surprise on the faces of the women who served us. Three or four curious shop-girls would gather and stare open-mouthed at the unusual remarks they heard; waiting vainly for the usual queries and remonstrances about price, quality, and fashion.

A few years afterward, when I went into one of these shops, the forewoman, recognizing me, hesitatingly asked who was the gentleman who had come in with me some years back? "We all agreed it couldn't be a father or a husband," she said; "they don't ask that kind of questions, nor take that attitude."

HOUSEKEEPING is a rather uninteresting occupation at the best; but if one has to go through all the little worries, the disappointments and heartbreaks, the wearing routine of it, alone, it is a much more unpleasant burden. Many of the minor tragedies of the housewife are like a child's pranks, really comical, and can be so seen later; but at the time they are often more of an unpleasant drama.

The husband who has retired can and quite often does take his share in those burdens. The day after my baby was born, both my Italian maids gave notice.

Name....
Address....

Weary from being up all night, they had got on each other's nerves: the cook was jealous of the maid because she was "with the 'bambino' all the time;" the maid accused the cook of drunkenness because she fell asleep on the kitchen table. A storm in a teacup, of course, but at the time a black calamity to me. I lay back and cried. My husband came in just then, took the maids out, dealt with the trouble, and I heard no more about it.

Another time, when a millionaire, an American well known for her faultless dinner parties, came to lunch, my Italian maid (wishing to put her best foot forward) brought the vegetables on in soap dishes, "Because they were more decorated." I, of course, could have dropped under the table in embarrassment; but my husband, with his greater composure, recognized it for the great joke it was, and the occurrence became an occasion for good will and merriment.

Now, a man can do these things only if he is around; and he can be around only when he is over the necessity of having to make a living and a career. He has the leisure and the freedom to take an interest in details. He can exercise his hobby, instead of having to struggle for existence. His contact with his wife is not made only after he has been plowing his weary brains eight hours a day, and has become nervous and irritable—due to the strain of business life.

Many young husbands, I find, are too tired to talk at all when they get home; many go straight out to parties or shows or dinners, for "change," and so they never get any rest at all. All these misfortunes the "retired" man avoids. He can work when he likes, and he can work at his hobby; he is a satisfied man, and a satisfied man is more likely to be a satisfied husband than a discontented, overtired, irritable man.

If a man has learned from his life's experience at all, he will know that a woman likes to be listened to. He can afford to listen. Having been young once, he probably did a good deal of talking, and it may be assumed has said a good share of what he wanted to say. Someone else can now have a chance.

That is very important for a young woman, and especially a young wife. All her theories of life have to be considered; all the knowledge she has accumulated, all her experiences, she wants to tell, to discuss, to mull over.

Few young husbands like to listen. With their male superiority and their self-confidence to establish, they like to talk. The young wife who gets her chance to talk to the older, wiser, listening male, has a source of happiness in her married life which it is almost impossible to estimate.

BUT it is when the children arrive that I think the young wife finds her investment in an older husband yields the greatest return. If he has had children before, he will know how to avoid some of the worst mistakes parents make. If he has not had children before, what a fascinating field is there for them to explore together. The old father does not know it is "unmanly" for a man to bother with a baby; he does not know that centuries of tradition have made infant-care a woman's job only; he sees in the baby not only a squalling, ugly, red-faced bundle that has to have

Solved at Last!!!

What to do with Old Razor Blades!

DON'T throw them away! For old razor blades are worth *real* money—now that KRISS-KROSS rejuvenates them an amazing way—and gives them the kind of edge you have only *dreamed* about until now. And not only that, it can take a *new* blade right out of a fresh package and increase its sharpness almost 100%!

KRISS-KROSS makes blades *last* astonishingly, too. Ten weeks of slick shaves from a single blade is only a *low* average—while any number of cases are on record where one blade has lasted for 365 keen, cool shaves a year!

SPECIAL OFFER NOW

KRISS-KROSS fits *all blades* except Durham—and to make it easy to test it, we are announcing a special limited offer. Right now we are including FREE a new kind of razor never sold in stores. Adjusts 3 ways and is absolutely unlike anything seen before. Find out about it today. No obligation. Clip coupon below for offer. Mail it now!

AGENTS!

Find out how to make $100 a week and more just showing KRISS-KROSS to men in your locality. Full or spare time. R. S. Hopkins (Mich.) made $20 first day. We show you how. It's easy. Check bottom of coupon for details and generous proposition. Mail it now.

Young men needed by Davey Tree Expert Co.

Interesting, vigorous outdoor work in a growing organization where merit wins advancement. Good starting wages. Permanent positions and a real future for men who make good. Our present field force of Davey Tree Experts cannot meet the increasing demand. So we are selecting now, to enter our employ, a few sturdy, clean young men, thorough Americans, single, between 20 and 30 years old, free to travel, industrious, with good practical education, and able to give good references. Write for qualification blank to serve in place of personal interview. The Davey Tree Expert Co., Inc., 121 Federal Bldg., Kent, Ohio.

physical attentions and that makes a disturbing noise; he sees his own immortality; he sees the "biologically most advanced human being" on earth. He will carry it about, wheel its pram, watch it in the bath, even scald its milk bottles, with the feeling that he is serving, perhaps, a genius—in any case a fellow human being. And he wants to take his share of bringing it up.

Older fathers really want to "get their hands on the baby." I have noticed it again and again. A world-famous old English philosopher wheels the pram with his twin babies about the streets of Cambridge and deals with their needs. A well-known California poet took over the entire care of one of his twin boys, though the mother was more than willing to do all the work. Mr. Milne has made Christopher Robin a classic. I believe the only way for a busy young woman to have all the fun and none of the trouble of babies, and yet not turn them over to hired labor, is to select an old father for them.

At least, that has been my experience. I was working on a book when my baby came, and I did not want to drop it. We were both quite definite in not wanting a nurse. The baby's father became its "nurse," and, to my surprise, a better one than any modern, trained woman. Not knowing the rules, he invented or discovered new ones, which, psychologists have since told me, are good. He taught the baby a sense of humor in its cradle; he taught it to laugh instead of to cry when it was hurt. I was prepared for the child to alter our lives, to make, as some friend told me it would, slaves of us for at least six years. Instead, he has been only a delight; we have traveled, worked, visited, lived exactly the lives we wanted to live, only pleasanter, perhaps, because, using the baby as an excuse, we sought sunny climates and pleasant houses with gardens. I have really had the share that falls to most fathers—all the fun and very little of the work. And as the father did not consider the work "work," there was work for neither parent.

Of course I do not counsel against marrying young men. That, no doubt, is a deeply rooted practice that will always continue. But to the modern young woman, anxious to combine marriage and career, have children and grow up with them, and enjoy all sides of life without having to sacrifice any of them, I would give without hesitation the advice: "Don't be afraid to marry an older man—if he has not stopped growing."

A VOICE out of the air in the wee small hours of the morning led William S. Dutton to interview Walter S. Gifford, president of the American Telephone and Telegraph Company, on the new trend in industry. If you are at all pessimistic about the future of industry, and wish to remain in that frame of mind, don't read what Gifford has to say, or you will find yourself regarding the industrial outlook with the same wonderful optimism that he has. However, let us say that Gifford's optimism is not based on flights of fancy, but on knowledge, vision, and keen business judgment.

The Great Blue River in the Sea

(*Continued from page 24*)

steeper and at Hatteras it is a matter of only a few miles from the shoals to a mile-deep bottom.

After leaving Hatteras the Gulf Stream parts company with the one-hundred-fathom line, for its set now is across the ocean. Opposite Norfolk the stream is about 85 miles off shore; opposite Atlantic City, about 120 miles; opposite New York, 200 miles or more. At this stage it is being forced steadily to the eastward by the prevailing winds and the rotation of the earth. It keeps its identity as a consistent drift until about in the neighborhood of the Azores, where it divides into three forks.

One of these branches flows northward in the direction of the Arctic. The middle one flows toward Europe. The third fork bends southward, around the Azores, washes the Madeira and Canary islands, is swept by the northeast trade winds toward the equator, joins the equatorial current setting westward toward South America, and so enters the Caribbean, the Gulf of Mexico, and finally becomes part of the Gulf Stream again. It has been computed that the time required to make this circuit around the Atlantic and through the Gulf is about three years.

Has anyone ever drifted around the circuit and timed it?

No; the Hydrographic Office estimates the time from the records it has of the velocity of the current at different points. It gets some light on the subject too from the movement of derelicts and the drift of bottle papers.

Bottle papers are printed forms which the Hydrographic Office supplies to all vessels leaving American ports. The hydrographer asks the ship's officers to coöperate in the study of ocean currents by using one of these forms whenever they have opportunity—write on it their position at sea and the date, seal the paper in an empty bottle, and throw it overboard. The paper has printed directions in seven languages asking the finder to note the date and place at which the bottle is picked up and mail the paper to the Hydrographic Office, or deliver it to the nearest United States consul.

More than 10,000 bottle papers, picked up on all the shores of the earth, are in the archives of the Hydrographic Office, and it is receiving additions on an average of about three a day.

The longest recorded drift of a bottle paper is from a point off Cape Horn, where a British ship dropped the bottle on May 31, 1909, to the coast of New Zealand, where it was picked up on May 19, 1912. As the current around Cape Horn sets eastward, this bottle must have drifted across the South Atlantic, around the Cape of Good Hope, and through the current of the Indian Ocean, past Australia

to New Zealand—a distance of 10,250 miles. Over that route its average rate was nine and one-half miles a day.

More spectacular than drift bottles are abandoned ships, which are frequently found in the Gulf Stream. The Coast Guard is continually patrolling the coastwise shipping lanes in search of derelicts. Those that it finds it either tries to tow into port or dynamites. The Hydrographic Office posts the position and direction of derelicts for the guidance of mariners, and incidentally its nautical engineers study the movements of these wanderers for what they tell of the behavior of currents.

In October, 1923, the schooner *Governor Parr* was wrecked in a gale off the New England coast, and her crew were rescued by a passing ship. The schooner, with a full cargo of 1,500,000 feet of lumber, was carried by the current right out into the most thickly-traveled part of the Atlantic, and was a serious danger to navigation.

In January a Coast Guard cutter found her and started to tow her into Halifax, but on account of heavy weather and lack of fuel, had to abandon her. The derelict meandered across the Atlantic, was sighted by various ships, and finally in August seamen from a British vessel boarded her off the Portuguese coast and set her on fire. But waterlogged lumber does not make good fuel, and a few weeks later the *Parr* was seen farther to the southward. Later she was reported near the Canary Islands; and finally in October, 1924, near Cape Juby, Africa, where she was most likely cast ashore. In a little over one year she had made about half the circuit of the North Atlantic.

The longest known drift of a derelict, however, is the record held by the *Fannie E. Wolston*, an American three-masted schooner, which was abandoned off Cape Hatteras on October 15, 1891. She traveled back and forth across the western half of the Atlantic for three years and six days, sometimes in the grip of the Gulf Stream, other times blown aside by winds or caught by eddies and cross currents. She was reported to the Hydrographic Office forty-six times from different parts of the ocean. She was last sighted on October 21, 1894, on the edge of the Gulf Stream opposite Maine, and probably broke up during a winter gale.

Neither an ordinary drift bottle nor a derelict gives accurate indication of the movement of a current, however, because as long as any part of a floating object projects above water it offers wind resistance. Sometimes a wind blows against a current, sometimes it is across a current—and it is the vagaries of the wind, in addition to the tricks of rips and counter currents, that make so many tracks of derelicts appear as a series of zigzags. Experiments are being made with specially-constructed bottles, which are ballasted to keep the bottle just below the surface of the sea.

The drift in the frozen Arctic Ocean is as irresistible as the flow of the Gulf Stream. This was accidentally demonstrated by the American ship *Jeannette*. The *Jeannette* entered the Arctic from the Pacific Ocean through Alaskan waters and was herself caught in the ice pack and crushed north of Siberia on June 13, 1881. Part of the wreckage floated and was found in the North Atlantic in 1884,

A Bigger Job— *and You're the Man*

Are you hunting a bigger job, or does the bigger job hunt you? Why waste priceless years at routine work, when you can acquire at home in a comparatively few months the specialized knowledge for which big firms pay big money? more than 4,000 miles from the point where it was wrecked.

From this it was reasoned that if the *Jeannette* had been strong enough to resist the ice the current would have carried her across the polar ocean, into the Atlantic. Dr. Fridtjof Nansen decided to build such a vessel and trust it to the current, and the result was his remarkable expedition in the *Fram*.

The *Fram*, which was powerfully built and reinforced and so shaped as to ride the ice when necessary, entered the Arctic Ocean off the New Siberia Islands (not far from where the *Jeannette* was wrecked) on September 20, 1893. As was expected, the pressure of the ice lifted her, and she drifted the entire journey on an even keel high above the water, emerging on the opposite side of the Arctic, off Spitsbergen, in August, 1896. This journey of nearly three years was performed without loss of life and without damage to the ship, and proved convincingly that a powerful current flows across the polar ocean from the direction of the Pacific into the Atlantic.

PERHAPS the most surprising fact about ocean currents is their capacity for carrying heat long distances. Somewhere in the Atlantic, about opposite New England, the Gulf Stream meets the cold Arctic waters of the Labrador Current. In August, after the Arctic ice has been melting all summer, this cold current is strong enough to force the northern edge of the Gulf Stream many miles southward, but it does not break into and mingle with the warm stream.

Captain DeCarteret of the cable ship *Minia* reported an interesting comparison of temperature in these waters. His ship was south of the Newfoundland fishing banks and about opposite Boston when the captain saw a wall of dense fog to the southeast, and suspected that it was caused by the warm, moist air of the Gulf Stream suddenly meeting the cold air of the Labrador Current. "As the ship's bow was about to enter the fog," reported Captain DeCarteret, "the sea temperature was thirty-five degrees, and as her stern entered it the temperature was fifty-six degrees. As the fog was too dense to see anything, I returned to the cold water and repeated the tests with the same results."

This was on April 30, when icebergs are beginning to drift south with the Labrador Current, and it seems remarkable that within so short a distance as the length of a ship the water should show a difference of twenty-one degrees in temperature. No wonder icebergs quickly melt as soon as they cross from their native waters into the stream! The wall of cold water that confines the Gulf Stream is as real as a levee.

Of course there is some mixing of waters. There must be some mixing, caused by differences in the densities of the waters, else the cold water would never get warmed, for water is one of the poorest conductors of heat known. The oceanographer Wegemann has illustrated this in a striking way. Assume, he says, a section of the ocean 5,000 meters deep with the water all at uniform temperature of 32 degrees. Suppose that the surface water is then brought in contact with a constant heat of 86 degrees, and that there is no motion in the water, no movement of its particles in circulation, no forces at work to distribute the heat other than the forces of conduction. Perhaps you may think that it might require some days or weeks or even months for this surface heat of 86 degrees to spread by conduction to the under waters. Wegemann says that after 100 years the water down at 100 meters would still be at 32 degrees, and after 1,000 years it would have heated only to 45 degrees at that depth. You can understand from this that the transfer of heat by conduction is practically negligible in the sea.

THE fact is further illustrated by the low temperatures which prevail in the deeps right under the heated waters of the tropics. At the equator, for example, where the surface water is 80 degrees and warmer, the water 800 fathoms (4,800 feet) below it is 37 degrees, and at 2,000 fathoms (12,000 feet) the usual temperature is 35 degrees. Cold water is heavier than warm water, because it is less expanded, and its natural tendency is to sink. There is probably a seepage of cold Arctic water under the Gulf Stream.

Nature could not select a better heating medium than water. It requires thirty times as long to heat water one degree as it does to heat the same quantity of any other liquid, and its rate of cooling is equally slow. The water of the Gulf is absorbing heat for months as it drifts under a tropic sun, and when it pours into the Atlantic it carries a full cargo of heat units. Some of this heat warms the air above the Gulf Stream, some of it is lost in the incidental mixing of waters, but proportionately these losses are slight. It has been estimated that the warm drift across the Atlantic carries as much heat to northern Europe as the entire Arctic regions obtain from the sun.

A curious by-product of the great circular drift of waters across and around the North Atlantic is the Sargasso Sea, so named by Christopher Columbus because of its floating seaweed. It lies southeast of the Bermuda Islands, between the twenty-fifth and thirtieth degrees of north latitude and the thirty-eighth and sixtieth degrees of west longitude, an area about as large as the Gulf of Mexico. Harrowing stories have been printed of this sea meadow, where it is said becalmed ships have been caught, to rot in the entangling tropic growth, entombed amid slimy sea creatures and the skeletons of other dead ships—all of which details, men in the Hydrographic Office assured me, are highly imaginative.

"No mariner fears the Sargasso Sea. Hundreds of ships pass through it every month, and I never heard of a ship being caught by the weeds or becoming entombed there," said a nautical engineer. "The Sargasso Sea is simply a huge slow-moving whirlpool, created by the currents which circle around it. The seaweed is dead Gulf weed, brought by the waters of the Gulf Stream from the tropics, and it is continually dropping to the bottom of the ocean. Derelicts occasionally are swung by the currents into the Sargasso Sea, perhaps drift bottles are floating around in the center of its pool, and there is other wreckage—driftwood and the like. But the place is neither a death trap nor a graveyard, nor anything dangerous."

The Gulf Stream has been called the mother of gales, but this view is not now held by ocean meteorologists. "It is a

BOYS! Here's an opportunity for you to earn your own spending money each week and get prizes besides. Represent *The American Magazine, Woman's Home Companion*, and *Collier's, The National Weekly*, in your town. Write to-night.
JIM THAYER The Crowell Publishing Co. Dept. A-12, Springfield, Ohio

favorite path for gales," one explained, "and there is a tendency for hurricanes to travel up the Gulf Stream if they happen to touch its course. A cyclonic storm requires warm vapor to keep it going, and the Gulf Stream provides plenty of this to feed the hurricanes, but it does not create them. A great deal of fog and rain is caused by the warm vapors meeting the cold air from the Arctic. Waterspouts are common in the Gulf Stream region—I have seen as many as nine twisting and bending in its waters at the same time. They are mostly spray and vapor."

Some years ago an engineer proposed the construction of a jetty from Newfoundland eastward into the Atlantic for two hundred miles, to serve as a dike against the cold waters of the Labrador Current. This structure—which he estimated would cost about $190,000,000—would, he argued, shield the east coast of the United States against the chilling Arctic waters and protect the Gulf Stream against premature cooling. Thus both America and Europe would be served. The project was introduced in Congress, but nothing came of it.

Another improvement, suggested to the Hydrographic Office by a gentleman in Belgium, is that the Government blast out the chain of Aleutian Islands which stretches from the Alaska Peninsula westward almost to Asia. By removing these barriers, he reasoned, an open channel would be provided through which the warm waters of the Japanese Current would pass northward, to thaw out the icebergs and glaciers and moderate the climate of the Arctic Seas. The proponent of this scheme did not give any estimate of the cost and method of blowing up the islands.

A THING to remember is that ocean currents represent a balance of natural forces. Every great current has its counter current, the movement of waters from the tropics is matched by reciprocal movements from the poles. The Labrador Current is perhaps as important in the equilibrium of nature, which produces our climate, as the Gulf Stream is.

Several years ago a sea captain came into New York with the amazing yarn that he had sailed for miles off the New Jersey coast through a sea floating with dead fish. The Bureau of Fisheries investigated and found that the dead fish were all of the species known as tile fish, a bottom dweller accustomed to warm water. Further investigation showed that the Gulf Stream was "off soundings" in that neighborhood. Its course had shifted only slightly but enough to leave the ocean shelf inhabited by this tropical community out in cold water, and the result was a killing winter under seas. Since then the Gulf Stream has returned to its former course, and at last accounts the tile fish were reëstablished in their old haunts.

Thus, ocean currents affect life in the sea as well as on land. Both Humboldt and Sir John Herschel said that ocean circulation is the greatest problem of terrestrial physics. Certainly it is the vastest physical force in operation on the planet. The late Admiral John E. Pillsbury, whose life study was the Gulf Stream, was not exaggerating when he called it "the grandest and most mighty of any terrestrial phenomena."

That's *One* Reason Why I Want 100 Men who wish to TRIPLE THEIR INCOME

FIVE hundred million dollars' annual fire loss, 17,000 lives and the mortal dread of fire that's in everybody are reasons why we must get men in our open territory to take orders and supervise installation of *Fyr-Fyters*.

Selling *Fyr-Fyters* is comparatively easy, so powerful and convincing is the story of fire losses. Previous selling experience although desirable is unnecessary. We train our men to become fire-prevention experts. Earnings start immediately, no investment in stock or territorial rights asked.

Big Earnings Possible

Payne averaged $20.77 a day for 217 days; Graham and Mendenhall each averaged $100 a week working only part time; De Pries made $500 one week; Hill sold 1400 *Fyr-Fyters* in one sale. In our records are many other instances of earnings of $50 to $60 a day and incomes of $3600 to $7200 a year by *Fyr-Fyter* men.

An Amazing Story for You to Tell

Read your daily paper, listen to the fire alarms, ask your local fire chief, notice the inflammable material everywhere and judge for yourself the need of *Fyr-Fyters* and why we are able to make this offer.

Fyr-Fyters are used by Standard Oil, Ford Motor Co., International Harvester and many other of the largest concerns in the world.

Factories, stores, garages, auto owners, warehouses, schools, hospitals, farmers, private homes and other places use thousands of *Fyr-Fyters*. Your earnings as a *Fyr-Fyter* Representative are only limited by your ambition and desire to work.

This Opportunity is for You

Now we are ready to appoint 100 more men. It is your opportunity for $5000 or more, easily and quickly, from your first year's effort—$100 a week to start. Write immediately for full details of our offer.

FYR-FYTER CO.
1-J Fyr-Fyter Bldg. Dayton, Ohio

J. A. Ross, Los Angeles writes, "You led me from the depths of privation to the heights of prosperity

in five years and today, earning from $8000.00 to $10,000.00 a year, I would say to any man seeking both prosperity and success

GRASP THE OPPORTUNITY THAT "PROCESS" OFFERS WORKERS."

We offer desirable positions to full or part time representatives in every town taking orders for our nationally known lines of Personal and Business Christmas Cards, Commercial and Social Stationery, etc. No experience necessary, as we tell you to whom and how to sell. We furnish samples and everything necessary free, also pay liberal commission in cash every day together with liberal monthly bonus to producers. Write me personally for samples and full details.

GIVE YOUR LOVELY GOWNS A CHANCE!

REALLY, do you think it is fair for you to expect even the prettiest of garments to look well on you if you are hobbling along, flinching, suffering with foot aches?

THE ARCH PRESERVER SHOE

is helping one and a half million women to the fullest enjoyment of their pretty clothes. It is giving them the full activity of youth; it is giving them smartness and charm.

You have active, vigorous feet when you wear the Paris-New York styled Arch Preserver Shoe, because this shoe has a special concealed arch bridge that prevents sagging, a flat inner sole that prevents pinching, and a metatarsal support that prevents distortion—patented features found in no other shoe.

Your feet are happy, and they carry you along buoyantly, eagerly—to the fullest enjoyment in work and the keenest delight in fun.

Every woman should read the interesting booklet, "Feet—the New Source of Youth and Smartness." Send for it and name of dealer who has the latest styles in Arch Preserver Shoes for you and your children.

The Verona

Made for women and misses by only The Selby Shoe Co., Portsmouth, O., for men and boys by only E. T. Wright & Co., Inc., Rockland, Mass.

Getting Along with People—That's Fletcher's Job

(*Continued from page 44*)

learn, one way or another, about getting along with my fellows.

"My first principle is to know where my hat is all the time, and not to be afraid to put it on my head. The Western Union has a good slogan: 'Don't write, telegraph.' Mine is: 'Don't write, don't telegraph, go.'"

"That's a good idea for getting along yourself," I ventured.

"It is a better idea," he said, "for getting along with others. How can you get a fellow to like you if he doesn't see you, hear your voice, shake your hand, find out whether or not you are a regular fellow. I may not have much of a personality, but at least it's better than a postage stamp!

"Suppose I had landed that first office by correspondence, I'd have missed a chance to renew old times and associations and to recall my homely face to Mr. Roosevelt's attention."

As a matter of fact, Fletcher is not hard to look at or difficult to recall. Fine, sun-hardened face, rangy shoulders, slim waist line. The soldier's straightness. The athlete's lift. The business man's manner. The statesman's head. A big pink-and-gray man who insists he is fifty-four and looks as if he were at least ten years his own junior.

"I could give you many other examples," he said (and he did before he was through), "of how that first principle has worked in my case. But let's go on now to Number 2: *I not only go, but I go alone.* Socially, I am gregarious enough. But when it comes to business, I never hunt in pairs. Some men are born plumbers. They always take their helper with them. I don't. I carry my own tools. And I never talk to the other fellow if he has his helper with him—or even an innocent bystander.

"Take the case of Billy Loeb. I was glad enough to go with him to see the President. I couldn't have got in without him. But I never could have got anywhere with Roosevelt if I had tried to talk to him with Loeb standing by. I can't explain it wholly. But a third person at a conference between two people, even if he is silent and not unfriendly, comes in between like an invisible film."

THESE two principles of Fletcher's—*going himself* and *going alone*—were responsible for his becoming a Rough Rider in the first place, and also for laying the foundation of friendship and association which made his later relations with Roosevelt natural and easy. This was the situation: Wood was in San Antonio with his troopers. T. R. was in Washington, rarin' to go. Both men had announced that the regiment was full up. Fletcher was in Chambersburg working as a court stenographer. But he couldn't hear the witnesses for the rumble of the guns.

So one night he jumped the sleeper for Washington. Four hours later, Fletcher found himself lined up with forty-nine others in a big waiting-room. On the stroke of eleven, Roosevelt sprang into the room, grabbed the first applicant by his two hands, assured him that he was just the kind of fellow he would love to have in his regiment, but that orders were orders, the regiment was full—and, to make a long story short, this was the way out. In thirty seconds, he was telling the same story to number two!

"I was half way down the line," the Ambassador told me, with a smile for the recollection, "and I said to myself, 'Henry, this will never do. First thing you know, you'll be out in the hall.' So I thought hard while the next three men were getting theirs and then, well, I came to the conclusion that the only chance I had of getting anywhere with the Colonel was to move to the far end of the line."

When Roosevelt got to Henry, Henry had him all to himself—and that night Henry went to San Antonio.

"That story isn't important," said Fletcher modestly, "except as it shows the value of the personal equation and an undisturbed opportunity to use it.

"The incident in the White House is a more inclusive thing, because it involves several other principles. For instance, what to do about people who might influence the man with whom you are eager to get along. If I had offended Cortelyou, I might have had an enemy for life—and a powerful one too. If I had neglected Loeb, I shouldn't have had a friend in time of need. *Getting along with one person often involves getting along with a good many others:* the person's wife, his secretary, his telephone girl, his office boy. I think I might sum up my third principle in the adage: 'Love him, love his office boy.'

"NOW, as it happens, I am on pretty good terms with Mussolini." (Anyone who has seen and heard the exchange of compliments between the Ambassador and the Duce in the Mussolini movietone knows the truth of that remark!) "But it would never have done to go over the heads of some of his subordinates; for instance, in the matter of debts. Or any other matter, if it can be helped—and that goes for Rome, or New York, or Chambersburg. Subordinates are as important in a way as their chief. You may go over their heads successfully *once*. But next time, and a hundred other times, when you aren't looking, they'll go over and get yours.

"I wasn't ready for the President that first time," the Ambassador continued. "I would never think of rushing in like that now. I would put in my year's study first. When I first went to Rome the dean of the diplomatic corps was a fine old chap named Barrère. He had been there ever since Cæsar and Brutus had their little tiff, and he knew everything and everybody, from Marcus Aurelius to Mussolini. So I used to go down to his place every night I could get off and sit and smoke with him, until I got the whole picture of the situation as he saw it. Then, I felt strong enough to take the British Ambassador on at golf! In short, *Principle No. 4 is preparedness.*"

Fletcher might have added that he

Digitized by Google Original from UNIVERSITY OF IOWA

believes in extending the advantages of his preparedness principle to his employers; that he keeps his bosses in Washington so well informed that President Coolidge knows everything a certain Italian stateman says—allowing for the difference in time—several hours before he says it!

Fletcher's farsighted "preparedness" in studying Spanish before he applied for a job in a Spanish-speaking country was rewarded many years later on the evening of his first day as American Minister to Chili. Relations between the two countries had passed the breaking point. The previous American Minister had actually been withdrawn. Fletcher was finally dispatched as a forlorn hope in the effort to prevent war.

He knew only one man in the city of Santiago, the envoy from Brazil, who had served with him in Portugal earlier in his career, and with whom he had long since learned to get along. The Brazilian proved a good friend, and volunteered to take him around to the leading club and introduce him to the business men.

One by one, the principal citizens of Chili were hauled up and somewhat reluctantly introduced to the American envoy, until one man, franker than the rest, stated that he was glad to shake hands with Mr. Fletcher as a private individual, but not as a representative of the United States. Then, before the new Minister could reply, he turned around to his friends and said in a Spanish aside: 'As for his country, I wouldn't buy a shoe-string from her.'

Until now, Fletcher had not said a word. But this was his opportunity. Turning to the company and addressing them in perfect Spanish, he said: "Gentlemen, I see that my mission is already a failure. One of the chief objects of diplomacy in these days is to create better trade relations between sister nations. But what can I do? Here, on the very first day of my arrival, I find that the shoe-string market is all shot to pieces!"

The surprise of being addressed in their own tongue, combined with the good nature and tolerance of this retort, so worked on the minds of these susceptible Latins that they burst into hearty laughter at the expense of their own countryman, and welcomed their American guest into the innermost circles of their club life.

In the end, the man who had made the slurring remark became one of the American Minister's best friends and supporters, and the Chilean Government, controlled to a large extent by the members of that particular group of Santiago business men, settled at Fletcher's behest all of the matters over which the nations had been so long quarreling. No such result might ever have been obtained if Fletcher had not been prepared for those men with his Spanish language and his American wit.

"WHEN I came back to T. R. that time after my year's work," the Ambassador continued, "I had something to offer him. That's one advantage of preparedness in getting along with people. You find out something you can do for them, and then it is easier to ask them to do something for you."

I asked him if waiting a year didn't require a bit more patience than the average man possesses.

"Perfect!" . . . . *says the smooth salesman*

Clothes settle to your figure and lose their shape, unless tailored to your attitude... your posture . . . by this improved method.

BUT, how will it look a few weeks later?

ALMOST any suit looks good in the clothes shop mirror. But how does it look after you have worn it for a few weeks—when the shoulders settle, the arm holes draw and the lapels pop open like the top of a valise?

After serving as personal tailors to millions of men, Ed. V. Price & Company has learned the answer. It takes more than good style and fine fabric to make a perfect-fitting, correctly balanced suit. *It requires more than tailoring to your measure.*

We all have our peculiarities. Clothes must be fitted to your "attitude" . . . your posture . . . so you will not pull them out of shape as you wear them.

Ed. V. Price & Company uses an exclusive Attitude Method of tailoring which insures splendid style and perfect fit as long as a suit lasts.

Only our great volume of business makes it possible to quote such low prices. Our $35 suits would cost you $55 to $75, if we cut only 25 to 50 suits a day.

If you want the utmost in satisfaction, in fit, in smart style, and in your choice of exclusive imported and domestic woolens, send us the coupon below.

That unruly collar—a common fault of hit-or-miss fitting. What a difference when it *always* sits snug at the neck!

Another tell-tale mark of poor fit. Lapels roll gracefully only when the coat has been skilfully draped to your posture.

Only when they are cut expressly for the wearer can you be sure the trousers will hang correctly and fit comfortably.

Padding of Shoulders will not prevent underarm sagging of a poorly fitted coat. It must be cut and draped to fit the shoulder slope.

Safeguard Your Property!

Protect your home and buildings from loss and damage by fire, lightning and weather. Metal makes the safest and most satisfactory roof. But there is a great difference in sheet metals. Make sure that you are supplied

Apollo
Galvanized
Steel Sheets
for Better Sheet Metal Work

Also made with KEYSTONE Copper Steel base, the alloy which gives maximum rust-resistance.

APOLLO-KEYSTONE Copper Steel Sheets are the highest quality sheets manufactured for roofing and siding, gutters, spouting, ventilators, and building construction purposes. KEYSTONE Copper Steel also excels for tanks, flumes, culverts, and similar uses, where long life and resistance to corrosion are important factors. Look for the KEYSTONE in trade mark.

For tin roofs for residences and public buildings, use Keystone Copper Steel Roofing Tin Plates.

This Company is the oldest and largest manufacturer of a complete line of Black and Galvanized Sheets, Full Finished Sheets, Automobile Sheets, and Special Sheets for all known uses; also Tin and Terne Plates adapted to every requirement. Sold by leading metal merchants. Write for ROOFING TIN AND ANTI-CORROSIVE METAL booklets—they will prove of interest to you.

AMERICAN SHEET AND TIN PLATE COMPANY
General Offices: Frick Building, Pittsburgh, Pa.

AMERICAN SHEET STEEL

Products of QUALITY and Service!

"I don't think so," he replied. "We wait a year for a good many other things; Christmas, for instance; and a new straw hat. Why shouldn't we wait a year for the right time to perform an important act.

"We all have to get along with people who possess idiosyncrasies which must be studied and met," Fletcher went on. "And that leads us up to my *fifth principle: 'Know thyself; but know the other fellow, too.'*

"I have a huge respect for the other fellow. He isn't always right. If he was, there wouldn't have to be any diplomats. But his method, if I can use it, is always better than my own. In my business, I can seldom do what the other fellow wants; but I can often do what *I* want *his way*. It is so much easier to get along with anyone if you can fit into his formula instead of trying to get him to fit into yours.

"Mr. Bryan, as you remember, was very much interested in putting through a series of peace treaties, the Bryan Treaties. He had not communicated with me in regard to the matter; but one day, when I was in Chili, the foreign office called me up and told me they had received a draft of the proposed agreement, with request that they sign and return it. I went right over, read the treaty, told them that it seemed all right to me, and asked why they didn't sign it as Mr. Bryan requested. They hemmed and hawed a bit, and then admitted that their only objection was to one clause, which would submit to arbitration their long-standing dispute with Peru.

"I TOOK the treaty home, studied it carefully, and found that it would be possible, by one slight change, to make the treaty acceptable to Chili without weakening it so far as the United States was concerned. The change was the insertion of the word 'future' before the word 'dispute.' I immediately cabled Washington asking for a leave of absence. My request was granted. And two weeks later, I walked into Mr. Bryan's office, explained the change to him, and fixed up the treaty to the satisfaction of both parties."

"Going all the way from Chili to Washington to see your man was sticking to your first principle with a vengeance," I ventured.

"Mr. Bryan was a stubborn man," he answered. "I could never have handled him at long-distance. I didn't know him very well, and I believe in knowing my boss as well as my competitors. Besides, that experience taught me that the time and place of a conversation is almost as important as the subject matter."

I knew what he meant. Many stories have been told as to why the Wilson Administration retained Fletcher in Chili—and promoted him—in defiance of the established custom that to the victors belong the diplomatic spoils. The real reason was that he demonstrated in his handling of this treaty matter his ability to get along with everybody concerned—including his new boss.

"How do we stand now on principles?" I asked. "Have we five or six?"

He counted them off on his fingers.

"Five, I think, including preparedness and knowing the other fellow as well as you know yourself. And I'll give you a sixth: *That the man you are dealing with is always more important than the deal you are trying to make with him.*"

"Is that so," I said, "even in big things?"

"Especially in big things. Everybody knows that a contract is no better than the man who makes it. Signing an agreement doesn't do much. It's carrying it out that counts. And it's the man that must do that. It's the man that is important every time. For one thing, you may have to deal with him again.

"I HAVE worked for a good many bosses—five Presidents and nobody knows how many Secretaries of State. I have done my best for them, and I have tried to make my best so good that it will be valued for itself alone. But in my heart I am proudest of having worked with all of them without loss of liking or respect on either side.

"About the men with whom I have been crossing wits throughout all these years, my competitors in the diplomacy business, I feel much the same way. I have fought with them all. But I like to feel that I can shake hands with them all today."

I was reminded, as he spoke, of the last session of that rather acrimonious conference at Havana. So-and-so, according to dispatches, made a speech. So-and-so replied. So-and-so-was photographed with So-and-so. So-and-so and So-and-so and So-and-so were lost in the crowd. But "Ambassador Fletcher was busy for a full half-hour shaking hands with the assembled delegates."

"I am not a glad-hander," he laughed. "I don't shake hands with anybody who doesn't want to shake hands with me. But I do try to make people want to. I do try to create a permanent feeling of personal liking which lasts after the temporary task is done. I seek, and usually find—you'd be surprised how easy it is to find—a social basis quite apart from the business in hand.

"Most men play golf. All men eat. I do both. And I usually do them in the company of men with whom I am doing business. I can say a great deal more to a man across a desk if I have spent an evening talking with him across a dining table. Perhaps I can sum up my feeling in a single sentence: I don't take my business home with me, but I do take home my business friends."

ARE WE EDUCATING ourselves so that when we have leisure we shall know how to use it? That is the question John Erskine asks next month in his article, "What Education Means to Me." The trouble with American education, as this famous educator and novelist sees it, is that, although it prepares us for success by telling us how to reach it, it rarely shows us what to do with it. The country is full of men and women at mental loose ends. Erskine shows how self-education can prevent such a distressing situation, and how every one of us can make his time count so that he will live to the fullest extent possible, up to the very end.

Go Tell 'em to the Trees

(*Continued from page 25*)

brooding, as many folks would have done, she went out and walked. Soon she began seeing things she did not know existed, and she became interested in the world around her. One day she came across the nest of one of the warblers, a fairy casket holding four exquisitely beautiful eggs, like pink-flecked pearls. She knew absolutely nothing about birds; but the next day she bought a bird book, forgot herself and her troubles and the doctor's doleful prediction, and spent the happiest months of her life hunting birds' nests.

At the end of a year she called on her physician and told him she was too busy with her hobby to confirm his diagnosis, and that she did not believe he knew his business anyhow.

Today she is supporting herself by writing about the wonders of bird life. She not only has cured herself but she is giving pleasure to those who never had the chance to neighbor with the feathered folks.

Many have found the Elixir of Youth—or something just as good—while collecting butterflies, Indian arrow heads, rare beetles, orchids, and the like. But, remember this: No one ever found his lost youth indoors!

Recently I read of a successful banker who decided to retire at the age of sixty-eight. His friends all predicted that he would not last long after giving up regular business and regular hours. But he fooled them. He not only lived, but he grew stronger as he tramped through swamps, and over mountains in the pursuit of his new-found hobby—collecting orchids. Now he looks ten years younger.

MANY a man takes his gun or rod, and says he is going hunting or fishing. Often, if you knew the true urge that sends him to the woods or streams, you would find that it is the longing to get away from himself, or to still some hidden grief.

There comes a time in all our lives when we need to take stock of ourselves—to see ourselves stripped of all sham and pretense. There is no better place for this mental inventory than in the solitude of the everlasting hills, or in the silence of the forest. In such surroundings, we often find that which brings healing to wounded hearts, and strength to weary souls. Of course, when sorrow or discouragement comes you can shut yourself in your room; darken the windows; chink up the cracks so that no sound can reach you. But this is not the kind of solitude you need; it will do you more harm than good, and leave you morbid and depressed.

Many have found a new interest in life, to say nothing of the peace for which we all yearn, by getting close to the heart of nature. Many a woman has forgotten her troubles while working with her flowers. I once had a neighbor who probably loves her flowers more than anything else, except her friends. It was a common thing to see her working in her garden. But when we saw her bending over a pansy bed much longer than was necessary to

Sun-scorched?

This will relieve it

WHEN your skin gets hot and sun-scorched—smooth in Hinds Honey & Almond Cream. It will quickly relieve, "take out the heat," make your skin soft and fresh again. Hinds Cream has always done that.

But here's good news—Hinds Cream also *prevents* sun-scorch. The trick is to pat on Hinds Cream and powder *before* going out into the sun. Then your skin won't sun-scorch. It can't. Because Hinds Cream, with powder over it, protects the skin from severe sunburn, from redness and blister—from all weathering, in fact. Keeps it smooth and young and lovely.

Try Hinds Cream these two ways. You'll like it. The coupon below will bring you a sample bottle. Just fill in and mail today.

Our Veterinarian will personally advise you in any matter concerning sanitation—and the health, care and feeding of your dog. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc., etc.

weed it, we knew that she had something on her mind. Perhaps one of her friends was ill. At any rate, she had gone outdoors—the church that is always open—to be alone with her thoughts. Only God knew of the prayers that were wafted upward along with the fragrance of the flowers!

There is probably nothing in nature that appeals to the human heart in exactly the way that flowers do.

I have often wondered how many souls have found themselves amid the glorious beauty of the Magnolia Gardens near Charleston, South Carolina, said by world travelers to be one of the loveliest spots on earth.

The solemn grandeur of the live oaks, with their drapery of Spanish moss; the hush of the vast swamp; the quiet peacefuiness of the marsh; the acres of azalia, camellia, and magnolia; and the solitude and restfulness of it all, reach deep down in the heart and leave it cleansed and purified. I cannot imagine getting lonely in a garden of roses; or having the blues where violets bloom; or swearing in the presence of Easter lilies.

It was my good fortune to know, and claim as a friend, one of nature's noblemen —a courtly, big-hearted man, who for many years was at the head of a large manufacturing establishment, but who was never too busy to see and enjoy the little things around.

The birds particularly interested him, and his grounds and gardens became a veritable safety zone for the feathered tribe. During his latter years, his eyes failed, and most of the time he was confined to the house. But he had known and loved the birds, and to the very last he enjoyed sitting on his piazza and listening to their songs and merry calls. Though he could no longer see them, he knew their voices, and prided himself on saying: "That is a catbird; that is a robin," or "What could be sweeter than that thrush's song?" or, "I believe that is the same mockingbird that has been building in that rose vine for years."

Suppose that he had been so taken up with business that he had never noticed the birds, how empty those darkened days would have been!

I HAD another friend who was first a traveling man and then a merchant. Of all my friends, I think he was the one who most enjoyed getting away from the grind of business and off in the country for a day's outing. At heart, he never quit being a boy, though at the time I knew him he must have been sixty-five or seventy years old.

Fishing was his failing, but he did not care whether the fish bit or not; he was satisfied just to sit on the bank and watch his cork—though, when I come to think of it, he did not use a cork, but a quill. He was interested in everything, from the gaudy dragonfly that did a balancing act on the tip of his rod, to the mellowbugs that cut didos in the still water under the bank. I actually believe he even had a kindly feeling for the sweat flies that kept him slapping.

One day, in a casual sort of way, he said that he and his doctor had threshed things out. He had been told very plainly that it would be wise to get his affairs in shape, as he might have to leave them at any time.

He was baiting a fish hook when he repeated this to me. There was not a tremor in his voice, and his hand was as steady as ever—that was the kind of man he was. In the next breath he added that we were not to give up our outings, but instead there were to be more of them. You see, we could not afford to lose any time.

While nature did not cure his malady, it cured him of thinking of himself, and of brooding over his condition. That was a great deal. To tell the truth, I really believe that his last days were among the happiest of his life. If he had lived shut up in the house, with nothing to do but count days, think how much he would have suffered! But under the soothing touch of nature, the days slipped by as quietly as beads from a broken strand, and we scarcely noticed their going.

THE darkest day that ever dawned in my life came a few years ago, when I stood beside the still form of one who for more than forty years had been the greater part of my existence.

The end was not unexpected; but there are some things in life you cannot prepare for. Knowing that they are coming does not lessen the shock when they do come.

In imagination, I must have followed that form to the family plot in the churchyard a thousand times; and for months in my dreams I could hear the falling clods; but all that took none of the bitterness from the cup when my fear became a reality.

Some sorrows are too deep for words, and the kindly sympathy of friends only seems to open the wounds afresh. After the flowers had been heaped on the mound, I went back to the place which for so many years I had called home. But I found only emptiness and memories. I had to get away from it all—to find some place where I could think things out, and see if there was anything worth saving left from the wreck of my life. In this frame of mind, I went outdoors, and without realizing what I was doing took the road that led to the hills.

As I walked and walked, all nature called as it had never called before, and with heart bowed down, I answered the call. At the end of an hour or so, houses, people, and traveled roads were behind me, and I found myself among my old friends, the trees. The leaves appeared to whisper a welcome, and the solemn hush of the forest seemed to enter my soul and leave something of its peaceful quiet Somehow nature never appeared so restful as on that summer day; the green of grass was never so vivid; the sky was never so blue; the purple of the mountains was never so soft, or the music of the pines so soothing.

Unreservedly I surrendered to the subtle influences, and a strange peace seemed to envelop and become a part of me—it was like going into a warm room after a day of lowering clouds, cold winds, and driving storm. The silence and the solitude were what my being craved. While I had not forgotten the sorrow that I can never forget, still it seemed to be a great way off, as if seen through a haze or mist.

As I was walking home in the holy hush of the late afternoon, a strange glow suffused the landscape, and the trees and hillsides shone with a reflected radiance,

Digitized by Google Original from UNIVERSITY OF IOWA

as if lighted by a great conflagration.

Looking back, I was greeted by a vision the like of which I have seldom seen. The whole heavens had become one molten, mantling sea of color. The sun was setting in a glow of crimson and gold, and the colors were changing right before my eyes. As I drank in the beauty of it all, the crimson faded to the pink that peach blossoms wear; and then into lavender, and the lavender into pearl-gray; while the gold became brighter and brighter, and faded into amber, and then, little by little, the clouds became ordinary clouds, and the glorious spectacle was over.

As I watched the shifting glories of that sunset, I seemed to see beyond the clouds, and into the City not made with hands. My vision reached beyond the temporal, and I got a glimpse of eternal justice—the justice that cannot err, and the mercy that tempers the wind to the weak and helpless. In short, I saw God in it all, and realized that where God is there can be no mistakes.

EDGAR A. GUEST has a way of tackling his subject so that you feel it is a personal conversation between you and him. He also makes you think that it is about time to turn over a new leaf and begin afresh. His next month's article, "Don't Short-Change on the Little Things of Life," is no exception to the rule. We all know that the average day is made up of small deeds and incidents—the commonplace things of life. It is a good policy occasionally to get back to homespun truths and recognize their worth. And there is no gainsaying the fact that it *is* the little things of life that make life worth living.

I Got Tired of Being a Fool

(*Continued from page 31*)

little mouth wide open, like a baby robin in its nest, yelling, yearning, pleading, and expecting tobacco; and there were times when all the nerves in my body begged for coffee. But I stuck it out. The battle lasted for two months, and since then I have had no desire for any of the things I cut off my list.

Meanwhile, I had landed with the Equitable Life Assurance Society, the company I am with now. Business came slowly at first; my wife and I were hard up for quite a time, but that does not and did not matter, for in the period of financial stress I learned how to overcome fear, temper, and depression.

Take fear first, for it is the greatest enemy we have. Whenever I felt a little quaky, I reasoned with myself that fear was not on that list of enduring qualities—it was not one of the nine magic words. But reason, alone, is not enough, so when the old bugbear tried to slip up on me, I'd say, "Now is the time to think of somebody else, anybody else, everybody else except myself."

That was and is my rule for treating fear, and it has worked. For instance: During those first months when I was try-

Fatigue! Headache! Constipation!

ENO *will combat these symptoms of "intestinal toxicity"*

MODERN life, with its business activities, its social whirl, its love of sports, demands the utmost from women. The one who is listless, who must conserve her energy, who suffers from headaches and fatigue, is placed under a truly tremendous handicap.

And so often the trouble is easy to combat. For bilious attacks, bad breath, tiredness are usually signs that intestinal toxicity is stealing away vitality and strength (and beauty, all too frequently).

This condition is not one that calls for the use of drastic, bitter cathartics. At the best, they only bring temporary relief and often shock the system unnecessarily. Why not, instead, trust yourself to the gentle, thorough action of ENO's Effervescent Saline. So many thousands have tried it—with such unfailing success!

ENO is a delightful, sparkling saline that tends to settle an upset stomach. Its gentle, laxative action thoroughly flushes and cleanses your overloaded digestive tract and washes away the poisons that constantly accumulate in your intestines.

ENO has a really pleasant taste . . . unlike so many other "salts." It does not gripe nor interfere with the daily routine. You'll like it . . . and you'll like the way ENO has of "setting you up" for the day.

Tired digestion and bad breath, caused by intestinal toxicity, may be overcome. Eat reasonably, exercise moderately but regularly, drink plenty of water . . . and try ENO regularly in the morning. ENO has been the standard effervescent saline the world over for 60 years—particularly in the tropics, *where constipation is so prevalent* . . . and so dangerous to neglect!

Your druggist has ENO at 75c and $1.25 a bottle. Get a bottle today and take it regularly morning or evening. Keep it in the bathroom.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

ENO — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of ENO. *Taking this sparkling, delightful saline regularly will help to keep you fit and eager throughout the hardest day.*

For a business headache, nothing is better than a glass of ENO. *You can get it at the better soda fountains everywhere.*

Give your face a treat!

Apply MOLLÉ with palm of hand

No brush-no lather-no rubbing

Shave faster than you ever shaved before

Without danger of cutting skin

Dry face with towel-that's all

No steaming, lotions or powder

Makes Your face feel Like a Million Dollars

Take the word of a million men

Try MOLLÉ (MÖ-LAY) for a week at our expense!

See why a million men have switched, permanently, to MOLLÉ. Find out what we mean when we say MOLLÉ *lubricates the shave* with a protective film of healing creams, so you can shave faster than ever before, but without danger of cutting the skin.

Above all, we want you to know how wonderful MOLLÉ makes your face feel AFTER shaving. That "million dollar" feeling simply can't be described.

Every MOLLÉ shave is, in reality, *facial treatment*—as refreshing and stimulating as a head-barber's facial massage.

A Whale of a Tube, 50c—at your Druggist

ing to write insurance, I often did not have enough money to live on.

One day I faced real financial need. I just had to do something. What should I do? This rule came to me: "When you are keenly conscious of your own needs, do something for somebody else!" That seemed to me to be spiritually sound, so I followed it. Over on the East Side (I had moved to New York City with my family) there is a hospital for crippled children. I went to the superintendent and persuaded him to let me entertain the youngsters. First, I told them stories which fell flat; next, I tried reading to them, and that venture flopped also. I was up against it now, sure enough, for here I had undertaken something for others, and was about to fail in it! In desperation I decided that, upon my next visit to the hospital, I'd sing. Now, I'm no wood thrush. As a songster, I'm more in the class of the jay. But the children liked my singing, and that was the main thing.

Every Sunday for a year I went to that hospital and sang. I know nothing of music, so, to keep my repertoire fresh, I'd buy talking-machine records, play them at home, and learn the songs from the machine. At the outset, I didn't have money enough to pay for the records, so I went to a recording company, explained what I was doing, and they gave me fifty or more songs for children, all of which I learned by painstaking practice over the music box. But before the year was over I had money enough to buy records, and money enough to buy a good many other things. By refusing to put money first, I seemed to have hit upon the key to money-making. Business began coming my way, and it came fast! My rule, "When you are conscious of your own needs, do something for somebody else," apparently was working financially as well as spiritually. Certainly in my own case it was working that way, and still is.

THE biggest insurance policy I ever wrote—it was for one million sixty-five thousand dollars—was written without solicitation on my part. I heard of a woman who was in deep trouble; I dropped everything and went to help her, and actually was able to help her, which made me very happy. Her brother, after it was all over, came to me and of his own accord suggested this tremendous policy. That's how things work out in my experience. I do not give more than half of my time to business; the rest of it I give to people who are in trouble of one kind or another, and who think that I may help them. The result is that I am constantly elated at the chances I have to be of real use to people; business comes as a by-product.

I will never go into any business venture if my happiness depends, even in some small degree, upon the outcome of it. Before I visit a man in an effort to sell him insurance, I become plainly certain that my happiness does not depend upon the success of my efforts. No business in the world is worth unhappy hours. Some months ago I was working on a very large policy; I had spent much time and money in preparing this case, and had every reason to believe that it would go through as I had planned. The morning came for me to close the contract, and I set out for the man's office. Before reaching it I stopped to think: will I be downcast if the thing goes against me? I assured myself that it was safe to proceed, that my happiness, even for the day, was not at stake.

The man saw me as soon as I sent in my name. We began to talk, and he steered the talk around to one side of the subject. I saw that the policy I had worked so hard for was about to fall through. He became apologetic.

"I feel miserable about this," he said. "You had reason to think I would take the insurance, you have spent your time and money in trying to sell me, and now I can't go through with the deal. . . ."

"Now, you forget all about me," I broke in. "I came here to do you a service, and I still want to serve you. I am amply repaid for all my time and money, for it has been a great pleasure to know you. I would never have come if I had thought my coming would bring worry."

I left his office in high spirits. I had conquered depression and disappointment; had proved that I am subject to elation but not to depression. Wasn't that more worth while than a signed contract?

NOW for the sequel: I considered that business venture closed; but a few weeks later the man wrote to ask that I call on him, and I did.

"I still cannot take that insurance," he said; "but I have been wondering if you could use letters of introduction to one hundred of the biggest men in the East. You were so decent to me that I want to make it up to you."

Of course I could use those letters, and I am using them. They give me a working basis for an entire year, which probably will be the most profitable year I have ever known.

Profit, financial and spiritual, comes to the man who doesn't bark too eagerly on its trail. A good many years ago a dwarf came to see me. He was looking for a job, and was very much downcast, complaining that because of his size no one would employ him. I helped him get a job, and saw him no more for many months.

Christmas Day arrived, and someone called at my door. I went out and there was the dwarf with a present for me. Each Christmas he comes, bringing me some little remembrance, and his visit is the finest part of my Christmas celebration. The hour or more I spent with that dwarf on his first visit to me has yielded the biggest profits I ever got from the investment of a similar period of time—spiritual profits, which I would not trade for any other kind.

Fear and depression I got rid of by reasoning and by action. Outbreaks of temper were ditched in much the same way. One night soon after I came to New York, and when I lived away up in the Bronx and was broke, I had to stay downtown until late. Subway trains were running at infrequent intervals; I was dog-tired and eager to be home, so I dived into a subway station, hoping to play in luck and get a train within a minute or two. A train was standing as I started down the steps; I speeded up and was about to enter one of the cars when the guard slid the door shut before me. He could have let me enter without delaying the train. His act was unnecessarily rude, and I felt a hot wave of anger surge in me.

"Stop!" I said to myself. "Don't be a fool. You've missed the train and must

Digitized by Google Original from UNIVERSITY OF IOWA

wait ten or fifteen minutes for another. Nothing you can do will speed the next one, so why burn up your energy by getting mad?"

The reasoning was sound; but reasoning, as I have already told you, isn't enough in my case—it must be followed by action. So I looked around to see if there was anyone I might be of use to, and far up the platform I saw a woman with a baby and a suit case. She was leaving the station.

"May I help you?" I asked.

"I need some help," she said; "but it would be an imposition to ask you to come with me as I am going across town to the Pennsylvania Railroad station."

"Let me take you!" I urged.

I took the suit case and we went up to the street, got a taxi and drove to her destination, waited there for her train, and then I helped her aboard. All of this delayed me two hours. But I was in high spirits! I had conquered a fit of silly temper, had forgotten my fatigue, and was happy.

Did you ever stop to think that if a man were ordered to be as big a fool as he is, he would revolt? For instance, suppose you were ordered to get up with a grouch, would you do it? Suppose you were ordered to be cross to your family if things didn't go exactly right, would you obey?

We do a thousand foolish things that we would not do if we were ordered to do them, because then we would see how absurd they are. Can you imagine a man obeying if he were ordered to get mad at a stuck dresser drawer, cuss it, jerk it, yank it out of place and spill its contents on the floor? Can you imagine anyone getting furious at a collar button if someone else had told him he had to be furious at it? But we do these fool things, and by doing them we use up enough energy to accomplish some really worthwhile end. You can exhaust yourself by anger, for anger is a consuming passion; but you cannot ruin your day by being cheerful, for cheerfulness is strengthening. You can make a mess of the day, or of life, by being gloomy, but you'll never make a mess because of genuine elation.

I AM just an ordinary, garden variety human who did not want to keep on being a fool. That's why I banished fear, worry, anger, depression, temper, and a lot of other things from my life. I believe that if I, with only a fifth-grade education and average intelligence, could do this, other people could, also. Perhaps the methods I have used will not work in all cases. They worked for me—that's why I told you of them. But if my system doesn't work for you, some other system will and, man! you ought to try it.

Life becomes almost automatic if you tap the source of strength, of love, of happiness upon which life depends. It is silly for a poor little insignificant mortal, such as I am, to buck the great stream of eternal life. I sought it out, and flow along with it. In that stream are those qualities I am trying to reflect. My nine magic words are ships on the surface of that stream. My entire span of life is from the time I awake in the morning until I go to sleep again at night. The past is over, the future hasn't come. I do not worry over the one nor fear the other, for my concern is to make a fine job of today!

Scattergood and the Square Peg

(*Continued from page 51*)

commencing," said Lawton, "to build a logging railroad."

"Through our town?"

"Right smack," said Lawton.

"Huntin' trouble, eh," demanded Pete Haddy belligerently. "W-al, you're runnin' into it. The' hain't no road goin' through this here valley. Now, jest pack up your kit, and git!"

"I said we weren't hunting trouble," said Lawton; "but we are building a road. The road is going up this valley. Your name is Haddy, is it not? It seems to me I met one of your family in town the other day."

"We hain't forgot it, neither."

"What can happen to one Haddy," said Lawton, "can happen to six. If you behave, we will go along about our business. You will not be hurt by this road. It is necessary to the development of this section. You have no right to interfere with it."

"We make our own rights up here. You clear out whilst you got your health."

"Now, listen carefully," said Lawton. "This road is going through. It is going up this valley. We sha'n't meddle with you if you don't meddle with us. But I've been hearing a lot about you, Haddy, and what kind of town you run. I know you are squatters with no rights. I know you've terrorized this country for years. So far as I'm concerned, you can keep on doing it—as long as you don't interfere with my job. But, Mr. Haddy, lift one hand to interfere with me here, and you're done. Just one hostile move from you, and the town of Hell's Half Acre goes off the map. Am I clear?"

Haddy laughed scornfully. "Big talk!" he said. "If you hain't give this up and moved out of here by nightfall, I calc'late to move ye myself before mornin'. That's the last word."

"Then," said Lawton, "good afternoon!"

THE six trooped off with truculence in every movement of their huge shoulders. Lawton turned to Fred Norton and whistled.

"Well," he said, "that's that!"

"It's what we're here for," Fred said simply.

"If I'm any guesser," said Lawton, "Scattergood Baines put us here for more than building a railroad. He's got something on his mind."

"And so," said Fred, "have I." Fred was remembering his wife, the girl he had married out of Half Acre—that kidnapped child, who still lived under Pete Haddy's threat.

"How many men in Half Acre?"

"Couple of dozen."

"All big as these Haddys?"

"They're the pick of 'em."

"Why have they never been cleaned out?"

"I calc'late they got to be a kind of habit with us. We got used to havin' 'em around."

"But the law?"

"The law has to have proofs," said Fred. "We know what they been up to; but provin' it in a court's somethin' else."

"Ah," said Lawton. "Proof!" He stood for a few moments considering this and that before he spoke again. "Fred," he said, "they'll be down on us tonight."

"To be sure."

"You picked our men pretty carefully?"

"As good men as the' is in the state."

"Call them off the storage shed," said Lawton. "We'll lug the most valuable supplies into the bunk-house. With twelve men we can't defend both buildings."

"If we leave the warehouse they'll burn it."

"Did you ever happen to hear of a crime by the name of arson? They send people to jail for it—nice long terms."

"If they ketch 'em," said Fred.

"Um." Lawton kicked an implement at his feet. "The handle of that will make a nice weapon. Who's our best woodsman?"

"De Bar, the Canuck."

"As soon as it gets dark, have him on the job on the edge of Half Acre. If the Haddys start for us, he must beat them to it and give us warning."

Fred nodded.

"AND our job," Lawton went on, "is to save the bunk-house and supplies—and to identify raiders. So they can be sworn to in court. Send a man into town for a reel of barbed wire. Put a gang to setting posts around the bunk-house."

"Goin' to call for more help?"

"I don't remember that Mr. Baines said anything about our doing that," said Lawton, with a grin.

So every man was put to work again. Posts were set in the ground in a circle around the bunk-house; materials were piled inside, and all was made ready. The wire arrived before dusk, and was strung rapidly into an encircling entanglement. The Frenchman, De Bar, strode off through the woods to take up his watch on the edge of Half Acre. Then, nothing remained but to wait.

Darkness fell. It was nine o'clock when De Bar came into camp with the news that Half Acre was moving: twenty-odd men were on their way through the woods, with the Haddys at their head.

"Light every light," said Lawton. "Make this bunk-house look as if there were a party on."

It was done. Then he led the entire army outside the barbed wire and concealed them in a clump of young spruce, midway between the unfinished buildings, each man armed with a heavy peavey handle. And there they waited, all but De Bar, who went scouting through the woods. In half an hour he returned, to report that the raid was at his heels.

"Quiet, everybody," said Lawton.

"Be you goin' to let 'em have the shed there for nothin'?" asked Fred.

"I guess it'll be worth it," Lawton said, with a chuckle.

Presently, sounds became audible. Men were lurking in the woods near at hand. Lawton thought he could follow their mental processes: They would reconnoiter, find the storehouse unguarded and put the torch to it. Then, in the confusion of the fire would come the attack on the bunk-house. And he figured rightly.

Black shadows flitted into view; then yellow flames arose, which, as they licked upward, were accompanied by a chorus of savage yells. The men from Half Acre massed beside the burning building.

"Remember," said Lawton, "the main business is to identify them. Be able to swear to names!"

"But hain't we to git no fightin'?" asked a big lumberjack.

"Some," said Lawton; "and we get it *now*."

The score of attackers moved across the clearing toward the bunk-house, a straggling army.

"Keep close together," whispered Lawton. "Stick in a mass. Wait till they're abreast of us. The minute they run against the wire I'll give the word."

Pete Haddy's voice arose in a bellow of command and of challenge. Half Acre charged the bunk-house, but in the darkness plunged headlong against unexpected barbed wire.

"Now!" whispered Lawton. And his little army emerged from the clump of spruces in a solid phalanx, peavey handles aloft. In the confusion and the uproar of profanity their approach was not observed until they were in the midst of the Haddyites, taking them on the flank and cutting through them like water through sand. The surprise was complete—and a man who takes over the head a peavey handle swung with enthusiasm by powerful arms is apt to lose interest in events. The phalanx reversed, plowed its way through again, and the fight was over.

Half Acre bellowed its pained surprise, and took to its heels. But not all of it. Five men remained more or less quiescent on the ground, one attempting painfully to crawl away into the protection of the forest. All five were secured: one Haddy and four citizens of lesser note.

"Not bad for a start," said Lawton. "Tie 'em up tight. We'll keep 'em for souvenirs. I guess we're through for the night. But a couple of fellows better stand watch. I'm going to town."

"For help?" asked Fred.

"For badges!" said Lawton, with a chuckle. "We're going to make it official. And how many can you men swear to?"

"I calc'late between the dozen of us, we can swear to all of 'em," said Fred.

"I'll be back before morning," said Lawton.

HE WALKED down the tote road to the place where an ancient flivver had been parked, and drove with speed to Coldriver and to Scattergood Baines's farmhouse. Scattergood was in bed, but answered the pounding upon his door in a nightgown of pink flannelette which did not enhance greatly his natural beauty.

"Huh," he grunted noncommittally.

"Are you a friend of the sheriff's?" asked Lawton.

"Hollerin' for help? Kind of figger you can't manage alone?"

Lawton grinned. "No, sir. But I've always wanted to wear a badge. I like

He Has Hit on the Big Secret of Successful Retailing!

Albert DePrez, Successful Merchant of Shelbyville, Indiana, Tells FARM & FIRESIDE His Merchandising Secrets

THE big store of J. G. DePrez Co., in Shelbyville, Indiana, started in business 48 years ago—as a hardware store.

Today it's hard to tell what kind of store it is. For you can buy practically anything there from a roll of wire fence to a grand piano. Yet it isn't, strictly speaking, a department store.

It's just "Deppry's"—that's the way people who live in the big store's 20-mile trading radius refer to it.

And it's a merchandizing institution in a class all by itself—simply because Albert DePrez, head of the store and a shrewd and far-sighted merchant if ever there was one, foresaw the changing trend in consumer buying.

And he organized his store to suit the shopping habits of a *new* type of hardware store customer.

What was the changing trend in consumer buying he observed? What was the secret—and how did he meet it?

He Tells FARM & FIRESIDE

One of the striking things about the DePrez store is the fact that it has built up its present huge sales volume right next door to a big city.

Indianapolis is only an hour's trolley ride away.

Yet this unusual store more than holds its own in the face of a big-city store competition, a fact that reflects its aggressive merchandising policy.

A Store Newspaper

Advertising, of course, has been a big factor in the store's success. Unlike most retail stores it has an advertising department of its own. Mr. DePrez explains how his investment here has always paid good dividends.

And he tells why it pays to get a monthly store newspaper that goes into the homes of 6500 farm families—a larger circulation than any local newspaper has.

Judging from the quick complaint that comes into the post office when some farmer fails to get his copy on time, the editor of this paper evidently knows what kind of news is most interesting to farmers and their families. Mr. DePrez tells the secret of that, too.

Monthly Sales—and Why

Why does this store find it profitable to run a feature sale once a month? It's interesting to note its experience in this direction—and to see how these sales are planned and carried out.

Mr. DePrez also explains how the cost of increased selling activity always pays its own way—and a profit—if it's handled wisely.

"Of course it costs more to sell more," he says. "But on the other hand it's *worth* more."

He tells also how they sell stoves. This is one of the departments in which they have hung up a real sales record. But most of the credit for this record, he says, goes to a new type of stove which, because it is a *merchandizable* product, has rejuvenated the stove business.

Send the Coupon

These are just a few hints at the rich record of this merchant's successful experience.

Get the whole story in FARM & FIRESIDE's latest successful-dealer interview—now published in a folder, a copy of which will be mailed free to any small-city retailer who sends in the attached coupon.

FARM & FIRESIDE'S Service to Small-City Retailers

This is another interview in FARM & FIRESIDE's series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing more than 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine—edited straight to the *individual* and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

badges. They look so nice on your coat."

"Um. . . . Anythin' happen?"

"Nothing to speak of," said Lawton.

"Got to have that there badge tonight?"

"I'd like it."

"Come in and set. I'll see if I kin wake him on the telephone. Want to git swore as a deppity, eh?"

"That's all."

Scattergood worked the handle of the antique telephone instrument until he was answered. "Sheriff," he said, "I'm sendin' a young feller down to get deputized. He wants him a badge. Name of Stewart."

"I thought my name was Jones," said Lawton.

"Jest," said Scattergood, "fer special purposes!"

"Good night, and thank you," said Lawton.

"G'-by," said Scattergood.

The sheriff was awaiting Lawton's arrival and, after duly swearing him in as a deputy, handed him a shining nickeled badge. The young man pinned it ostentatiously upon his coat and, chuckling, drove away toward his construction camp, where he arrived well before daylight. All was quiet. Half Acre had had enough for the night.

The camp was awake at dawn.

"I wonder how Half Acre's feelin' this mornin'?" asked Fred Norton.

"They probably drowned their sorrows," said Lawton, "so they won't be very chipper today."

"And they'll be lame heads," said Fred.

"IN WHICH case," Lawton said, "there's no time for finishing up a job like the present. You men are now a *posse comitatus*."

"I know what a posse is; but what's the other thing?"

Lawton grinned. "It means a posse with peavey handles!" he said. "We're going at this as legally as a Philadelphia lawyer. See my badge? I'm a regular, honest-to-goodness deputy sheriff, with warrants and everything. Swore them out last night for all the men you fellows identified."

"Gosh!" said Fred, "you move spry."

"So," said Lawton, "I'm on my way to make a few arrests. Anybody who wants to go along is welcome."

In ten minutes the posse was on its way through the woods, with De Bar and Fred Norton thrown out ahead as scouts. Without misadventure they reached the hill above Half Acre and, from their concealment, looked down upon the squalid hamlet. Drab, unpainted, slatternly houses fronted each other irregularly along an unkempt road. Few signs of life were visible. A man passed along the road toward the building at the end, which Fred identified as the general store and village saloon.

"Bet they're mostly there gettin' a pick-me-up," he said.

"Anyhow," said Lawton, "they're not expecting a visit. Let's go down."

They started down the hill, keeping well under cover, and so approached Haddy's barroom, where were gathered no fewer than sixteen of the denizens of the place. Not a few of them wore bandages; one man carried an arm in a sling, and there was a general air of moroseness.

Pete Haddy sat upon the counter, scowling. "Somebody's goin' to git hurt fer this," he growled.

"And we got to git back Mike and the boys," said Tom Haddy.

"Give the boys another drink, and we'll git started," Haddy said.

But the refreshments were never served, for a voice from the door interrupted: "Do you mind if I join you?" asked Lawton Stewart.

The men in the room swung suddenly, saw him leaning against the jamb of the door and smiling upon them genially. They surged toward him; but he raised his hand.

"Now, boys," he said, "let's be sensible. I wouldn't be surprised if there were a thousand men outside. Maybe two or three thousand. So let's all be gentle. And you might look at my little star." He waggled the lapel of his coat, upon which was pinned his deputy's badge. "You boys have been naughty. You went and burned up valuable property last night; and you oughtn't to have done that."

"Rush him!" said Haddy, leaping the counter.

"Look at the window," said Lawton.

They looked. Smoke rolled upward, obscuring the view; flames leaped and crackled.

"You boys were so fond of fire," Lawton said, "we thought we would bring some along. . . . Now, stand easy. We've enough men on guard to keep you in here until you're as crisp as boarding-house steaks. It wouldn't be a bad idea. . . . And if one of you makes another step this way that's what'll happen!"

Again he smiled on them; saw panic come to birth on those bearded, evil faces. Man, in common with all animals, fears fire as he fears few other things in heaven or earth. Smoke and sparks were now drifting through the window, filling the room. Lawton had counted upon the effect of all this.

"You've a right to stay here and roast," he said. "Or you can step out one by one as I indicate you with my finger. We're kind and gentle and don't want to harm a hair of your heads; but we're sort of irritated too. Now, I'm going to count ten. If Pete Haddy isn't through the door before I finish, why, nobody goes through the door at all. One . . . two . . . three . . . four . . ." Haddy hesitated. He scowled upon his men, but found no strength there, only a sudden terror, an animal fear. "Five . . . six . . ."

HADDY shouted a curse and strode toward the door. As he came abreast of Lawton that young man deftly stepped to one side, swiftly placed a hand between Pete's shoulders and pushed mightily. Haddy went headlong into the waiting arms outside.

"You next," said Lawton, pointing. "And you . . . and you." In ten minutes the room was empty of all save choking smoke. Lawton followed the last man, watched as he was securely bound, and then stepped to Pete Haddy's side.

"Pete," he said, "dry leaves make a fine fire, eh? You should have taken a closer look out of the window. Just a couple of bonfires, Pete—and they were half a dozen feet away. You don't think so quickly the morning after, do you?"

Pete growled profanity through his beard.

"I guess," said Lawton, "Half Acre'll have to go get itself a reputation. Letting thirteen men capture twenty-four of you in two tries. Why, Pete, I thought you were a hard, tough lot! . . . Hoist 'em up, boys. We'll walk 'em to camp."

He shrugged his shoulders. "Well," he said, "I guess I've worked myself out of *this* job. Seems as though I might have strung it along a week or two more!"

SCATTERGOOD BAINES sat on the piazza of his hardware store entertaining a visitor—none other than Mr. Maclyn Stewart.

"This young man must be a go-getter," said Stewart. "To clean up Half Acre in two days, when it has been a fester in the landscape for a dozen years!"

"Calc'late he's perty good," said Scattergood. "Funny thing, though, the' was folks called him wuthless."

"It's remarkable how some men are unable to perceive real ability," said Mr. Stewart.

"Does beat all. But I notice, if you ram a square peg into a round hole nobody kin see any virtue in the peg. Now, this here young man wouldn't amount to shucks as a bank clerk. I bet you'd fire him in a week."

"But why should anyone want a man like that to wear a white collar? He belongs out in the air, doing things."

"Jest what I calc'lated," said Scattergood. "Now what d'ye calc'late we better do fer him?"

"I can tell that better when I see him. But offhand I'd say he is the sort of man I've been looking for these many years. A man I can trust with my lumber interests—to take care of my cutting operations and oversee the woods."

"Sich men is rare," said Scattergood dubiously.

"I think we've found one."

"W-al," said Scattergood, "you kin take a look at him. He's jest crossin' the bridge. . . . Name of Jones."

Maclyn Stewart looked, and shook his head. He looked again, and saw coming toward him a young man roughly dressed in such clothing as your lumberjack has found most suitable for his employment. He was not a big young man. But, somehow, he seemed big. There was a swing to his shoulders, a thrust to his stride, a sort of physical efficiency which made him impressive as a spectacle.

Mr. Stewart got to his feet. "He . . . he looks familiar!"

"Name of Jones," repeated Scattergood with a chuckle.

"Name of Jones nothing!" said Maclyn with sudden excitement. "Jones—huh!" He took the step at a leap. "Lawton, Lawton!" he called, and his voice broke, "it's Dad . . . it's your dad!"

"Well," said Lawton presently, "that's a heap better than being a father!"

"I resigned that job," Maclyn said jubilantly. And then, "Son, I never knew what pride was before."

"Um," said Scattergood, "the's another job you better resign."

"What's that?"

"Tryin' to make sow's ears out of silk purses!" said Mr. Baines.

This stone lumber never wears out

Johns-Manville Transite, as easily handled as wood, is as lasting and fireproof as rock

TRANSITE is the solution of many building problems.

Transite Asbestos Lumber is made from asbestos fibres and Portland Cement combined under tremendous pressure into monolithic, unlaminated sheets of any desired size or thickness.

Transite is literally stone lumber. Enduring as stone, convenient to use as wood, this remarkable building material has furnished timeproof, fireproof walls and roofs for thousands of industrial structures. Applied to skeleton frame buildings Johns-Manville Transite produces walls and roofs that will actually outlast the framework itself. For such purposes Transite is generally used in corrugated form, although flat sheets are sometimes preferable.

Transite is impervious to most fumes and gases, while the effect of weather is to harden and strengthen it.

A Material of Many Uses

Transite, because of its strength, long life and other permanent qualities, is used for many purposes besides walls and roofs. Among these are interior ceilings and partitions, smoke flues and jacks, hoods for paper machines and housings for other industrial equipment, arc barriers in electric power stations, dry kiln construction, and scores of other special uses.

Wherever it is desired to have a material which will resist weather, smoke, fumes and heat, or which will not be burned by electric arcs or fire, Transite is the most satisfactory material.

Made by Experts

Transite is made by Johns-Manville, pioneer developer of the use of Asbestos. The experience of more than fifty years is behind this wonderful manufactured stone. And this experience is not alone with the making of asbestos products, but with the needs of industry in general. Johns-Manville engineers work with power station experts, with famous architects and builders all over the country, and with the leading engineers of industry. Transite, as is true of all Johns-Manville products, is made to meet the known demands of those who should use it. This is the reason for the success of Transite, since with the compounding of the asbestos and the cement goes this background of engineering skill and experience which is, first of all, practical.

13 acres under one roof. This huge storage shed of a world-famous industrial corporation has a roof area of 13 acres. Both roof and walls are of everlasting Transite.

New ways of taking advantage of the valuable properties of Transite are constantly being developed. Our engineers are glad at all times to discuss the use of Transite with anyone interested. *Address Johns-Manville Corporation at New York, Chicago, Cleveland or San Francisco.*

Which?

It's easy to choose between 3-in-One and just "any old oil" when you consider this: 3-in-One has been the outstanding packaged oil for thirty-four long years! Therefore, it *must* be good. And it is.

Several high quality oils are scientifically compounded to produce 3-in-One. That's why it is so much better than ordinary "machine oil" which is usually only a light mineral or so-called fish oil.

3-in-One

Prevents Rust - OILS - *Cleans & Polishes*

Use frequently and liberally on every light mechanism about the home—sewing machine, vacuum cleaner; the *motors* of washing machines, electric refrigerators, oil burners; also go-carts, roller skates, bicycles, scooters, locks, bolts, hinges. They will operate easier, last longer, require fewer repairs.

Sold everywhere in 3-oz. Handy Oil Cans, 1-oz. "Oilright" Handy Cans and three size bottles by grocery, drug, notion, hardware and general stores. Ask for 3-in-One by name and look for the Big Red "One" on the label.

Manufactured Since 1894
THREE-IN-ONE OIL COMPANY
130 William St., New York, N. Y.

THE FAMILY'S PROBLEMS

Should I Make My Children Pay Board?

WE HAD a pretty painful time at our house yesterday morning. I suppose I should come out plainly, and say that we had a family row. It started over a hat that my youngest daughter had brought home in triumph to me the night before.

At the breakfast table, Lou asked me if I were sure that I liked her gift. I had already expressed my thanks; but I knew that it would make the child happy for me to thank her all over again. I dutifully started in to do so, but I was interrupted by my only son, aged sixteen:

"You girls make me sick! Bringing home a little present to Mother now and then, and kidding yourselves that you are so big-hearted. You make a hundred dollars a month apiece. Together, you make as much as Dad does. *What you ought to do is pay board.* Then Mother would have money enough to buy things for herself, and not have to be forever thanking you two for things she doesn't want!"

This was the longest speech any of us had ever heard Junior make. It sort of struck us dumb for a second, and then it started me thinking. Was my policy in not having the girls pay board a mistaken kindness? I wondered. Was it something that might react to their detriment later on?

After the girls left for their jobs, I did a lot of thinking—and some telephoning, and the more I thought, the more convinced I became that Junior quite possibly was right. The girls really ought to pay board.

I REALIZED that my daughters haven't the faintest notion of the value of a dollar. Lou has been secretary to our leading lawyer for two years. Ellen has been teaching four years. Neither has ever saved a cent except what she put by for her summer trip to the mountains, or the seashore.

If their money gives out, they think nothing of asking for five or ten dollars to run them till next pay day. Then, if one of them buys new curtains for her room, or pays a weekly laundry bill, she feels that she has discharged her indebtedness. In mulling over these things, I realized for the first time that if my children were suddenly pushed out of the home nest they wouldn't know how to live on what they can earn. I saw that their standards of living were all wrong.

Worst of all, I saw that they were deceiving themselves. Aided and abetted by their father and me, they had somehow fooled themselves into thinking that they were self-supporting, just because they have jobs. They have even managed to convince themselves that they contribute their share to the upkeep of the house. Let one of them buy a pair of bath towels, and the other say, "Mother, I'll pay the telephone bill this month," and they feel self-righteous for weeks. I had smiled over this in the past; but I did not smile now. Indeed, the memory of it helped me make up my mind to explode my bomb that night.

I talked it over with my husband while I was dishing up supper. He gets off to work half an hour before the children have their breakfast, so he had missed the scene at the table.

WHEN we got to the dessert, I said, as casually as possible, "I've been thinking over that matter we were discussing at the breakfast table this morning, and I've decided that Junior is right. It isn't fair to you girls to let you think that food and shelter cost nothing, just because you get them at home.

"I called up Mrs. Nelson today and she tells me that she gets thirty dollars a month when two girls share a room. It's thirty-five when they have separate rooms. Now, you girls have separate rooms and a bath between you, but I'm going to charge you only thirty dollars. And, of course, you have the run of the house and the parlor to entertain your friends, while the girls down at Mrs. Nelson's have to share with fifteen or twenty others. You won't have to bother any more about housework, which you both hate," I finished. "I'm going to hire a good maid. That will make things a lot easier for me too."

The girls looked bewildered.

"All right, Mother," said Ellen, and Lou added, "Of course, Mother."

Junior looked at his plate.

Well, it was hard; but it had gone off all right. I was feeling fine about it until my sister dropped in this morning on her way back from the market.

"I saw Lou in the drug store," she said. "She tells me that you are going to make her and Ellen pay board. I think you're foolish, Nell. Look at my boy and girl, both working in the city. I don't see 'em once in three months. First thing you know, yours will be gone too. Mark my words, you'll regret it, Nell."

Maybe I *will* regret it. Maybe my sister is right, and Junior and I are wrong. I wish somebody would give me an answer to the riddle. MRS. N. G. M., GEORGIA.

The BISHOP Murder Case

The new *PHILO VANCE* story by

S. S. VAN DINE

Author of the famous "Benson," "Canary," and "Greene" Murder Cases

"WHO KILLED COCK ROBIN?"
(*Saturday, April 2d; noon.*)

OF ALL the criminal cases in which Philo Vance participated as an unofficial investigator, the most sinister, the most bizarre, the seemingly most incomprehensible, and certainly the most terrifying, was the one that followed the famous Greene murders.* The orgy of horror at the old Greene mansion had been brought to its astounding close in December; and after the Christmas holidays Vance had gone to Switzerland for the winter sports. Returning to New York at the end of February, he had thrown himself into some literary translations, and for over a month had devoted himself sedulously to this thankless task.

"I chanced to look down," said Professor Dillard, "and to my horrified amazement I saw Robin lying on his back with an arrow-shaft protruding from his breast"

Whether or not he would have completed the translations, even had his labors not been interrupted, I do not know; for Vance was a man of cultural ardencies, in whom the spirit of research and intellectual adventure was constantly at odds with the drudgery necessary to scholastic creation. I remember that only the preceding year he had begun writing a life of Xenophon—the result of an enthusiasm inherited from his university days when he had first read the "Anabasis" and the "Memorabilia"—and had lost interest in it at the point where Xenophon's historic march led the Ten Thousand back to the sea.

HOWEVER, the fact remains that Vance's translations were rudely interrupted in early April; and for weeks he became absorbed in a criminal mystery which threw the entire country into a state of gruesome excitement.

This new criminal investigation, in which he acted as a kind of *amicus curiæ* for John F.-X. Markham, the District Attorney of New York, at once became known as the Bishop murder case. The designation—the result of our journalistic instinct to attach labels to every

*"The Greene Murder Case" (Scribner's, 1928).

cause célèbre—was, in a sense, a misnomer.

There was nothing ecclesiastical about that ghoulish saturnalia of crime which set an entire community to reading the "Mother Goose Melodies" with fearful apprehension;* and no one of the name of Bishop was, as far as I know, even remotely connected with the monstrous events which bore that appellation. But, withal, the word "Bishop" was appropriate, for it was an *alias* used by the murderer for the grimmest of purposes. Incidentally it was this name that eventually led Vance to the almost incredible truth, and ended one of the most ghastly multiple crimes in police history.

The series of uncanny and apparently unrelated events which constituted the Bishop murder case began on the morning of April 2d, less than five months after the double shooting of Julia and Ada Greene. It was one of those warm, luxurious spring days which sometimes bless New York in early April; and Vance was breakfasting in his little roof garden atop his apartment in East Thirty-eighth Street. It was nearly noon—for Vance worked or read until all hours, and was a late riser—and the sun, beating down from a clear blue sky, cast a mantle of introspective lethargy over the city. Vance sprawled in an easy chair, his breakfast on a low table beside him, gazing with cynical, regretful eyes down at the tree tops in the rear yard.

I knew what was in his mind. It was his custom each spring to go to France; and it had long since come to him to think, as it came to George Moore, that Paris and May were one. But the great trek of the post-war American *nouveaux riches* to Paris had spoiled his pleasure in this annual pilgrimage; and, only the day before, he had informed me that we were to remain in New York for the summer.

For years I had been Vance's friend and legal adviser—a kind of monetary steward and agent-companion. I had quitted my father's law firm of Van Dine, Davis and Van Dine to devote myself wholly to his interests—a post I found far more congenial than that of general attorney in a stuffy office—and though my own bachelor quarters were in a hotel on the West Side, I spent most of my time at Vance's apartment.

I HAD arrived early that morning, long before Vance was up, and, having gone over the first-of-the-month accounts, now sat smoking my pipe idly as he breakfasted.

"Y' know, Van," he said to me, in his emotionless drawl; "the prospect of spring and summer in New York is neither excitin' nor romantic. It's going to be a beastly bore. But it'll be less annoyin' than travelin' in Europe with the vulgar hordes of tourists jostlin' one at every turn. . . . It's very distressin'."

Little did he suspect what the next few weeks held in store for him. Had he known I doubt if even the prospect of an old pre-war spring in Paris would have taken him away; for his insatiable mind liked nothing better than a complicated problem; and even as he spoke to me that morning the gods that presided over his destiny were preparing for him a strange and fascinating enigma—one which was to stir the nation deeply and add a new and terrible chapter to the annals of crime.

VANCE had scarcely poured his second cup of coffee when Currie, his old English butler and general factotum, appeared at the French doors bearing a portable telephone.

"It's Mr. Markham, sir," the old man said apologetically. "As he seemed rather urgent, I took the liberty of informing him you were in." He plugged the telephone into a baseboard switch, and set the instrument on the breakfast table.

"Quite right, Currie," Vance murmured, taking off the receiver. "Anything to break this deuced monotony." Then he spoke to Markham. "I say, old man, don't you ever sleep? I'm in the midst of an *omelette aux fines herbes*. Will you join me? Or do you merely crave the music of my voice—?"

He broke off abruptly, and the bantering look on his lean features disappeared. Vance was a marked Nordic type, with a long, sharply chiseled face; gray, wide-set eyes; a narrow aquiline nose; and a straight oval chin. His mouth, too, was firm and clean-cut, but it held a look of cynical cruelty which was more Mediterranean than Nordic. His face was strong and attractive, though not exactly handsome. It was the face of a thinker and recluse; and its very severity—at once studious and introspective—acted as a barrier between him and his fellows.

Though immobile by nature and sedulously schooled in the repression of his

Despite the apparent indolence of his attitude, I could tell that Vance was keenly alert, and that his mind was busy coördinating the factors of the scene before him

*Mr. Joseph A. Margolies of Brentano's told me that for a period of several weeks during the Bishop murder case more copies of "Mother Goose Melodies" were sold than of any current novel. And one of the smaller publishing houses reprinted and completely sold out an entire edition of those famous old nursery rhymes.

Digitized by Google Original from UNIVERSITY OF IOWA

emotions, I noticed that, as he listened to Markham on the 'phone that morning, he could not entirely disguise his eager interest in what was being told him. A slight frown ruffled his brow; and his eyes reflected his inner amazement. From time to time he gave vent to a murmured "Amazin'!" or "My word!" or "Most extr'ordin'ry!"—his favorite expletives—and when at the end of several minutes he spoke to Markham, a curious excitement marked his manner.

"Oh, by all means!" he said. "I couldn't miss it! . . . It sounds mad. . . . I'll don fitting raiment immediately. . . . *Au revoir.*"

REPLACING the receiver, he rang for Currie.

"My gray tweeds," he ordered. "A somber tie, and my black Homburg hat." Then he returned to his omelet with a preoccupied air.

After a few moments he turned, looking at me quizzically.

"What might you know of archery, Van?" he asked.

I knew nothing of archery, save that it consisted of shooting arrows at targets, and I confessed as much.

"You're not exactly revealin', don't y' know." He lighted one of his *Régie* cigarettes indolently. "However, we're in for a little flutter of toxophily, it seems. I'm no leading authority on the subject myself, but I did a bit of potting with the bow at Oxford. It's not a passionately excitin' pastime—much duller than golf and fully as complicated." He smoked a while dreamily. "I say, Van; fetch me Doctor Elmer's tome on archery from the library—there's a good chap."*

Pyne, the Dillard butler
Beedle, the cook

*The book Vance referred to was that excellent and comprehensive treatise, "Archery," by Robert P. Elmer, M. D.

I brought the book, and for nearly half an hour he dipped into it, tarrying over the chapters on archery associations, tournaments and matches, and scanning the long tabulation of the best American scores. At length he settled back in his chair. It was obvious he had found something that caused him troubled concern and set his sensitive mind to work.

"It's quite mad, Van," he remarked, his eyes on space. "A medieval tragedy in modern New York! We don't wear buskins and leathern doublets, and yet— *By Jove!*" He suddenly sat upright. "No—no! It's absurd. I'm letting the insanity of Markham's news affect me. . . ." He drank some more coffee, but his expression told me that he could not rid himself of the idea that had taken possession of him.

"One more favor, Van," he said at length. "Fetch me my German diction'ry and Burton E. Stevenson's 'Home Book of Verse'."

When I had brought the volumes, he glanced at one word in the dictionary, and pushed the book from him.

"That's that, unfortunately—though I knew it all the time."

Then he turned to the section in Stevenson's gigantic anthology which includes the rhymes of the nursery and of childhood. After several minutes he closed that book too, and, stretching himself out in his chair, blew a long ribbon of smoke toward the awning overhead.

"It can't be true," he protested, as if to himself. "It's too fantastic, too fiendish, too utterly distorted. A fairy tale in terms of blood—a world in anamorphosis—a perversion of all rationality. . . . It's unthinkable, senseless, like black magic and sorcery and thaumaturgy. It's downright demented."

HE GLANCED at his watch and, rising, went indoors, leaving me to speculate vaguely on the cause of his unwonted perturbation. A treatise on archery, a German dictionary, a collection of children's verses, and Vance's incomprehensible utterances regarding insanity and fantasy—what possible connection could these things have? I attempted to find a least common denominator but without the slightest success. And it was no wonder I failed. Even the truth, when it came out weeks later bolstered up by an array of incontestable evidence, seemed too incredible and too wicked for acceptance by the normal mind of man.

Vance shortly broke in on my futile speculations. He was dressed for the street, and appeared impatient at Markham's delay in arriving.

"Y' know, I wanted something to interest me—a nice fascinatin' crime, for instance," he remarked; "but—my word! —I wasn't exactly longin' for a nightmare. If I didn't know Markham so well I'd

Digitized by Google

UNIVERSITY OF IOWA

be tempted to suspect him of spoofing."

When Markham stepped into the roof garden a few minutes later it was only too plain that he had been in deadly earnest. His expression was somber and troubled, and his usual cordial greeting he reduced to the merest curt formality. Markham and Vance had been intimate friends for fifteen years. Though of antipodal natures—the one sternly aggressive, brusque, forthright and almost ponderously serious; the other whimsical, cynical, debonair, and aloof from the transient concerns of life—they found in each other that attraction of complementaries which so often forms the basis of an inseparable and enduring companionship.

During Markham's year and four months as District Attorney of New York he had often called Vance into conference on matters of grave importance, and in every instance Vance had justified the confidence placed in his judgments. Indeed, to Vance almost entirely belongs the credit for solving the large number of major crimes which occurred during Markham's four years' incumbency. His knowledge of human nature, his wide reading and cultural attainments, his shrewd sense of logic, and his *flair* for the hidden truth beneath misleading exteriors, all fitted him for the task of criminal investigator—a task which he fulfilled unofficially in connection with the cases which came under Markham's jurisdiction.

VANCE'S first case, it will be remembered, had to do with the murder of Alvin Benson;* and had it not been for his participation in that affair I doubt if the truth concerning it would ever have come to light. Then followed the notorious strangling of Margaret Odell† —a murder mystery in which the ordinary methods of police detection would inevitably have failed. And last year the astounding Greene murders (to which I have already referred) would undoubtedly have succeeded had not Vance been able to frustrate their final intent.

It was not surprising, therefore, that Markham should have turned to Vance at the very beginning of the Bishop murder case. More and more, I had noticed, he had come to rely on the other's help in his criminal investigations; and in the present instance it was particularly fortunate that he appealed to Vance, for only through an intimate knowledge of the abnormal psychological manifestations of the human mind, such as Vance possessed, could that black, insensate plot have been contravened and the perpetrator unearthed.

"This whole thing may be a mare's-nest," said Markham, without conviction.

"But in any case I thought that you might want to come along. . . ."

"Oh, quite!" Vance gave Markham a sardonic smile. "Sit down a moment and tell me the tale coherently. The corpse won't run away. And it's best to get our facts in some kind of order before we view the remains. Who are the parties of the first part, for instance? And why the projection of the District Attorney's office into a murder case within an hour of the deceased's passing? All that you've told me so far resolves itself into the utterest nonsense."

Arnesson sat down on the arm of a chair and extended his long legs. "What could be more ap-

Markham sat down gloomily on the edge of a chair and inspected the end of his cigar.

"Hang it, Vance! Don't start in with a "Mysteries of Udolpho" attitude. The crime—if it is a crime—seems clear-cut enough. It's an unusual method of murder, I'll admit; but it's certainly not senseless. Archery has become quite a fad of late. Bows and arrows are in use today in practically every city and college in America."

"Granted. But it's been a long time since they were used to kill persons named Robin."

Markham's eyes narrowed, and he looked at Vance searchingly.

"That idea occurred to you, too, did it?"

"Occurred to me? It leapt to my brain the moment you mentioned the victim's name." Vance puffed a moment on his cigarette. "'Who Killed Cock Robin?' And with a bow and arrow! . . . Queer how the doggerel learned in childhood clings to the memory.— By the by, what was the unfortunate Mr. Robin's first name?"

"Joseph, I believe."

"Neither edifyin' nor suggestive. . . . Any middle name?"

"See here, Vance!" Markham rose irritably. "What has the murdered man's middle name to do with the case?"

"I haven't the groggiest. Only, as long as we're going insane we might as well go the whole way. You know, Markham,

propriate," he exclaimed, "than that Cock Robin should die from an arrow shot from the bow of—"

that a mere shred of sanity is of no value."

He rang for Currie and sent him for the telephone directory. Markham protested, but Vance pretended not to hear; and when the directory arrived he thumbed its pages for several moments.

"Did the departed live on Riverside Drive?" he asked finally, holding his finger on a name he had found.

"I think he did."

"Well, well." Vance closed the book, and fixed a quizzically triumphant gaze on the District Attorney. "Markham," he said slowly, "there's only one Joseph Robin listed in the telephone direct'ry. He lives on Riverside Drive, and his middle name is—Cochrane!"

"What rot is this?" Markham's tone was almost ferocious. "Suppose his name *was* Cochrane: are you seriously suggesting that the fact had anything to do with his being murdered?"

"'Pon my word, old man, I'm suggesting nothing." Vance shrugged his shoulders slightly. "I'm merely jotting down, so to speak, a few facts in connection with the case. As the matter stands now: a Mr. Joseph Cochrane Robin—to wit: Cock Robin—has been killed by a bow and arrow. Doesn't that coincidence strike even your legal mind as deuced queer?"

"No!" Markham fairly spat the negative. "The name of the dead man is certainly common enough; and it's a wonder more people haven't been killed or injured with all this revival of archery throughout the country. Moreover, it's wholly possible that Robin's death was the result of an accident."

"Oh, my aunt!" Vance wagged his head reprovingly. "That fact, even were it true, wouldn't help the situation any. It would only make it queerer. Of the thousands of archery enthusiasts in these fair states, the one with the name of Cock Robin should be accidentally killed with an arrow! Such a supposition would lead us into spiritism and demonology and whatnot. Do you, by any chance, believe in Eblises and Azazels and jinns who go about playing Satanic jokes on mankind?"

"Must I be a Mohammedan mythologist to admit coincidences?" returned Markham tartly.

"MY DEAR fellow! The proverbial long arm of coincidence doesn't extend to infinity. There are after all, laws of probability, based on quite definite mathematical formulas. It would make me sad to think that such men as Laplace* and Czuber and von Kries had lived in vain. The present situation, however, is even more complicated than you suspect. For instance, you mentioned over the 'phone that the last person known to have been with Robin before his death is named Sperling."

"And what esoteric significance lies in that fact?"

"Perhaps you know what *Sperling* means in German," suggested Vance dulcetly.

"I've been to high school," retorted Markham. Then his eyes opened slightly, and his body became tense.

Vance pushed the German dictionary toward him.

"Well, anyway, look up the word. We might as well be thorough. I looked it up myself. I was afraid my imagination was playing tricks on me, and I had a yearnin' to see the word in black and white."

Markham opened the book in silence, and let his eye run down the page. After staring at the word for several moments he drew himself up resolutely, as if fighting off a spell. When he spoke his voice was defiantly belligerent.

"*Sperling* means 'sparrow.' Any schoolboy knows that. What of it?"

"Oh, to be sure." Vance lit another cigarette languidly. "And any schoolboy knows the old nursery rhyme entitled 'The Death and Burial of Cock Robin,' what?" He glanced tantalizingly at Markham, who stood immobile, staring out into the spring sunshine. "Since you pretend to be unfamiliar with that childhood classic, permit me to recite the first stanza:

"Who killed Cock Robin?
'I,' said the sparrow,
'With my bow and arrow.
I killed Cock Robin.'"

A chill, as of some unseen spectral presence, passed over me as Vance repeated the old familiar lines.

II

ON THE ARCHERY RANGE

(*Saturday, April 2d; 12:30 p. m.*)

SLOWLY Markham brought his eyes back to Vance.

"It's mad," he remarked, like a man (*Continued on page 69*)

Pardee

*Though Laplace is best known for his "Méchanique Céleste," Vance was here referring to his masterly work, "Théorie Analytique des Probabilités," which Herschel called "the ne plus ultra of mathematical skill and power."

What Education Means *to* ME

By JOHN ERSKINE

WE THINK of education as coming to us in successive stages. We went to the elementary school, we gradually reached high school, perhaps we got as far as college, or studied business, law, or medicine. If we failed of any of these opportunities, we think of ourselves as to that extent uneducated. Too few of us have the courage to use what education we have, unless someone has given us a diploma certifying our right to it.

A teacher learns to think of education in another way. His students, in school or college, are most of them intellectual children, often willing to be taught but sometimes unwilling. He hopes to get them to that point of maturity when they will begin to study of their own desire and for their own sake. Not because their elders wish it, but because knowledge, even knowledge taken from books, will give them power to live and make their way in the world. Whenever this maturity is reached, the teacher feels that the student has left his infancy behind, to become perhaps a scholar, yet in any case a man.

But even the teacher often forgets how much remains to be learned after we have succeeded in a bread-and-butter sense. In one way only does American education prepare for success—it tries to tell us how to reach it; but it rarely shows us what to do with it. When we have achieved even a little prosperity, a little leisure, do we know how to use it? If we don't, we haven't been educated for success.

Fortunately, if we have had the courage and the brains to succeed, we can teach ourselves how to enjoy our place in the sun. That is the kind of self-education I wish to discuss here. I write for people like myself, who are conscious of the rich possibilities of life and who are eager to miss none of them. No matter how much we learned at school, we now find our equipment inadequate for the prosperity which time has brought. We must either educate ourselves to enjoy new aspects of life, or else give up the opportunities, and to that extent admit ourselves a failure.

A man who applies himself to his business is likely to prosper before he is forty or fifty years old. He then has a reasonable prospect of several decades of health and increasing leisure. But if he has learned only what was necessary to get him on in his business, these years ahead of him will be full, not of opportunity but of embarrassment and disappointment. He will not be able to use his leisure, at least not to the best advantage. When the need of action is ending, and the man has time to think, he enters the society of his more thoughtful fellows. But to take his place among them he needs such a body of information, and such training as the activities of his youth may not have provided.

DRAWING BY WALTER JACK DUNCAN

For a woman also there will be the same problem: If she marries fairly young and brings up children, she may find herself likewise, at the age of forty, or even earlier, with more leisure at her disposal than she can fill happily. With reasonable prosperity in the home, and with a reasonable degree of health in the family, she will have less and less to do. With modern inventions, the housework will be easier to manage, and she may either devote herself to unimportant or imaginary duties, or she may resign herself to essential idleness and deterioration. In former days, the esteem in which she would have been held as a successful mother, the tradition of reverence and gratitude which would have surrounded her, might have been enough to occupy her thoughts and insure her satisfaction; but now an active woman is hardly content to spend the second half of her life contemplating the virtues she exhibited during the first half.

WHEN men and women come to this point in their lives they often turn critics of the education they had in childhood. They say the school ought to prepare us from the very beginning to live properly in these mature years. Perhaps the school might do more for us than it at present does, but the criticism in general is essentially unjust. We could hardly store up so long in advance any preparation which would be entirely adequate now. We ought to remember, moreover, that the sort of education which successful middle age needs is a peculiarly difficult kind to impart; it is easier for us to give it to ourselves than to share it with others.

When we were passing from our infancy into that second stage of education in which we consciously sought the power to live and make our way in the world, we were drawing upon the strongest impulse in our nature, the impulse to act. We are so constituted that action is easier for us than thought. When any strong stimulus is applied to us from the outside—when we are badly frightened, for example, or suddenly made happy—it is easy for us to do something about it, but very difficult to think clearly, to appreciate our condition, or to describe our feelings.

Success and leisure bring us chiefly the opportunity to think and to understand. In this respect, leisure and success will always be embarrassing. If we do not employ them to the best advantage, it may be because our nature still impels us toward various forms of action, an idleness disguised, or masquerading as something else. We may turn to sports or to a restless unphilosophic kind of travel, in which the motion is the main thing. We may even turn to those aspects of good work, social and religious, which most resemble the active life or the business in which we have succeeded. We may even fill our moments by "going to" the theatre, or the moving pictures, as we say; but perhaps it is not the play nor the picture which interests us—it is the going and coming.

THE impulse in us to act rather than to think, is not, however, in my opinion, the chief obstacle to the proper development of our middle-aged selves. The chief obstacle is a lack of courage. Many of us have been assuming that our education was over when we left school or college, and that to resume our education in any way is to admit failure and retrace our steps.

Society is just beginning to realize the mistake in this point of view. The education of our youth was indeed a failure if after we are out of school we can learn no more. The phrase "adult education" means for too many of us a sort of rescue work for those unfortunates who missed adequate training in their youth. The fact is, however, that we did have adequate training. We forget that those men and women who amount to anything in this world never cease their education for a moment. We need only the courage to begin.

Just what we each need in order to enjoy the leisure our middle years have brought us is always a personal question, but it is fairly safe to guess that most of us need four main equipments: In the first place, we want to know something about the history of the human race. Not quite the sort of history we studied in school, perhaps—not simply a list of rulers, or dates, or battles. In our life work we have often wished we knew how such and such a thing came to exist in the particular form in which we met it. We have tried to

Digitized by Google

UNIVERSITY OF IOWA

explain to ourselves individuals, cities, or whole countries, and we found no explanation possible, unless we could find out what went before. On our way to success, in other words, we have learned this general principle: most things in this world can be explained in a large part by their origin, or by their antecedents. But just because this principle is so general, we don't know how to begin our studies. It seems hopeless to attempt the mastery of the entire past.

The point is that we ought not to begin with the past, but with the present. In short, our method should be precisely the method of the trained historian. We ought to start with the particular event which we wish to understand. We should read first the most obvious explanations of it, and afterward, as long as our interest lasts, the more detailed accounts.

At the moment, we may be talking about China, for example, and we wish we knew something precise and adequate about that vast country, that extraordinary people. Remembering that we had no course in school on Chinese history, we feel we are ill-equipped to understand the newspaper today. But we could easily go to any good encyclopedia and read the article on whatever era of history we are interested in. The brief treatment we find there will tell us in outline what has happened, and where and when.

At the end of the article there will be some important titles—the books or other documents on which the brief encyclopedia account is based. If we read these books, we shall find in them references to the sources from which, in turn, their information is drawn. If we then read these sources and continue to follow up the further references which they may contain, we shall come at last to the original documents and records from which the trained historian interprets the past. Now we are ready to tackle the present again, for there are always new books on the oldest topic.

ANYONE who follows this course of reading to the end will have at his command all that is known on the subject. Though he may not at first realize it, he will have mastered much more than he probably would have read in any formal course on the subject. Along the way, as it were, he will have had his curiosity aroused about other areas of history, and he will satisfy these curiosities by the same method—reading first in the brief superficial account, and gradually in the more detailed and fundamental records.

Few of us, of course, have the energy and the time to master even one phase of history with the thoroughness here suggested; but in principle this is the method, and it is available to anybody who can read.

Even if we stop with the encyclopedia articles, we shall have stored up a large amount of information. But we ought not to lose heart at the very beginning, or make up our minds in advance not to be thoroughly informed.

It is remarkable how much anyone can accomplish by the habit of steady reading. There are many business men in America today, who, in spite of the fact that their business and their other duties leave them only short intervals of leisure, have made themselves profoundly learned, often in rather large areas of history. Their secret is to use regularly the briefest intervals of the day. If they have ten minutes, they read; if only five, they still read. Perhaps they never had a stretch of uninterrupted hours such as most of us think necessary for the scholarly life.

The man who assumes that some day he will have plenty of time to improve his mind will probably go unimproved to the grave. Uninterrupted time does not offer itself in our modern world. But if we take from the public library the particular book we wish to study at the moment, and if we keep it where we can lay hands on it quickly, in the quarter of an hour before dinner, or the half-hours before we go to sleep at night, or even the few minutes we may have while waiting for breakfast, we shall be surprised at our progress.

The kind of curiosity we have about the past depends of course on our tastes and temperaments. Some of us are naturally antiquarian. For such readers, the flavor of the past as such is attractive. They try to put themselves back into the period in which they are reading, and history gives them a happy sort of outlet or escape from the contemporary world.

But for most men, the desire to know what has happened in the world connects itself closely with interest in the present. We are after an explanation of what we see before our eyes. For such readers it will not be the difference between one age and another that is attractive, but the resemblances. (*Continued on page 106*)

In the age-old conflict between the call of high adventure and the call of love Dan obeys

The Stronger Voice

By
EDMUND
WARE

"I've been the toughest team hand on an old-time gradin' gang;
I've rode the rods and dared the gods and cussed and fought and sang;
I've followed big construction jobs and blowed a heap o' pay;
But fall is here and winter's near. Me for the South! Today!"

BLACK PADDY, leaning against a great steel beam, sang softly. In the dusk a mammoth steam shovel began to look shadowy and terrible. The air was damp with the smell of clay; a steam siphon gurgled in the bottom of the pit, and far-off lights blinked through the dark.

Near Paddy, his feet dangling over the edge of the beam, sat Alamo Dan. He was watching the river. At night the river made you think about things you'd never think of in the daytime. The lights on the Canadian shore made you wonder what was back of them, who had turned them on.

A shadow-shape moved slowly out on the current. There was a faint sound of engines churning and of water sweeping by. It was a big freight steamer. Maybe all the way from Duluth. You couldn't tell.

A wind came searching from across the river. It was growing cold. Well, Detroit *was* pretty far North for November—pretty far North. That was why Black Paddy had begun to sing. Dan had been expecting any day now to hear Black Paddy's voice. He had heard it every fall since they had teamed up on that flood dam job in Dayton, years ago, now.

Paddy sure had something in his voice that stirred you up, and made you want to be moving on toward some mysterious place. But this fall would be different, because there was a secret. What would Black Paddy say? What would he think?

Dan felt a hand on his shoulder. He looked up. Paddy's dark head was thrown back. He seemed taller, bigger, finer than ever before. He was always that way when he was getting ready to travel, and Dan could tell by the feel of the hand on his shoulder, and by the way Black Paddy stared up and up into the dark, that something big was happening.

"Listen, Dan," he said. "*Listen!*"

"What is it? What *is* it?" Dan gazed into the blackness, trying to discover the cause of the remote rushing sound which came to him out of the sky. "What is it?" he whispered.

Black Paddy held up his hand, waiting until the sound had slipped away into silence before he answered, "Wild geese!"

"Say! The sound of their wings, Paddy! Makes a man feel kind of funny, don't it?"

"Sure does, son. I'll tell you why. It means the end of another season; means we're due to start South again, along with them. Ah! The rumble of iron wheels is in my ears, and the wings of the wild geese have got me!

"We're off for the South tomorrow, son. Is it N'Orleans? Florida? Or where?"

Dan's chin rested in his hands. For a long time he gazed at the strange reflections on the river.

"I'm not goin', Paddy. I'm not goin' this fall."

BLACK Paddy laughed. "What do you say? Not goin' South with old Black Paddy? You who have heard the rumble of iron wheels? You who have dug in rock and clay from coast to coast? You who have wandered spring and fall with Black Paddy and his wild geese? You're young, my son, and funny!"

"I'm not goin', Paddy. Honest!"

"Listen, Dan. I've heard men like us say that before. But they can't stay still. You can't. I can't. And what's the good of trying? Why, *think!* A week, ten days—and we'll hear the black men's voices singing on the levees. We'll sniff the air of N'Orleans. We'll meet old friends who've gone ahead, and hear their yarns of other camps. We'll see Long Jack and Walk-alone and Sunny North. We'll hear them tell of tunnels, of mines, and other jobs. Oh, you'll go, same as you have before—with old Black Paddy!"

"No. I can't hardly make you understand, 'cause I can't talk like you. But I'm not goin', honest, Paddy, I'm not. I just *can't.*"

"*Can't* go?"

"I've—got a girl."

Black Paddy sighed strangely. "I knew it! I *knew* it! Dan, you're a young fool!"

Digitized by Google
Original from
UNIVERSITY OF IOWA

"Aw—say! *Don't* talk like that, Paddy. She's different. I promise you she's not the reg'lar kind. She makes me wish—she makes me wish I hadn't done a lot of things."

Black Paddy came close. On each of Dan's arms he placed a hand. "I've watched you grow," he said, "from the gawkiest gay-cat in the bunch. I've shown you big adventures. I've worked with you. We've ripped the earth and blasted rock and swung a pick together. I've watched your young arms grow from flimpsy things to what they are. And—now you're usin' them to hold a girl!"

"She loves my arms, Paddy. She says they're—beautiful."

"'Course she does! She loves your arms. She loves the look of your eyes. You've been and seen and done. You've filled your life with adventure. *That's* what she loves, young Dan, not you!"

"She *says* she loves me. I think she does. I've got a feelin', Paddy."

"Come on, forget her. We've got our pay from this job. We'll go down the map and hear the black men sing. This talk is too soft for us. Women! Love! We're *men*, Dan. We *do* things! Tonight we'll go to Joe's by the river and drink to the wild geese. Come on!"

BLACK PADDY took his coat from where it hung upon a timber. Dan did not move, but stared quietly at the river lights. Paddy could sure talk. If only *he* could talk the way Black Paddy could. He'd make him understand. But it made you feel all twisted up to try and tell anyone about it. You could tell about a fight, or about seeing a man all smashed up in a cave-in; but when it came to telling about your girl, and how you loved her, and how wonderful she was, why—you just couldn't say anything at all.

"Let's be off, son," said Paddy, gesturing toward the river. "There's friends and warmth and whisky waiting for us."

"I ain't goin' to drink any more, Paddy."

"You—what?"

"I ain't goin' to drink tonight—or any other night ever again."

"Well, by the gods! You *do* love her, don't you?"

Black Paddy glanced down at Dan, then strode off, singing, into the darkness:

". . . I've rode the rods and dared the gods.
And cussed and fought and sang;
I've followed big construction jobs . . ."

A tugboat whistled somewhere out on the river. The echo died away, and Dan heard faintly through the river mist,

". . . Me for the South! Today!"

If he left Black Paddy, what then? Never again could he listen to the wild geese or to the rumble of iron wheels. He'd have to quit the bunch and stick on one job—but he'd have Ann. He'd have her to think about every day and every night. She sure was pretty fine. There

wouldn't be any more of those unhappy, restless times a fellow had, because he'd just go and tell her about it.

And Black Paddy? *He'd* prob'ly team up with some other guy; all the time they'd roam and roam and see big things—rivers, mountains, rock and steam and steel!

Dan stood up, took a last look at the river, and walked down the crunchy cinder path to the workmen's shanty. He put on his other coat and his broad belt with the big silver buckle. He stepped out, closing the door behind him, walked across a vacant lot and down a long street to the tobacco shop where Ann worked. He leaned against the counter and watched her while she waited on the last customer.

She glanced up at him quickly, a glance of deep, sudden welcome. She noticed the trouble in his eyes. "I guess there's something on his mind," she thought. "I guess he's come because he needs to talk to me." It was good to think that she could help him.

The customer went out, and they stood looking very seriously into each other's eyes.

"Say, Ann. I got something to tell you."

She came nearer, looking at him anxiously. "All right, Dan. I'll be with you right away."

He helped her on with her coat, and stood behind her, watching while she put on her hat before the long mirror back of the cigar counter. She turned out the lights, and they left the shop and took a street car to the middle of the city. They transferred and rode out East Jefferson Avenue to the Palais Royal.

THERE were lights—a million of them, and music, and an awful stampede of people, dancing and dancing and dancing. You could see the big ferris wheel whirling slowly and dizzily. The people who were 'way up on the top always screamed, half in fear, half in excitement. Near by, the roller coaster roared horribly on its tracks, the sound rising, sinking, rising, sinking like iron waves on an iron shore.

"I don't want to tell you here, Ann. Everything's too loud and mixed up. Where can we go?"

"We can go over to Belle Isle, Danny. There won't be many there."

They took a bus across the lighted bridge to Belle Isle and walked to the open land along the river. It was very still.

They sat down on a bench and Dan took her in his arms and kissed her lips.

"Well—I had it out with Black Paddy."

"You did?" She turned quickly.

"Yes. He said a lot of things. Some I didn't understand. Paddy can talk wonderful, so you don't know what it's all about. You just get a feelin'."

She could see that he was disturbed, and she drew his arms more tightly around her and touched his face with her hand. "What do you mean, Danny? What kind of a feeling?" She felt him tremble.

"WHY, I don't know, Ann. I don't know. But I don't have it when I'm with you. I just want you—I want to be with you forever, and that makes it kind of easy to forget things."

"What do you mean?"

"Well, you know we've traveled a pile, me an' Paddy. Winters we'd go South, and in the spring we'd come up North again and hear about some big job opening up, and we'd bust loose and go—everywheres.

"Nothing ever tied us down. Kind of a good way to live, Ann. We'd meet up with other guys in hang-outs we knew, and tell yarns about what we'd done and where we'd been. Kind of wander around all over—nomads, Black Paddy calls us. Him and me always stuck together.

"There's a lot of guys would give anything to be Black Paddy's side-kick. He's kind of famous, Paddy is. He can fight like the devil, and work! Say, Ann! He's been everywheres and done everything! We got to know each other pretty well, what with bein' together so much as we was. I *like* Paddy. Don't you see how it is?"

"Yes, Dan, I see. He wants you to go wandering forever with him. And you want to go. But you want to stay too."

She tried very hard to read his eyes in the darkness. "Well—are you going?"

"I don't know!"

The wind came whispering across the river. He took both of her hands and held them against his lips for a moment. "If you loved me enough—if you *really*—" Dan's face was close to hers. "Paddy said maybe you only loved my arms, loved me 'cause I was strong, and 'cause I'd been a lot of places. He said it wasn't really *me* you loved."

"Hush, Dan dear. *Don't* say things like that. Here—kiss me and see if you can feel how much I love you!"

"No. . . ."

Paddy had said women did things like that, couldn't help it, 'cause that was their nature. They just made men sacrifice everything. Why, what could Ann ever know of what he would give up to stay with her? What could she know about the sound of the wings of the wild geese, or the urge in Black Paddy's voice, or the feeling you got when the black men sang at night on Southern rivers?

He knew. He knew the great longing to be gone. And what would Ann be to him? What would she do for him? Could she be as much in his life as old Black Paddy and the endless road?

"Ann!"

She answered with a vague tightening of her fingers on his arm.

"Look—supposin' I got smashed up. Supposin' I got hurt bad on some job so I wouldn't look the same or feel the same any more. Would you still love me? Or would you go and love some other guy?"

"Dan, why ever do you talk like that?" She drew his head down to hers. He would have turned away, but she kissed his mouth, and his arms closed tight around her.

"I'll stay, Ann. I'll stay with you until I die!"

HE LEFT her at the doorway of her little room near the shop. He heard her whisper "Good night," heard her footstep in the dark hall. She was gone.

He walked down the street, blinking at the light from the arc lamps. An empty car thundered by. Late at night cars seemed to make more noise—all the other sounds were quiet.

He crossed a field back of a factory and came to the rooming house where he and Paddy slept. Black Paddy had not come in.

"He's still singing down at Joe's," Dan thought, "or maybe tellin' about the loggin' camps or the Truckee Dam job. He's sure been everywheres and done every-

The American Magazine Invites You to Listen In

BEGINNING on September 19th, THE AMERICAN MAGAZINE *Radio Hour* will be presented regularly on the National Broadcasting Company's "Red" network of twenty radio stations. This hour will hold the air every second Wednesday evening at eight o'clock, Eastern Time. Here is the list of stations, as at present arranged:

WEAF, New York	WGR, Buffalo
WEEI, Boston	WCAE, Pittsburgh
WTIC, Hartford	WTAM, Cleveland
WJAR, Providence	WWJ, Detroit
WTAG, Worcester, Mass.	WEBH, Chicago
	WSAI, Cincinnati
WCSH, Portland, Me.	WOW, Omaha
WLIT, Philadelphia	KSD, St. Louis
WRC, Washington	WHO, Des Moines
WGY, Schenectady	WDAF, Kansas City

WOC, Davenport, Ia.

This hour is arranged for your entertainment

Black Paddy held up his hand, waiting until the sound had slipped away into silence before he answered

thing. I wisht I'd been as many places as he has!"

He stretched out under the blankets and gave a long tired sigh. Somewhere a big clock struck. Kind of a mournful sound—kind of a drowsy sound. A dark wind came prowling through the window and made the curtain wave silently toward him. . . .

He heard Black Paddy's voice, and knew that it was morning. "Up with the larks, son! I have big news!" Paddy's hand tugged at his shoulder.

"Hullo, Paddy. What's the matter? Where was you all night, anyways?"

Paddy closed the window and turned, smiling. "Things happened in the night," he said. "I was with O'Neil at Joe's. He's the city inspector and a three-bottle man. He tells of a big sewer job just opening up 'way out Mack Avenue. Aldrich and Kane are going to lay ten thousand feet of twenty-four-inch pipe. They start the big machine tomorrow and want two men to lay the crock behind it."

"I thought you was goin' South, Paddy?"

"As sure as the wild geese, son. But I'll stick with you a while and see the old Bucyrus eat the clay. Just for a week I'll stay—just to hear the iron buckets gnaw, to watch the pipe-trench dug behind the steam." (*Continued on page 156*)

Popular Beliefs

Some are true; and this article tells

WHEN you were a youngster, you heard, and probably believed, that an elephant never forgets an injury and is afraid of mice; that if you were to split a crow's tongue, he would easily learn to talk; that chameleons change color; camels go for two weeks without water; and that a frightened ostrich buries its head in the sand. More than likely, you were told also that dragon flies would sew up your eyes, that snakes could throw poison and that they never die before sundown; that cows lose their cuds and that a cat has nine lives.

Some of these popular beliefs are true, or at least well enough founded to justify their existence. Others, of course, are ridiculous and false.

One of our male elephants, Gunda, once displayed violent anger when there appeared before his cage a boy who had some years before been in our employ and whom he had not seen in the interval. The boy had grown considerably, but there was no question but that Gunda recognized him, and hated him.

The puma's call is bloodcurdling. It sounds like the screaming of a human in distress

The story behind the incident is that the boy worked on the "pony walk," where our juvenile visitors enjoy their pony rides. The elephant carried passengers up and down the same path. Whenever Gunda passed it was the boy's habit to switch his hind legs with a pony whip. He managed to do this regularly without the elephant handler finding it out.

Naturally, after this had happened frequently over a long period of time the boy became fixed in the beast's memory. It was not surprising that later he recognized the youth, any more than it is surprising for an intelligent elephant to remember a former keeper, or for one to learn to know you if you make a habit of bringing him a piece of sugar every Sunday morning. An elephant, like other animals of the higher order of intelligence, knows and remembers persons seen habitually, and reacts to their presence according to the treatment experience has led it to expect. But to insist that an injury inflicted by one man in a crowd of people will be recalled by the animal twenty years later, should that individual reappear, is paying too high a tribute to the memory of even so perspicacious a creature as the elephant.

NOT long ago, Khartoum, our big African elephant, was observed by one of the keepers backed into a corner with his trunk held high and his great ears spread wide in the elephantine attitude of alarm. The object of his fear was a very small mouse. Strangely enough, the presence of a rat in the elephant house is regarded with complete indifference. Perhaps the fright over a mouse is inspired by the possibility that the tiny rodent might crawl into the end of the trunk, whose delicate inner membranes are most sensitive. A garter snake released in Khartoum's quarters once as an experiment, produced the same symptoms of excited fright.

That elephants regularly live to be one hundred and fifty or two hundred years of age is very commonly believed. We may be pretty positive that no elephant lives to be two hundred years old. Wherever men are familiar with the big beasts an elephant is considered to be growing until he is twenty-five, young at thirty-five to forty-five, fully mature at fifty-five, and old at from sixty to eighty years. Any elephant a hundred years old would be regarded as extremely old and very unusual.

Parrots have a great reputation for exceptional longevity, which the facts justify to a degree. We have fairly authentic information of parrots having lived one hundred years. One recently came to us at the Zoo that I knew to have been in a New Jersey family for thirty-seven years. A definite record exists of a gray parrot living ninety-three years, and another of a sulphur-crested cockatoo that survived for eighty-one years. The average age attained by birds in captivity is probably between two and four years.

The real patriarch among living creatures is the Galápagos tortoise, which very likely does attain an authentic span of two centuries of life. Scientists have estimated that certain specimens were four hundred years old; but I should feel safe in asserting that a tortoise three hundred years old was phenomenally aged. We have a Galápagos tortoise here that has been weighed and measured annually for twenty-six years. In

HERMAN PALMER

some are not, you which is which

that time his weight has increased from one hundred to two hundred and sixty pounds, or at an average of about six pounds a year. The growth of an animal in captivity, however, is no fair criterion for estimating his natural growth, for in the wild state meals and temperature are much less regular.

Instances are often reported of common land tortoises having been found with ancient dates carved on their shells. However, unless boy nature in other localities is quite different from that in the neighborhood where I grew up, one may suspect that young jackknife owners have not been over-scrupulous about presenting tortoises with a hundred or so extra birthdays.

The life span of an animal can be estimated with rough accuracy by multiplying by four or five the number of years required to reach maturity. Apply this rule to human beings, horses, dogs, or any animal whose growth and age you know about, and you will find it approximately correct.

Such beliefs as that bats have a propensity for getting in your hair, and that dragon flies are ambitious to sew up your eyelids, of course have no more basis in fact than the saying prevalent amongst negroes in certain sections of the South, that a frizzle-feathered chicken wears its feathers hindpart foremost because it made the unfortunate mistake of emerging from the shell backward. Almost in this class is the time-worn legend that the ostrich buries his head in the sand, and thereby feels himself made safe from approaching danger. If this were true, the capture of wild ostriches would be a far more simple undertaking than it is.

WHAT an ostrich really does when he becomes aware of danger, and thinks himself as yet unperceived, is not unlike the action of a hen or a quail under similar circumstances. He squats down close upon the earth. The long neck that would otherwise make him still conspicuous he stretches out flat along the ground. He does not bury his head; his eyes are open and alert to see whether he had better be running instead of trying to hide. In this position, he looks like just another hummock of the surface.

Whether the old story had its rise in the faulty observation of some explorer who thought the crouching ostrich had covered his head, we may never know. We know now that it is a fable, with which we must part rather regretfully since it affords so apt a comparison with the actions of some of our fellow humans.

However, you may continue to say "As vain as a peacock," with a perfect basis of fact. We have several dozen peafowl running at large over the one hundred and sixty acres of the Zoölogical Garden. My observation of them leaves me no doubt about the vanity of the male of that particular species. On a Sunday or a holiday when the grounds are crowded, a peacock that finds himself the center of an admiring group will continue to circle and strut, with every evidence of pleasure and pride for as many hours as he continues to attract attention. Ordinarily, the peacock's gorgeous display is obviously entirely for the pleasure of the peahen; but when a crowd of people is watching he will "strut his stuff" with no hen anywhere in sight.

A strange eccentric among our peacocks is one old fellow who seems to have decided to devote his career to bringing some color and pleasure into the quiet lives of the tortoises. As soon as they are turned into their pen in the morning, he may be expected to appear, spread his tail, and march about among them most of the day. Day after day, he spends with the tortoises, leaving only to be fed, even then to return immediately. The explanation? We have none.

Just *how* the chameleon changes color no one is absolutely certain, but it is a fact that he can do so at will. It is likely that his pigmentation is largely dependent upon the dilation and contraction of his blood vessels. Several species of fish possess this ability also. The little paradise fish from Asiatic tropical waters in the New York Aquarium has been observed to change color, from brown to blue to green, three times in three minutes.

It is true, too, that a lizard can lose his tail and grow a new appendage in its place. The common axolotyl, better known as the spotted newt or tiger salamander, can be bereft of a very large portion of his tail without permanent loss. Being composed entirely of muscular and connective (*Continued on page 193*)

This philanthropic peacock visits the tortoises daily and gives them a show worth looking at

What *is* Happening *to the* American Family?

By
HARRY EMERSON FOSDICK

A FAR-REACHING revolt is on against old-fashioned family life. Moreover, such a revolt was inevitable. With our inveterate tendency to believe in "good old times" and to see our present degeneracy against the fair background of an imagined past, we commonly glorify the old-fashioned home. But even conservatives who count their opinions on the family orthodox, and who are filled with indignation at the modern revolt, need only imagine themselves precipitated back a few centuries into the thick of the ancient customs to see how intolerable that old-fashioned family life would be.

Here is one item from the ancient English law dealing with the rights of a husband over his wife:

> He shall treat and govern the aforesaid A well and decently, and shall not inflict nor cause to be inflicted any injury upon the aforesaid A, except in so far as he may lawfully and reasonably do so in accordance with the right of a husband to correct and chastise his wife.

That was old-fashioned family life.

In the economic realm, all the English wife's property belonged to her husband. If she was a wage-earner all her earnings were his by law. If he brutally mistreated her and deserted her and she became self-supporting, he could return any time and take away every cent that she had gained. If he died first, he even could will away from her all her property and leave her destitute, save for her "necessary" clothes, her jewels, and ornaments of the person.

This actual incident is taken from the Westminster Review, in 1856:

> A lady whose husband had been unsuccessful in business established herself as a milliner in Manchester. After some years of toil she realized sufficient for the family to live upon comfortably, the husband having done nothing meanwhile. They lived for a time in easy circumstances after she gave up business and then the husband died, bequeathing all his wife's earnings to his own illegitimate children. At the age of sixty-two she was compelled, in order to gain her bread, to return to business.

That was old-fashioned family life.

As for divorce, only the man could hope to get it. In all English history no woman

Digitized by Google
Original from
UNIVERSITY OF IOWA

applied for divorce before 1801 and only three before 1841. No matter what a man did to his wife, she had to endure it.

Consider this utterance of a prominent Anglican clergyman in a Philadelphia pulpit in 1880:

> There is no crime which a man can commit which justifies his wife in leaving him or applying for that monstrous thing, divorce. It is her duty to subject herself to him always, and no crime that he can commit can justify her lack of obedience. If he be a bad or wicked man, she may gently remonstrate with him, but refuse him never.

THAT was old-fashioned family life. No wonder that for half a century the revolt has been persistent and vehement!

Moreover, not only have these positive evils stung our generation into rebellion, but the most characteristic factors of our new economic order have made it incredible that the dead hand of the past should rule the modern family. In particular, some eight and a half million women in the United States are in gainful occupations outside their homes. The consequences of this fact are far-reaching and deep. Freedom is a matter of economics; there is little use in claiming to be free if one is economically dependent.

Today increasing millions of women are economically independent; we train our daughters to that end as we train our sons. When, therefore, we read that a very large proportion of all divorces applied for are sought by women, the fact is not so discouraging as it might be. It does not necessarily mean that the estate of family life is in fact worse than it was a century ago. On the available evidence, I am strongly inclined to think it is better. What is clear is that modern women will not stand what their foremothers did, because they do not have to.

A vehement revolt, therefore, is on against old-fashioned family life. We may as well make up our minds that it is inevitable. If we are wise we shall see that it is desirable. The longer that some of the old legal and social taboos are retained, the more disastrous will be the breakage when they give way. The eminent churchman who summons the hosts of the Lord to "holy indignation" as the chief remedy he has to offer for our perilous experimentation with the family is wasting his whistle in the teeth of a rising gale.

THIS fact, however—that the present revolt is inevitable and that there are many elements in the old-fashioned family against which revolt is necessary—does not solve our problem. The real danger in our situation lies in the fact that so many people see clearly what they are revolting from and so few see at all what they are revolting to.

Every age of rebellion against obsolete modes of life and thought presents this crucial problem. Dislike of something old is easier than discovery of something new. As in the case of Russia, it is simpler to perceive the evils of capitalism and to run headlong from them than it is to perceive what you are running into when you take the road leading toward communism.

It has long been proverbially evident that getting precipitately out of the frying pan may be only a prelude to landing in the fire.

The dominant mood of every age of revolt is the passionate desire to get away from something. In this generation, when even our books bear titles like "The Revolt of Youth," this passion for escape is ardent. We wish to get away from old taboos, burdensome restrictions, moral conventions, cramping orthodoxies; and the resultant situation is often similar to the estate of a man who has fled from a wild-cat in the woods. He saw so clearly what he wanted to run from that he did not stop to think what he was running to, so that, having now paused to consider the matter, he is bewildered, lost, out in the woods, and not sure where.

Such is the situation in large areas of American family life today.

The spirit of revolt against old marital laws and customs, inevitable and justifiable though it is, has brought us to a pass not unlike that of Rastus fleeing from a bear, who, asked where he was going, cried as he fled past, "I ain't going nowhere; I'se coming from somewhere." The attention of many people for half a century has been largely concerned with the things in family life that the new generation wishes to flee from. It is high time that we began seriously and intelligently considering what we are fleeing to.

"Companionate marriage" is the term that increasingly is being used to sum up the probable end of the present revolt. This term was first employed by Doctor Knight of Barnard College in an article published in May, 1924. At its inception it signified simply the wedlock of two people who, for various reasons all the way from pleasure to health, wished to marry without facing, at least in the early years of their union, the responsibility of children.

That there are situations where such an arrangement is both innocent and desirable, must be obvious. Two people going to a difficult missionary field may be well advised not to have children. Conditions of individual health at home may make such an arrangement temporarily imperative. He would be hard-hearted as well as ill-advised who would insist that two professional students working, let us say, for higher degrees, might not marry until they were prepared to support a family.

TO BE sure, even in its simplest form, this modern variation from the historic family depends on methods of controlling birth; but that it is inevitable, that it is in wide-spread and constantly increasing use, that it is often absolutely necessary and generally innocent, most observers would at once agree.

From this early and simple meaning, however, the phrase "companionate marriage" has moved out to a much wider significance. Words gain associations, connotations, suggestions far beyond the power of their originators to guide or prevent, and the phrase "companionate marriage" now popularly represents a scheme of sexual experimentation, whereby two people go through the form of marriage in order to live with each other without assuming either the hope of permanency or the responsibility of children.

In a word, companionate marriage now has become generally synonymous with trial marriage. Try wedlock on, it says; if you do not make a success of it, try again; marriage is neither so sacred nor so emotionally delicate that you need to be afraid to experiment with it. It is like buying a pair of shoes. Of course you will try to secure a good fit the first time, since it is so bothersome a nuisance to change if you fail; but if the fit is poor no great damage is done. Get another pair.

THAT such trial marriage is not so much a modern deviation from as it is a modern cancellation of the historic family is clear. The one crucial point at issue in the present confused situation is to be found in the inquiry whether in our revolt against the old-fashioned family we are revolting to trial marriage. Is that our *terminus ad quem?*

The easiest thing in this world is to hate something. We have been indulging this facile faculty of anger against the obsolete laws and taboos which have governed the home. Our attitude of revolt has centered our attention on the process of escape from disliked inheritances of marital codes and customs. Now we begin to get a fairly clear view of the revolt's actual destination. It seems to be trial marriage. Is that really where we wish to end? If not, now is the (*Continued on page 96*)

We Don't Know Where We Are Going

But We're On Our Way

"THE real danger in our situation," says Doctor Fosdick, "lies in the fact that so many people see clearly what they are revolting from and so few see at all what they are revolting to. . . . It seems to be trial marriage. But is that really where we wish to end? If not, now is the time to face the question. At present we undoubtedly are headed in that direction."

The Man Who Cannot Stay Still

By MILDRED HARRINGTON

ALONE white man lay on the uneven brick platform which was the community bed of a half-ruined inn somewhere in a remote district of northwestern China. Here, a few weeks before, had occurred one of the most disastrous earthquakes of history.

With his back propped against the wall, he was painfully lettering on a piece of wrapping paper two lines from Robert Louis Stevenson's "Requiem." The words were these:

> Glad did I live, and gladly die,
> And I laid me down with a will.

The white man was writing his own epitaph. A twisted little smile compounded of suffering and an incurable sense of humor played about his lips as he thought how faithfully each uncertain stroke of his quavering writing would be copied by some Chinese stonecutter who would not understand a letter that he chiseled. He smiled again, but a little sadly this time, as he pictured the rough stone slab that would stand on the alkali plain along the Yellow River as his last flaunt to fate!

That morning he had received his death sentence in the unmistakable symptoms of the supreme dread of the traveler in Asia—amœbic dysentery. Only one cure is known for this disease. It is a prolonged and elaborate treatment with a dangerous poison, and requires expert hospital attendance and medical supervision. It was a month's journey to a hospital over roads wiped out by landslides and broken by huge cracks in the earth. Progress could be made only by horseback. This mode of travel was impossible, for if the patient were jarred he might die of hemorrhages.

The name that the sick man signed to his impromptu epitaph was Upton Close. He was an American newspaper correspondent who had come out from Peking to investigate conditions in the devastated earthquake region. His companion on the journey was the Reverend John Hayes, head of a committee sent out by the International Relief Association.

Close had been half sick for several days, but he had kept going. On the morning that he realized the serious nature of his illness, he wrote his farewells to family and friends. Then, crouched over a tiny charcoal hand brazier while the icy winds of Central Asia whistled through the ruined walls of the inn, he made his plans:

It was three hundred miles to a hospital; sixty to the nearest telegraph station. Without remedies, he might reckon on three weeks to live. If he could get treatment in that time, there was hope. Hayes had already dispatched a coolie to the telegraph lines with a message to the nearest town. The answer came on the third day: By great good luck there was a native doctor visiting his family seventy miles to the north. Perhaps they could reach him before it was too late.

They made two attempts to start; on both occasions the sick man suffered so cruelly that Hayes brought him back. But let Upton Close himself take up the story here:

"I was growing weaker and weaker," he said, in recounting the experience to me, "and Hayes was greatly troubled. I finally pledged him and my Chinese servants to make no effort to carry my body back to Peking. I requested them to see that those intrepid lines of Stevenson's were put over my grave.

"I thought of my wife and two little boys. I had dreamed of the time when we would ride forth together in search of adventure. But now it seemed that I was headed for the Great Adventure, which all men must meet, alone.

"POOR Hayes was desperate. At last he decided to risk the trip to the native doctor's home. I was swung in a hammock which Hayes had rigged up under a great covered cart. Both the hammock and I were wrapped in oilskins for protection against the bitter wind, which was loaded with stinging sand and sleet.

"I know but little of that journey. At length Hayes found the doctor. I understand that the treatment consisted of large doses of opium and kerosene. How it happened, I'll never know, but when I had survived the remedy, the disease was gone.

"My recovery was as rapid as my seizure. In a few days I was fretting to be out of my hammock. When we came within sight of Ning-an-bu (Tranquil Peace Mart), I mounted (*Continued on page 133*)

Upton Close

HIS REAL NAME, and the one under which he went to China, is Josef Washington Hall; but the name under which he came back and under which he now lives is Upton Close. A reckless adventurer whose delight it is to study at first hand the big events of the earth, is this young man of the strange *nom de plume*. But he got that curious name honestly enough. He was close to fighting in China, and he sent a despatch telling of the fight. The last two words were these: "Up close." Someone mistook them for a signature—Up Close. That didn't sound like a name, so they made it Upton Close; he liked the looks of it, so adopted it as his own.

Wayman Adams

WAYMAN ADAMS, one of the greatest of portrait artists, earned his first five dollars by painting the picture of a neighbor's cow; his next five came for the picture of a faithful old horse owned by a country doctor. "You've got her!" exclaimed the doctor when he saw the picture on the gable of his barn. "That's Mary Belle, even to the spring in her knee! But remember, young feller, don't get lazy, don't get spendthrifty just because you can earn five dollars a day!" Mr. Adams was born in Muncie, Indiana, in 1883. His principal studio is now in New York City.

"If you wish to know whether or not you really want a thing

Try Giving It Up" says WAYMAN ADAMS

By M. K. WISEHART

BACK in 1889, on a farm six miles from Muncie, Indiana, a boy going on seven sometimes surprised his father and mother by the things he could do with a pencil. An impulsive line—a little blurred stroke, a dot, a dash—and he had a kind of likeness! It might be a man in a hay field. His mother hanging out clothes! A dog, a horse, a goat! Childlike, immature, these pictures were, but about them was something arresting.

The father was a man of limited means, a stock-raiser on a small scale. Sometimes he went up into Canada, whence he brought back great draft animals, Clydesdales, or Percherons, for breeding purposes and for sale. Now, he not only gave these horses such names as "Solon," "Hercules," "Atlas," and "Eve," but he painted their pictures as well.

And these pictures had *point*. There were two barns on the place; and on each of the four sliding doors there was a picture, not of a typical horse but of a *particular* horse.

And the boy, admiring the painted mares and stallions as much as the animals inside the barn, marveled. He was filled with ambition, and he imitated his father's work. And somehow he too caught the difference between the typical and the particular.

By the time he was twelve, when the family had moved into the nearby town, Wayman Adams, using his father's materials, was painting pictures in oil. In Silverburg's drug store, in Muncie, there was an exhibition—some of the pictures by the father, some by the son. One by the boy was a spirited copy of "The Bombardment of Matanzas."

In Albany, Indiana, was a hotel proprietor, W. P. Bartlett, who owned the best herd of short-horn cattle in the state. Said the hotel man to the boy one day: "I got a cow I think a great deal of! Six years old! Worth two thousand dollars! If you painted her picture, what would it cost me?"

"Do it for nothing—you pay for the paint!"

"Didn't ask you to do it for nothing. Asked you what you'd charge?"

"Five dollars!" said the boy.

It was his first portrait. Exhibited in the corridor of the Hotel Bartlett, it created a sensation, and the Albany paper printed a front-page story with headlines in letters an inch high: "Gypsy Girl III Has Her Portrait Painted by Wayman Adams, a young lad of Muncie."

Not far from Muncie, in Yorktown, was an elderly doctor, a gruff, kindly man, who had a faithful horse that had served him well. Her name was Mary Belle. Said the doctor to the boy one day, "Been looking at that picture of yours in Mr. Bartlett's place. Do as well by my old mare and you can paint her on the gable of my barn."

"Mercy on us!" exclaimed the doctor when the job was done. "You've got her! That's Mary Belle to the life! I'd know her a mile away! Even to the spring in her knee! Well, well!"

Handing over five dollars and peering over his spectacles, the old doctor became stern, severe. "Done a pretty good job," he said, "but it didn't take you long! Five dollars is a lot of money for a boy to earn in one day! Now, don't get lazy! Don't get spendthrifty! If you'll attend to business, you'll never go hungry! Maybe you'll make your mark!"

"The Conspirators": Joseph Pennell, John McLure Hamilton, and Charles Burns, painted by Wayman Adams

BY NOW, the newspapers of Muncie, and other newspapers as far away as Springfield, were calling Wayman Adams "the boy artist." Some referred to him as a "prodigy." There were people who said that he had done so well because his father had helped him. Still others—the wiseacres—said: "Aw! He's what they call a precocious kid! You know how it is with them kids! They peter out! That kid ain't never goin' to set the world on fire!" Others were awed. They pondered the mystery. And some said: "Mark my word! That boy was born a genius!"

He *was* born a genius, as we shall see.

Twenty-eight years have passed since the Muncie boy painted Mr. Bartlett's cow. Today, at forty-five, he is one of the foremost portrait painters of America—famous wherever portrait art is known for his

Digitized by Google Original from UNIVERSITY OF IOWA

Portrait, "A Danish Woman," by Wayman Adams

gifted, brilliant, and colorful characterizations; for the sweep, daring, and skill of his brush; for the penetration of his vision; for his unique power and certainty in expressing that vision!

Recently, in the artist's studio in West Fifty-seventh Street, New York, I was looking at some of these portraits. Celebrities, noted musicians, authors, painters, scientists, and many public men have sat for him! And many others, whose fame consists in having been painted by him—striking characters from the by-ways of life! And besides these portraits brief, glowing epics of moods and moments in Florence, Madrid, New Orleans, San Francisco, New York!

HE WAS born a genius, and I wondered what meaning his story might have for the rest of us. *He* couldn't have known anything of those doubts and perplexities which beset the average boy when starting out on what he thinks of as his career. *He* must have known where he was going. For *him* the road was surely clear. . . .

But, at the moment, I said nothing of this. In the course of many discussions that followed, I got what I think is the real story. Presently you will see how its meaning touches us all. . . .

"I was sixteen when I had my first adventure," he said. "Just a boy's adventure, a first foray into the world. My family were in anything but prosperous circumstances. I wanted to get away, to *do* something and *be* somebody. It wasn't because I wanted to learn to paint; I could paint at home. Nobody was opposing me in that.

"With another boy I ran away, stealing into a freight car that was headed for Danville, Illinois. This car was loaded with iron pipe and in such a way that there was a space at one end. On a down-grade the pipe slipped. It came over on us. Things went black. The next I knew I was in a hospital. For a long while after that I was unable to walk. Home was a pretty good place.

"Father, it seems, was never very ambitious for me. He would have been satisfied to have had me remain forever in Muncie. But he felt that painting was a good thing. We kept at it, making copies of "The Franciscan Monks," "The French Minuet," and sketching the dogs and horses of our neighbors. These were sometimes exhibited in the local stores.

"FOUR years of this. I was twenty. Again I felt that I had to get away. This time I talked it over with Mother. 'Painting is no kind of a business at all,' she said. She didn't see how anybody could make a living at it.

"In Albany, there was a friend of the family, a Miss St. John, who had studied art in Cincinnati. We went to see her. She looked at some of my sketches. 'Why, yes,' she said to Mother, 'I think it would be a good thing to do. Send him to the John Herron Art School in Indianapolis, if you can!'

"But Mother couldn't send me. She let me have what she could, seventy-five dollars. With that as a beginning, I thought I could find out what chance there was.

"In a way, I knew that I could paint; but I didn't feel that I was *born* to paint. What I really wanted to find out was whether there was a chance to make it go. I didn't yet realize that if there was a chance, I'd have to *make* it."

That seventy-five dollars lasted about a month. Down-town was a dairy lunch-room, one of a great chain of such places operated by a company with headquarters in New York. During the noon-time period, the management employed extra help for carrying dishes from the service chairs to the counter. The boy from

Wayman Adams was busy with his brushes and paint long before he ever had a chance to study art. This shows him, at seventeen, with several copies he had made

This photograph was taken in the early days near Muncie, Indiana. The little girl on the horse is Wayman Adams's sister; the man holding the horse is his father. The paintings on the barn doors were made by the elder Adams

Muncie got a job as one of the extras. A dollar a day and luncheon in addition! That helped out for a time. And his work at the school, though obviously lacking in any real training, attracted attention from the start, largely because of his ability to get a likeness.

And what he didn't know about paint! The putting on of paint! The brush! The magic implement! And brush strokes! There is a stroke for the starting surprise of an eyebrow, the flare of a nostril, the turn of an ear, the sweep of the hair. As one of his later masters said: There are all kinds of strokes. Dull, confused, doubtful strokes! Icy, cold, hard, brittle, timid, fearful, apologetic, pale, negative, smart, evasive, and glib strokes! The swing of the body into the stroke! Strokes which *laugh!* Strokes that are placid, the horizontal strokes, as in the evening scenes by Hiroshigi. Strokes that carry up, mount, rise, as in El Greco's pictures!

ANOTHER thing. For him, at this time, it was far easier to express the surface likeness than it was to *see*.

Easy enough to see when you don't see anything in particular! Easy enough to get some kind of likeness when you see the subject in the way that's handiest for what you are able to do. But to see the subject with some inner vision, and make that vision your subject—that's *hard!*

Vaguely he was coming to realize this, the true nature of his undertaking. And, meanwhile, both ends had to meet!

He gave up art school. On full time, twelve hours a night, he went to work in the dairy lunch-room. He stayed there for a year. Starting in the kitchen, he worked up until he was counter-man. Finally, he had charge of the store. He was still painting a little in the daytime. He would pick up an odd character in the street, or paint from memory some scene snatched up in passing. At times, his fellow workers in the store posed for him—"Daddy" Holland, "Red" Simmons, "Bowery" Broyles.

"The thought I had in quitting art school was this," he remarked: "'I'll work a year,' I told myself, 'and won't be late once. At the end of a year, maybe the manager will transfer me to Philadelphia, and I'll go to art school there.' At the end of the year they asked me to take charge of a new lunch-room in Louisville, Kentucky. There was a chance to work up in the business. That was made plain. The future for my art seemed very uncertain. But I had never worried about money much. Anyhow, I took the chance that opened. I gave up art. In a way I gave it up. I'm glad I did. But I stayed in Louisville only two and a half months."

PHOTOGRAPHED BY PETER A. JULEY & SON, NEW YORK CITY

Booth Tarkington, by Wayman Adams

AT THE moment, we were standing near the great north light of Mr. Adams's studio, all around us the evidence of one of the most brilliant and rapidly successful careers that American art has known. It was the evening hour. From the street below came the fanfare of a great parade, a city homeward bound . . . the explosive sounds of buses . . . the horns of motor-cars.

"Why do you say you are glad you gave it up?" I asked.

"If you wish to know whether or not you really want a thing," was the quiet answer, "*try giving it up!* Try to fix your mind on (*Continued on page 179*)

Champion White Water

Captain Sydney Barrington has made steamboat history in the North where rivers are swift and hazards are great

Drawings by Adolph Treidler

S-T-E-A-M-B-O-A-T! *S-t-e-a-m-b-o-a-t!"*

The spring-green hills of Dawson echoed to the shouts of men, women, and children stampeding joyously through the streets toward vantage points on the banks of the Yukon, on the roofs of buildings, on the arms of telephone poles. Tooting of sirens and howls of malemutes swelled the expectant chorus. An answering whistle, deep and prolonged, thrilled the watchers to further demonstrations:

"T-h-e-r-e she comes! S-t-e-a-m-b-o-a-t!"

Down around the "Louse-town" curve she swept, a devil-may-care little stern-wheeler belching smoke from her high black stack, tossing ice from her iron-sheathed prow, flinging white water from her churning wheel. All three decks were dark with hat-waving passengers whose combined shouts seemed but an accompaniment to those of a huge negro waving a banjo from the top of the capstan. On jackstaff, vergestaff, flagstaff, and spars new brooms shone yellow in the sunlight, proclaiming the greatest event of Dawson's year—the arrival from Whitehorse of the first boat, which meant summer, new faces, freight, mail, fresh fruit, and vegetables to the inland town that had been ice-bound for eight months. Those brooms also meant a "clean sweep" for the daring pilot who had not only kept his bow at the heels of the Yukon's break-up but who also had outwitted and outmaneuvered every other skipper of that river-fleet which each year contended for this hazardous victory.

It was for the pilot, the hero of the hour, that the crowd was cheering when the heaving line hit the dock, and the big negro, swelling with pride, swung his banjo to his hip and burst into a melodious roar:

"Steamboat Syd, on de mighty Yukon!
Steamboat Syd, he's de gamest of dem all!
Steamboat Syd, champion in de pilot-house!
He's surely got dem bested in de spring
and in de—"

"Hey, Splotus! Pipe down and get aft!"

SPLOTUS'S boss was leaning authoritatively from the pilot-house window. He was little more than a boy, tall, slim, and red-headed. The look of annoyance in his blue eyes gave way to a half-bashful grin as he acknowledged the plaudits of the crowd who, like the royal Splotus, delighted to do him honor. For he was Captain Sydney Barrington of the Barrington Navigation Company, the youngest captain on the Yukon, the champion white water skipper of the North, and the pilot who for six consecutive seasons had been the first to warp his steamer to the Dawson dock.

Such a reputation meant something in that time of heavy traffic on the upper Yukon, when competition between transportation companies was of the keenest, and navigation at times so beset with danger that every passenger had to sign an agreement to carry his own risk when he came aboard. The great river flowed fast between Whitehorse and Dawson. Its four hundred miles were spiked with sunken rocks, blocked with sandbars that shifted overnight, torn into fury by roaring rapids. In the late fall, and early spring when ice was running and the temperature dropped below zero, these dangers increased until every trip became a gamble with disaster. Only a man of nerve, judgment, and daring skill could win.

But young Captain Syd Barrington, in partnership with his two brothers, not only owned half a dozen river craft, but he managed the company, was head pilot of his own fleet, and was the only man who ever competed successfully with the mighty White Pass and Yukon Transportation Company, backed by millions of dollars.

Since those days, which were a decade after the gold rush, Captain Syd has continued to make steamboat history all over the North where the rivers are the highways to the wealth that lies in the hills—swift flowing, dangerous rivers that defy navigation. From the great whispering Yukon dumping its load of silt at the end of twenty-five hundred miles, to the glacier-born Susitna that rushes to meet the tidal bore of Cook's Inlet, he has answered the challenge of them all. He has conquered the rips and boil-holes of

Pilot *of the* North

By BARRETT WILLOUGHBY

"Runnin' Miles Canyon in a big boat," says an old Alaska waterman, "was like kissin' yourself good-by; but Cap'n Syd tied bales of hay around that steamer and with four of us aboard to help him, he swung her into the roarin' current and down she came!"

the rocky Porcupine; the avid whirlpools of the Pelly's Fishhook Bend; the foaming log-strewn freshets of the treacherous Koyukuk; and on many another river he has been the first, and sometimes the only one to venture with a steamer. The most successful, and certainly the most noted river transportation man in the North, he operates on the Stickine; which river, say those who know the Yukon, the Mackenzie, and the Peace, has no equal for beauty and danger and swiftness.

"YOU know," drawled Captain Syd one day, as I stood beside him in the pilot-house, "if it hadn't been for freckle-cream, I might be writing prescriptions now, instead of bucking white water here on the Stickine." He gave the engineer a jingle, leisurely "flanked" the steamer around a threatening rock in midstream, and continued: "My father was a deep-water captain, as were all the Barrington men as far back as we have any record; but after anchoring his ships in all the seaports of the world, he decided that none of his sons should follow in his wake.

"He determined to make a doctor out of me, so I was sent from our home on Whidby Island, Washington, to Seattle to go to school. After hours, I was delivery boy for a drug store; but I know I wasn't much of a success at this job because, no matter where my packages were directed, I always arranged my route to take in the water front.

"At fifteen, I was an ungainly red-headed kid, six feet tall and terribly bashful. There wasn't an inch of my face that wasn't freckled as a seagull egg. I hated those freckles worse than a sailor does a shark, and my only interest in medicine was to get rid of them. No one knew it, but I tried every cream for that purpose in the drug store, and never lost a single freckle. Then, convinced that I'd given the medical profession a fair chance and that it had failed me, I felt free to go down to the water front and get me a real job on a steamboat. I landed one as night watchman on a Puget Sound sternwheeler."

AT THE end of four years' steamboating—since there was no age limit then—the bashful Syd had his papers for coastwise navigation. He was a captain at nineteen.

He soon decided that salt water was too tame for him, salt water where channels always remain as they're marked on the chart. He was glad when the Klondike strike of '97 gave him an excuse to go to

"The Trail Eater"

LIKE a breath from her own bracing Arctic country is Barrett Willoughby's latest epic of Alaska. Those who read her "Rocking Moon" in THE AMERICAN MAGAZINE will be eager for her new story, "The Trail Eater;" while to those others who have yet in prospect the thrill of first acquaintance with this writer we commend "The Trail Eater," which will appear in THE AMERICAN MAGAZINE, beginning in the December issue.

"In this story," says Barrett Willoughby, "I tell of the gold town Nome in the heyday of its glory—rich, reckless, luxurious, and ugly. Nome in evening clothes and on the trail. Nome, where the malemute was king and fortunes were lost and won on strings of racing dogs. I tell of the Sweepstakes Trail, and the daredevil drivers who risked their lives on that four-hundred-mile course, that is the longest, most hazardous, most cruel—and most fascinating—known to the world of sport."

the Yukon. He and his two brothers were with the first gold seekers who staked promising claims in the new diggings, yet all the time that young Captain Syd's hands were busy with a shovel and a gold pan they ached for the jerk and the swing of a steering-wheel.

Unable to resist the lure of the river, Captain Syd one day traded his gold claim with its promise of fortune for an interest in the "Willie Irving," the most ramshackle-looking little sternwheeler that ever grounded on a river bar. His brothers joined him in the venture, and the three boys were among those who began the steamboat run on the upper Yukon.

Reckless, intoxicating pioneer days and a red-headed skipper unhampered by years, or fears, or wisdom! No wonder Captain Syd's performances with the "Willie" have become a proud tradition in the history of Northern transportation.

"Those were the times when we burned wood instead of oil," he remembered. "Since everyone in the country was digging for gold, there were no established woodyards along the river. We had to cut our own as we went along. Crew and passengers alike would pile out on the bank, some to chop down trees and others to pack the logs aboard. If any of the passengers were reluctant I'd say, 'Well, boys, we won't get to Whitehorse on time, unless you give us a hand.' They always did, for speed, rush, and scramble was the order of travel then.

"We had accommodations for about a hundred, but we generally carried twice that number. They slept in relays and the berths never had a chance to get cold."

The going isn't so good when the ice begins to close in on the Yukon

THE captain still speaks of the "Willie" with a pride akin to that of a father for his first-born. "She always tried to do what I wanted her to do," he declared. "I had the paddles on her wheel specially faced with steel. When we'd hit shallow water, and she couldn't go up bow on, I'd turn her stern up-stream and set her engines going full speed. Say, you should have seen her wheel spin as she'd dig into that gravel! Stones flew higher than the smoke stack and came down on the deck like hail. But the little rascal could nearly always make a channel over a bar and get into deep water.

"When we'd come to Five Finger Rapids—this was before steamers were lined through there with cables—she didn't have quite enough power to go up against that swift current. Then I'd have the engineer screw the safety-valve down until it couldn't pop off, and heave pitch knots and slabs of fat bacon into the furnace until we got up enough steam to buck the rapids. All the passengers on the bank—oh, yes, we had to unload them while we did it because the 'Willie' might have blown up any minute, you see—all the passengers would cheer and yell every time she gained a foot until they'd be hoarse as crows when we finally got through into quieter water where they could come aboard again.

"I don't know of anything that can give a fellow such a sense of power as running a steamboat on a river he has to fight all the time. My brothers and I were successful with the 'Willie' and it went to my head a little." The captain smiled apologetically. "When we finally sold her and I took my share of the profits—fifty thousand dollars—you would have thought I was the boy who had snatched the Yukon River from its source and flung it over the Arctic Circle into the Bering Sea! I decided to run down to Nome, which was booming then.

"Besides, I wanted to see the lower half of the Yukon. Other pilots had told me how she sweeps past Fossil Bluffs, where you can see mastodon skeletons sticking out of the bank; and how she rolls along through the bed of that prehistoric lake they call the Flats; and how she spreads herself wide and lonely over a hundred miles of yellow marsh where her mouth touches tidewater. So I took passage on one of the big steamers running from Dawson to St. Michael.

"I THOUGHT it would be a fine thing to sit in lordly passenger ease and watch the Indian pilot do all the worrying about snags and rocks and sandbars; but we hadn't gone more than two bends and a look before he ran her high and dry on a gravel bar. The captain was so disgusted he sent the Siwash ashore. When we got the steamer off, he asked me to take her down to St. Michael, which was about fifteen hundred miles west. I was really glad to do it because being a passenger grows mighty monotonous.

"At St. Michael I was just about to board a sea-going vessel that would take me across the hundred-mile stretch of Bering Sea to Nome when I saw a little sternwheeler lying close to the beach. I stayed there, hunted up the owner, and bought her and a barge for fifteen thousand dollars. Over in Nome they were taking out gold by the bucketful, and I knew I'd have all I could do with my boat if I could only get her there. Since she was not a sea-going craft, I loaded her on the barge and made arrangements with a tug-boat captain to tow the outfit over to the gold camp.

"About that time a storm blew up and as that hundred-mile stretch is bad in a gale, the captain refused to leave. I was in a hurry, so I found another captain who was willing to go if I paid him double the usual price. In the meantime, I'd met about a dozen fellows who were stranded in St. Michael, a dead camp. They were so up against it that I hadn't the heart to go off and leave them. I promised I'd see them to Nome.

"I thought I could pay the captain their fares and it would be all right, but when I mentioned it he had a fit. Refused point blank to carry any passengers. I couldn't argue with him because I was afraid he'd refuse to tow my steamer out. Still, I'd given my word to those poor devils who were depending on me, and I had to keep it some way. Finally, I told them to go aboard my own boat and stow themselves away below.

"When I went down to take them some grub for the journey I found that every busted guy

IF ANYBODY had told me that Will and I would ever go interfering with other people's married life, I wouldn't have believed it. But at that, I wouldn't have been any more surprised than at the idea of Girlie Whittaker's ever having any married life to interfere with.

I don't think anything has caused as much talk in Montrose since Sam Porter ran for mayor as Girlie Whittaker and Sidney Hinkel getting married.

"How in the world," Mother Horton and her friends kept wondering, "Sidney Hinkel ever got a nice girl like Girlie Whittaker!"

And, "How in the world," our young bunch kept wondering, "Girlie Whittaker ever got a man like Sidney Hinkel!"

"I suppose," Mother Horton's friends decided, "she married him to reform him. It's an awful shame too, because everybody knows that that never works."

"Talk about going through the woods and picking up a crooked stick at last!" said Dulcie, who is always painfully frank. "Why, Sid has gone with some of the prettiest girls in Montrose!"

This was perfectly true, and Dulcie had been among them. As a matter of fact, Sid had taken practically all of us girls about some at one time or another. I remember Mother had a perfect fit when he started calling me up because he traveled for Butterfly Silks and had the reputation of being fast.

Will always stuck up for Sid and said it was perfect tommyrot about his being fast. He had been a wild boy, into all the mischief in town; but Will said he didn't do any worse things Hallowe'ens and so on than the rest of them, only Sid was unlucky. He was always the one to get caught. And then, when he grew up and went on the road, that just finished off his reputation. Will said it made him tired the way people always took it for granted that a traveling man must be a sport.

Sid's reputation, however, deserved or not, never did him any harm with us girls. We were all crazy about him. He dressed like a million dollars and was a dandy dancer and could play the piano like a fool.

But nobody thought Sid would ever get married. As Will said, he moved too fast. He was only home occasional week-ends and perhaps three weeks or so, during the dull season. He always rushed some girl while he was in town; but just as things were beginning to look serious, he'd be off on the road again. All our husbands joked about it a lot.

"When I think what one short, Middle-West trip at just the right time might have saved me from!" Howard Merton would groan, when all his four babies had bronchial colds at once and somebody happened to speak of Sid.

Or Roger Lane when Dulcie insisted on getting an over-stuffed divan before they'd got through paying on the Songola, or Frank Kirsted, when Mrs. Kirsted's cranky old-maid cousin came to visit them a week, and stayed all winter. When any of them were temporarily a little off matrimony.

"Sid's the lucky fellow," they'd say. "It's hard to pick off a bird on the wing."

IT WAS all joking, of course; but there was a certain amount of truth underneath it. More than once Sidney had left for the road when one more Sunday evening would probably have made him an engaged man.

"The boy," our husbands would say, with pretended envy, "leads a charmed life."

And then, after having led it for nearly thirty years, to fall for Girlie Whittaker, of all girls in the world! Girlie, who was plain as a kitchen plate and had never, so far as any of us knew, so much as had a beau in her life.

"Fall for her nothing!" said Dulcie bluntly. "You can't tell me that, after all the girls Sidney Hinkel has gone with, he ever fell for Girlie Whittaker. It was the psychological moment, and Girlie happened to be the girl that was on hand. Sid comes home for three weeks when his family's all gone to Los Angeles, the house shut up and bleak. He stops at the hotel, and it's dull and lonesome. We all take pity on him and invite him for dinners and so on. It's cozy and homey, and it suddenly begins to dawn on Sidney that he's nearly thirty years old, and that all the boys he grew up with are married and having families. He begins to feel kind of old and out of it and lonesome, and the first unmarried girl that his eyes light on is Girlie Whittaker. If it had happened to be any other girl in town, that girl would be Mrs. Sidney Hinkel this minute."

"I should think," said Rosie Merton, "that marrying Sid would be taking an awful chance. Of course he's perfectly dandy to go to a dance with, but to marry—"

"Oh," Mrs. Kirsted explained that easily, "Girlie didn't want to be an old maid, and she knew that it was Sid or nobody. Besides, she thinks of course she can reform him."

"Oh, Girlie may, at that," said Rosie Merton. "They say that Mr. Burris was a wild egg when he was a young man, and now look at him President of the bank!"

"Well," said Mrs Frank Kirsted, "it will be kind of fun to watch, anyway. See how Girlie goes about it."

To which we all agreed.

The older people had a sort of goody-goody hopelessness about it. Of course it couldn't be done, they mostly said, but it was very noble of Girlie to try it. The young men took a perfectly vindictive pleasure in it. In his comical way, Sid had been very high-hat during his bachelor days, when the other young men were getting married. I remember how, when Will got engaged to me, Sid shook his head sadly and said:

"Too bad! Another good man gone! That's right, Bill, grin. Keep a stiff upper lip. There's nothing like putting up a brave front when you're up against it."

WHEN our husbands were cutting out smoking, in order to save money for the living-room rug and spending their Saturday afternoons putting up a garage or mowing the lawn, Sid would blow into town with his golf clubs and his pockets full of money, and much talk about the new shows he'd seen in Chicago or the cute girl he'd met in Detroit. He was always trying to get up a friendly little poker game, or a bunch to drive out to the new road-house on the pike and dance for a while.

When the husbands would say they couldn't make it, he'd kid them about getting close and settled down and slow, and pretend he thought they'd got a life sentence in Joliet. It was all in fun, of course, and perfectly good-natured. Still, there was just enough truth back of it to make the boys awfully amused now at the prospect of watching Sid get broken to double harness.

The first thing was Sid's changing jobs. Sid, apparently, really believed that he decided to give up traveling on his own

Digitized by Google
Original from UNIVERSITY OF IOWA

idea, little guessing that the whole town had decided before he and Girlie got back from the honeymoon that of course that would be Girlie's first move. Sid apparently, however, believed that he'd thought of it, himself.

"I've got a good chance to get the Todd and Todd agency for this whole corner of the state," he told Will, "and, believe me I'm going to snap it up. It's a dandy territory, and I'll be able to handle it with a car. Not have to be away from home overnight. That makes a hit with me, I'll tell you. I've seen enough of hotels to last me for life."

THEN, there was the duplex apartment. The first day they were back from their honeymoon Sid got Will to take him and Girlie around town to look at bungalows. Roger and Dulcie were at our house for supper that night, and Will was telling us about it.

"I think I've got them sold on the Parker place," Will said. "It's a good buy, and for all it looks so small it's got more room inside than you'd think. Sid was especially keen about the two bedrooms. 'That'll give us a guest-room,' he said. 'I'll be able to put up any of the fellows I knew on the road when they're covering Montrose and Verblen. They're a good live bunch, and I'd hate to lose touch with them just because I'm not traveling myself.'"

There was a little pause. Then:

"I wouldn't spend the commission on that sale yet, if I were you, Will," said Dulcie. "I've an idea you'll find that Girlie will prefer a house that hasn't any guest-room."

And, sure enough, when Will called up Sid a day or so later to ask him what he thought about the Parker place, Sid said:

"I'll tell you, Bill, I've changed my mind on that proposition. Girlie's located a slick duplex apartment we can rent, the upper floor of Birdsell's house, you know. We've decided it would be better for us just to rent for the first year or so, till we see where we're at. By that time, we may be in a position to build."

I happened to be sitting so close to the telephone that I could hear what he said. Recalling Dulcie's prophecy:

"Ask him," I whispered, "if the apartment's got two bedrooms."

"No," Sid answered, "that's the one drawback; but we're going to get a couch for the living-room that'll open up into a comfortable bed, and we can put up anybody there overnight."

And then Girlie found an over-stuffed couch at Wilson's Furniture Store that she just set her heart on. It was a beauty, down cushions and wool mohair of the smartest mulberry shade. It was marked way down, and toned in so perfectly with the rug the Whittakers had given Girlie for a wedding present that, as Sid said, they bought it before they realized that it was just too short for anyone to sleep on.

"It's tough luck," said Sid, "not to have a place to put anyone up overnight, but then you can't have everything, and we've got one peach of a little home here."

Sid, in fact, was such a good sport about everything that it really took all the fun out of watching him get reformed. The boys had expected him to put up more of a fight.

There was the bunch of men over in Verblen that he'd always played cards with whenever he was in town. He expected, of course, to go right on playing twice a week or so, now that he was married. But when he found that Girlie didn't want him to, he gave it up without a bit of complaint. And he was so nice about it. He was nice about everything, in fact.

"There, you see what I've always told you," Will would say triumphantly. "Haven't I always said Sid's reputation was a joke? Look at him—could you find an all-around decenter man in town than Sidney Hinkel? And he's a lot of fun besides. A man doesn't have to be a crape-hanger to be decent."

The whole town, too, was beginning to agree with Will about Sid. The only difference being that the rest were inclined to give Girlie all the credit. Inside of three months, the very older people who had sighed and said a girl ought never to marry a man to reform him were saying what a fine man Girlie was making out of Sid, as proudly as though the whole thing had been their own idea.

DURING all this time, while the town was deciding that the marriage seemed to be turning out all right after all, I was getting better acquainted with Girlie. I saw her more than any of the other girls because their duplex was only half a block from our new house, and we dropped back and forth quite a little daytimes while our husbands were at work. And Girlie was lovely about staying with the twins—she'd bring her sewing over any afternoon and watch them if I wanted to go out. Every mother who's closely tied with young children knows what a hit that makes. Both Jack and Jill were crazy about Girlie.

To tell the truth, I had never liked Girlie very well, myself. She was one of those tactless people who can be trusted to say just the wrong thing at every critical moment. But I don't seem to have much character that way; just as soon as I get well acquainted with anybody I dislike, I begin to stop disliking them. That was the way it worked with Girlie. I began to stop minding her tactlessness, because, as I got to know her better, I could see so plainly what had made her that way.

SHE was one plain girl in a family of beauties. People still talked about how pretty Mit Whittaker, Girlie's mother, had been as a girl, and both Girlie's sisters looked just like her. Then along came Girlie, looking just like her father, whose face is certainly not his fortune. It was a terrible blow to Mrs. Whittaker, who had never dreamed of having anything but belles in her family.

Both she and the two older sisters began when Girlie was still a little girl to try to nag her into being good-looking. It was, "Stand up straight, Girlie," and, "Fluff your hair out, Girlie; your face won't look quite so thin," and, "You ought to smile more, Girlie; at least you've got good-looking teeth." And when she got old enough to pick out her own clothes, "What on earth did you

Digitized by Google Original from UNIVERSITY OF IOWA

get a *tan* hat for? It makes you look sallower than ever."

When she got to the beau age, both her sisters who, of course, were well married by now, tried to show her how to be popular. Then it was, "You must jolly the boys along a little, Girlie; boys hate a stick-in-the-mud." And, "Well, why on earth did you say *that* to Corinne's brother?" They were always trying to rake up beaus for her, and fairly throwing them at her head, and then scolding her afterward because she didn't know how to "encourage" a man.

Good gracious, no wonder Girlie was kind of tactless! You can't be told that everything about your looks is wrong and that everything you do is wrong all your life, and wind up with very much ease or self-confidence. Of course Girlie didn't exactly tell me all this, but she told me enough, and dropped a lot more that she didn't realize she was telling. And I'm not one of those people who have to have everything worked out by x over y to get the answer.

LONG before Sid came along, the family had given up trying to do anything about Girlie; they'd just resigned themselves to her being an old maid.

"Did they approve of Sid?" I asked, one snowy afternoon when Girlie had brought some flat crêpe over and we were each cutting out a dress.

"They never had, before," said Girlie. "They always said he was fast. But they didn't oppose our getting married, any." She bent over the piece of flat crêpe as though engrossed with it. Without looking up, she said:

"I heard Mother tell Mildred"—Mildred was the oldest sister—"that she always said an unhappy marriage was better than no marriage at all. That, for her part, she'd rather be a grass widow than an old maid, any day of the week."

Girlie laughed as she said this, to let me see, of course, that it wasn't anything special of a confidence, that it was really quite a joke, and that she didn't mind in the least. A person who wants to get over that impression never ought to laugh. It's always a dead give-away. Girlie's laugh was queer and flat and brittle; it sounded almost as much like crying as laughing. And a miserable, shamed crimson crept up over her sallow cheek till it reddened the tip of her ear.

There's no doubt that I felt very sympathetic toward Girlie. It would be a pretty bitter thing to feel that your very own family thought you were lucky to get a man that was too fast for any other girl to marry. No wonder, I thought, Girlie was so crazy to make something of Sid. It would be a great triumph and satisfaction to have him turn out well.

And if Girlie had just had the good sense to stop when she'd done enough, all the town would have been sympathetic. Admiring, in fact. Sid was becoming both a respected and a popular figure in Montrose.

HE WAS a wonderful mixer and joiner, and Will said that every organization he belonged to, he was good for. He was always doing a good turn to somebody. Getting a job for old Mr. Wheeler, customers for Mr. Latchkey, boarders for Mrs. Perlie. When young Doctor Wilson had his car stolen, Sid climbed up on a little table after a Boost Montrose Club meeting, and made a speech about it.

Doctor Wilson was a young fellow just beginning practice, and he went out on all the hard country calls the older men wouldn't take any more. He was still pretty poor and scrimping along, so that he hadn't carried any insurance on the car. Will said Sid's speech was a scream, calling people right out by name:

"Come on, Doctor Van Cleek," he said to the most high-hat doctor in town, "come on; you start us off with a hundred dollars. It'll be worth it to you the next blizzard, to turn over and go back to sleep knowing that Doc Wilson's taking care of the Ridge and other outlying districts. Thank you. And, Mr. Burris, come on, how about another hundred? You can leave a few bricks out of the new Burris Building; we'll never tell on you. Thank you."

And so on, getting down to five dollars from men who'd never have given five cents except that they didn't want to look cheap. Sid actually raised a new car for Doctor Wilson in less than an hour.

Oh, Girlie would have had nothing but credit and (*Continued on page 117*)

Sidney Hinkel wasn't just sticking up for his wife from a sense of duty. He honestly believed what he was saying

Why the did not

What has happened in this town might happen anywhere

So this is Sodus! Yes, it's Sodus, New Mills managed to do a lot of good, have a

IT'S a simple, plain tale, this story of the Mills brothers, of Sodus, New York, a little hamlet of less than fourteen hundred inhabitants. But it's a tale I like to tell to young men —and I meet many of them—who think their home towns aren't big enough; that they haven't a chance unless someone will help them; that the green pastures are on the other side of the hill.

The Mills brothers started a newspaper, the "Sodus Record," with less than five hundred dollars of money, mostly borrowed. Warner Mills, the editor, was twenty years old; Ray Mills, his brother and business manager, was eighteen. That was thirty-one years ago.

They still live in Sodus. Warner Mills is still editor of the "Record," Ray is still its business manager. They are now multi-millionaires; but their money hasn't changed them a mite; they are still small-town people, putting on no more "dog" because they are rich than they did when they were poor.

A libel suit, which they lost, put the young newspaper on its feet. But it took a bank robbery and a murder really to start them on the road to fortune. They haven't made their millions out of a small-town weekly, exclusively. But if it hadn't been for the newspaper they would not have taken the successive steps which made them millionaires; and while they may retire from some of their other activities, and probably will, they will always remain newspaper men.

WHEN the Mills brothers were born in Sodus, it was not much more than a wide place in a dirt road. It hadn't changed much when I came to know the town, about the time the young Millses were getting out the first issue of the "Record." Their elder brother, Ed, and I worked together on a Buffalo newspaper, and I used to go down to Sodus Point, fishing. I'm telling a story, you see, which I have seen developing for thirty years.

I'm not sure but that it was Warner Mills's enthusiasm for fishing which really laid the corner stone of their achievements. Fishing is a contemplative recreation. It gives a man time to think. And if he uses that time in thinking the right sort of thoughts, he'll get further as a country editor or an electric-power magnate, or anything else, than the man who never takes time off by himself to fish and think. What Warner Mills was thinking about in those youthful fishing days was what he and his brother Ray could do to make Sodus a better town to live in.

C. Ray Mills, with his little daughter Sylvia

Lying in the heart of the rich apple and peach orchard belt which runs for a hundred and fifty miles between the shore of Lake Ontario and the old Indian trail along the ridge from Lake Erie to the Mohawk Valley, Sodus was one of the best towns in the world to get away from, as Ray Mills expresses it. Off the beaten track—one had to take three different railroad lines with two changes of cars to get to the county seat—the people, like the town, were in a backwater. And the merchants competed for trade by methods invented by Noah, and advertised chiefly by threats and warnings.

"The social life of Sodus in those days consisted mainly of the Ladies' Aid Society of the Methodist Church," said Ray Mills. There was no public library, no books available except the juveniles in the Sunday-school library. The one attempt at public entertainment, a roller-skating rink erected in the "eighties," had failed with the lapse of the skating craze. The nearest place where the people of Sodus could find relief from the monotony of a country village was Rochester, thirty-five miles westward as the crow flies, but half a day's journey by roundabout and infrequent trains.

BUT Sodus is no longer an unorganized crossroads hamlet. It is an incorporated village with a population of 1,361 by the state census of 1925, which is more than double what it was thirty years ago. The village has miles of paved sidewalks and concrete streets, a telephone system connecting with every farm in the nearby countryside, an electric lighting system which covers as wide a range as the telephone, a fire department, waterworks and sewers, a new high-school building which is one of the finest in the state, a splendid public library—even an up-to-date jail. A gas plant is just being installed.

And foremost in community importance is the theatre. Thousands of theatrical folks, including the big Broadway booking offices, know the Arcade theatre at Sodus

Mills Boys Leave Home

By FRANK PARKER STOCKBRIDGE

York, a hamlet where Warner and Ray fine time and make several million dollars

as one of the best in the country. Sodus folk get something besides the movies; the very best "road" shows come to their town, because the Mills brothers have made it possible for them to do so.

"There hasn't been a business failure in Sodus in years," Ray Mills told me. "Sodus merchants have become progressive and modern in their business and advertising methods. Orchards of vast extent produce fruit for the canneries and cold-storage warehouses with which Sodus is surrounded, and such things as 'hard times' are unknown in the whole region tributary to our town."

JUST as an illustration of the friendly spirit which has replaced the old narrow conservation of Sodus business men, I noticed in a late issue of the "Record" the report of the way the creditors and friends of a farmer who had lost seventy-five thousand dollars on his celery crop were coming to his aid. No lawsuits, no judgments, no petition in bankruptcy filed against him, but all the creditors getting together with the farmer and working out a plan to keep him going in business, waiting for their money until he could clear off the debt.

Sodus has changed spiritually as well as physically, and the Mills brothers have had a lot to do with the change in both directions. They will "boost" their town with voluble enthusiasm, but are modestly reticent in telling the part they have played in its development. If I hadn't known the Mills boys almost from knee-pants age, I couldn't tell their story in its correct perspective.

THE one clear idea they had in the beginning was that they wanted to be newspaper men. Their brother Ed had made good as a newspaper man in Buffalo, and both Warner and Ray, while still students at the old Sodus Academy, acted as correspondents for Rochester and Syracuse papers, reporting mainly the doings of the summer cottagers at Sodus Point, a few miles away—and the fishing news. Warner always got something about fishing into his reports. Then Warner Mills entered Syracuse University, where, besides attending classes and managing the university baseball team, he continued as a newspaper correspondent, sending college news to city papers.

"Warner was headed straight for a big city newspaper," said Ray Mills the other day, when telling me of their start. "There didn't seem to be much of a chance for his talents in a small town like ours. But I didn't want him to leave Sodus. Mother also was very much opposed to the idea, and Warner really felt the same way about it. Our mother was the best friend and the wisest adviser two boys ever had."

The idea of starting a second newspaper in a village of five or six hundred people seemed absurd at first glance; but Ray Mills believed it could be done, and Warner, home from college for the Christmas vacation of 1896, agreed with him. Their father wasn't so sure, but their mother believed in her boys. The old "Wayne County Alliance" had been running for fifty years.

Ray went around and talked to the business men of the town. Some of them just laughed at the idea of two boys of eighteen and twenty starting a new paper; but some of them agreed to give it a certain amount of advertising patronage if they (*Continued on page 188*)

Some smart boys from the city try their game on Coldriver

SCATTERGOOD

By CLARENCE BUDINGTON KELLAND

YOUNG Mr. Clayton had come to Coldriver because it was quiet and because the air was salubrious. He was a thin young man and not at all ruddy; but ill health did not affect his affability. He loved, it seemed, to talk to people and was pitifully eager for human companionship.

On his second day in the village, he stopped before the hardware store, where Scattergood Baines sat in his strong chair on the piazza. His manner was diffident and ingratiating as he spoke hesitatingly.

"Good morning," he said, and halted.

"Mornin'," said Scattergood. "How be ye? Name's Clayton, hain't it? Come to git back your health, hain't ye? Look kind of peaked, seems as though."

"It's lonesome in a strange place," said young Mr. Clayton.

"It's lonesome any place," said Scattergood, "if ye got a tendency that way. More lonesomeness is inside of folks than outside. Folks is born lonesome or they hain't. Now, me, I don't call to mind ever bein' lonely."

"The doctor," said Clayton, "tells me I mustn't think of going back to work for a couple of months."

"Then," said Scattergood, "I wouldn't do it. What's your business when you're workin' at it?"

"I started out to be a lawyer; but I couldn't stand it indoors all the time, so I've been trying to be a real-estate salesman. I did pretty good too," he said eagerly. "You see, my folks left me a little money—not much—so I could do a bit of investing. And just before I came away I sold a business piece I had an option on and did pretty well. I haven't invested it yet, but when I do—with what I had before—I can get along for a while if I'm careful."

"You got the look of a money-maker," said Scattergood.

"This bank here is all right, isn't it?" asked Clayton; "because I've put the ten thousand I made in it, while I'm waiting to see what to invest it in."

"I calc'late your money's safe," said Scattergood. "If ye don't contrive to fool it away somehow."

"You bet I'm going to be careful," said the young man. "Bonds, or something like that."

Scattergood listened tolerantly. Mr. Clayton went on and on, disclosing his history, his ideals, his hopes, indeed everything he knew or suspected about himself in the most open and boyish way imaginable. At the end of an hour, he got up suddenly and in some embarrassment.

"Oh," he said, "I've bored you, I'm afraid, with all this talk about myself."

"Not to speak of," said Scattergood. "Folks never bores me. Some is jest more int'restin' than others."

AFTER that Clayton stopped almost every day, and when he was not talking to Scattergood he was chatting with the postmaster or Sam Kittleman or Elder Wentworth, or anybody with leisure and inclination to listen.

Gradually he became absorbed by Coldriver and merged into the scenery; still visible but no longer of especial interest to anyone. This condition was hastened by the arrival of Messrs. Pride and Goodwin. It was not easy to tell if these gentlemen had costumed themselves according to the ideas of some motion-picture director as to what a confidence man should look like, or if they were the actual proprietors of a medicine show. Inasmuch as they produced no wagon with gasolene torch, the better opinion had it they were sharpers.

Nevertheless, they conducted themselves in a manner which was so utterly harmless that Coldriver commenced to believe appearances might be against them. They went fishing—one of them in a silk hat—and came home with a basketful of chub, which they had mistaken for trout. They followed the tracks of Old

Man Hoover's sow through the black growth for a day in the belief that she was a deer. On the whole, said Coldriver, if these are sharpers we don't need to set an extra guard over the bank.

IT WAS on the third day that young Clayton encountered them, as if by chance, on the covered bridge over the East Branch.

"Well," demanded Goodwin, of the silk hat.

"It's a set-up," said Clayton. "This Baines has got more money than the Federal Reserve, and he's one of these smart ones. Everybody'll tell you how smart he is. The game I outlined in my letter is made to order. He'll fall for it like a chorine for a limousine. Thinks he invented brains—you know that kind of hick. Thinks he's the guardian angel of this neck of the woods. I've studied him inside and out. If it wasn't for doing a good, workmanlike job, I'd say we didn't even have to be smooth."

"No chance you got over-enthusiastic, is there?"

"I tell you I know this bird like the palm of my foot."

"Then," demanded Mr. Pride, "when do we give him the works?"

"The curtain goes up today. You smarts'll have to cultivate me a few days to make it look jake. Start in this afternoon. I've got the foundations in."

"How big is the purse?"

"It ought to run to twenty grand."

"Clayton," said Pride, "this was some idea of yours, going after the local wise guys instead of the boobs. They're easier; and when they're stung they're ashamed to yelp."

"Listen," said Clayton, "we can walk out of town with this in a basket with the cover off."

"On your way then," said Goodwin; "I crave action!"

CLAYTON stopped almost daily to chat with Scattergood.

"Have you," asked the young man, "met those gentlemen who came to the hotel a week ago?"

"The feller with the plug hat?" asked Scattergood.

"Yes. Mr. Pride and Mr. Goodwin. I see quite a little of them in the evening and they're interesting talkers, I can tell you. Yes, sir, they've seen a lot of things. I guess they're pretty big business men too. I'm learning a lot just listening to them."

"I warrant ye," said Scattergood noncommittally.

"I think they're up here on some kind of a deal," said Clayton, "though they don't say much about it. I kind of got the idea it's got something to do with water power."

"The's lots of water power around," said Scattergood. "Every time we git a rainy day the water power gits to be conspicuous-like, a body might say."

"I think all their fishing is just to cover up some investigations."

"It must," said Scattergood, "be fur suthin' besides ketchin' fish."

"I bet you," said young Mr. Clayton, "if they really set their minds to fish they'd clean out the streams. That's the kind they are—real go-getters."

"W-al," said Scattergood, "if ye find 'em educatin', stick to 'em. Educations is hard to come by. I dunno nothin' agin 'em outside of their looks, which is what I'd call a mite too ostentatious-like."

"Oh, that!" said Clayton. "I just set that down to eccentricity. Lots of big business men are eccentric."

"I never seen a fox advertisin' to a flock of hens he was a fox," said Scattergood. "I dunno but I'd regard sich a fox as kind of eccentric."

Young Clayton got up off the step and moved along to the hotel. It was not until three days had gone that he paused to speak to Scattergood again. This time he seemed excited and worried.

"Mr. Baines," he said, "I wonder if I could ask your advice."

"Ye kin ask it, and I'll give it. The

Digitized by Google
Original from UNIVERSITY OF IOWA

question is, seems like, will you take it?"

"I've got to take somebody's advice," said Clayton. "Will you look at this?"

Scattergood looked at the paper the young man handed him. It was a ninety-day promissory note made by Pride and endorsed by Goodwin, payable to Clayton, and the sum mentioned was ten thousand dollars.

"I looked at it," said Scattergood.

"It's not a check, is it?"

"We gen'ally call 'em notes," said Scattergood.

"But it shouldn't be a note. It should be a check. It should be a check I could cash right away."

"Should-be's that *hain't*," said Scattergood, "has got lots of folks into trouble."

"LET me tell you about it: You see, these men are here on a water-power project, and they have to be pretty secret about it. The other day they took me into their confidence, because they needed a third party they could trust. And I was to be in on the profits—not a big share, but enough maybe to double my money."

"A hundred per cent," said Scattergood, "is allus a welcome profit."

"It looked good. All I had to do was to give my check for ten thousand dollars—drawn to cash. They didn't want their names to appear in a deal where they were taking an option on a site for a dam and power house. Well, the idea was, I was to give my check, and they were to give me back their check for the same amount. I wasn't taking any chances. They took me to the bank and showed me where they had more than that on deposit. All I had to do was to deposit their check right away, don't you see, and the bank would just switch the money back and forth.

"Well, they wrote out the check, all right, and I had it in my hand. I know it was a check. But when I got to the bank with it it wasn't a check, it was this note, and the bank wouldn't accept it for deposit."

"The bank wouldn't," said Scattergood. "Did you let this here check git out of your hands after they drawed it?"

"Why, I think not. Wait— Mr. Goodwin did ask to see it a second, because he thought maybe he'd made a mistake in the date. But he handed it right back."

"That," said Scattergood, "was where they switched it on ye."

"But I can't get my money now for ninety days."

"Seems as though."

"What can I do? Isn't there anything? I—I don't want to lose all that money. And it looks as if those men had done me a dirty trick. It looks as if they meant to gyp me."

"Has got that gen'al complexion," said Scattergood. "Of course they claim you lent 'em the money straight out?"

"Yes," said Clayton.

"And it's two to one sayin' so, and all the evidence you got is this here note, which bears out their story. I calc'late them men kin sit down peaceful for all the worryin' they got to do about you. Nothin' crim'nal. The wust kin happen to 'em is that you sue 'em after ninety days. You can't even make no move till the note's due. Then ye kin git a jedgment agin 'em; but that's all. Them men won't worry none about jedgments. No, young feller, I calc'late you've bought you ten thousand dollars' wuth of education."

"They're just brazen," said Clayton. "Why, they haven't even taken their money out of the bank here. Theirs and mine. It's there, and I can't touch it?"

"Not fur ninety days," said Scattergood.

"There must," said Clayton, "be some way of getting at that money in the bank."

"None as I kin see," said Scattergood.

"I may look like a fool, Mr. Baines, but I don't believe I'm a fool. What I'm going to do is go back to the hotel and think. If those sharpers could think up a scheme to get my money away from me, I can think up one to get it back. I'm going to be the sharper this time. I'm going to show those men I'm smarter than they are."

"Good luck to ye," said Scattergood.

That night Mr. Pride made his secret way to Clayton's room in the hotel.

"How's tricks?" he asked.

"Coming fine," said Clayton. "He won't be able to keep his finger out of the pie. If I've got him sized up right, and I know I have, he can't resist a chance to show how much smarter he is than anybody else. He's always butting into things. Made a kind of specialty of it—getting folks out of trouble and such-like. It's a habit. He's an addict. I'm just giving him a little rope, and then I'll shove him the works. He'll fall like a kid for a lollipop."

"He better," said Pride.

"He'll think," said Clayton, "he's going to be noble and get back my ten thousand, while he cleans up a little for himself. It's in the bag."

"Well, push it along. I'm fed up on this climate."

"Sit tight," admonished Mr. Clayton.

"I'll sit easy," said Mr. Pride, "when we've pouched the cash."

ON THE following day Mr. Clayton awaited an opportunity when Scattergood was alone on his piazza, and walked over briskly as one on important business.

"Mr. Baines," he said, "I told you I'd get an idea. I told you I could think up a way to get my money back from those crooks."

"Seems like I recall suthin' of that nature," said Scattergood. "How'd ye make out?"

"I've got it. It'll work. I can get back my money, and maybe some more if it works smooth. For anybody who'll go into it with me."

"The's a ketch in most things, I've noted," said Scattergood.

"Naturally," said Clayton. "These men would have no dealings with me. They'd smell a rat. I've got to work through a third party."

"Seems as though," said Scattergood.

"And, of course, I've practically no money. This is going to need some capital to swing it. For bait. I think we can sting the boys for an extra couple of thousand. But if we can't, I'd be willing to pay a couple of thousand for the use of the money for a few hours. Not even to handle it. Just to let it be seen."

"Um. . . . Sounds kind of attractive. How d'ye aim to contrive?"

"I got the idea the other day when I went up with the Elder to the Billings house. The one you're going to auction off the furniture and everything. You own the Billings property, don't you?"

"Give the widder a lump sum," said Scattergood; "and now I got it onto my hands. She wanted to up and traipse off to Californy to her daughter."

"There's quite a lot of old furniture and knickknacks and some pretty old books. A lot of books."

"Furniture hain't wuth much. Nothin' in the antique line. Don't calc'late the books is valuable."

"Nevertheless," said Clayton, "we can sell them to Pride and Company for ten or twelve thousand dollars."

"Mebbe," said Scattergood. "Mebbe not."

"Did you ever," asked Clayton, "hear of a gold brick?"

"Heard 'em mentioned. Hain't never bought any."

"MY IDEA is to turn the Billings stuff into a gold brick. That's where you come in. First, there's got to be some talk overheard by Pride and Goodwin, that Billings's estate was a lot short of what folks thought it would be. That's to prepare 'em."

"Fur what?"

"For finding," said Clayton, "twenty one-thousand-dollar bills inside Grant's Memoirs in the library."

"Be they a-goin' to do that?"

"I hope so. You will go to them, because they are city men and should know about such things, to ask them to give you an idea if the old books and furniture and things are worth money."

"Kind of consult 'em, like you might say?"

"Exactly. And ask them to look things over. Naturally, having no reason to refuse, they'll do it. They like nosing around, men like that. Never can tell where they'll run onto something useful."

"Calc'late so."

"And you ask 'em to look the books over careful. While they are examining them, you pretend not to watch. They will find twenty one-thousand-dollar bills put between the leaves of the general's memoirs."

"My money?" asked Scattergood.

"I hope you'll see it that way."

"Remains to be found out. And then what?"

"Why, naturally, they'll find out the books are valuable and want to buy them. Realizing, of course, no one suspects Billings's missing money is there. They'll go as high as ten or twelve thousand to get that twenty."

"Most folks would," said Scattergood.

"Then you get them away, do you see, or into another room, or anything. You can have someone you trust hide in the kitchen or a closet, and as soon as Pride and Company are out of sight, they must slip in and get the money and take it back to the bank for you. That makes you all safe."

"Looks so," said Scattergood.

"But Pride and Company won't know you are aware of the money, so they'll have no worries—except to get hold of it as soon as possible. You can dicker with them; they'll buy all the Billings stuff, and we've got their money. They can't complain. It will be their own proposition. They didn't buy money, but furniture and things. Of course they'll know they've been done; but what can they do about it?"

Digitized by Google Original from UNIVERSITY OF IOWA

The gentlemen moved to the door, closed it after them and locked it softly . . . making Scattergood a prisoner

"Nothin', so fur's I kin see," said Scattergood. "Young feller, you got you up a perty slick scheme. Perty slick. I calc'late you're smarter'n what I took ye to be."

"It can't fail. Will you help me out? Will you do it?"

Scattergood considered. "I dunno how I kin pick up a couple thousand dollars easier," he said. "Calc'late we've made a bargain, you 'n' me."

"Then, when—when shall we work the game?"

"Lemme see? Um. . . . Can't be tomorrer. Got to be out of town fur the day. Say Thursday. Calc'late I kin be back and ready by then." He chuckled. "Be kind of int'restin' to see their faces, eh? Heap of satisfaction watchin' dishonest folks git their come-uppance. Young feller, this here's a heap slicker'n the old original gold-brick swindle."

"It sure has trimmings," admitted Clayton proudly.

"WE KIN lay the foundation fur it before I leave—about Billings dyin' with a heap less'n folks expected. We kin work that part of it tonight. Pliny Pickett 'n' me, we'll 'tend to that."

"Fine," said Clayton.

Scattergood was as good as his word. That evening, in the office of the hotel, in the presence of Pride and Goodwin, he and Pliny discussed at some length the inexplicable shrinkage in the estate of the late Mr. Billings, and even set the amount as approximately twenty thousand dollars.

Late that night Mr. Pride again made his cautious way to Clayton's room.

"Looks like he fell for it," he said.

"Swallowed it, hook, line, and sinker."

"What day?"

"Thursday."

"You have arrangements made. We want a car ready. Goodwin will draw our money out of the bank. We fetch this Baines up to this room to dicker for his furniture—so his man can't get at him and give the alarm—and we lock him in and crave distance in (*Continued on page 142*)

De-Bunking the Glands

Dr. Lewellys F. Barker explodes some of the popular gland fallacies. Miraculous cures, amazing transformations of personality, and other sensational gland stories, he says, are misleading and dangerous

By Albert Edward Wiggam

GLANDS are enjoying a boom; they've been enjoying a boom for some time. And it is generally conceded that whenever there's a boom there is usually a great deal of bunk.

Only the other day, when I happened to be looking over the many clippings that I had collected on the subject of glands, I received another which told about a doctor in England who had rejuvenated and transformed the lives of one hundred women by the transplantation of glands "borrowed" from other women.

But some of the stories in my collection outrival this in doubtful veracity: In fact, the various and varied reports of the marvelous changes of personality effected by "monkeying" with the glands rival the miracles of the Bible.

If we are to believe all we hear and read about glands then "our destiny is in their hands," as one physician quaintly puts it. We are told that children are angelic or naughty according to their glands; that criminals are criminals because of glandular imbalance; that the ambition and bald-headedness of Cæsar, the dominating personality of Napoleon, the wisdom of Abraham Lincoln, were due to the possession of certain types of glands. Apparently, we have glands that make us happy and glands that make us sad; glands that make us lovely and glands that make us bad. In brief, think of any kind of human situation or behavior, and somewhere or other a glandular explanation of it will be forthcoming.

But the incident that helped to crystallize my opinion that a great deal of bunk has been written about glands occurred when I was passing a shop window. My attention was attracted to a large colored picture of a weazened, shriveled-up, anemic, washed-out, bald-headed man, standing by the side of a handsome, athletic-looking man with a fine head of hair. My sympathies immediately went out to the unfortunate member of this strangely assorted pair.

You can imagine my relief, however, when I discovered that I was merely gazing at two pictures of the *same man*, one "before" and the other "after" taking some "scientific compound" for the glands, which could be purchased inside the shop for only one dollar a box.

The discovery that the glands of internal secretion do in many ways influence growth and personality is so new to the public—even new to physicians—that it offers the opportunity to clothe quackery and immature knowledge with the dignity of medical degrees and diplomas from colleges of pharmacy. It also encourages unscrupulous manufacturers of medicinal products to mystify the public with chemical terms and scientific jargon—one of the surest ways of filching money from the pockets even of educated people.

I knew that some remarkable experiments were being carried on with frogs, lizards, and other lower animals. I had seen tadpoles, that had failed to become frogs owing to the removal of the thyroid glands, turn into frogs when thyroid extract was fed them. Tiny tadpoles had had their development speeded up so that in a short time they became frogs, although no bigger than flies; others, owing to some sort of treatment of their glands, had turned a beautiful golden hue.

But none of the men engaged in making these experiments suggested that golden-haired blondes could be produced by glandular treatment, or that the growth of children could be speeded up at will, or that imbeciles could be transformed into geniuses, or sinners into saints. It remained for the "bunk" artists to turn loose their vivid imaginations on such experiments, and the credulous public to believe them.

SO WITH the thought in mind of the large number of people who are being gulled and misinformed about glands, I decided to interview some physician of high standing in this field and ask him to tell us the main well-established facts about the glands. I conferred with a number of leading medical men in New York and elsewhere and, upon their advice, I asked Dr. Lewellys F. Barker, Professor Emeritus of Medicine of Johns Hopkins University, to tell The American Magazine readers just what they could rightly believe and what they should consider as bunk about glands.

Doctor Barker has not only been a student of the glands of internal secretion for many years, but he has also recently edited a four-volume encyclopedia devoted exclusively to the glands of internal secretion and metabolism, in association with Dr. Herman O. Mosenthal, of New York, and Dr. R. G. Hoskins, editor of the "Journal of Endocrinology." This journal is the official organ in America of the Association for the Study of Internal Secretions. Doctor Barker possesses a string of degrees that well-nigh exhausts the medical alphabet, but he assured me that he would prefer to be spoken of as just an emeritus "professor of medicine." "If a man has been really a good professor of medicine," he said to me, "I think that is as fine a title as he could desire."

"I quite agree with you," began Doctor Barker, "that glands are just now enjoying a boom. Far too big a boom in many respects. Particularly are the glands of internal secretion, known as the endocrine glands, overboomed with the public at large. It is, of course, a fascinating field, but in some quarters it is being sadly overworked. Even medical men have written articles and made claims about the glands that read more like fairy tales than sound science.

"BOTH the laity and the medical profession are in for a lot of disillusionment about this gland business. The public has a right to know the facts; and enough facts of first-rate importance have been discovered without the need of adding romance. But the public has been, I fear, led to expect far too much.

"As an illustration of this, scarcely a week passes that some woman does not apply to the group of doctors with whom I am associated, for help for her backward or defective child. The child, she will tell us, is not getting along as it should, perhaps not growing normally, not learning well at school, not behaving like other children, or some similar set of symptoms. And she is sure that 'some gland is responsible,' and that we ought to be able to put our finger on it and make the child normal. Only rarely is it possible to work such a transformation in children. Even in certain instances in which we are reasonably sure that glandular disorder is responsible for the child's condition, it is not always possible to correct that disorder.

"I would make the guess that, so far as our present knowledge goes, not more than a few cases in a hundred of the abnormal children and adults that we see can be greatly benefited by glandular therapy. The few happy successes that have been reported are unfortunately sometimes exploited by the press. As a consequence both the public and some doctors have gained the impression that it is a very common thing for people to be changed radically in intelligence and character by some kind of gland treatment. They are wrong. Such recoveries and apparent transformations are the exception rather than the rule."

I asked Doctor Barker what he thought about a statement I had seen that nearly one third of our criminals were not responsible for their acts; but were driven to their anti-social (*Continued on page 183*)

Dr. Lewellys Franklin Barker

DR. LEWELLYS FRANKLIN BARKER, professor emeritus of medicine of Johns Hopkins University, is one of the most distinguished physicians in the world. With the exception of five years, when he was head of the department of anatomy at the Rush Medical College, Chicago, he has been, since 1894, connected with Johns Hopkins University and Johns Hopkins Hospital in Baltimore. He was born in Ontario, Canada, in 1867. Before Mr. Wiggam wrote the accompanying article he canvassed a number of distinguished doctors, asking who was the best man in America to give a common sense, but scientifically correct interview on glands, and these physicians sent him to Doctor Barker.

Kate Gleason

KATE GLEASON is the busiest "retired" woman in the land. She is now engaged in developing a sea island off the South Atlantic Coast, in building houses at East Rochester, New York, for families with small incomes, and in erecting war memorials in France. Between times she has other projects to occupy her mind. She is, according to her own definition, "A lucky rover over the face of the earth"; but she earned the right to rove by years of brilliant salesmanship and management when she was actively connected with the famous Gleason Works of Rochester. She was one of the first women to go on the road as a traveling salesman, and the record she made is still fresh in the memory of her friends and her competitors.

She wished she had been born a boy, so she decided to do a man's work—and this is the story of

Kate Gleason's Adventures in a Man's Job

By HELEN CHRISTINE BENNETT

SHE sat on the horse block and looked eagerly up and down the street. It was May and the trees were budding; lilacs waving above her head were about to burst into sweet-scented bloom. But the chubby short-skirted little figure on the horse block recked nothing of these. Her dimpled hands beat an impatient tattoo at her sides. Aha! Her plump body swelled out like a pouter pigeon's as she took a deep breath. A *boy* had come into sight, a rather tattered boy with many freckles and riotous red hair fraying out under a disreputable cap. She waited, palpitating, until he was exactly abreast, striding along unconscious of the fat little girl on the horse block.

"Hi," she yelled, "you don't dast fight my brother Tom!"

At the shrill challenge the red-headed boy turned, looked at the grinning, impertinent face as again she taunted:

"You don't dast fight my brother Tom!"

"Who says I don't?"

"I says so."

"Ah, you ain't got no brother Tom. You ain't—"

"Tom! *Tom!*" she screamed.

The boy started. In direct response there came from a shed in the back of the yard a tall, lanky boy, a boy as big as he was, whose fists were already doubled.

"You don't dast fight my brother Tom. Here's Tom! You don't dast fight my brother Tom, you—"

The red head swallowed, threw back his shoulders, clenched his own fists and sailed in. With a long "Ah" of pure enjoyment, the little girl settled herself on the block to watch.

It was a good fight. The whistling stranger was quick and vigilant. But in the end he picked himself out of the dust of the Rochester street and went his way. The victor dusted his hands and retired to the shed with a single sentence to his adorer:

"Good for you, Kate; get me another."

At once she settled down, looking right and left for the next victim. It was a pact. She was not yet four years old, but her big brother, Tom Gleason, had agreed to teach her to read, *if* she would sit on the horse block and challenge any boy passing to fight. Tom had paid his half. Already she knew her letters and was 'way in the First Reader. This morning she had come out under Tom's instructions to stop any boy as big as he or bigger, and she was paying her debt.

Thus, before she was four years old, Kate Gleason was managing a fourteen-year-old pugilist. At eleven she did her first half-day's work on the books at her father's tool shop. At twenty-five she was secretary and treasurer and sales manager of a rapidly growing gear factory that continued to grow into the now famous Gleason Works, of Rochester, New York. A little later she startled her countryside by developing a magnificent estate and living upon it, all alone, in an unusual and beautiful house modeled after the Spanish "Alhambra." In 1915 she resigned from her position in the Gleason Works, although she retained her financial interest, and since then she has been what she terms, "A lucky rover over the face of the earth."

THE roving has been accompanied by a bit of labor. She built, and a part of the time managed, eight factories in East Rochester. For three years she was president of the National Bank there. She designed and constructed over a hundred homes in that city, built a golf course, a clubhouse, and an apartment house. She went to California to complete her study of the architecture of small homes, purchased several hundred lots in Sausalito and built a number of houses there. In France she purchased two war-torn castles, and is reconstructing them, and has opened, as an A. E. F. Memorial, a library and motion picture theatre for the people of Septmont.

Last year she began the most extensive development she has as yet projected, in the sea islands at Beaufort, South Carolina. Near that town she has purchased land with twelve miles of ocean beach, including an entire island, which she purposes to use for the raising of turkeys.

Kate Gleason has the Midas touch. In every business operation, save one, she has made a profit, so that in addition to her record of achievement she has the distinction of being one of the world's multi-millionaires, with the credit of making every penny of her own fortune

You never heard of her? That's not surprising, unless you are an engineer or are interested in machine tools and gears. But in all probability the gears in your car were cut on a Gleason Gear Planer, and any man who has to use those little indispensables of modern machinery in his business knows the name "Gleason."

A few years ago the head of a well-known machine company was visiting the Ford Automobile Works at Detroit and was being taken about by Henry Ford.

In a room of gear planers Ford stopped.

"There," he said, pointing to them, "is the most remarkable machine work ever done by a woman. That machine is a marvel. And Kate Gleason invented it."

"I hate to spoil a good story," the visiting manager replied; "but it was William Gleason, Kate's father, who invented that machine, and her brothers James and Andrew and their associates who perfected it. Kate is a wonderful business woman, and she handled the financial and selling end of the plant."

"Is that so?" asked Ford. "Well, I always heard she did it all."

Two years later the same manager again visited the Ford plant and was again taken about by Mr. Ford. And when they approached the gear planers Ford stopped and said:

"There is the most remarkable work ever done by a woman—"

The visiting manager gave up. On his return to Rochester he called on Miss Gleason.

"I've done my best for you, Kate," he said. "But a good yarn is like the brook. It goes on forever."

AS WE sat before the great hearth in her lovely home at Clones and talked over this incident, Kate Gleason shook her head.

"All through business those yarns have been my greatest asset and my greatest peril," she said. "Before I began work I was often in the society of my mother's friends, who were ardent suffragists, and some of them warned me that men would be my business enemies. I went into a man's field, that of machine-tool making, but found the exact opposite. From the time I began to work men stretched forth helping hands to (*Continued on page 168*)

Your Cousin Mehitabel

By DON MARQUIS

Illustrated by NORMAN PRICE

IT IS Cousin Mehitabel Whipple-Smythe who keeps Our Family reminded of blue blood, *noblesse oblige*, traditions, and all that sort of thing. And not only *our* family, into which she was born, but the Whipple-Smythe family, which she annexed by marriage. Cousin Mehitabel's maiden name was Dainter, and she can prove to you that it was D'Aisne-Terre, or something like that, 'way back in thirteen-hundred-and-starved-to-death, and for some strange reason she seems to take a great deal of satisfaction in that.

Cousin Mehitabel's ancestors have signed everything signable from Mount Sinai on down to synol soap testimonials, including Magna Charta, the Declaration of Independence, and the duller sort of diaries. They have landed from every important ship that ever made port, including William the Conqueror's outfit, the well-known Mayflower expedition, Leif Ericson's bunch of viking roughnecks on their See America First tour, Lord Baltimore's pioneers, and, undoubtedly, the Noah Family. No ark or argosy filled with blue blood ever went anywhere across blue brine but that some far-off connection of Mehitabel's had managed to conceal himself somewhere between crow's nest and scuttle-butt . . . if, indeed, he was not in command.

The rest of us aren't particularly aristocratic; at least, you can't tell it on us. We don't feel it; we don't look it. And, after all, we must be just about as nearly related to all these people as Cousin Mehitabel is. And, for that reason, we are the despair of Cousin Mehitabel. She thinks we ought to get all "het up" and excited every time she cross-hatches the family toga with another stripe of imperial purple; she is disgusted with our bourgeois and proletarian indifference to the noble and gentle past which she spreads before us for the sake of our future. We fail to rise to Mehitabel, and it grieves her. In fact, at times it maddens her. And this, in turn, maddens the rest of us, and we pretend to be a great deal more common and low-down and good-for-nothing and trashy in our derivations than we really are.

The truth is, we're just an average family, with the average number of horse thieves hanging from the limbs of our family tree, and kin to the average number of decent people who hanged them there.

IT IS Granddad who gets Mehitabel's goat worse than any of the rest of us.

"Hitty," he said one day—and if there's anything she hates worse than being called Hitty, it is being called Metty—"Hitty, your blue blood and royal ichor goes to your head too much. The gentry ought to learn to carry their ichor without staggering."

There are a lot of little blue veins in Cousin Mehitabel's nose, which lends credibility to the story of blue blood, when you come to think of it; and when she gets to feeling very important she elevates the nose just a trifle, and sticks her chin forward, and looks up toward the ceiling, and the veins swell a little. She's rather a good-looking woman at that, with quite an air; but when she gets that look and assumes that attitude, we all know that she has a new genealogical revelation to spring on the rest of us—something about which Dainter it was that married the third cousin of the particular Pierce who was connected with the Northumberland Percys.

Granddad pretends that the original name of the Whipple-Smythe family, which allied itself to her by matrimony, was Whiffle-Smith. And he goes further, and pretends to have discovered authentic and documentary proof that the name Whiffle-Smith was in itself derived from Whifflesnoot.

So, when she gets that rapt look upon her countenance, and gazes at the ceiling as if she were penetrating the past, with her nose and chin thrust out and up, Granddad remarks mildly:

"Hullo! I see Hitty's treed another Whifflesnoot!"

In fact, Grandfather almost broke up the match between Cousin Mehitabel and the Rev. Dr. Jeremiah Whipple-Smythe when he came a-courting her.

Dr. Jeremiah Whipple-Smythe is as keen on ancestry and genealogy as she is, and talks about it as much; it is an ideal union. She was living at our house at the time, and so was Grandfather.

I well remember the scene: Dr. Whipple-Smythe had dropped in to tea, and Granddad was sticking around, although he doesn't really like tea at all, making himself objectionable in a mild, sweet, polite, and patriarchal way. Mehitabel had said:

"Dr. Whipple-Smythe is related to the Joneses, you know, Grandfather—*the* Joneses, of Llynthycummyrtyll, in Wales, who came over to this

When Hitty gets that rapt look upon her countenance, Granddad is sure she's treed another Whifflesnoot!

country first with one of the Wesleys!"

Granddad let that pass, although there was a twinkle in his eye, and he let four or five other genealogical cracks go by without an answer, but finally something aroused an internal sense of outrage in him, and he got really rough, in his gentle way. He began this way:

"Dr. Whipple-Smythe, what do you think of Adam?

"Why, sir," he said, hemming and flushing and clearing his throat, "in what way do you mean, sir?"

"Moral character, huh?" asked Granddad.

"I have no reason to believe otherwise," said Dr. Whipple-Smythe, getting a little redder.

"Ready to forgive him all his little transgressions—eatin' that apple and everything, huh?"

Dr. Whipple-Smythe may have thought at this juncture that some obscure attack was being made upon his clerical orthodoxy, for he said solemnly: "I believe, sir, he expiated that offense."

"Eve was a nice woman, likely, don't you think?" went on Granddad, while several other members of the family signaled him in vain to lay off his reprehensible line of conduct.

"Undoubtedly, undoubtedly!" said Dr. Whipple-Smythe, a trifle tartly.

GRANDDAD paused for a moment, and took his glasses off and polished them with his handkerchief, and then permitted a genial smile to suffuse his countenance, as if he had been in great anxiety but was pleasantly relieved by Dr. Whipple-Smythe's answers.

"Glad you like 'em, glad you like 'em!" he said heartily, and set down his teacup and went over and shook hands with Dr. Whipple-Smythe. "Tickled to death you like Adam and Eve! They're the couple this family is descended from—and we ought to all get along fine together!"

And not until then did he glance at Cousin Mehitabel, whose veins were getting bluer and bluer. She is too much of a lady ever to hit an old gentleman on his saintly white head with a heavy teapot, but there was a thought of that sort in her maiden heart if I know how to read Mehitabel.

A warning (not to say a jolt) like that would have been enough for anybody in the world but Mehitabel—especially with Granddad still lingering about the living-room drinking tea. But Cousin Mehitabel is different; it is not so much that she *won't* lay off family trees—I really believe that the woman *can't*.

Within five minutes she was telling about the Three Brothers of the Dainter Family who came to Virginia in 1630. (I don't know why there should always be Three Brothers who came either to Virginia or Massachusetts, and started every American family; but such seems to be the case.)

"Those are the records of two families that we're somewhat ashamed of," said the old clerk

"And all the Dainters in America are descended from *them*," she concluded brightly. And Dr. Whipple-Smythe brightly responded with some more news of his own ancestral importance.

Thus goaded, Granddad coiled and struck—struck a foul blow.

He leaned back in his morris chair, and pushed his glasses up on his forehead, and joined the tips of his fingers, and began to reminisce. Or, rather, to lie. I hate to use that short and ugly word in connection with that mild and sweet old man, with his halo of white hair and his innocent blue eyes. But there is no other word.

"The Dainters," said Grandfather, "were pretty good people—as people went in this country in the early days. It was quite a step up in the world for my daughter when she married Mehitabel's father, who was a Dainter. And I felt it as such, and she felt it as such, and I ain't got any doubts that Hitty herself really feels it as such. For my own family—Hitty's mother's people, you know, Dr. Whipple-Smythe—never had much in the way of advantages.

"All the Dainters I ever knew lived in houses, even in the early days, and they et their vittles off of plates, even if they wasn't anything but tin plates, mostly, and quite a considerable number of 'em could read and write, and the only thing I ever heard of any of 'em going to jail for was makin' whisky without payin' any taxes to the Government—but the class of people the Dainters belonged to never considered *that* any crime, and don't yet!

"Yes, sir, it was quite a step up in life when a tribe like mine was able to marry in among as good people as the Dainters."

Here the white-haired, sweet old hellion smiled blandly at Mehitabel, and became deliberately ungrammatical:

"For my family ain't much, and we never was," he continued. "When I was a kid, we was never learned anything in school, because Pap never believed none in book learnin'. He couldn't read nor write himself—had to make his mark onto papers he signed, and all that—and he didn't believe in no book learnin' for we-uns, and he would of lambasted us if we'd of wanted to go to school, but we never wanted to."

Grandfather (who is really a scholar, and can quote from the Latin poets without a stumble in his quantities) cut a sidelong look at Dr. Whipple-Smythe to see how that gentleman was taking it. He was taking it perspiringly.

"We lived in a log cabin, we did," continued the dear old limb of Satan, "and all the table we had was a log hollered out till it was like a trough, an' the corn-meal mush an' baked potatoes an' hog meat was all dumped into the trough, out'n the spiders an' kittles and we-uns et it out of jackknives an' wooden spoons. Yes, sir, we wasn't much to look at fur a fambly, we-uns wasn't! Up till we was fourteen years old we all dressed in one long linsey-woolsey slip like a nightshirt—and it *was* a nightshirt, too, an'—"

BUT at this point Cousin Mehitabel arose in blazing dignity, and left the room. Dr. Whipple-Smythe, crimson and uncertain, followed her. There wasn't any use saying anything to Granddad, and none of us did. He went to the bookshelf and got down his favorite volume of Addison's "Spectator" and was soon chuckling over it—or over something.

But, as I said, the incident almost broke up the marriage, for Dr. Whipple-Smythe was enough like Cousin Mehitabel to take a good deal of it to himself. And he and Granddad have never really got along very well since. I think maybe Granddad aggravated the (*Continued on page 112*)

A strange and thrilling

Last Instalment

ROCK, you didn't break any laigs gettin' hyar with thet good news," growled Preston, as Rock entered.

"Reckon you won't be rarin' for me to hurry, after I start," replied Rock, closing the door, and facing the rancher with intent, unmasked gaze. "Preston, not a whisper of what I say must be heard by anyone but you."

"Come close then, an' talk low."

Whereupon, Rock drew a chair up to Preston's, and, eying him squarely, whispered, "Preston, the jig's up!"

"What do you mean?" hoarsely rejoined the rancher.

"You're found out."

"What's found out?"

"Your butcherin' stolen cattle. Slagle found Half Moon hides under that culvert above his place. He told John Dabb. Dabb told Tom Lincoln. Then me."

"My Gawd!" Preston's eyes set, and, as if to shut out from his mind the revealing light, he covered his face with nerveless hands.

Rock's first thrill came with the rancher's reception of this news. It augured well. But he let the revelation sink deep. He waited.

At length Preston lifted his haggard countenance:

"How can Slagle prove thet—on me?"

"He can't. The hides were there, and now they've been moved."

"Ahuh. Wal, then, I'll deny everythin', an' fight them."

"Gage, *I* can prove you guilty."

"You can? How?"

"Ash's tracks. I trailed them. I measured them. I got his boot track here in the corral. I saw that same track leadin' down to the culvert and under it. I compared them. I ripped open one of those burlap sacks. The Half Moon brand!"

THE big hands clenched, and then opened wide.

"Rock, you wouldn't ruin me?"

"No."

"An' you shore couldn't break Thiry's heart?"

"Do you need to ask?"

"Does anyone else have the proofs on me—like you?"

"No, not yet. But I'm not the only trailer on this range. Somebody will trail your sons, as I did Ash. *If you don't stop them!*"

"Does anybody else suspect—besides the four you named?"

"Hesbitt's outfits are scourin' the

Ash's muscles seemed to ripple. Rock could catch gleams of blue fire under the wide black brim of his hat

drama of frontier days

range. They suspect. But they don't know. Reckon sooner or later they'll hit on somethin'. Old sign. It might not convict, but it'd ruin you, just the same. And any fresh sign—Preston, you'll all go to jail!"

"Rock, are you comin' in with me—an' Ash—an' Thiry?"

"I'm in with you and Thiry now. Not Ash. . . . But—clean and honest, Preston. I've laid my cards before Dabb and Lincoln. They know me. I couldn't be crooked now—not to save your life and Thiry's happiness."

"Ahuh! . . . What's the deal?"

"Listen," whispered Rock, bursting with his message. "I've shut Slagle's mouth. I've bought his silence. He's leavin' the range."

"Lord Almighty! . . . How'd you do it? What'd you give him?"

"Twenty-five hundred dollars."

Preston whistled low. "Of all the fellars I ever seen, you—Rock, I'm goin' to square thet with you."

"Sure you are. You're goin' to square it *all*. . . . Listen: Come to town with me. I've got it all fixed. Dabb will call a meetin' of the Cattle Association council. That means him, Lincoln, and Hesbitt. To keep this out of court, you will agree to pay Hesbitt for his Half Moon stock. Dabb and Lincoln have promised me they'll handle Hesbitt. It will all be done in secret. Then you and your sons who were in this deal must leave the country. We all believe Ash roped you into this butcherin' stolen cattle."

"HE SHORE did. He was killin' stolen steers long before I ever knew. Then it was too late to stop him. An' I drifted in myself. All so easy! Only a few head of stock at a time! Nobody could ever guess! An' now—Rock, I'd almost as lief croak as face thet council. They might let me off, but they'd tell. It'd leak out."

"Preston, you're not thinkin' clear. You don't see this right. Straight out, you've fallen to worse than rustlin'. If you don't take this chance, for the sake of your women-folk—you'll ruin them. And you'll be as bad as Ash. You're no fool. I'd say, if it weren't for your wife and daughters, you should *quit* this crooked work, and fight the whole range. If you met up with a bullet, well and good. . . . But you're not alone. You've got a wife to think of—daughters, innocent boys. . . . By heaven, Preston, I can't let you ruin Thiry!"

"Wal, Rock, I'll think your idee over good an' hard. My not acceptin' it pronto doesn't mean I don't appreciate your wonderful offer an' all thet prompts you. I shore do. It may be the best way to save

Digitized by Google
Original from
UNIVERSITY OF IOWA

them. But the wife—Thiry, Allie, Lucy—they'd have to know, an' I'd almost shore rather die in my boots than tell them."

"Man, we don't have to tell. No one but Thiry will ever know."

"All right. Thet's much in its favor. I'll think it over. . . . Meanwhile, I'll stop Ash if I have to hawg-tie him. An' you better take the boys an' go off in the woods somewhere. They deserve a vacation. But no goin' in to town. Take them huntin'. It's 'most turkey season. An' let me know where you go."

WELL as Trueman Rock knew that country, it was his fortune to be taken by the Preston boys to high hunting grounds which he had never visited or heard spoken of on the range.

It was up in the mountains back of the Pass, about a day's climb on horseback, eight thousand feet above the low country. Up there, early fall had set in and the foliage was one gorgeous array of color. The camp, which was where they threw their bed rolls and built their fire, lay in a mountain meadow, at the edge of a magnificent grove of quaking aspens. Behind, on a gentler slope, stood scattered silver spruces and yellow pines, growing larger as they climbed, until on the ridge above they massed in the deep timber line, which like a green-black belt circled the mountain under the gray, grisly, weathered and splintered peaks.

A golden glamour seemed to float over that grove, and to enrich all objects under the aspens, the fallen poles, the rocks and grass, the camp equipment, and the men themselves. It was cast by the golden sunlight falling through the dense aspen foliage, not a quivering leaf of which did not burn pure gold. Even when there was no wind the leaves fluttered, as if endowed with life that was trembling, dying.

Rock fell in love with this place, more than with any other he had ever dropped a saddle in. How poignantly he needed the beauty, the color, the solitude! He had come up there on the ragged edge of utter desperation. But scarcely were the boys out of sight and the horses grazing along the green-bordered brown stream, still and deep, before he began to feel something at work on his restless, seeking, striving mind.

The hour was along toward sunset, and the brothers had gone off to hunt a little before the day ended. Rock felt grateful to Preston for this respite up under the peaks. Like scales, he cast off the outer and worn vestments of his mental strife.

The days passed until Rock had no idea how long he had been absent from the Pass. Nearly a fortnight, he guessed. Then came Indian summer, that enchanting brief period of smoky, warm, still days, and floating amber and purple haze in the air.

Al Preston left to go down home for supplies. This threw Rock into a fever of uncertainty. What news would he fetch back? What message from Preston? Would Thiry write? The day was long, the night interminable, the second day unbearable. Rock wandered in the open forest across from camp, wanting always to be in sight of the trail that came up from below. Mid-afternoon ought to see Al ride in. That would allow ample time for the slow pack horse. He sat on a pine log in the open forest above the oak grove. The smoky haze, the purple veils, the warm, swimming air, so full of fragrance and dreamy languor, the riotous mosaic of autumn colors, the melancholy birds, the dim sun still high and red above the slope of the mountain—these held Rock in strong grip, making it possible for him to wait.

Then a gray-laden pack horse emerged from the green wall across the meadow. Rock suffered both thrill and pang. Next came a dark horse holding a slight rider that could not be Al Preston. Who could it be? Not the youngest Preston lad. Perhaps it was some boy Al had brought or sent. For Al was not in sight. Another pack horse cleft the dark green gap where the trail emerged. And after it was Al on his big bay. The foremost rider waved to the boys in camp. How they yelled! Rock watched with eyes starting and expanding. What was there strangely familiar about that rider? Yet he knew he had never seen him before. Rock never forgot a mounted rider. Suddenly he leaped up madly. Thiry!

He ran. He leaped the brook. He made the camp in bounds.

"Howdy, Trueman." Her smile was strained and she scarcely met his eager gaze. He had never seen her in rider's garb. Could that make such a difference? She wore a tan blouse, with blue scarf, fringed gauntlets, overalls, and high boots. She looked like a boy until she dismounted. Rock had a wild desire to snatch her in his arms.

"Boys, throw my pack and unroll my bed," she said. And while the boys obeyed with unified alacrity, she led the stunned Rock away from camp, under the golden aspens, into the forest.

"Glad to see me?" she asked, looking ahead at the windfalls and the splashes of brilliant hues.

"Glad!" he echoed, as if words were inadequate.

"You don't show it."

"Thiry! . . . I'm loco."

SHE still held his hand, which she had taken openly before her brothers Rock could not shake off his trance. Still, it did not seem the Thiry he knew. She halted beside a great fallen spruce with rugged seamed bark.

"Lift me up," she said. And when he had complied, she held him with strange hands, and looked into his eyes as she had never before.

A black squirrel squalled from a silver spruce that towered over them. All around the forest enclosed them: standing and fallen timber, sapling pines and sturdy junipers, patches of aspen, white-stemmed with dead-gold foliage, quaking as with a tremor of their roots. The thick tang of pine filled the air.

"Kiss me," this unknown Thiry said, not shyly, nor yet boldly, but somehow unnaturally for her. When Rock obeyed, restraining himself in his bewilderment, she put her arms around him and her face against his neck.

"Bad news, Trueman dear," she said, as if forced.

"Sure, I could have guessed it. But it's welcome, since it fetched you."

"Ash made a killing of Half Moon steers and shipped the beef from Wagontongue," went on Thiry, talking by rote.

Rock's frame jerked with the hot gush of blood through his veins, but he did not voice his anger and dismay. And he remained mute. Her monotone, the absence of any feeling, the abnormal something about her, fortified him to hear catastrophe which would dwarf what she had already told.

"Dad wants you to come in with us—share our fortunes, our troubles, our sins. . . . Help us fight these enemy outfits. . . . If we—"

"We?" he interrupted, in bitter heat.

"Yes, we: Ash and Dad and I—and my three brothers—and you."

"I! . . . And what do *I* get for spillin' blood for thieves? Ah, that is Preston's game. He wants me to kill, to spread terror among those Wyomin' outfits. . . . And my reward will be—"

"Me," she said, without emotion.

"With Ash Preston's consent?" demanded Rock, angered to probe to the depths of this proposition.

"Dad claims, when you become one of us—Ash will have to consent."

"THIRY PRESTON! You ask me to do this thing? You ask me to be a thief—a killer—to save your rotten brother, your weak and crooked father?"

"I—ask—you."

In violence, almost with brutal force, Rock shook her, as if to awaken her out of a torpor.

"No! No, you poor driven girl!" he cried. "I would die for *you;* but I'll never let you ruin your soul by such dishonor. They have blinded you, preyed on your love. Your brother is mad. Your father desperate. They would sacrifice you. Ash would agree to this, meanin' to shoot me in the back. . . . No, Thiry!"

"You . . . will not?" she sobbed.

"Never. Not even to have you."

Suddenly then, he had a wild, weeping creature in his arms, whose cries were incoherent, whose beating hands and shaking body wrought havoc to the iron of his mood. "Oh, thank God, you won't!" she wept, lifting streaming eyes and working face. "I prayed you'd—refuse. I told Dad you'd never, never do it. I told Ash he lied—he'd never let you have me. But they made me—they drove me—all night they nagged me—until I gave in. . . . Trueman darling, say you forgive. I was weak. I loved him so—and I'm almost broken. But you lift me from the depths. I love you more—a thousand times. Let come what will. I can face it now!"

Hours later, Rock kept vigil over a sleeping camp, where near him lay Thiry in deep slumber, her fair, sweet face, sad in repose, upturned to the watching stars. Beyond, her brothers were stretched in a row, likewise with dark faces still and calm in the starlight.

Rock's heart was full to aching. The night was exquisite, clear and cold, with blue velvet sky lighted by trains of stars, white sparks of fire across the zenith. The night wind sighed through the aspens, soughed in the pines, and roared low up on the mountain slope. Coyotes barked and wolves mourned. Whatever might betide on the morrow, or thereafter, this night was his in all the fullness of requited love, of protective possession. He had forgotten the prayers of his youth, yet it was certain that he prayed. There seemed infinite strength in the grand dark

Digitized by Google Original from UNIVERSITY OF IOWA

mountain above, and a mystery all about him in the ceaseless voice of dying insects, in the murmur of wild nature.

In the rose light of dawn, while the Preston boys whistled and shouted at their camp tasks, Rock and Thiry again wandered under the silver spruces, the golden aspens, the scarlet maples, back to that bit of primal forest land.

"Don't go back to the Pass," Thiry was pleading.

"I must. I'll go alone."

"But I'm afraid. If you meet him—

A dark horse holding a slight rider came into view. . . . Rock watched with eyes starting and expanding. What was there strangely familiar about that rider?

Oh—you will—Trueman, I couldn't hate you. Once I thought I might. Oh, don't go!"

She wound her arms around his neck and clung to him with all her might.

"Take me away—far away across the mountains," she begged, her lips parting from his to implore mercy, and then seeking them again. "It's the only way. I am yours, body and soul. I ask nothing more of life but that you spare him—and take me. . . . The boys will let us have a pack. We can cross the mountains. It is not yet winter. Then somewhere we two will live for each other. I will forget him, and all this horror. And you—will never—kill another man."

"Thiry girl, hush, you are breakin' me," he cried, spent with the might of agonized will that denied her kisses, her clinging arms. "That would be the worst for us both. It would brand me with their guilt, and drag you down. . . . No. I shall go alone—make one last stand to save your father."

ROCK rode the zigzag descending trail down to the Pass in four hours, another splendid performance of his sure-footed, tireless horse.

There did not appear to be any untoward condition at the ranch that obviously affected the women-folk. Preston had ridden off early that morning to a general round-up out on the range, at a place called Clay Hill. Ash Preston and his three brothers were off somewhere, probably also at the round-up, on their return from Wagontongue. No; they had not driven the beef wagons to town this time.

"Reckon I'll ride over to Clay Hill," muttered Rock.

Clay Hill was a famous old round-up ground. The gray bare knob of clay rising over a grassy level had given it its name. There were several cabins near the springs that gushed from the base of the hill.

Rock's keen eye snapped at the old-time scene. Dust and color and action! Herds of cattle, fields of horses! Not until he rounded the southern corner of Clay Hill, where the trail ran, and came abruptly upon the first cabin, horses, wagons, men, did he grasp that something was amiss. What could check a general round-up in the middle of the afternoon? No cowboys on guard! No cutting or branding! No movement, except a gradual straggling of the herds! The men he saw were in groups, and their postures were not expressive of the lazy, lounging, careless leisure attendant upon meal hours or cessation of work.

Rock had permitted himself no anticipations. But he divined the hour he had long dreaded; and, instead of halting, as if momentarily checked by an invisible blow in the sinister air, he spurred his horse and rode down upon the men, scattering dust and gravel all over them.

He was off, throwing down bridle, gloves, and in two swift jerks he got out of his chaps.

"What's up?" he demanded of the six or eight cowmen who backed away. In his first sweeping glance he did not recognize one of them.

All my life I have been hoping for a little leisure, my goal until my boy grew up; now he has

My Last Hope for Freedom has

By W. O. SAUNDERS

PHOTO BY HAMBLIN SUFFOLK, VA.

"MY BOY is proceeding about the business of living his own life," says Mr. Saunders. "It isn't that he doesn't give a darn for Dad any more; but he wants to explore and decide some things for himself. And I shall not upbraid him, or interfere, because he is following in my footsteps, after all. If we but understood the laws of heredity we might say with certainty that he is what he is because of what his father was. But this I know: I have lost my boy, and he must find himself in the maze of life's perplexities and illusions through which I, before him, had to pass."

FOLKS, I have lost a son. And he is the only son I had or ever hope to have. I guess millions of other fathers have lost their sons in the same way: the sons of fathers probably have gone the way of my son for millions of years, and will go. But even in much company misery is not robbed of all its pangs.

He was seventeen years old when I took him in my arms that night and bade him good-by. All of a sudden, I realized that he wasn't the same boy I had known for seventeen years. It was another and entirely different boy, and this was no casual good-by or an *au revoir;* in a moment the night train would roll out of the station, and that boy would be gone out of my intimate life forever. My boy has gone to college.

"He'll be back for holidays; he'll be with you all this summer." That's what everybody says; and I know otherwise. Oh, yes, he will come back for a day or two at a time, hang around the house a little while this summer, write home now and then, be nice to the old man and mother; but that boy is gone, gone. He is on his own manhood now, facing a world away from home, looking onward toward the place that he hopes to make in the world, and Daddy is now just Dad; just Dad, and nothing more.

And I had made so many plans for that boy. I was seventeen years old when I went out from under my own parental roof to find my own way in the world. I didn't go to college; my folks were poor and had not quite succeeded in putting me through high school. I got an early start in the business of shifting for myself, married early, had a family before I was really grown up.

Having started out so early and under handicaps, life has seemed sort o' long to me. It has been a long, hard drag most of the time. I paid entirely out of the Building and Loan Association only a few months ago, and I never owned a Tuxedo suit until yesterday.

I say it's been a long, hard drag bringing up the family, acquiring a home, and building up a weekly newspaper property in a little town.

But that boy was growing up; and when he got up into his first long trousers and they made him editor of the school paper, I began to bank on that boy. Keith—that's his name—would soon be big enough to be helpful in the business; he had shown an aptitude for writing and for the printing craft. Only a few years now, and he would be old enough and responsible enough to take over the business and let the old man play a bit.

It's good to dream; I guess we spend a great deal of our lives dreaming things as we would like them to be, only to see our dreams fade out before the projection of life's realities. But dreams carry us over hard places, like the stimulant of much coffee in the night we sat up with someone's dead.

I entertained myself with a lot of pleasant dreams about that boy. Although only in my early forties, I can't work as hard and fast as I once did. I used to think nothing of doing the work of two or three men. But even in the thirties I found myself slowing down, and I tire now after a day's work; and that phantom thing called Freedom has cozened me right much.

I HAVE been pursuing that bird Freedom all my life, and have been, oh, so reluctant to admit that you just can't put salt on its tail. But Freedom ever eludes me. My first dream of freedom came when I was but two or three years old, when I became cognizant of the fact that I was wearing gingham dresses, like a little girl, and should be in pants to attain to a boy's estate. I thought that when I got my first pair of pants I would be free from Mother's apron strings and the petting of numerous aunties.

But I got my first little pants, and found that freedom from one set of vexations only got me into other difficulties, with more responsibilities and more life problems to solve. The first day I strutted my first pair of pants, I got my nose punched by another boy who had been wearing pants a few months longer than I had.

And then I discovered that everybody expected more of a kid when he put on pants; he wasn't a baby any more, to be coddled and forgiven for every misstep. I went to school and found a discipline in the schoolroom to which I had to submit, that seemed more irksome and galling than any discipline I had known at home.

I yearned then for the freedom that would come with long pants. When I got my first pair of long pants with suspenders to them I would know what freedom was. The first thing I would do would be to lick the teacher.

but never got near gone off to college, and

"I had thought my boy would take over the business and let the old man play a bit!"

Flown

Illustrated by
HARRY TOWNSEND

It seemed ages before I ever got to the long pants. And when I got them, instead of stepping into freedom I found myself suddenly enslaved to more conventions than I had ever dreamed of. I mustn't get down in the dirt on my knees and shoot marbles any more; I mustn't spit on my hands and rub them on my trousers to get the dirt off; I must tip my hat to every pert little miss and every fussy old woman, whether I liked them or not. The world was so full of don'ts that I seemed hardly to have room to turn around in. I mustn't even laugh hilariously and vociferously any more. I must be a young gentleman. Good lord! My heart sank within me.

But I would yet be free: I would break away from home, where I was expected to be in at a ten-o'clock bedtime, be punctiliously at meals, and do a thousand chores. I would be my own boss, fix my own hours, choose my own company, go and come as I please and not have to get up Sunday morning, when the sleeping was so good, and go to church to sit through a long and doleful sermon uttered by an aged pastor with a quavering voice. Silly dreams of freedom! I left home and got the freedom I had sought in small things only to find myself more enslaved than ever: a slave to a job with steady hours; slave to a dingy boarding-house; slave to more and more conventions. But, thought I, surely marriage and a home of my own would give me freedom. Another silly dream!

I MARRIED, and freed myself from the drabness and loneliness of an attic room in a lodging-house, only to find myself enslaved to a new world of conventions and responsibilities. Looking back on it all now, I don't know how one of my rebellious spirit managed through it without kicking out before I had lost my kick. After secretly and sullenly squirming and fretting under the yoke of matrimony for several years, I finally settled down to it and put aside my fool's dreams of freedom, for a time.

But that boy had started me off on another dream of freedom. Publishing a weekly newspaper in a small town is no sinecure these days. It was different before the rural telephone, rural free delivery, good roads, automobiles and radio came. And all these things have come with such amazing rapidity within a mere decade or so!

The life of the country editor was once one of infinite leisure. The daily papers from the cities were sometimes a week old before they got into the country. There was little telephone communication; some farmers came to town once a week, most of them but twice a year. The automobile hadn't come into popular use; radio wasn't dreamed of. The country editor had his own little world all to himself.

All has changed. Over ribbons of concrete come fast motor-trucks bearing the morning and afternoon editions of Norfolk, Virginia, newspapers into Elizabeth City hot from the presses. A daily paper in my own town sends its flivvers out on the rural highways carrying press reports to the farmer the same day. That means work for (*Continued on page 164*)

Don't Short Change *in the* Little Things *of* Life

By

EDGAR A. GUEST

I WAS wandering through the Detroit Art Museum one day several years ago when I was joined by a friend whose knowledge of art would qualify him as an expert. An unusually rare collection of the old Dutch masters was on exhibition.

I knew that those few pictures were immensely valuable. They were all heavily insured. Two or three of them were pointed out to me as having cost their present owners more than two hundred and fifty thousand dollars each.

I confess that in my ignorance of art I was puzzled. Some of those pictures didn't interest me at all. Elsewhere in the museum hung any number of canvases that appealed to me more. Yet these few old masters were being exhibited and studied and praised and admired by people who supposedly knew what it was all about.

I had sense enough to know that it takes more than age to make a masterpiece. So, standing before what to me was the least impressive of those rare pictures, I said to my art-loving friend:

"Why is that particular canvas so valuable? What makes it a masterpiece?"

He looked at me rather sorrowfully. Finally he said: "Well, for one thing, it is a great work of art. Look at the marvelous coloring, which many years have not dimmed. Notice how beautifully the picture is composed so that this part balances that. But over and beyond all these things, the artist who painted it proved his right to mastership by an exquisite handling of the minutest details."

Then he began to point out to me, one by one, little things which my untrained eye had entirely missed. Now I saw that the veins in the old man's hands looked as though the blood was still pulsing through them; that the sunbeam coming through the window fell upon a mug on the table in such a way as perfectly to illumine the design on the old drinking piece; that the old man's hat was beautifully done. Why, a singing bird in a cage was a picture in itself!

Said my friend: "Only a fine artist does the little things with such fidelity."

I thought then, and I think now, that pictures and folks grow to greatness in much the same way. It is largely the little things which make a masterpiece of art; it is the little things which make men and women truly fine.

Human masterpieces are built by patience and thoughtfulness and unselfishness; by courtesy, good manners, kindliness, and understanding. The lives of the

great characters we all know and love are filled with tiny details exquisitely done.

The importance of little things is vividly emphasized in something that a woman said to me the other day. "My husband would die for me," she told me with a little grimace, "but he always forgets to pass me the salt at the table. Probably he'll never have the chance to die for me, but I need the salt three times a day!"

And there you are! We all need the salt of human thoughtfulness and kindness many times every day. It is only once in a lifetime, perhaps, that we call on our friends, or are called on by them, to make a big sacrifice.

MOST of us meet the great trials of life well enough; we are much more likely to fall down miserably in the little tests. Even in the matter of politeness we are often careless. Because a clerk thought it not worth his while to be courteous to a shabbily dressed man, one of the leading stores in Detroit lost a lifetime customer. A citizen of great means, who refuses either to dress or act the part, walked into a high-class haberdashery shop one morning and said to the clerk at the counter:

"I want to look at some socks, if you please."

"I can show you some very nice *hose*," replied the clerk with an edge of rebuke in his voice.

"Never mind going to the trouble," replied my friend. "I came to buy socks, and since you don't keep socks I'll go to a store that does. I'm sorry I made the mistake." With that he was on his way. He has never since been back to that shop.

It is by little things that battles are lost or won.

Norval Hawkins, one of the best known sales managers in the country, was sitting in his office one morning when a beautifully engraved card was brought in to him by his secretary. The card belonged to a salesman for a high-class automobile company. When the young man entered, Mr. Hawkins was still holding his card.

"I have called, Mr. Hawkins," said he, "to see if I can interest you in one of our cars."

"No, you can't," said Mr. Hawkins, who had been looking the young man over from head to foot. "I'm not interested in your automobile; but I am just a little interested in salesmanship and in you. Now, if you care to listen, I'll take a few minutes of my time and tell you something about yourself."

"I'd be very glad to hear it," said the young fellow, not dreaming what was coming.

"All right," said Hawkins. "Sit down. This card of yours is engraved. It's an expensive card, and the company you are representing is selling an expensive automobile."

"That's true," the youngster admitted.

"You didn't shave this morning," snapped Hawkins. "You've not had your shoes shined in a week. That's the same collar you had on yesterday. You've still got your hat on your head, although you're sitting in my office, and you've taken at least a dozen puffs at that half-smoked cigar which you brought in with you. I'm going at you rough-shod because I want to teach you something. Tell me honestly, do you think, as a salesman, you measure up to the quality of this engraved card, or to the automobile you are trying to sell?"

The young man admitted his carelessness.

"You may think," said Hawkins, "that I'm finding fault with you about little things, but it's the little things which are important. If I weren't interested in all salesmen, I wouldn't bother with you. I'm finishing my job and you're just beginning yours. I can't resist the chance to pass on some of the things that experience has taught me. That morning shave is important. That half-smoked cigar is important. Don't carry it into a gentleman's office when you are making a business call. Always represent your company at your best; not at your worst."

"Mr. Hawkins," said the youngster, "I am glad I came in here. I had never thought of these things."

"I knew *that* the minute you came into this room," said Hawkins. "That's why I decided to give you a jolt. I thought you'd be sensible enough to take it the right way."

I PLAY golf during the summer months. I play with many men, yet there are some I like to play with better than others; and there are a few I avoid as though they were my enemies—which they are not.

I shun them because I am not happy when I am with them. They irritate me.

They are big in a big way, but they are petty about trifles. They quarrel with their caddies and abuse them; they seem always to be seeking for themselves some small advantage; they violate not the letter but the spirit of the rules; they are indifferent to the little courtesies of the game. In short, they are not true sportsmen.

The difference lies not in big things but in tiny details. One man adds comradeship and thoughtfulness and good nature to his game; the other makes it merely a self-centered struggle for victory.

After all, it is our *attitude* toward life which counts. We shape in the main our own characteristics. We advertise ourselves daily by our conduct in small affairs.

There once lived on our street an old man who had more friends than anyone else I have ever known. Perhaps this was because he did more nice little things than anyone else I have ever known. To me, he was an outstanding masterpiece of gentleness and kindness. He had a little garden where he grew old-fashioned flowers. It seemed to me that I never saw him walking down the street without a bouquet in his hand.

"To whom are you always carrying flowers?" I asked.

"Oh," he said with a little smile, "these are for a little girl in the next block, who is ill. I'll just stop in on my way to the street car and leave them for her."

"Has she been ill long?" I asked.

"No. Just a few days."

"But you seem always to be carrying flowers."

"Yes," he answered. "I think there is never a day when everybody we know is well and happy, and wouldn't be just a little comforted to be remembered. I can't do very much for people, so when the garden's in bloom I take a few flowers to let them know I am thinking of them. Sometimes I leave a bunch on certain desks in the office. It isn't much."

What an exquisite little detail that fine old man worked into his life's picture! There was no great outstanding feature to his career, but wherever he moved beauty went with him and love remained. The day he was buried there were more flowers sent to his door than his little home could accommodate. I see that tender, thoughtful, big-hearted old man over and over again in memory; particularly when I myself have failed to do the little thing which I might so easily have done, had I only thought.

Results are not all that count. It is important to know how those results are gained.

Business is the excuse of the churl and the grouch, but there is plenty of time for the little deeds of courtesy and kindness if we have the will to do them. It isn't the time, but the thought that is lacking. A man can grow rich, and still play the friend along the way. He can still be gentle in his relations to his fellows.

I THINK all gardeners are humble men. They seem to learn from the flowers something which many of us miss. Old John, at the Detroit Golf Club, fascinates me. He is one of the most lovable characters I have ever met. All his life has been spent on the soil, and he knows and loves everything that grows in our climate.

One day last spring, as he was bending over a bed of forget-me-nots, I went up to him and said:

"John, you seem to love all the flowers!"

"Oh, yah!" he answered with a smile of tenderness.

"But, John," I said, "some are prettier than others. Some are more fragrant than others. Do you give the big plants and the showy blooms more attention than you give the little ones?"

"Oh, no," he said, shaking his head. "No; I treat them all alike. You know they are all flowers."

Lincoln was a human masterpiece, and I think that was Lincoln's attitude to his fellow men. He recognized the varying degrees of genius and ability; the shades of honor and conduct, and strength and weakness. But he saw also that the crying need of all men is for kindness and sympathy and understanding and friendship. I think he poured as much of his heart and his love and his thought into the letter which he penned to the widowed mother who had given five sons to die on the field of battle, as he did in penning the speech at Gettysburg. His life was filled with exquisite details.

I know a number of men who have been successful in business, but who have failed everywhere else.

To this day, one of them finds it difficult to keep good workmen about him. He never for one minute lets them forget that they are working *for* him. The idea that they might be working *with* him is foreign to him. Giving orders is his specialty. He can snap out "Do this!" with more (*Continued on page 124*)

If You Ask Me:

Don't Keep Your Glad Hand for Special Occasions

A BIG testimonial dinner was given to David Belasco several years ago. Among the speakers was Channing Pollock, the famous playwright.

"One of the tragedies of life," he observed dryly, "is the fact that no one ever gives us a dinner until we don't need one."

Mr. Pollock spoke from experience. In the days when he was sweating as a dockhand on the New York water front and binding his bloody hands with rags, he would have welcomed an invitation to a square meal—or a light lunch, as far as that goes. In the past twenty years, since his plays began to bring him fame and fortune, I suppose there are few men in the theatrical world who have been entertained more often in public.

It's easy enough to trail along with the noted. If a daring explorer, a literary "lion," or even a mere congressman comes to town, the good ladies of the Literary Society or the Social Guild will run around in circles to get his famous feet under their groaning board. But how often in the course of a year does one of them give herself the thrill of inviting someone to her table to whom a company meal, with all its "fixings," would be an unexpected treat, and sometimes even a life-saver!

Usually, you are ready to give three rousing cheers for the man who has made his mark; but how often do you go out of your way to give a cheering word to the man who shows plainly that he is having a tough time in the battle of life? I mean the man who's discouraged, who has had too many knocks for his strength and has lost his grip on things. I can't help thinking it might be a good thing if more often you would let the heroes of the hour stew in the juice of their own greatness, and give a "glad hand" to one who really needs it.

You may not be entertaining an angel unawares or adding to your "social standing," but at least you'll be bringing a little bit of heaven into two human hearts—yours and his.

Merle Crowell

The Sheriff

The mob halted . . . all but one. . . . "Come on!" he yelled. "The door's next!"

By SAMUEL A. DERIEUX

ILLUSTRATED BY STOCKTON MULFORD

BIG Noah Burts, sheriff, bareheaded, in his shirt sleeves and followed by his jailer, hurried as fast as his huge bulk would permit across the rear courtyard of the new county jail. Middle-aged, ponderous, hot, this hurry seemed forced, uncongenial to him. He had been routed from the electric fan and ice water of the office by a sudden ringing of the bell connected with iron gates that opened from the courtyard on a rear alley. The ringing told that the deputies had come with the prisoner, had brought him in, according to orders, by devious and secret ways.

All afternoon he had sat at his desk listening for this summons, smoking one cigar after another, as a man smokes who waits. Out of the office window, up a heated street lined with one-storied structures, he had watched the town square, overhung by clouds of dust. He did not remember to have seen such a dust except on circus days and on the day of his election. It told of big crowds already arrived, of other crowds pouring in. It told of the threat that overhung his jail and the law he had sworn to uphold.

Now, out in the courtyard, assisted by the jailer, he swung the heavy gates open and stood aside to let an overheated car dart in. He glanced up and down the alley, lined with negro shacks. The huge afternoon shadow of the castlelike jail fell across them. Usually, their denizens were lounging on the porches, their ragamuffin children playing in the gutters. Now the place would have looked deserted, the shacks for rent, but for the fact that every door was closed and bolted. The sheriff nodded at the jailer; they pulled the heavy gates together and fastened them.

DEPUTY BEN ALLEN had gotten out of the car and was leaning against the front wheel, rolling a cigarette. Under his broad hat brim he glanced shrewdly at the sheriff, as if he knew something his chief did not know. Another deputy, clambering awkwardly out of the rear seat, seemed to have his feet entangled with something that reddened his face with disgust. The four men gathered around the car. From the bottom came a strange, moaning sound.

The sheriff reached down, caught hold of a shirt between the shoulder blades, and jerked. The others crowded close about as if to hide this moaning secret from the barred windows above and from the brazen afternoon sky that looked mercilessly down upon them. They shuffled across the courtyard, impeded by two dangling black feet. They crowded through a door, down iron steps, along a dim corridor.

Before a solitary cell there was a shove forward, and doors clanged. The sheriff, mopping the sweat from his brow, stared into rolling eyeballs. On his face was the stern, rising rage of a heavy, slow-thinking man. He turned to the others, but he did not speak. What was there to say?

Up in the office at a stationary basin he washed his hands. Then the four drank glass after glass of ice water, placing the glasses back on the table. It was a heavy piece of golden oak, long enough for a man to lie stretched out on, or for directors to sit around at a meeting.

They did not look at one another nor speak. The secret under their feet seemed to make them avoid each other's eyes. The big electric fan—that symbol of the complete equipment of the new jail—

The powerful story of a man who rose higher than the crowd could understand

hummed on the table, filling the room with the sound of machinery, and swung its slowly revolving face from one to another, as if in question.

The sheriff sank into his swivel chair and picked up from the desk the cigar he had laid aside. Occasionally through the window came the distant honk of a car or the bray of a mule. Between these sounds was a heavy silence, a treacherous similitude of August peace brooding over the heated town. The sun, a swollen ball of fire, peered through the dust clouds into the room. Even care-free, cynical Ben Allen cleared his throat before he spoke, and leaned forward toward the sheriff, his eyes still shrewd.

"GUESS who seen us, Sheriff," he asked, "after we had got inside town and thought we had got away with it?"

The sheriff wheeled around, facing him.

"Who, Ben?"

"That brother of yours, Joe Burts—that's who!"

A shade of anxiety, like a passing cloud, crossed the massive, heavy-jowled face.

"Did he see what you had, Ben?"

"Did he? Looked right down betwixt the seats. Him and four others in his new car. Drove off toward town looking back. That was the time the nigger started groaning."

The jailer had risen and was leaning across the table toward Ben.

"Why didn't Joe Burts jump you there?" he demanded, as if he were incredulous of the whole story. "What hindered him, I'd like to know. Joe Burts ain't the man to hold back!"

"Didn't I say," retorted Ben, "that there wasn't but four besides him? The grand jury might indict that many—might be ashamed not to. Joe Burts ain't no fool!"

The jailer straightened up, his eyes anxious.

"Everybody knows we got him now," he said. "Everybody!"

He took a sudden step toward the sheriff.

"What you goin' to do, Noah?"

There was a momentary appeal for sympathy in the big fellow's eyes as he looked up at his excited lieutenant. What *could* he do? His hands were tied.

"We'll just wait an' see, boys," he said.

THE election of big Noah Burts to the office of sheriff had been a joke to all but the law-abiding elements. He had been picked up from his country store and hustled about the county on a whirlwind campaign in which his floundering speeches had been jokes, like his candidacy. Joe Burts and Joe Burts s friends had brought him to the speaking places, surrounded him while he spoke, then hurried him away, as if they were secret service men in charge of some high dignitary.

The law-and-order league, the preachers, the forces of decency in general had united against him. "Boys," their candidate had cried on the stump, "next time a circus comes to town, look at the elephant. A man sits on his neck and guides him with a prod. The elephant in this show is Noah Burts, the prodder's Joe Burts. Don't blame the elephant, boys, but don't vote for him!"

The boys had laughed, but they had crowded over one another voting for him. They liked him, sitting up there red of face among his nimbler opponents. He was no high-brow candidate; he was one of themselves. Then, Joe Burts knew how to slap them on the back, pull them confidentially aside and talk straight into their eyes. Besides, the up-stairs room over Joe's garage was the only oasis left in an encroaching desert of prohibition and moral reform, and the boys were thirsty.

Thus Noah Burts was sworn in High Sheriff of Francis County; and Joe Burts still moved among men with the good-natured arrogance of a political boss for whom the world is going right; and from the up-stairs room over the garage men continued to stumble with red faces and thick tongues. Big Noah Burts was not the man to bite the hand that fed him, expecially when that hand was his brother's.

He did listen with gravity to a committee from the law-and-order league that called upon him. They recited numerous abuses, which he promised to look into. But when they came to the inevitable garage, his eyes grew hard. Memory of his boyhood on a poverty-stricken farm, with a ragged little brother trotting always at his heels, was behind that hardness in his eyes. "Look out for Joe, Noah," his mother had whispered that night when the charity doctor had come for the last time—and turned away from the bed.

The sheriff brought the conference to a sudden close with a sternness that made the members of the committee reach for their hats. But that night he sent for Joe, and they talked till midnight. "When did you turn saint, Noah?" Joe grinned finally, and the subject was dropped. But after Joe was gone, the sheriff sat for a long time very solid in his chair, and smoked one cigar after another.

AND now, in his office in the jail, the ponderous and very human sheriff was thinking of that dust out there above the town, in terms of his job. The chances were that most of the men in that crowd had voted for him. He could not remember a sheriff who had not held the office several terms. He had his pride, like another man.

He must see Joe at once. That crowd must be sent about its business, and Joe was the man to send them. He wheeled

Digitized by Google
Original from UNIVERSITY OF IOWA

around to the desk and picked up the 'phone.

The garage was on the outskirts of the town, out of the jurisdiction of the town police. He did not have to consult the telephone book for the number, so intimate was the connection between the jail and the blind tiger. A loud voice shouted in his ear:

"No—he ain't here! Who's that talkin' anyhow? That you, Noah?"

THE sheriff hung up the receiver quickly, his face flushing with anger. The man at the other end he had recognized—a farmer who had supported him as vehemently as he now yelled at him. During the brief interchange he had heard in that distant room the mumbling voices of plotting men. Some idea of putting on his hat and going to them, of appealing to them in person, he put aside. If he would not bite the hand that fed him, neither would he lick it.

Likewise, he dismissed the momentary impulse to call the police. The chief was his political enemy; he belonged to the law-and-order crowd; he was one of the "high-brows." Besides, it wouldn't be fair to Joe and the boys to show suspicion before anything happened. He turned to Ben Allen, who sat tilted against the table, cynically smoking a cigarette. Ben had worked in the garage until at Joe's suggestion he had been appointed deputy. Ben was, so to speak, the attaché of the garage in the office of the sheriff. Ben knew how to keep his eyes open and his mouth shut.

"Ben,"—the sheriff spat into the cuspidor between his feet—"suppose you step out and take a look around. And, Ben," he added when the deputy reached the door, "tell Joe I want to see him. Right away. Bring him with you, Ben."

He sat smoking in silence after Ben had gone. The jailer and the other deputy left him—to see about supper for the prisoners, they said, and he nodded. The restless afternoon wore away. The swollen sun dropped over the town. The silhouette of church spires, the contour of trees, were outlined against the angry afterglow. Over it all hung the pall of undiminished heat, and the threat of that strangely patient crowd.

A leaden weight of lonely foreboding pressed down upon Noah Burts, heavy as the breathless heat out there. He rose and walked up and down the office, his hands clasped behind him. What if Joe did not come? What if the mob came instead? He had known sheriffs who surrendered prisoners such as this after a framed-up resistance. He had not blamed them; they were men before they were sheriffs. Still, something in him recoiled. His oath of office kept coming into his mind, the dignity of the courts. He sat down and mopped his face.

He wheeled quickly to face the window when at last the front gate opened. He stared with disappointed eyes into the dusk of the courtyard. Ben Allen was closing the gates—alone. He did not speak when the young deputy came into the office and softly closed the door. But his heart beat faster than usual in his enormous chest, and his face, raised to the deputy's, was reddened by more than the fading glow that came in through the window.

"Lord!" gasped Ben. "What a crowd!"

He gulped down a glass of water, and sat down close to the sheriff, leaning forward.

"They mean business," he went on. "Take it from me. Over there in the drug store"—he indicated with his thumb the street corner hidden from sight by the jail wall—"there's fifty if there's a man. They're not in there after dopes and milk shakes, either! Out in the rear alley, they're there, too. Not lookin' for houses to rent, either, you can bet on that. A little later and I'd never have got in, Joe's password or not. They ain't takin' no chances, them boys."

He rolled a cigarette, looking boldly over the process at the sheriff, the fan on the table flapping his shirt and cravat.

"I seen Joe, like you told me. There's open reception up-stairs over the garage. If it hadn't been for Joe, they'd have held me. The fewer men in the jail, the less the trouble if it come—see? But Joe cussed 'em out; 'Noah was a man before he was a sheriff,' he said. Then he pulled me aside.

"'Tell Noah,' he says, 'now's his chance to make himself solid with the boys. Now's his chance to clinch the job till his hair's white; keep the boys glued to him an' make friends with the high-brows to boot.'"

THE messenger leaned forward, a confidential hand on the sheriff's broad knee.

"At nine o'clock," he whispered huskily, "the bell to the front gate rings. You go out to the gate, bunch of keys and all. You take your gun along. They'll be waitin' along the outside of the wall, out of sight. The main crowd'll be held back, y'understand; there won't be but four at the gate. You open—they jump you—you shoot, in the air. Desperate resistance, see? Sheriff overpowered. You know—the old game!"

The sheriff leaned suddenly forward.

"Ben, I told you to bring Joe Burts. Now, go get him!"

"Go where? I tell you, I won't get back! If you don't believe it, step to the gate. Take a look. Then, if you say go, I'll go. It don't make no difference to me. This ain't my funeral!"

Crimson of face, the sheriff rose and reached for his hat. Ben sprang up and faced him.

"At nine o'clock," the messenger whispered huskily, "the bell to the front gate rings. You go out to the gate . . . and take your gun along"

Through the fog of his grief, a light was flickering in the soul of Noah Burts

"You want to let 'em in now?" he demanded. "Well, all you got to do is open the gate!"

The sheriff looked down at the deputy, then sank back into his chair. There was the truth, the whole truth, and nothing but the truth, in Ben's eyes. The thing had happened while he sat waiting for Joe to come to him. The jail was surrounded; they had taken no chances.

He turned around to the desk 'phone, leaning bulkily over the papers, his feet tucked under his chair. He jerked the receiver up and down. But in the instrument there was no popping of life. From Central came no response. He threw the useless thing aside, and turned to face the darkening room, in which he was bottled up, a prisoner by his friends. They had him trapped; he had acquiesced in smaller things, he would acquiesce in this. His mind tried to justify such acquiescence. If he were not sheriff this night, he would be out there with Joe in the midst of the mob. The accounts he had heard that morning of the crime recurred to his mind, and the (*Continued on page 175*)

The vigilant eye of his

AUTUMN

By

ILLUSTRATED BY

ONE of my first really graphic impressions of autumn was not half so dramatically impressed upon me as it was upon the negro with me, old Cæsar Moultrie, who, when I was a plantation boy, used to be frequently commissioned to accompany me on some of my expeditions into the forest wilds. He was a good comrade, was tolerant of my boyish views, was wise in an ancient nature-taught way, and left me many a happy memory.

That day in late September we were sitting together under a big hickory-nut tree, a few resplendent leaves from which glided to the placid waters of the creek before us, and rested there, sumptuously, royal barges for the Cleopatras of the fairy world. The utterly peaceful reverie that comes over fishermen who are good companions and are having no especial luck was upon us.

Old Cæsar had laid his battered cap on the grass beside him. His bald head glistened amiably. I was half asleep. The universe seemed to be in a joyous trance. When I heard a slight sound in the hickory tree overhead, I just thought that another big gold leaf had started down. But this was no drifter. In a second, with a resounding crack, a heavy hickory nut landed squarely on the top of Cæsar's head. The nut, clipped from its twig by a foraging gray squirrel, was still in its outer green shell, and therefore doubly heavy. The blow was enough to knock out an ordinary man. But Cæsar, after an initial blink at the moment of contact, reached over, picked up the nut, looked at me, and chuckled.

"De fall o' de year done come," he said.

THE fall of the year! It is a magic expression, ancestral, poetic, universal. It is like nightfall, like dayspring, like evenfall. The year ripens like an indolent misty peach—and falls. Sundown is the fall of the sun—his gorgeous foundering in the blazing vortex of the west. Those critics of language who insist that we always say "autumn" overlook the appropriateness and the beauty of connotation of "fall." The fact that diction-

wife kept him at his task

ARCHIBALD RUTLEDGE

THOMAS FOGARTY

aries do not always give it is perhaps one reason why it should be treasured.

I recall another incident of the declining year which perhaps well illustrates one of the elements of this fascinating season's character. We generally associate autumn with the ripeness and the richness of age, with life's promises fulfilled, with the infallible wisdom that comes like the growth of a mighty oak out of the very heart of nature—out of the soil and the sun, the starlight and the rain, with the beautiful slow passage of the years.

This old wisdom is almost cosmic in its sagacity, having in it the human spirit's fathomless far reach to the heart of God. I came upon this example of it in this way: I was talking with old Anthony Lee about the little negro church that he and the other negroes on the plantation had started to build, and I was lamenting the fact that the steeple of the humble edifice had never been completed. Anthony listened to me kindly enough, but I could tell from the light deep in his brooding eyes that he had reservations to make to my criticism. When I was through, he said gently, touching his ragged shirt over his heart:

"Cap'n, here de Temple."

Was there ever a sermon more eloquent? Was there ever a keener rebuke of worldliness in religion? Anthony was thinking of the only true altar, the shrine of the heart, builded by the Almighty, and visited by Him. And this humble negro was telling me that God cares only for the offerings upon that sacred altar, for the music welling from the virtuous soul, for the unfeigned worship of the human spirit.

CHILDREN are usually, I think, far wiser about many essential things than we are. They know instinctively that all of us live in a world made sacred by the very wonder of it. Spiritually aware of the mystery of existence, they see a million miracles, and they have the grace of heart to acknowledge their true character. Children have an artless and disarming honesty of soul that we are always in danger of outgrowing. Naïve to the point of indiscretion, their thoughts, their celestial reflections, their talk—all these seem to be spiritually extemporaneous. Often they converse truly like Children of Light. The supposed errors they make are commonly to be laid to their fortunate ignorance of our complex, dubious, and disingenuous civilization.

Christ, who understood everything, said that Heaven is made of children; that is, of people as refreshing, as native, and

as fragrant-hearted as children. Now, in this festal season of autumn, all of us take a childlike joy in the winey air, in the resplendent colors, in the beauty and abundance in garden, field, and orchard. It is then that all of us rake leaves together, talk honestly, abandon our cumbrous dignity, love one another, and are as serenely happy as little children.

Here a great maple is softly burning like a vast yellow primrose. The water-oak by the winding creek is some mysterious jewel, glimmering with dewy flames of topaz, amethyst, and rose. The old sassafras tree on top of the pasture ridge looks like a miniature sunset, all saffron and ruby. About all this beauty there is something communicable. All of us feel it; and we have to see as much of it as we possibly can. Yet we do not like our neighbors to imagine that we can afford not to be busy. We therefore pretend to rake leaves; but in reality we are steeping our very souls in the glory of autumn, ruddy autumn, fruitful, fragrant, generous, and gorgeously fading.

When the leaves begin to fall, we slip back into happy childhood; and literally from sea to sea every man, woman or child who has a rake, and who has a yard to rake, is now busily raking leaves. What pastime is more harmless, childish, delightful, and futile? It would be far better for our lawns if the leaves were left where they fell, for they are nature's blanket for the winter. But Molly is out in her yard raking leaves; and Annie is sweeping them from her tiny pavement; and the Taylor boys are carrying great baskets of red and yellow leaves from the lawn to the chicken yard. People rake leaves as they do everything else—characteristically.

Now the good housewife is down on her knees to get that sly leaf that has hidden under the hedge. She'll not have it said that she sweeps dust under her carpets! Now the village Rip Van Winkle, who really ought to be hunting in the hills, is raking leaves as a sportsman does who wants to be after the real business of his existence; but the vigilant eye of his wife, and her tongue, the tone of which seems somehow to lack the general mellowness of the season, keep him at his task. Yet with Rip raking, leaves have a chance.

THERE is something universal about this spirit of raking leaves. All of us have a lingering ancestral feeling that we must be getting ready for winter. Doubtless the cave man gathered leaves for his bedding in his dusky cavern. Then in the autumn we are alert to Nature's changes. Life becomes more of a game. Every move that Nature makes we interpret as a signal to us to bestir ourselves. She scatters her leaves, and we rake them up. It is a tremendous racial gesture that we are aware of the coming of our annual fight with winter.

Besides, when we rake leaves we have a very soothing feeling of respectability. There is a real community interest in this activity. I may not have a cent in the bank, but if people see me going after leaves energetically they feel that I am in the common cause, and that I am a man of thrifty ways. It is an innocent outdoor sport, this raking of leaves. It brings millions of people out to do the same thing; and all of them draw close to the ancient hearthstone, to the humble yet matchless beauty of earth. Autumn and the raking of leaves draw us close in some immemorial democracy. I believe we think long thoughts when we rake leaves. For one thing, it is very easy then for us to see that, while all our lives we strive and struggle to produce beauty (occasionally achieving a somewhat sorry imitation), the creation of beauty is natural, is spontaneous with God.

And when we think of Him, we think of each other kindly; for all of us are in His big back yard raking leaves.

Beautifully the leaves are falling, with an impartiality directed by a justice divine, radiantly on the lovers strolling in the twilight, brightly under the dancing feet of little children, gently upon the old, tenderly on the hallowed graves in the village churchyard.

THERE is about autumn the golden glamour of a memorable farewell; but if it is sad, its sadness is visionary. In reality, the parting is happy. It is not permanent. The voyage is not one into blank space. It is a circumnavigation. All this beauty is fading, not so much because it is dying as because it is going on a journey. Other lands shall see her loveliness and rejoice in her charms, and soon she will be with us again. The ancients with their mythology really did very little intellectual clowning; they usually had things right. In autumn, they said, Persephone has to go back to Hades to visit her husband; but within a few months she will once more return to the old home where Mother Ceres lives.

That idea is a beautiful one, and more just than Bryant's, that:

> The melancholy days are come, the saddest of the year. . . .

Though a great poet, he there suffered a spiritual backsliding. Trivially viewed, autumn may be sad; but in a broad and general sense it is the most gorgeous, the most opulent, the most enamoring of all seasons. The time of harvest, of mellow fruitfulness, of strangely renewed vigor and strength, of the sumptuous funeral of foliage old, of the splendor of the mighty southward migration of the birds, of the smoke from burning leaves and from cleared gardens, of Indian Summer, of matchless days when the earth seems hardly to breathe under her canopy of golden mist, of piles of yellow corn, of rows of corn-shocks like Indian wigwams, of heaps of ruddy apples, of bubbling cider presses, of aromatic odors from the fields, the woods, the roadside—such is autumn.

Nature has yielded her all; she is a little tired, but triumphant, fading but beautiful. She is the proud mother. Her beauty has the noble effulgence of maturity. The fragile flowering of maidenly spring has at last borne its fruits and its grains.

Autumn is Nature's joyous wistful pause to look with benignant smiles upon her handiwork and upon her happy children. Autumn is the long afterglow of summer, a time in which the heart may well rejoice, reflect, be calm, be radiantly grateful to God. It used to be called St. Martin's Summer, and it was a favorite season with lovers. Beloved also of artists, of it many a masterpiece has been painted. Yet the originals of these masterpieces are ours, for nothing; and the artist is the Almighty. Paintings are copies. All the originals of all pictures of nature belong to the lover of nature. Nature's beauty, autumn's loveliness, these belong forever to the hearts that delight and rejoice in them.

I remember how autumn came to me one day when I was fishing for bass. Most people imagine that fishing consists in catching fish; but the name of the sport describes the effort. Much fishing is a fine gesture toward being busy when the soul languishes to loaf. It is one of those harmless human deceits which help to keep our appearance respectable. To make the bluff complete (as all wives know) a man's preparations for fishing are artificially elaborate; it is as if he had discovered that he had been trifling long enough, and must now get down to the real work of life. Moreover, a certain solemnity attends the preparations.

But when the genial and beloved hypocrite is once planted by his favorite pool, he becomes so enamored of his peaceful surroundings, so secure in the delusion that his wife imagines him laboring hard for her throughout the livelong day, perhaps braving perils for her dear sake, toiling in deep waters that she may enjoy the fruits of her hero's efforts, that he drowses blissfully; he grows careless of life and of time; careless of fish and the supposed vital object of his coming to this remote bank overhanging the lonely, placid creek.

He puts in the day loafing incessantly, vigilantly, virtuously; and when at sundown he takes home a few infant chubs instead of a dozen five-pound bass, his wife manifests both her mental and her spiritual superiority by praising with charming innocence his extraordinary ability as a sportsman. Light is by no means the swiftest thing in the universe: the swiftest thing is the way in which a wife gets onto the curves of a fishing husband. Fishing is one of my favorite vices.

THAT day in late September I was at a famous stretch of bass water of one of the tributaries of the Potomac. From shore to shore the wide creek lay dreaming. The silvery sycamores, the massive white oaks, the plumed and graceful elms, the stalwart shagbarks—all these lay mirrored in the silent water. They seemed like music, and the images like its echoes. Down the still tide floated gaudy leaves, many of them curled into tiny crafts, little Pintas and Santa Marias voyaging adventurously.

In the very center of the stream a belated dragonfly dipped his wide wings to the water, starting faint ripples as he performed some aërial stunts. In a patch of reedy marsh bordering the stream a flock of redwing blackbirds called incessantly. Far overhead I heard the faint "spink-spank" of migrating bobolinks. On the limb of a sycamore an imperious blue jay with an acorn in his bill was hammering it softly. I could see in the water every move he made. Of all bright-plumaged birds, none is more energetic than he.

Looking down the creek, I became aware of another fisherman. He was sitting on a rock that jutted into the

Digitized by Google Original from UNIVERSITY OF IOWA

stream; and rock and fisherman were dappled with sunlight. Setting my line, I strolled down to have a chat with him.

He proved to be an old farmer with gnarled hands, ruddy honest face, and piercing blue eyes. We fell easily into conversation, as fishermen and other idlers generally will. I asked him if he knew the stream well, and if fishing were what it used to be.

"I was born in that house on the bank over yonder," he said, pointing to an ancient stone structure overlooking the creek. "Sixty years ago, to this very day, I was sitting here on this same rock."

This, thought I, was the preliminary of an entirely new kind of fish story.

"The fall of the year was just beginning," he went on, "just like it is now, without a body's hardly knowing it. I was a little boy then, and I had played hooky from school. I was sitting right here when, away off yonder to the south, I heard what I thought was thunder. But it kept up too steady, and there wasn't a cloud in the sky. My conscience made me think that the devil was getting ready to come after a boy who'd stayed away from school. The thunder got worse and worse—just growlin' at me. At last I couldn't stand it any longer. I set my line and headed for the schoolhouse. I got there late, but in plenty of time to hear more than I could take in."

"BUT how about the thunder?" I asked, seeing him fall suddenly day-dreaming about that ancient time.

"Those were the guns of the battle of Antietam," he said, "the guns of the opening day's fight—about twenty miles to the south of us here. And this creek looks today just like it looked that day; these same red leaves floating down, these same restless birds calling and heading to their winter home. And sixty years from now," he added, "things along this creek will not have changed much. Nature never does change much, does it?"

When I went home at twilight on that autumnal day, I had but the proverbial three small fishes; but I had acquired a quaint little chapter out of real history and out of the history of human nature. Beautiful it is to me to think that with each succeeding autumn the rolling guns of Antietam sound dimmer and farther away, hushed out of existence by the positive virtues of love and purposeful forgetting. Year after year the hatreds pass, having in them the seed of death; and love grows from more to more. Autumn is a time of memory, but of reconcilement. We then look toward the past, but see it only, as Timrod beautifully says, as

A shadowy land where joy and sorrow kiss,
  Each unto each corrective and relief;
Where dim delights are brightened into bliss,
  And nothing wholly perishes but grief;

Ah, me, not dies! No more than Spirit dies,
  But in a change like death is clothed with wings;
A serious angel with entranced eyes,
  Looking to far-off and celestial things.

Autumn has always had for me a radiant charm. Well can I recall, even at this distant day, how autumn used to come to me in the little Carolina seacoast village where I was born. As a barefoot lad, trudging a mile to school up a bush-bordered village lane, I used completely to forget the importance of a classroom education in studying the things in creation's vast and fascinating schoolhouse, especially alluring on a fragrant morning in the early fall.

I felt the certain glamour of the season though I never tried to define it; but it compelled me to stay outdoors as long as possible. A migrated catbird lurking fussily in a clump of pokeberry bushes, slyly and ravenously devouring the succulent black fruit, would hold me like an enchantment. I loved to listen to the telltale rustle and the soft sunny whistling of the white-throated sparrows under the wild hedges. Thrilling to me were the mellow human flutings of the long-billed curlews as they wheeled in the golden haze of the tranced autumn sky, or streamed in long lines gracefully toward the lonely seabeaches.

IN THOSE far early years the strange beauty of autumn haunted me like a passion; and I have never lost a certain romantic unrestrained rapture over it—an emotion that is native, I think, to our whole race. I remember the radiant bronzing of the water-oaks; and the shining buckeyes that we used to gather; and the glistening black live-oak acorns.

In the great pine forest just across the tidal creek near where the schoolhouse stood, there was, at the wane of the year, a glimmering world of tawny wild beauty; and one of my very clearest recollections of boyhood is of my inability to get to school on time because I had to pass through a world that the season had turned into a sumptuous daffodil field. And now, when I see children lagging their way wistfully on an autumn morning, eagerly and joyously delaying, I know how they feel. Their sensitive and reflective hearts cannot resist the fabulous splendor of the year's gorgeous pageant of the Field of the Cloth of Gold.

Despite the glamour of the fall, there are those who find the autumn depressing, because, discovering in it what they believe to be the (*Continued on page 129*)

Clifton Robert Sparks, Jr., will some day control the destinies of the famous three ring tent show that bears the family name. Cliffie's playmates are a pair of baby tigers

This Circus Baby Wants *to be a* Clown

IN THE natural course of events, Clifton Robert Sparks, Jr., fourth generation of showmen, will one day inherit a three-ring circus, but just now this blond and chubby baby of three and a half years wants to be a clown.

He knows what the life of a circus clown means, too, just as he knows what the life of a circus owner means, for "Cliffie" has been trouping with the circus which bears his surname since he was nine weeks old. He has lived in a circus tent in every state in the Union and in most parts of Canada. He has covered the United States four times, from north to south, from east to west, visiting almost every town of three thousand or more inhabitants where tented shows are welcome.

I first met Cliffie more than three years ago. He was then just three months old. With pink bonnet strings tied under his chin and pink silk quilt tucked tidily about him, he was sleeping blissfully in his carriage beside the popcorn stand in the menagerie tent. Lions roared and monkeys chattered, and throngs of circus patrons surged through the tent or fed peanuts to the elephants, but Cliffie was undisturbed. He was undisturbed by circus sounds and smells because he has three generations of circus ancestry behind him: his grandfather, John H. Sparks, founder of the family circus; his uncle, Charles Sparks, present owner; and his father, Clifton Sparks, Senior, who is next in line for circus ownership.

All that was of little interest to Cliffie as he slept in his wicker carriage. It is still of little interest to him after three and a half years of trouping. When he comes of age, Clifton Robert Sparks, Junior, will become a circus "governor," but he would rather be a clown. He told me about it last summer when I met him at Troy, New York.

"I'm going to be a clown like Paul Wenzel," he informed me. "Paul Wenzel is the best clown on this circus. Paul Wenzel is the best clown in the world. I am going to be a clown like Paul Wenzel and play a trombone."

I had motored a hundred miles to see the young heir to the circus, and I found him at a tent marked "Private," but there was nothing exclusive about Cliffie. He was hammering away at a tent stake with a small but effective mallet, helping Tommy, the colored boy, get his tent in place.

"Look what I'm doing!" he called out gleefully as I approached and as the hammer drove the stake into the ground.

He wore a musician's cap at a rakish angle over his short-cropped golden curls. His brown eyes were rimmed with black lashes. His diminutive tan rompers were drawn up over a fresh blue blouse. His chubby legs were bare above his blue half socks. His small feet, shod in elk-hide shoes, were spread sturdily apart, as he whanged away at the tent stake, in imitation of the negro stake drivers who were putting up the big top near by.

While Cliffie was pounding stakes, there came the boom of tom-toms from an adjacent side show. Clifton, Junior, dropped his hammer and strode out for a better view of the Hawaiian troupe, clad in leis and hempen skirts, dancing on the platform. He watched the tom-tom drummer for a few minutes, then, seized with a bright idea, he called out excitedly:

"Tommy! Tommy! Get my drum!"

The colored boy did as he was bidden, and Cliffie gave attention to his drum for a while. It was a young drum, but it showed the effects of a hard life and its head was battered to ribbons.

We were dining in the cookhouse, or circus dining tent—Cliffie in his folding high chair on one side of the red-checkered tablecloth and I on a plank at the other. He paused frequently while eating toast and asparagus soup from his little blue bowl, and greeted his fellow troupers. He knew them all by name and they were all

Digitized by Google
Original from the UNIVERSITY OF IOWA

his friends, for he had lived among them ever since the day he was born.

Taking a baby of nine weeks on tour was not the simplest thing in the world, as Vera Sparks, his mother, will tell you. But babies have trouped with circuses since first the world began, and obstacles can be overcome where a baby's welfare is concerned.

"Of course everything had to be made over," Mrs. Sparks told me. "The stateroom of our private car had to be remodeled to include Baby's bed. Wherever possible all the equipment was collapsible. His bed at night became a 'coop' by day. He had a folding bathtub, his trunk was cut to specifications, for space is an important item in the circus world.

"As for his life in the circus, he never was a 'hush baby'," his mother explained. "We never had to say, 'Hush! Baby's asleep!' He went to sleep at night to the tune of the radio on the car if the others wanted the radio. He napped in the daytime to the circus sounds. The roar of the lion, the trumpet call of the elephant, the calls of the sideshow barker and the ice-cream vender ballyhooing their wares are no more disturbing to a circus baby than are street sounds to a city child. Of course in a private car and a private tent he gets away from much of the general noise; but circus babies live out of doors; their nerves are steady and they are usually very happy children."

I sat beside him one day while he took his afternoon nap in the private tent. The music from the big top and the side shows floated through his dreams, the faithful Tommy kept guard, and Cliffie slept peacefully. When his nap was ended, it was playtime again, and he came for me.

He took me by the hand and showed me about the grounds, as familiar with his tented world as if the scene were not shifted every twenty-four hours. The tents are not always all located alike, but the same general scheme prevails. One enters the menagerie tent by way of the front door, which is always opposite the ticket wagon; one passes from the menagerie to the big top, or main tent; from the main tent to the "back yard."

In the menagerie tent Cliffie showed me Myrtle, the elephant on whose head he often takes a ride. Myrtle flapped her ears and swayed happily in recognition. He showed me the tiger cubs which have been his playmates since they were taken from their sick mother and fed on a bottle.

"Some day you will own this circus," I said.

"Yes," he replied; "but I'm going to be a clown. A clown with a trombone like Paul Wenzel."

And nothing I could say had any weight with Cliffie.

STELLA BURKE MAY

Ethel Christoffersen made an auto service station pay where a man had failed. Her skill in changing tires and draining crank cases has brought her custom from miles around

She Changes Tires and Drains Crank Cases Like an Expert

A SHINY sedan swung into the drive of a gray stucco oil station at Hamlin, Iowa. The driver blinked his eyes in surprise, then smiled broadly at the girl in blue and white striped coveralls who came out to meet him.

"Do you run this station?" he asked.

"I do," she said promptly. Her brown eyes were unusually large and bright. "How can I serve you?"

"Well, er—" He hesitated. "The fact is," he went on awkwardly, "I wanted my oil changed; but I don't suppose—"

"Certainly," she assured him. "How about gas?" She lifted the hood of the engine.

"Yes; I want the tank filled too."

The girl went into the station and in a moment returned with a grease-spattered bucket. She lifted a wooden cover from over the pit in the floor. "Can you push your car a little farther ahead?" she asked. She had put a cap over her light brown hair.

He released the brake of the car and slowly pushed it ahead on the gently sloping drive.

"There!" she called. "Thanks a lot."

Then she disappeared under the car, going down the cement steps of the pit. The man pushed his hat back on his head, took it off, ran his fingers through his hair, and chuckled quietly to himself.

In a few moments she was back. Expertly she readjusted the lid and set the bucket behind the gas pump. Her movements were quick and easy. She jerked the hose from its hook on the pump and adjusted the nozzle into the tank at the back of the machine.

"How much?" she asked.

"Fill 'er up!" he answered.

The handle of the pump squeaked a little as she turned it slowly, and the colorless fluid in the reservoir descended with bubbles gurgling.

"You're the first girl I've seen running an oil station, and I've traveled from one end of the country to the other."

"Well, it's lots of fun, and a good business." Her mouth was rather wide and her smile, he found, was infectious.

"Darned if I won't tell the fellows to stop here and have their crank cases drained," he said, adding humorously, "if they want to see the oil queen." Then they both laughed.

Ethel Christoffersen is eighteen years old. She has been in charge of the gas and oil station since her graduation from high school, a year ago. The building was owned by a neighbor who had been running the station for several months and had given it up as a failure. He wanted to lease the building, and the oil company with which he had had a contract began to seek a man to take over the business. After a futile search in the small village of one hundred and fifty souls, the village postmaster suggested that the agent interview Ethel Christoffersen.

Ethel's father had died a short time before and her plans for going to college had to be abandoned. She could not teach a country school for a year, and the idea of remaining idle in the village for several months was irksome to the ambitious girl.

Digitized by Google Original from UNIVERSITY OF IOWA

Then came the agent for the oil company and presented his idea of running the oil station.

It seemed preposterous at first for so young a girl to undertake such a venture. Her mother viewed the idea with disapproval. But it was evident that the station could be made to pay, since it was located on the main intersection of two cross-country federal highways. Furthermore, it would allow her to remain at home and yet enable her to help with the family finances. After a prolonged family consultation, it was decided that Ethel should lease the building for the three summer months, during which time the oil company would advance supplies on credit. Within a short time business began to flourish and Ethel's station to create considerable comment throughout the countryside. The young people in particular were quick to patronize it.

Her friendliness and pleasing personality have made her station the meeting point of the young people from the surrounding farms and nearby towns. Weather and mud do not stop them from driving their cars, and business is open during the entire year, although, of course, more prosperous in the summer time.

Traveling salesmen pass the word on to their fellows of the genial, plucky girl and her station. They are amused to see her drain crank cases and change tires; but it is all a part of the day's work to her.

Thus by the perseverance of this young rather slight girl a paying business has been made of a proposition that appeared to be a failure.

Charlie Ulrich Spent Ten Years Making This Table

PHOTOGRAPH BY HARE, BUFFALO, N. Y.

For more than ten years, Charlie Ulrich of Orchard Park, New York, has devoted all of his spare time to making this unique table, in which there are 15,000 pieces of inlaid wood. His wife's cooking utensils furnished some of the designs

BACK in the hill country of western New York, some twenty miles south from Buffalo, is a small village named Orchard Park. Here Charlie Ulrich has lived for over fifty years, doing his job as a carpenter. Born in West Seneca, only a few miles away, he has lived in the same corner of the world always. Even his farthest trips on carpentering jobs did not take him more than fifty miles from the spot where he was born.

One day recently I chanced to pass by his farm. Seeing an elderly man chopping wood out by the barn I hailed him and asked if I might get something to drink. He offered me a great bowl of milk and led the way, when I had finished, into his parlor. It was the typical country "best room," with shades half drawn and a few straight-back chairs.

I sat down and after my eyes had grown accustomed to the dim light, I realized that before me and filling the center of the room was a massive table of inlaid woods. It was a thing of superb workmanship, such as one would seldom see outside of a museum. He must have read the question in my eyes, for, with a chuckle and a proud smile, he said:

"I made that there table."

Then, slowly and with infinite pride, he told me the story of its creation.

"One day," he said, "come some eleven years ago this spring, the boss gave me a mighty fine piece of wood. I brought it home and thought I'd try experimentin' with it by putting a stripe around her, guess mebbe I thought it 'ud do fer a table top then.

"The stripe looked purty good, so I tried inlayin' another. Looked better still, so I jest kept on a-settin' things in her. Whenever I'd be chipping away at some wood on a job and a chunk fell off that looked good, I'd jest put it in my dinner pail and take it along home with me; and then when I had the time I fiddled at it a bit with my penknife until I had something nice; then I set it in her.

"See that checkerboard in the middle? There's twenty-seven hundred pieces of wood in that there alone," he said proudly.

"How long did it take you?" I asked, examining its polished surface.

"Eleven years nearly, and that was workin' in my spare time nights and holidays and Sundays. The wife used to joke me about it, and the young 'uns used to laugh at me and run away with my tools; but I jest kept a-goin' and told 'em to mind their own business, that this was my job. I kinda thought she'd turn out purty good, and I guess mebbe I got purty sweet on doing her, too. Used to work till three or so in the morning, sometimes. Why, see those flags in the corner? It took me a month steady to do each one of 'em."

"Have you any idea how many pieces you've put in it in all?" I queried.

"Reckon there's fifteen thousand if they was all counted up. Used about twelve kinds of wood. There's black walnut and red cedar, white wood and pine, of course. Then there's cherry and maple and beech and oak and jest a bit of cucumber wood."

"You've got some interesting things in it," I said, after scrutinizing its intricate patterns.

"Well, I jest put in what I knowed about. I've got all my carpentering tools set in her; and say, but that saw took me a long time to cut out and lay in! Then I put my wife's cookin' utensils in—potato masher, rollin' pin and all that. Card emblems seemed to be purty much thought of, so I stuck 'em in along with a few clover leaves and peach leaves and a set of dominoes. There's a crescent moon and some wheels and an old shoe—jest the things I saw and knew about."

That was the triumph! Charlie Ulrich has been nowhere; he had no standards of beauty, so all he could do was use the homely things of everyday life about him—and what infinite wisdom he had shown in this.

As I took my leave of him my mind was busy with thoughts of what I had seen. Here indeed was a vision of beauty, a desire for perfection, with no hope of reward other than the pure love of achievement.

Gladys Chase Gilmore found a new occupation for herself, when she arranged to teach department-store salesgirls how to serve the public so the public would want to come back

Gladys Gilmore's Unique Job Makes Shopping a Pleasure

IF YOU should walk into your favorite department store and find that the sales force serves you intelligently, with a genuine interest in you and your problems, it is possible that this attitude on their part may have been caused by Gladys Chase Gilmore. For she is the invisible personality that faces you across a thousand department-store counters.

Ten years ago, Gladys Gilmore was teaching a country school at a salary of six hundred dollars a year. Out of this sum she was paying back money borrowed to complete her last two years at Smith College. Today, this same girl earns six hundred dollars a fortnight in the job she created as the first retail store-training consultant in the United States.

Now that high-sounding title means simply that this clear-eyed young woman teaches sales folks how to serve you the way you want to be served. Or, in other words, it's her job to show executives and employees of department stores how to sell merchandise that doesn't come back, and to customers that do.

Miss Gilmore doesn't confine her training work solely to the big shops that line Fifth Avenue; nor, in fact, to the great department stores in any large city. These organizations in most cases have their own training departments. But since their experts are tied up within their own stores, and cannot share their time and experience with the stores on Main Street, Gladys Gilmore conceived the idea of starting out as a free-lance training consultant, to travel over the country and give advice and organization assistance to any store—large or small—which recognized the importance of a trained, informed sales staff.

"Conditions in the merchandising world have changed sharply within the past few years," the expert explains. "Today you buy service, not merchandise. You can get almost the same kind of merchandise in any two competing stores. But you go back to a certain shop not so much because you like their special goods, but because you like the kind of service some particular girl or man clerk gave you."

With this service ideal in mind, Miss Gilmore, for five years Director of Training at Abraham and Straus, and before that Assistant Training Director at Jordan Marsh in Boston and Marshall Field in Chicago, started on her own. It was just at this time, too, that the National Retail Dry Goods Association realized the need of having an expert to train stores to train themselves. Because of their knowledge of Miss Gilmore's work, they took her under their auspices, and it was at their headquarters that the free-lance consultant established her central office. From this point she now travels all over the United States, and in each store she remains a week, or longer, studying its specific needs, and laying out and installing a complete service training unit.

Miss Gilmore was born in Cambridge, Massachusetts. After two years at Smith she found herself suddenly thrown upon her own resources. Refusing to leave the university without a degree, she borrowed money from a relative and completed her course. Following her graduation, she began teaching in a small country school; but because of her small salary and the desire to pay back promptly the sum loaned her Miss Gilmore was forced to increase her earning capacity.

"As I looked around me at the other teachers," Miss Gilmore said, "I soon discovered that those who specialized in some branch were more vital, more arresting than the other instructors. The specialists, too, received much higher salaries than the others. So I felt I should like to take some specific training which would fit me for a better position.

"Before I decided what branch to study, I went to work during the Christmas rush at Jordan Marsh's in Boston, as Section Floor Manager.

"Here, it seemed to me, was an opportunity to meet and help people and at the same time earn my living at something I liked to do. I made up my mind to specialize in salesmanship."

Toward this end, Miss Gilmore entered a School of Education for Store Service, and upon her graduation the schoolroom saw her no more. She at once went into the merchandising world, where she has been ever since.

When the training consultant was asked to outline how she solved the important service question for different department stores, she replied:

"The first thing I do when creating or reorganizing a retail-store training department is to spend a half-day in that store, shopping in every department before any of the employees know me, so that I may determine just what kind of service a customer would receive.

"After the personnel of a particular store has been sized up," the expert continued, "I know the weak points of the organization and what specific training it requires. A meeting of the executives is then called, where I point out what has been discovered, how these weaknesses can be remedied and how the whole tone of the store can be raised by an efficient training department.

"The important thing in instituting anything of this kind is to make the employees want such a department, and appreciate what they will get out of it themselves. They must feel that this is an opportunity—not something that is being forced on them."

After Miss Gilmore has broken this preliminary ground, she sits down and

Digitized by Google

works out a special course of training that answers all the needs of that particular store. Then she installs it. In addition, she furnishes and equips the new department, starts a library or locates her training unit accessible to an already existing one, and, last of all, arranges for the advertising department to circulate a store paper among the employees so that this reading matter may afford a channel for training.

When she leaves that store, a training department is launched and well under way. And this training department carries on smoothly without her actual presence, because she leaves complete written instructions behind her.

ROSA STRIDER REILLY

When Guy Hunter "brought down the house" at Miner's Eighth Avenue Theatre in New York City, he decided that blindness never could stop his singing in public. Now his songs are heard regularly over the radio where he broadcasts his own announcements

"Amateur's Night" Gave This Blind Radio Singer His Chance

IN THE fall of 1891, a little boy with golden curls was registered at the Kindergarten for the Blind at Jamaica Plains, Massachusetts. Although but five years old and away from home for the first time in his short life, he was a manly, self-reliant little chap, taking the hard knocks and bruises which are invariably the lot of blind children with laughter instead of the usual tears.

Later on, when he had outgrown Jamaica Plains, he attended the Perkins Institute for the Blind, at South Boston. There, in addition to a fine general education, he was taught to tune and repair pianos, as well as to play them.

The possibility of his becoming a professional performer seemed very remote to Guy Hunter at the time. He was not content with a trade, however, and so, early in 1910, he made his first appearance on any stage at an amateur night at Miner's old Eighth Avenue Theatre in New York.

This procedure of booking was simple. One merely called on the stage manager, of a fine, bright Friday morning and registered for the evening's show. Guy's début occurred at the end of a particularly riotous evening when the audience was entertained, after the regular burlesque performance, by the efforts of eight or ten perspiring tyros who sang, danced, or declaimed, as the spirit moved them, until a long, cruel hook shot out from the wings and dragged them to oblivion accompanied by a bedlam of derisive applause.

There was no piano on the stage at Miner's in those days, but Guy had inveigled a dealer into renting him a piano and stool for three dollars for the evening.

His turn came after the audience had almost exhausted itself over the efforts of the preceding amateurs. Calmly and confidently he sang several popular ballads, playing his own accompaniments. The applause was deafening. He concluded with "Where the River Shannon Flows," in a perfect deluge of small change, hurled at him from all parts of the house by the enthusiastic audience, some of whom, it may be remarked, were sharpshooters with their ammunition.

A derby hat full of coins, picked up for him by the stage hands, amounted to something over twenty dollars, and this princely sum, added to the prize of five dollars given by the house for the best amateur performance, made the evening memorable for Guy Hunter.

"Dear old Miner's," he often remarks in reminiscent mood. "It was a rough but kindly Alma Mater! I still feel the sting of some of those quarters and dimes, and I still recall the fuss the piano man made about the dents in the piano."

The performance at Miner's brought Guy Hunter to the attention of Joseph M. Schenck, at that time booking manager for the Marcus Loew vaudeville circuit and, after a professional try-out at the Majestic Theatre in New York, he was booked for a ten-week tour of the Loew theatres. Following that engagement, there ensued several years of vaudeville—long road tours through the East and South, with only a boy for companion and valet.

Guy Hunter never travels alone, as many blind men do. Feeling one's way about with a cane is too slow, he says, for a man who has to keep engagements. He always has a boy who is not too large, as attendant, and it is of interest to know that he has placed many of these boys in good positions when they outgrew their period of usefulness with him.

Some idea of the number of songs that Guy Hunter has been obliged to learn, entirely by ear, and memorize, may be gleaned from the fact that he has had to carry his entire repertory in his mind for thirty years. This astounding mental library now contains more than seven hundred vocal and instrumental numbers, all filed for instant use. He has sung illustrated songs in the early days of the nickelodeon, played organ accompaniments to many miles of motion pictures, with his boy sitting beside him at the console, "telling him the picture," as it unfolded upon the screen. And he never missed a cue.

A soup that's full of health and goodness!

Tomatoes are famous for healthfulness. And in Campbell's Tomato Soup you enjoy all the rich goodness of red-ripe, sun-sweetened tomatoes.

The tonic juices. The luscious tomato "meat". In a smooth puree, blended with nourishing golden butter. Every spoonful refreshes and invigorates.

A real treat — Cream of Tomato prepared with Campbell's, according to the easy directions on the label. 12 cents a can.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

Yes, sir, yours. Made to your very order, you'll swear, the minute you lay eyes on your first Muffet!

Muffin size and shape, it fits your cereal dish exactly. Browned, top and bottom, the way you like your toast. Sides the natural color of yellow-ripe grain, just to let you see what Muffets are made of. Whole wheat! Cooked, drawn to a lacy ribbon thin as flakes from the fluffiest shortcake. Wound, layer upon layer. Baked. Toasted.

Light as a patty shell. Crisp as potato chips. Crunchy! Crumbles in your mouth.

Serve whole or broken up for convenience. Add sugar and cream. Fruit, too, if you like, berries or sliced, fresh, stewed or preserved.

You get calories, bran, an abundance of body-building minerals, easy digestibility.

And something particularly good to eat. Your dish—Muffets! Why not order now for tomorrow morning?

The Quaker Oats Company, Chicago; Peterborough, Canada.

The Bishop Murder Case

(*Continued from page 11*)

confronted with something at once inexplicable and terrifying.

"Tut, tut!" Vance waved his hand airily. "That's plagiarism. I said it first." (He was striving to overcome his own sense of perplexity by a lightness of attitude.) "And now there really should be an *inamorata* to bewail Mr. Robin's passing. You recall, perhaps, the stanza:

"Who'll be chief mourner?
'I,' said the dove,
'I mourn my lost love;
I'll be chief mourner.'"

Markham's head jerked slightly, and his fingers beat a nervous tattoo on the table.

"Good heavens, Vance! There *is* a girl in the case. And there's a possibility that jealousy lies at the bottom of this thing."

"Fancy that, now. I'm afraid the affair is going to develop into a kind of *tableau-vivant* for grown-up kindergartners, what? But that'll make our task easier. All we'll have to do is to find the fly."

"The fly?"

"The *Musca domestica*, to speak pedantically. . . . My dear Markham, have you forgotten?—

"Who saw him die?
'I,' said the fly,
'With my little eye;
I saw him die.'"

"Come down to earth!" Markham spoke with acerbity. "This isn't a child's game. It's serious business."

Vance nodded abstractedly.

"A CHILD'S game is sometimes the most serious business in life." His words held a curious, far-away tone. "I don't like this thing—I don't at all like it. There's too much of the child in it—the child born old and with a diseased mind. It's like some hideous perversion." He took a deep inhalation on his cigarette, and made a slight gesture of repugnance. "Give me the details. Let's find out where we stand in this topsy-turvy land."

Markham again seated himself.

"I haven't many details. I told you practically everything I know of the case over the 'phone. Old Professor Dillard called me shortly before I communicated with you—"

"Dillard? By any chance, Professor Bertrand Dillard?"

"Yes. The tragedy took place at his house.— You know him?"

"Not personally. I know him only as the world of science knows him—as one of the greatest living mathematical physicists. I have most of his books.— How did he happen to call you?"

"I've known him for nearly twenty years. I had mathematics under him at Columbia, and later did some legal work for him. When Robin's body was found he 'phoned me at once—about half past eleven. I called up Sergeant Heath at the Homicide Bureau and turned the case over to him—although I told him I'd come along personally later on. Then I 'phoned you. The Sergeant and his men are waiting for me now at the Dillard home."

"What's the domestic situation there?"

"The professor, as you probably know, resigned his chair some ten years ago. Since then he's been living in West Seventy-fifth Street, near the Drive. He took his brother's child—a girl of fifteen—to live with him. She's around twenty-five now. Then there's his protégé, Sigurd Arnesson, who was a classmate of mine at college. The professor adopted him during his junior year. Arnesson is now about forty, an instructor in mathematics at Columbia. He came to this country from Norway when he was three, and was left an orphan five years later. He's something of a mathematical genius, and Dillard evidently saw the makings of a great physicist in him and adopted him."

"I'VE heard of Arnesson," nodded Vance. "He recently published some modifications of Mie's theory on the electrodynamics of moving bodies. . . . And do these three—Dillard, Arnesson, and the girl—live alone?"

"With two servants. Dillard appears to have a very comfortable income. They're not very much alone, however. The house is a kind of shrine for mathematicians, and quite a *cénacle* has developed. Moreover, the girl, who has always gone in for outdoor sports has her own little social set. I've been at the house several times, and there have always been visitors about—either a serious student or two of the abstract sciences up-stairs in the library, or some noisy young people in the drawing-room below."

"And Robin?"

"He belonged to Belle Dillard's set—an oldish young society man who held several archery records. . . ."

"Yes, I know. I just looked up the name in this book on archery. A Mr. J. C. Robin seems to have made the high scores in several recent championship meets. And I noted, too, that a Mr. Sperling has been the runner-up in a few large archery tournaments.— Is Miss Dillard an archer as well?"

"Yes, quite an enthusiast. In fact she organized the Riverside Archery Club. Its permanent ranges are at Sperling's home in Scarsdale; but Miss Dillard has rigged up a practice range in the side yard of the professor's Seventy-fifth Street house. It was on this range that Robin was killed."

"Ah! And, as you say, the last person known to have been with him was Sperling. Where is our sparrow now?"

"I don't know. He was with Robin shortly before the tragedy; but when the body was found he had disappeared. I imagine Heath will have news on that point."

"And wherein lies the possible motive of jealousy you referred to?" Vance's eyelids had drooped lazily, and he smoked with leisurely but precise deliberation—a sign of his intense interest in what was being told him.

"Professor Dillard mentioned an attachment between his niece and Robin; and when I asked him who Sperling was and what his status was at the Dillard house, he intimated that Sperling was also a suitor for the girl's hand. I didn't go into the situation over the 'phone, but the impression I got was that Robin and Sperling were rivals, and that Robin had the better of it."

"And so the sparrow killed Cock Robin." Vance shook his head dubiously. "It won't do. It's too dashed simple; and it doesn't account for the fiendishly perfect reconstruction of the Cock-Robin rhyme. There's something deeper—something darker and more horrible—in this grotesque business.— Who, by the by, found Robin?"

"Dillard himself. He had stepped out on the little balcony at the rear of the house, and saw Robin lying below on the practice range, with an arrow through his heart. He went down-stairs immediately—with considerable difficulty, for the old man suffers abominably from gout—and, seeing that the man was dead, 'phoned me.— That's all the advance information I have."

"Not what you'd call a blindin' illumination, but still a bit suggestive." Vance got up. "Markham, old dear, prepare for something rather bizarre—and damnable. We can rule out accidents and coincidence. Ordin'ry target arrows, for instance—which are made of soft wood and fitted with little beveled piles—would never penetrate a person's clothing and chest-wall and pierce the heart. And the fact that a man named 'Sparrow' shou'd kill a man named Cochrane Robin, *with a bow and arrow*, precludes any haphazard concatenation of circumstances. Indeed, this incredible set of events proves conclusively that there has been a subtle, diabolical intent beneath the whole affair." He moved toward the door. "Come, let us find out something more about it at what the Austrian police officials eruditely call the *situs criminis*."

We left the house at once and drove up-town in Markham's car. Entering Central Park at Fifth Avenue we emerged through the Seventy-second Street gate. and a few minutes later were turning off of West End Avenue into Seventy-fifth Street. The Dillard house—No. 391—was on our right, far down the block toward the river. Between it and the Drive, occupying the entire corner, was a large fifteen story apartment house. The professor's home seemed to nestle, as if for protection, in the shadow of this huge structure.

THE Dillard house was of gray, weather-darkened limestone, and belonged to the days when homes were built for permanency and comfort. The lot on which it stood had a thirty-five-foot frontage, and the house itself was fully twenty-five feet across. The other ten feet of the lot, which formed an areaway separating the house from the apartment structure, was shut off from the street by a ten-foot stone wall with a large iron door in the center.

The house was of modified Colonial architecture. A short flight of shallow steps led from the street to a narrow brick-

Digitized by Google
Original from UNIVERSITY OF IOWA

lined porch adorned with four white Corinthian pillars. On the second floor a series of casement windows, paned with rectangular leaded glass, extended across the entire width of the house. (These, I learned later, were the windows of the library.) There was something restful and distinctly old-fashioned about the place: it appeared like anything but the scene of a gruesome murder.

Two police cars were parked near the entrance when we drove up, and a dozen or so curious onlookers had gathered in the street. A patrolman lounged against one of the fluted columns of the porch, gazing at the crowd before him with bored disdain.

An old butler admitted us and led us into the drawing-room on the left of the entrance hall, where we found Sergeant Ernest Heath and two other men from the Homicide Bureau. The Sergeant, who was standing beside the center-table smoking, his thumbs hooked in the armholes of his waistcoat, came forward and extended his hand in a friendly greeting to Markham.

"I'm glad you got here, sir," he said; and the worried look in his cold blue eyes seemed to relax a bit. "I've been waiting for you. There's something fishy about this case."

HE CAUGHT sight of Vance, who had paused in the background, and his broad pugnacious features crinkled in a good-natured grin.

"Howdy, Mr. Vance. I had a sneaking idea you'd be lured into this case. What you been up to these many moons?" I could not help comparing this genuine friendliness of the Sergeant's attitude with the hostility of his first meeting with Vance at the time of the Benson case. But much water had run under the bridge since that first encounter in the murdered Alvin's garish living-room; and between Heath and Vance there had grown up a warm attachment, based on a mutual respect and a frank admiration for each other's capabilities.

Vance held out his hand, and a smile played about the corners of his mouth.

"The truth is, Sergeant, I've been endeavorin' to discover the lost glories of an Athenian named Menander, a dramatic rival of Philemon's. Silly, what?"

Heath grunted disdainfully.

"Well, anyhow, if you're as good at it as you are at discovering crooks, you'll probably get a conviction." It was the first compliment I had ever heard pass his lips, and it attested not only to his deep-seated admiration for Vance, but also to his own troubled and uncertain state of mind.

Markham sensed the Sergeant's mental insecurity, and asked somewhat abruptly: "Just what seems to be the difficulty in the present case?"

"I didn't say there was any difficulty, sir," Heath replied. "It looks as though we had the bird who did it dead to rights. But I ain't satisfied, and—oh, hell! Mr. Markham, . . . it ain't natural; it don't make sense."

"I think I understand what you mean." Markham regarded the Sergeant appraisingly. "You're inclined to think that Sperling's guilty?"

"Sure, he's guilty," declared Heath with over-emphasis. "But that's not what's worrying me. To tell you the truth, I don't like the name of this guy who was croaked—especially as he was croaked with a bow and arrow. . . ." He hesitated, a bit shamefaced. "Don't it strike you as peculiar, sir?"

Markham nodded perplexedly.

"I see that you, too, remember your nursery rhymes," he said, and turned away.

Vance fixed a waggish look on Heath.

"You referred to Mr. Sperling just now as a 'bird,' Sergeant. The designation was most apt. *Sperling*, d' ye see, means 'sparrow' in German. And it was a sparrow, you recall, who killed Cock Robin with an arrow. . . . A fascinatin' situation—eh, what?"

THE Sergeant's eyes bulged slightly, and his lips fell apart. He stared at Vance with almost ludicrous bewilderment.

"I said this here business was fishy!"

"I'd say, rather, it was avian, don't y' know."

"You *would* call it something nobody'd understand," Heath retorted truculently. It was his wont to become bellicose when confronted with the inexplicable.

Markham intervened diplomatically.

"Let's have the details of the case, Sergeant. I take it you've questioned the occupants of the house."

"Only in a general way, sir." Heath flung one leg over the corner of the center-table and relit his dead cigar. "I've been waiting for you to show up. I knew you were acquainted with the old gentleman up-stairs; so I just did the routine things. I put a man out in the alley to see that nobody touches the body till Doc Doremus arrives,*—he'll be here when he finishes lunch.—I 'phoned the finger-print men before I left the office, and they oughta be on the job any minute now; though I don't see what good they can do. . . ."

"What about the bow that fired the arrow?" put in Vance.

"That was our one best bet; but old Mr. Dillard said he picked it up from the alley and brought it in the house. He probably gummed up any prints it mighta had."

"What have you done about Sperling?" asked Markham.

"I got his address—he lives in a country house up Westchester way—and sent a coupla men to bring him here as soon as they could lay hands on him. Then I talked to the two servants—the old fellow that let you in, and his daughter, a middle-aged woman who does the cooking. But neither of 'em seemed to know anything, or else they're acting dumb.—After that I tried to question the young lady of the house." The Sergeant raised his hands in a gesture of irritated despair. "But she was all broke up and crying; so I thought I'd let *you* have the pleasure of interviewing her.— Snitkin and Burke"—he jerked his thumb toward the two detectives by the front window—"went over the basement and the alley and back yard trying to pick up something; but drew a blank.— And that's all I know so far. As soon as Doremus and the finger-print men get here, and after I've had a heart-to-heart talk with Sperling, then I'll get the ball to rolling and clean up the works."

*Heath was referring to Doctor Emanuel Doremus, the Chief Medical Examiner of New York.

Vance heaved an audible sigh.

"You're so sanguine, Sergeant! Don't be disappointed if your ball turns out to be a parallelepiped that won't roll. There's something deuced oddish about this nursery extravaganza; and, unless all the omens deceive me, you'll be playing blind-man's-buff for a long time to come."

"Yeh?" Heath gave Vance a look of despondent shrewdness. It was evident he was more or less of the same opinion.

"Don't let Mr. Vance dishearten you, Sergeant," Markham rallied him. "He's permitting his imagination to run away with him." Then with an impatient gesture he turned toward the door. "Let's look over the ground before the others arrive. Later I'll have a talk with Professor Dillard and the other members of the household. And, by the way, Sergeant, you didn't mention Mr. Arnesson. Isn't he at home?"

"He's at the university; but he's expected to return soon."

Markham nodded and followed the Sergeant into the main hall. As we passed down the heavily-carpeted passage to the rear, there was a sound on the staircase, and a clear but somewhat tremulous woman's voice spoke from the semi-darkness above:

"Is that you, Mr. Markham? Uncle thought he recognized your voice. He's waiting for you in the library."

"I'll join your uncle in a very few minutes, Miss Dillard." Markham's tone was paternal and sympathetic. "And please wait with him, for I want to see you, too."

With a murmured acquiescence, the girl disappeared round the head of the stairs.

We moved on to the rear door of the lower hall. Beyond was a narrow passageway terminating in a flight of wooden steps which led to the basement. At the foot of these steps we came into a large, low-ceilinged room with a door giving directly upon the areaway at the west side of the house. This door was slightly ajar, and in the opening stood the man from the Homicide Bureau whom Heath had set to guard the body.

THE room had obviously once been a basement storage; but it had been altered and redecorated, and now served as a sort of club-room. The cement floor was covered with fiber rugs, and one entire wall was painted with a panorama of archers throughout the ages. In an oblong panel on the left was a huge illustrated reproduction of an archery range labeled "Ayme for Finsburie Archers—London 1594," showing Bloody House Ridge in one corner, Westminster Hall in the center, and Welsh Hall in the foreground.

There were a piano and a phonograph in the room; numerous comfortable wicker chairs; a vari-colored divan; and an enormous wicker center-table littered with all manner of sports magazines; and a small bookcase filled with works on archery. Several tripod targets rested in one corner, their gold disks and concentric chromatic rings making brilliant splashes of color in the sunlight which flooded in from the two rear windows. One wall space near the door was hung with long bows of varying sizes and weights; and near them was a large old-fashioned tool chest. Above it was suspended a small cupboard, or ascham, strewn with various

We'll send you a 10-day tube of this unique shaving cream, postpaid

Gentlemen:

Palmolive Shaving Cream embodies the four great essentials 1000 men told us they wanted in a shaving cream, plus a fifth which we added.

Its success is a sensation. Men are flocking to it by the thousands.

We believe it will give you shaving comforts unknown to you before. That it will surpass your present method of shaving in five important ways.

In your interest and in ours, let us send you a 10-day tube to try. We know we can win you in this way. 85% of its present users thus were won from other preparations.

Five advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

We're the makers of Palmolive Soap, as you know. Thus 65 years of soap study stands back of this creation. We made up and discarded 129 formulas before venturing it on the market.

Just send coupon

Your present method may suit you well. But still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time over station WEAF and 32 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you. Mail the coupon now.

odds and ends of tackle, such as bracers, fingerguards, piles, and arrow clamps. A large oak panel between the door and the west window contained a display of one of the most interesting and varied collections of arrows I had ever seen.

This panel attracted Vance particularly, and adjusting his monocle carefully, he strolled over to it.

"Hunting and war arrows," he remarked. "Most inveiglin'. . . . *Ah!* One of the trophies seems to have disappeared. Taken down with considerable haste, too. The little brass brad that held it in place is shockingly bent."

On the floor stood several quivers filled with target and flight arrows. He leaned over and, withdrawing one, extended it to Markham.

"You see what little chance this frail shaft would have of penetrating the human breast and producing death. Whoever killed Mr. Robin did it willfully, I fear. One doesn't use hunting arrows for target practice. It isn't done."

Markham frowned and compressed his lips; and I realized that he had been clinging to the forlorn hope that the tragedy might have been an accident. He tossed the arrow hopelessly on a chair, and walked toward the outer door.

"Let's take a look at the body and the lie of the land," he said gruffly.

AS WE emerged into the warm spring sunlight a sense of isolation came over me. The narrow paved areaway in which we stood seemed like a canyon between steep stone walls. It was four or five feet below the street level, which was reached by a short flight of steps leading to the gate in the wall. The blank, windowless rear wall of the apartment house opposite extended upward for a hundred and fifty feet; and the Dillard house itself, though only four stories high, was the equivalent of six stories gauged by the architectural measurements of today. Though we were standing out of doors in the heart of New York, no one could see us except from the few side windows of the Dillard house and from a single bay window of the house on Seventy-sixth Street, whose rear yard adjoined that of the Dillard grounds.

This other house, we were soon to learn, was owned by a Mrs. Drukker; and it was destined to play a vital and tragic part in the solution of Robin's murder. Several tall weeping-willow trees acted as a mask to its rear windows; and only the bay window at the side of the house had an unobstructed view of that part of the areaway in which we stood.

I noticed that Vance had his eye on this bay window, and as he studied it I saw a flicker of interest cross his face. It was not until much later that afternoon that I was able to guess what had caught and held his attention.

The archery range extended from the wall of the Dillard lot on Seventy-fifth Street all the way to a similar street wall of the Drukker lot on Seventy-sixth Street. The distance between the two walls was two hundred feet, which, as I learned later, made possible a sixty-yard range, thus permitting target practice for all the standard archery events, with the one exception of the Double York Round for men.

The Dillard lot was 135 feet deep, the depth of the Drukker lot, therefore, being 65 feet. A section of the tall ironwork fence that separated the two rear yards had been removed where it had once transected the space now used for the archery range. At the farther end of the range, backing against the western line of the Drukker property, was another tall apartment house occupying the corner of Seventy-sixth Street and Riverside Drive. Between these two gigantic bu ldings ran a narrow alleyway, the range end of which was closed with a high board fence in which had been set a small door with a lock.

FOR purposes of clarity I am incorporating in this record a pictorial diagram of the entire scene (it appears on the opening page), for the arrangement of the various topographical and architectural details had a very important bearing on the solution of the crime. I would call attention particularly to the following points: first, to the little second-story balcony at the rear of the Dillard house, which projects slightly over the archery range; secondly, to the bay window (on the second floor) of the Drukker house, whose southern angle has a view of the entire archery range toward Seventy-fifth Street; and, thirdly, to the alleyway between the two apartment houses, which leads from Riverside Drive into the Dillard rear yard.

The body of Robin lay almost directly outside of the archery-room door. It was on its back, the arms extended, the legs slightly drawn up, the head pointing toward the Seventy-sixth Street end of the range. Robin had been a man of perhaps thirty-five, of medium height, and with an incipient corpulency. There was a rotund puffiness to his face, which was smooth-shaven except for a narrow blond mustache. He was clothed in a two-piece sport suit of light gray flannel, a pale-blue silk shirt, and tan Oxfords with thick rubber soles. His hat—a pearl-colored felt fedora—was lying near his feet.

Beside the body was a large pool of coagulated blood which had formed in the shape of a huge pointing hand. But the thing which held us all in a spell of fascinated horror was the slender shaft that extended vertically from the left side of the dead man's breast. The arrow protruded perhaps twenty inches, and where it had entered the body there was the large dark stain of the hemorrhage. What made this strange murder seem even more incongruous was the beautifully fletched feathers on the arrow. They had been dyed a bright red; and about the shaft-ment were two stripes of turquoise blue—giving the arrow a gala appearance. I had a feeling of unreality about the tragedy, as though I were witnessing a scene in a sylvan play for children.

Vance stood looking down at the body with half-closed eyes, his hands in his coat pockets. Despite the apparent indolence of his attitude I could tell that he was keenly alert, and that his mind was busy coördinating the factors of the scene before him.

"Dashed queer, that arrow," he commented. "Looks Polynesian; . . . undoubtedly belongs to that archæological exhibit we just saw. And a clean hit—directly into the vital spot, between the ribs and without the slightest deflection. Extr'ordin'ry! . . . I say, Markham, such marksmanship isn't human. A chance shot might have done it; but the slayer of this johnny wasn't leaving anything to chance. That powerful hunting arrow, which was obviously wrenched from the panel inside, shows premeditation and design—" Suddenly he bent over the body. "Ah! Very interestin'. The nock of the arrow is broken down,—I doubt if it would even hold a taut string." He turned to Heath. "Tell me, Sergeant: where did Professor Dillard find the bow? —not far from that club-room window, what?"

Heath gave a start.

"Right outside the window in fact, Mr. Vance. It's in on the piano now, waiting for the finger-print men."

"The professor's sign-manual is all they'll find, I'm afraid." Vance opened his case and selected another cigarette. "And I'm rather inclined to believe that the arrow itself is innocent of prints."

Heath was scrutinizing Vance inquisitively.

"What made you think the bow was found near the window, Mr. Vance?" he asked.

"It seemed the logical place for it, in view of the position of Mr. Robin's body, don't y' know."

"Shot from close range, you mean?"

Vance shook his head.

"No, Sergeant. I was referring to the fact that the deceased's feet are pointing toward the basement door, and that, though his arms are extended, his legs are drawn up. Is that the way you'd say a man would fall who'd been shot through the heart?"

Heath considered the point.

"No-o," he admitted. "He'd likely be more crumpled up; or, if he did fall over back, his legs would be straight out and his arms drawn in."

"Quite.— And regard his hat. If he had fallen backward it would be behind him, not at his feet."

"See here, Vance," Markham demanded sharply; "what's in your mind?"

"Oh, numberless things. But they all boil down to the wholly irrational notion that this defunct gentleman wasn't shot with a bow and arrow at all."

"Then why, in—"

"Exactly! Why the utter insanity of the elaborate stage-setting?— My word, Markham! This business is ghastly."

AS VANCE spoke, the basement door opened, and Doctor Doremus, shepherded by Detective Burke, stepped jauntily into the areaway. He greeted us breezily and shook hands all round. Then he fixed a fretful eye on Heath.

"By gad, Sergeant!" he complained, pulling his hat down to an even more rakish angle. "I only spend three hours out of the twenty-four eating my meals; and you invariably choose those three hours to worry me with your confounded bodies. You're ruining my digestion." He looked about him petulantly and, on seeing Robin, whistled softly. "For gad's sake! A nice fancy murder you picked out for me this time!"

He knelt down and began running his practiced fingers over the body.

Markham stood for a moment looking on, but presently he turned to Heath.

"While the doctor's busy with his examination, Sergeant, I'll go up-stairs and

America's most famous box of candy

Best known of the Whitman assortments, *the Sampler* illustrates the reason for the success of all the products of Whitman's.

It is not enough to make candies with the finest skill and of finest materials.

They must be so handled, distributed and sold as to reach the homes of candy lovers everywhere fresh and in perfect condition.

Whitman's have combined quality and service. Over a long term of years they have patiently built up a system of distribution direct to every store that sells Whitman's.

This is your assurance of fresh candy when you buy Whitman's. Every package is guaranteed. Candy lovers have learned that the Sampler bought in Miami or Los Angeles is as perfect as that bought in New York or in Chicago.

Quality plus Service have made the Sampler a standard by which candies are measured.

have a chat with Professor Dillard." Then he addressed himself to Doremus: "Let me see you before you go, Doctor."

"Oh, sure." Doremus did not so much as look up. He had turned the body on one side, and was feeling the base of the skull.

III

A PROPHECY RECALLED

(*Saturday, April 2d; 1:30 p. m.*)

WHEN we reached the main hall Captain Dubois and Detective Bellamy, the fingerprint experts from Headquarters, were just arriving. Detective Snitkin, who had evidently been watching for them, led them at once toward the basement stairs, and Markham, Vance, and I went up to the second floor.

The library was a large, luxurious room at least twenty feet deep, occupying the entire width of the building. Two sides of it were lined to the ceiling with great embayed bookcases; and in the center of the west wall rose a massive bronze Empire fireplace. By the door stood an elaborate Jacobean sideboard, and opposite, near the windows which faced on Seventy-fifth Street, was an enormous carved table-desk, strewn with papers and pamphlets. There were many interesting *objets-d'art* in the room; and two diagrammatic Dürers looked down on us from the tapestried panels beside the mantel. All the chairs were spacious and covered with dark leather.

Professor Dillard sat before the desk, one foot resting on a small tufted ottoman; and in a corner near the windows, huddled in a sprawling arm chair, was his niece, a vigorous, severely tailored girl with strong, chiseled features of classic cast. The old professor did not rise to greet us, and made no apology for the omission. He appeared to take it for granted that we were aware of his disability. The introductions were perfunctory, though Markham gave a brief explanation of Vance's and my presence there.

"I regret, Markham," the professor said, when we had settled ourselves, "that a tragedy should be the reason for this meeting; but it's always good to see you. —I suppose you will want to cross-examine Belle and me. Well, ask anything you care to."

PROFESSOR BERTRAND DILLARD was a man in his sixties, slightly stooped from a sedentary studious life; clean-shaven, and with a marked brachycephalic head surmounted with thick white hair combed pompadour. His eyes, though small, were remarkably intense and penetrating; and the wrinkles about his mouth held that grim pursed expression which often comes with years of concentration on difficult problems. His features were those of the dreamer and scientist; and, as the world knows, this man's wild dreams of space and time and motion had been actualized into a new foundation of scientific fact. Even now his face reflected an introspective abstraction, as if the death of Robin were but an intrusion upon the inner drama of his thoughts.

Markham hesitated a moment before answering. Then he said with marked deference:

"Suppose, sir, you tell me just what you know of the tragedy. Then I'll put whatever questions I deem essential."

Professor Dillard reached for an old meerschaum pipe on the stand beside him. When he had filled and lighted it, he shifted himself more comfortably in his chair.

"I told you practically everything I know over the telephone. Robin and Sperling called this morning about ten o'clock to see Belle. But she had gone to the courts to play tennis, so they waited in the drawing-room down-stairs. I heard them talking there together for half an hour or so before they went to the basement club-room. I remained here reading for perhaps an hour, and then, as the sunshine looked so pleasant, I decided to step out on the balcony at the rear of the house. I had been there but five minutes, I should say, when I chanced to look down on the archery range; and to my horrified amazement I saw Robin lying on his back with an arrow-shaft protruding from his breast. I hastened down as quickly as my gout would permit, but I could see at once that the poor fellow was dead; so I immediately telephoned to you. There was no one in the house at the time but old Pyne—the butler—and myself. The cook had gone marketing; Arnesson had left for the university at nine o'clock; and Belle was still out playing tennis. I sent Pyne to look for Sperling, but he was nowhere about; and I came back to the library here to wait for you. Belle returned shortly before your men arrived, and the cook came in a little later. Arnesson won't be back until after two."

"THERE was no one else here this morning—no strangers or visitors?"

The professor shook his head.

"Only Drukker,—I believe you met him here once. He lives in the house at our rear. He often drops in—mostly, however, to see Arnesson: they have much in common. He's written a book on 'World Lines in Multidimensional Continua.' The man's quite a genius in his way; has the true scientific mind. . . . But when he found that Arnesson was out he sat for a while with me discussing the Brazilian expedition of the Royal Astronomical Society. Then he went home."

"What time was this?"

"About half past nine. Drukker had gone when Robin and Sperling called."

"Was it unusual, Professor Dillard," asked Vance, "for Mr. Arnesson to be away on Saturday mornings?"

The old professor looked up sharply, and there was a brief hesitation before he answered:

"Not unusual, exactly; although he's generally here on Saturdays. But this morning he had some important research work to do for me in the faculty library. . . . Arnesson," he added, "is working with me on my next book."*

There was a short silence; then Markham spoke:

"You said this morning that both Robin and Sperling were suitors for Miss Dillard's hand. . . ."

*The book referred to by Professor Dillard was the great work which appeared two years later, "The Atomic Structure of Radiant Energy," a mathematical emendation of Planck's quantum theory refuting the classical axiom of the continuity of all physical processes, as contained in Maximus Tyrius' Οὐδὲ ἐνταῦθα ἡ φύσις μεταπηδᾷ ἀθρόως.

"Uncle!" The girl sat upright in her chair and turned angry, reproachful eyes upon the old professor. "That wasn't fair."

"But it was true, my dear." His voice was noticeably tender.

"It was true—in a way," she admitted. "But there was no need of mentioning it. You know, as well as they did, how I regarded them. We were good friends—that was all. Only last night, when they were here together, I told them—quite plainly—that I wouldn't listen to any more silly talk of marriage from either of them. They were only boys . . . and now one of them's gone. . . . Poor Cock Robin!" She strove bravely to stifle her emotion.

Vance raised his eyebrows and leaned forward.

"'Cock Robin'?"

"Oh, we all called him that. We did it to tease him, because he didn't like the nickname."

"The sobriquet was inevitable," Vance observed sympathetically. "And it was rather a nice nickname, don't y' know. The original Cock Robin was loved by 'all the birds of the air,' and they all mourned his passing." He watched the girl closely as he spoke.

"I know," she nodded. "I told him that once.— And everyone liked Joseph, too. You couldn't help liking him. He was so—so good-hearted and kind."

Vance again settled back in his chair; and Markham continued his questioning.

"YOU mentioned, Professor, that you heard Robin and Sperling talking in the drawing-room. Could you hear any of their conversation?"

The old man shot a sidelong glance at his niece.

"Does that question really matter, Markham?" he asked, after a moment's hesitation.

"It may have some very vital bearing on the situation."

"Perhaps." The professor drew on his pipe thoughtfully. "On the other hand, if I answer it I may give an erroneous impression, and do a grave injustice to the living."

"Can you not trust me to judge that point?" Markham's voice had become at once grave and urgent.

There was another short silence, broken by the girl.

"Why don't you tell Mr. Markham what you heard, Uncle? What harm can it do?"

"I was thinking of you, Belle," the professor answered softly. "But perhaps you are right." He looked up reluctantly. "The fact is, Markham, Robin and Sperling were having some angry words over Belle. I heard only a little, but I gathered that each regarded the other as being guilty of playing unfair—of standing in each other's way. . . ."

"Oh! They didn't mean it," Miss Dillard interpolated vehemently. "They were always ragging each other. There *was* a little jealousy between them; but I wasn't the real cause of it. It was their archery records. You see, Raymond—Mr. Sperling—used to be the better shot; but this last year Joseph beat him at several meets, and at our last annual tournament he became the Club's Champion Archer."

Plymouth dealers are in a position to extend the convenience of time payments.

When it Comes to Dollar Value Plymouth is Really the Lowest-Priced

Compare the new Chrysler-built Plymouth with what you get at the prices asked for the few other cars in its field.

You discover that, dollar-for-dollar, the new Plymouth gives you more than any other motor car in the lowest-priced group.

What other car of its class gives you such large, comfortable full-sized bodies, ample for adult passengers—smartly styled and luxuriously upholstered in the manner of cars of far higher price?

What other car can approach it in the speed, power and acceleration so characteristic of Chrysler-built cars—joined to a smoothness which is truly a revelation?

What other car gives you the assuring safety of internal-expanding hydraulic 4-wheel brakes, with squeakless moulded brake lining, efficient in any weather—equipment you get only in other cars costing far more?

What other car gives you the prestige of Chrysler-Plymouth ownership with all the leadership in scientific engineering, precision manufacturing and style which this implies?

Contrast Plymouth in each of these details against the field.

You must come to the inevitable conclusion that *in point of dollar value* the Plymouth is actually the *lowest-priced* car in the automobile field.

"And Sperling thought, perhaps," added Markham, "that he had correspondingly fallen in your estimation."

"That's absurd!" the girl retorted hotly.

"I think, my dear, we can leave the matter safely in Mr. Markham's hands," Professor Dillard said mollifyingly. Then to Markham: "Were there any other questions you cared to ask?"

"I'd like to know anything you can tell me about Robin and Sperling—who they are, their associations, and how long you have known them."

"I think that Belle can enlighten you better than I. Both boys belonged to her set. I saw them only occasionally."

MARKHAM turned inquiringly to the girl.

"I've known both of them for years," she said promptly. "Joseph was eight or ten years older than Raymond, and lived in England up to five years ago, when his father and mother both died. He came to America, and took bachelor quarters on the Drive. He had considerable money, and lived idly, devoting himself to fishing and hunting and other outdoor sports. He went about in society a little, and was a nice, comfortable friend who'd always fill in at a dinner or make a fourth hand at bridge. There was nothing really much to him—in an intellectual way, you understand. . . ."

She paused, as if her remarks were in some way disloyal to the dead, and Markham, sensing her feelings, asked simply:

"And Sperling?"

"He's the son of a wealthy manufacturer of something or other—retired now. They live in Scarsdale in a beautiful country home,—our archery club has its regular ranges there,—and Raymond is a consulting engineer for some firm downtown; though I imagine he works only to placate his father, for he doesn't go to the office but two or three days a week. He's a graduate of Boston Tech, and I met him when he was a sophomore, home on vacation. Raymond will never set the world afire, Mr. Markham; but he's really an awfully fine type of American young man—sincere, jolly, a little bashful, and perfectly straight."

It was easy to picture both Robin and Sperling from the girl's brief descriptions; and it was correspondingly difficult to connect either of them with the sinister tragedy that had brought us to the house.

Markham sat frowning for a while. Finally, he lifted his head and looked straight at the girl:

"Tell me, Miss Dillard: have you any theory or explanation that might, in any way, account for the death of Mr. Robin?"

"No!" The word fairly burst from her. "Who could want to kill Cock Robin? He hadn't an enemy in the world. The whole thing is incredible. I couldn't believe it had happened until I went and—saw for myself. Even then it didn't seem real."

"Still, my dear child," put in Professor Dillard, "the man was killed; so there must have been something in his life that you didn't know or suspect. We're constantly finding new stars that the classical astronomers didn't believe could exist in certain orbits."

"I can't believe Joseph had an enemy," she retorted. "I won't believe it. It's too utterly absurd."

"You think then," asked Markham, "that it's unlikely Sperling was in any way responsible for Robin's death?"

"Unlikely?" The girl's eyes flashed. "It's impossible!"

"And yet, y' know, Miss Dillard,"—it was Vance who now spoke in his lazy, casual tone—"*Sperling* means 'sparrow'."

The girl sat immobile. Her face had gone deathly pale, and her hands tightened over the arms of the chair. Then slowly, and as if with great difficulty, she nodded, and her breast began to rise and fall with her labored breathing. Suddenly she shuddered and pressed her handkerchief to her face.

"I'm afraid!" she whispered.

Vance rose and, going to her, touched her comfortingly on the shoulder.

"Why are you afraid?"

She looked up and met his eyes. They seemed to reassure her, for she forced a pitiful smile.

"Only the other day," she said, in a strained voice, "we were all on the archery range down-stairs; and Raymond was just preparing to shoot a Double American Round, when Joseph opened the basement door and stepped out on the range. There really wasn't any danger, but Sigurd—Mr. Arnesson, you know—was sitting on the little rear balcony watching us; and when I cried 'He! He!' jokingly to Joseph, Sigurd leaned over and said: 'You don't know what a chance you're running, young man. You're a Cock Robin, and that archer's a sparrow; and you remember what happened to your namesake when a Mr. Sparrow wielded the bow and arrow'—or something like that. No one paid much attention to it at the time. But now! . . ." Her voice trailed off into an awed murmur.

"Come, Belle; don't be morbid." Professor Dillard spoke consolingly, but not without impatience. "It was merely one of Sigurd's ill-timed witticisms. You know he's continually sneering and jesting at realities: it's about the only outlet he has from his constant application to abstractions."

"I suppose so," the girl answered. "Of course, it was only a joke. But now it seems like some terrible prophecy.—Only," she hastened to add, "Raymond *couldn't* have done it."

AS SHE spoke the library door opened suddenly, and a tall gaunt figure appeared on the threshold.

"Sigurd!" Belle Dillard's startled exclamation held an undeniable note of relief.

Sigurd Arnesson, Professor Dillard's protégé and adopted son, was a man of striking appearance—over six feet tall, wiry and erect, with a head which, at first view, appeared too large for his body. His almost yellow hair was unkempt, like a schoolboy's; his nose was aquiline; and his jowls were lean and muscular. Though he could not have been over forty, there was a network of lines in his face. His expression was sardonically puckish; but the intense intellectual passion that lighted his blue-gray eyes belied any superficiality of nature. My initial reaction to his personality was one of liking and respect. There were depths in the man—powerful potentialities and high capabilities.

As he entered the room that afternoon, his searching eyes took us all in with a swift, inquisitive glance. He nodded jerkily to Miss Dillard, and then fixed the old professor with a look of dry amusement.

"What, pray, has happened in this three-dimensional house? Wagons and populace without: a guardian at the portals . . . and when I finally overcame the Cerberus and was admitted by Pyne, two plain-clothes men hustled me up here without ceremony or explanation. Very amusing, but disconcerting. . . . Ah! I seem to recognize the District Attorney. Good morning—or, rather, afternoon—Mr. Markham."

Before Markham could return this belated greeting Belle Dillard spoke:

"Sigurd, please be serious.—Mr. Robin has been killed."

"'Cock Robin,' you mean. Well, well! With such a name what could the beggar expect?" He appeared wholly unmoved by the news. "Who, or what, returned him to the elements?"

"As to who it was, we don't know." It was Markham who answered, in a tone of reproach for the other's levity. "But Mr. Robin was killed with an arrow through the heart."

"Most fitting." Arnesson sat down on the arm of a chair and extended his long legs. "What could be more appropriate than that Cock Robin should die from an arrow shot from the bow of—"

"Sigurd!" Belle Dillard cut him short. "Haven't you joked enough about that? You *know* that Raymond didn't do it."

"Of course, sis." The man looked at her somewhat wistfully. "I was thinking of Mr. Robin's ornithological progenitor." He turned slowly to Markham. "So it's a real murder mystery, is it—with a corpse, and clues, and all the trappings? May I be entrusted with the tale?"

MARKHAM gave him a brief outline of the situation, to which he listened with rapt interest. When the account was ended he asked:

"Was there no bow found on the range?"

"Ah!" Vance, for the first time since the man's arrival, roused himself from seeming lethargy, and answered for Markham: "A most pertinent question, Mr. Arnesson.— Yes, a bow was found just outside of the basement window, barely ten feet from the body."

"That of course simplifies matters," said Arnesson, with a note of disappointment. "It's only a question now of taking the finger-prints."

"Unfortunately, the bow has been handled," explained Markham. "Professor Dillard picked it up and brought it into the house."

Arnesson turned to the older man curiously.

"What impulse, sir, directed you to do that?"

Professor Dillard was disconcerted by the question.

"Impulse? My dear Sigurd, I didn't analyze my emotions. But it struck me that the bow was a vital piece of evidence, and I placed it in the basement as a precautionary measure until the police arrived."

Arnesson made a wry face, and cocked one eye humorously.

"That sounds like what our psychoan-

SOME FUTURE motorists in Japan. They are all familiar with the Mobiloil sign.

MEETING of the Mobiloil board of automotive engineers: These experts meet every year to study every car manufactured. When you follow their recommendations in the Mobiloil Chart you are sure of getting all the power your car was built to give.
Photo by Underwood & Underwood

RAPID TRANSIT in the Canary Islands. But even in this easy-going land the motorists prefer Mobiloil.

How wrong oil steals power from your automobile

The main reasons why the full power in your engine never reaches the rear wheels are three: Friction—blow-by of power—oil-drag.

1—Friction will always be with us. To eliminate the most friction, you must use an oil of such high lubricating value that all moving parts are carefully cushioned against metal-to-metal contact. Such an oil saves power.

2—Blow-by of power results when your oil is too light in body to seal the pistons. Then some of the power may escape past the piston rings instead of exerting its force on the piston heads.

3—Oil-drag results when your oil is too heavy in body and so resists the push of the pistons. It's like rowing a boat through molasses. Power is lost.

That is why sound engineering advice is needed to determine what is correct lubrication.

The grade of Gargoyle Mobiloil recommended for your car will give you full power.

Along with full power, Mobiloil gives you exceptional freedom from carbon. Its *correct body* enables it to reach every moving part. Its lubricating *quality* then assures all the protection against heat and friction that *any* oil can give.

Get power—by all means. But not at the expense of added wear or carbon. You are always sure of full power with Mobiloil—the world's quality oil.

GARGOYLE
Mobiloil

Look for the red Gargoyle trade-mark on the Mobiloil container

Make this chart your guide

It shows the correct grade of Gargoyle Mobiloil for certain prominent cars. If your car is not listed below, see complete Mobiloil Chart at your Mobiloil dealer's.

Follow winter recommendations when temperatures from 32° F. (freezing) to 0° F. (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, Model T, use Gargoyle Mobiloil "E").

That Stubborn Beard No Problem Now!

Whiskers come off quick and smooth when small bubbles soak them soft. No drag, no sting or smart. It's a new method of shaving that's very easy to prove by test . . . see our "no cost" offer in coupon below.

"My, that's smooth!" she'll surely say.

YOU'LL see the difference the minute you try it. A closer shave. An easier, quicker shave. You've never known such comfort in all your shaving days.

That's why we're offering a seven-day trial tube free to you and every other reader of this magazine. You'll find the details in coupon below.

"We always carry it on the boat, sir. Seems as though men all over the world use small-bubble lather."

Small Bubbles did it!

No other shaving cream is like Colgate's. No other can offer you such unique results. It's a "small-bubble" lather. For small bubbles hold more water. They carry it closer to the base of your beard. A glance at the photographs in the circles proves this better than words.

Note the closely knit, moisture-laden Colgate bubbles. Now contrast that with the large, air-filled bubbles of ordinary lather.

ORDINARY LATHER

Photomicrograph of lather of an ordinary shaving cream surrounding single hair. Large dark spots are air—white areas are water. Note how the large bubbles hold air instead of water against the beard.

COLGATE LATHER

Photomicrograph prepared under identical conditions shows fine, closely knit texture of Colgate's Rapid-Shave Cream lather. Note how the small bubbles hold water instead of air close against the beard.

Good-by, Razor-Pull!

The minute you lather up with Colgate's, two things happen:

1. The soap in the lather breaks up the oil film that covers each hair.

2. Then billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

In a moment your beard gets moist and pliable . . . limp and lifeless . . . scientifically softened right down at the base.

Test it Free, for 7 days

Just jot your name and address on the coupon . . . and leave the rest to us.

As an extra dividend we'll send a generous bottle of "After Shave," too. It's a brand new shaving lotion that's winning men by thousands!

Colgate & Co., *Dept. 501-J*, 595 Fifth Ave., New York **FREE OFFER, *MEN!***
Please send me FREE sample of Colgate's Rapid Shave Cream. Also sample of Colgate's After Shave.

alytic friends would call a suppression-censor explanation. Now, I wonder what submerged idea was actually in your mind. . . ."

There was a knock at the door, and Burke put his head inside.

"Doc Doremus is waiting for you down-stairs, Chief. He's finished his examination."

Markham rose and excused himself.

"I sha'n't bother you people any more just at present. There's considerable preliminary routine work to be done. But I must ask you to remain up-stairs for the time being. I'll see you again before I go."

Doremus was teetering impatiently on his toes when we joined him in the drawing-room.

"NOTHING complicated about it," he began, before Markham had a chance to speak. "Our sporty friend was killed by an arrow with a mighty sharp point entering his heart through the fourth intercostal space. Lot of force behind it. Plenty of hemorrhage inside and out. He's been dead about two hours, I should say, making the time of his death around half past eleven. That's only guesswork, however. No signs of a struggle—no marks on his clothes or abrasions on his hands. Death supervened most likely without his knowing what it was all about. He got a nasty bump, though, where his head hit the rough cement when he fell. . . ."

"Now, that's very interestin'." Vance's drawling voice cut in on the Medical Examiner's staccato report. "How serious a 'bump' was it, Doctor?"

Doremus blinked and eyed Vance with some astonishment.

"Bad enough to fracture the skull. I couldn't feel it, of course; but there was a large hæmatoma over the occipital region, and other evidences indicating a fracture of the vault. I'll know more about it after the autopsy." He turned back to the District Attorney. "Anything else?"

"I think not, Doctor. Only let us have your *post-mortem* report as soon as possible."

"You'll have it tonight. The Sergeant's already 'phoned for the wagon." And shaking hands with all of us, he hurried away.

Heath had stood glowering in the background.

"Well, that don't get us anywheres, sir," he complained, chewing viciously on his cigar.

"Don't be downhearted, Sergeant," Vance chided him. "That blow on the back of the head is worthy of your profoundest consideration. I'm of the opinion it wasn't entirely due to the fall, don't y' know."

The Sergeant was unimpressed by this.

"What's more, Mr. Markham," he went on, "there wasn't any finger-prints on either the bow or the arrow. Dubois says they looked as though they'd both been wiped clean. There were a few smears on the end of the bow where the old gentleman picked it up; but not another sign of a print."

Markham smoked a while in gloomy silence.

"What about the handle on the gate leading to the street? And the knob on the door to the alley between the apartment houses?"

"He's a Great Boss!"

"He's been planning for you and the children as well as for me. He wants you to be protected in case anything happens to me. He's a great boss!"

© 1928 M. L. I. Co.

WHEN you hear a man refer to his employer as "the boss," or "the chief," study the expression of the speaker's face. If the corners of his mouth turn up a bit and a happier expression comes into his eyes, you may be sure that his boss is kind and considerate.

In some businesses it is the boss's privilege and personal pleasure to know by sight, and usually by name or nickname, everyone who works for him. Some of the great bosses in America, while they do not have the satisfaction of personal acquaintance, have earned the trust and affection of thousands of workers who have never seen them.

Perhaps there are still some employers who study ways and means to squeeze pay-rolls to the limit and who consider individuals on the pay-rolls merely as money-making units. But they will be replaced, sooner or later, by bosses who have a better understanding of changing industrial conditions today.

Men cannot work collectively without leadership. They expect it and want it, but it must be intelligent and above all—fair. Then follows a mutual interest in the job to be done. When you hear a man in the ranks say "*we* sold more goods last month than in any previous one" he counts himself not as an individual but part of *his* organization.

Wise leaders, realizing that men cannot do their best if they are worried about family affairs, are glad to plan with them for the comfort and safety of their homes.

Cooperation of leaders and workers stretches the buying power of their joint dollars. In many cases it enables employees of an organization to get life insurance protection at much less than it would cost to buy the same protection individually. Employees who have learned that the boss, buying for their entire group, can get better rates are glad to let him do their buying. He saves them time, worry and money.

In this way, hundreds of thousands of families have already secured protection against possible financial disaster—at low cost. There will be more next year and more the year after.

The efforts of employers to provide protection for the families of their employees are bringing a new spirit of good will into industrial relations.

Ten thousand employers of labor in the United States and Canada have set up programs whereby their employees may secure insurance under most favorable terms. The necessity of medical examination is eliminated; family history becomes immaterial; so also the occupation of the individual; and cost to employees in each group is equalized.

Not only that, but when these Group Insurance programs are set up, employees are able to get their insurance at prices much below those available to individuals in the open market.

Employers and employees interested in Group protection plans are invited to send for free information on Group contracts to Metropolitan Life Insurance Company, Dept. 108-A, Madison Avenue, New York City.

HALEY FISKE, *President.*

The Jolly Jester and his vegetable dolls make instant appeal to children

The clown whose secret many mothers now use

"Mothers can get marvelous results with children right at home if they'll just make use of the child's love of fun to establish sound habits," says the Jolly Jester, in private life Wallace Mackay, an authority on children's food habits.

Shrieks and gasps of laughter greet him when he clatters onto the school stage—this jolly clown with his load of vegetable dolls. In city after city Wallace Mackay, the Jolly Jester, sends children home with health lessons happily learned. Thousands of mothers are now sharing his secret. They are appealing to the love of play, deep in every child's heart, to build fundamental habits.

That vitally important habit, for instance, of eating the right sort of breakfast. Nation-wide tests have shown that a child who comes to school without a *hot, cooked* cereal breakfast is handicapped in lessons and in games. That is why this rule hangs in 70,000 class rooms:

"*Every boy and girl needs a* hot *cereal breakfast*"

Knowing this, mothers are sometimes over-zealous in urging children to eat Cream of Wheat or other *hot, cooked* cereal.

Then there's a scene most parents recognize. Told that the nice bowl of cereal is good for them, children's first instinct is to say, "But I don't like my Cream of Wheat," or "I don't like oatmeal." They'd probably react the same way to a picnic, offered with a moral!

But, just as the Jolly Jester makes a fascinating game of vegetables, so the new methods of child guidance come to your rescue for the *hot, cooked* cereal habit. The minute children can make a game of the right breakfast they'll pass their bowls for more Cream of Wheat.

Now they *can* make it a game, through a children's Club called the H. C. B.

FREE — *mothers say this plan works wonders*

This fascinating H. C. B. Club plan arouses children's enthusiasm for a *hot, cooked* cereal breakfast and makes them want to eat it regularly. Badges and a secret for members, gold stars and colored wall charts! All material free, sent direct to your children with a sample box of Cream of Wheat. They'll work it out for themselves. 90,000 mothers are finding it such an *easy* way to be sure their children get the *hot, cooked* cereal they need so much. Send the coupon in today.

Recommended by authorities for 32 years

Here are some of the reasons why specialists have long considered Cream of Wheat an ideal *hot, cooked* cereal.

1. Because it is so rich in both physical and mental energy. It is all real food.
2. Because, with every harsh indigestible part of the grain removed, Cream of Wheat is exceptionally easy to digest.
3. Because its creamy goodness is so easily varied by adding prunes, figs, or dates while cooking.

Give your children the chance to do their best, every day. Start them off regularly with Cream of Wheat for breakfast.

"Nothing!" Heath snorted with disgust. "Both of rough, rusty iron that wouldn't take a print."

"I say, Markham," observed Vance; "you're going at this thing the wrong way. Naturally, there'd be no finger-prints. Really, y' know, one doesn't carefully produce a playlet and then leave all the stage props in full view of the audience. What we've got to learn is why this particular impresario decided to indulge in silly theatricals."

"It ain't as easy as all that, Mr. Vance," submitted Heath bitterly.

"Did I intimate it was easy? No, Sergeant; it's deucedly difficult. And it's worse than difficult: it's subtle and obscure and . . . fiendish."

IV

A MYSTERIOUS NOTE
(*Saturday, April 2d; 2 p. m.*)

MARKHAM sat down resolutely before the center-table "Suppose, Sergeant, we overhaul the two servants now."

Heath stepped into the hall and gave an order to one of his men. A few moments later a tall, somber, disjointed man entered and stood at respectful attention.

"This is the butler, sir," explained the Sergeant. "Named Pyne."

Markham studied the man appraisingly. He was perhaps sixty years old. His features were markedly acromegalic; and this distortion extended to his entire figure. His hands were large, and his feet broad and misshapen. His clothes, though neatly pressed, fitted him badly; and his high clerical collar was several sizes too large for him. His eyes, beneath gray, bushy eyebrows, were pale and watery, and his mouth was a mere slit in an unhealthily puffy face. Despite his utter lack of physical prepossession, however, he gave one the impression of shrewd competency.

"So you are the Dillard butler," mused Markham. "How long have you been with the family, Pyne?"

"Going on ten years, sir."

"You came, then, just after Professor Dillard resigned his chair at the university?"

"I believe so, sir." The man's voice was deep and rumbling.

"What do you know of the tragedy that occurred here this morning?"

Though Markham put the question suddenly, in the hope, I imagine, of surprising some admission, Pyne received it with the utmost stoicism.

"Nothing whatever, sir. I was unaware that anything had happened until Professor Dillard called to me from the library and asked me to look for Mr. Sperling."

"He told you of the tragedy then?"

"He said: 'Mr. Robin has been murdered, and I wish you'd find Mr. Sperling for me.'— That was all, sir."

"You're sure he said 'murdered,' Pyne?" interjected Vance.

For the first time the butler hesitated; an added astuteness crept into his look.

"Yes, sir—I'm sure he did. 'Murdered' is what he said."

"And did you see the body of Mr. Robin when you pushed your search?" pursued Vance, his eyes idly tracing a design on the wall.

...and now her Daughter

uses the same Dental Cream

Mrs. I. E. Brooks as a girl . . . when she started using Colgate's

BACK in 1908, exactly twenty years ago, Mrs. I. E. Brooks bought her first tube of Colgate's.

Today Mrs. Brooks is considered a beautiful woman . . . and her flashing white teeth deserve much of the credit. For what has more charm than a lovely smile?

Is it any wonder, then, that Mrs. Brooks buys Colgate's for her little daughter? Certainly she is anxious to give those sturdy little teeth the same proven protection her own have had for years.

Others, too, know the way

In this country, and in foreign countries the world over, you will find thousands of men and women like Mrs. Brooks. Because they began using Colgate's ten, fifteen, even twenty years ago, their teeth are exceptionally sound and beautiful today.

There is nothing mysterious about these enviable results. The men and women fortunate enough to secure them did nothing that you cannot easily and quickly do yourself. They visited their dentists for periodic inspections. And they used Colgate's.

With Colgate's, cleaning is not a side issue, or an added feature . . . it is the main thing.

Choose your dentifrice on the basis of results. Follow the lead of those who have already kept their teeth sound for years. Simply adopt for your own use the dentifrice most popular among people with well-preserved teeth.

In such a vital matter as the care of your teeth, could there be any safer guide than the actual experiences of people like yourself?

At your druggist's

Also, wouldn't it be an immense satisfaction to know that the dentifrice that you were using was the one which dentists recommend most frequently?

So, for lovely teeth, just ask your druggist today for Colgate's. Or, if you prefer, let us send you a sample to try.

Colgate & Co., Dept. 201J, 595 Fifth Ave., N. Y.
Please send me a Free sample of Ribbon Dental Cream.

"In this next scene you are escaping from the villain when one of your tires blows out."

"Then I ought not to use this car—you want to make the thing look reasonable."

"What do you mean?"

"Why, this car has Kelly-Springfield tires all around."

Again there was a brief hesitation.

"Yes, sir. I opened the basement door to look out on the archery range, and there I saw the poor young gentleman. . . ."

"A great shock it must have given you, Pyne," Vance observed dryly. "Did you, by any hap, touch the poor young gentleman's body?—or the arrow, perhaps?—or the bow?"

Pyne's watery eyes glistened for a moment.

"No—of course not, sir. . . . Why should I, sir?"

"Why, indeed?" Vance sighed wearily. "But you saw the bow?"

The man squinted, as if for purposes of mental visualization.

"I couldn't say, sir. Perhaps yes; perhaps no. I don't recall."

Vance seemed to lose all interest in him; and Markham resumed the interrogation:

"I understand, Pyne, that Mr. Drukker called here this morning about half past nine. Did you see him?"

"Yes, sir. He always uses the basement door; and he said good morning to me as he passed the butler's pantry at the head of the steps."

"He returned the same way he came?"

"I suppose so, sir—though I was upstairs when he went. He lives in the house at the rear—"

"I know." Markham leaned forward. "I presume that it was you who admitted Mr. Robin and Mr. Sperling this morning."

"Yes, sir. At about ten o'clock."

"Did you see them again, or overhear any of their remarks while they waited here in the drawing-room?"

"No, sir. I was busy in Mr. Arnesson's quarters most of the morning."

"Ah!" Vance turned his eyes on the man. "That would be on the second floor rear, wouldn't it?—the room with the balcony?"

"Yes, sir."

"Most interestin'. . . . And it was from that balcony that Professor Dillard first saw Mr. Robin's body.— How could he have entered the room without your knowing it? You said, I believe, that your first intimation of the tragedy was when the professor called you from the library and told you to seek Mr. Sperling."

THE butler's face turned a pasty white, and I noticed that his fingers twitched nervously.

"I might have stepped out of Mr. Arnesson's room for a moment," he explained, with effort. "Yes—it's quite likely. In fact, sir, I recall going to the linen-closet. . . ."

"Oh, to be sure." Vance lapsed into lethargy.

Markham smoked a while, his gaze concentrated on the table top.

"Did anyone else call at the house this morning, Pyne?" he asked presently.

"No one, sir."

"And you can suggest no explanation for what happened here?"

The man shook his head heavily, his watery eyes in space.

"No, sir. Mr. Robin seemed a pleasant, well-liked young man. He wasn't the kind to inspire murder—if you understand what I mean."

Vance looked up.

World's Fastest Road Car

now sets new styles in Interior Luxury and Design

THE Airman Limited is years ahead! Here is *new elegance* such as motorists have never known before. In the newly designed interiors are infinitely finer upholstery—artistic new appointments—and colorings which introduce a new note in interior beauty—delightful blues, maroons, harmonious mixtures of green and gray and brown. The complete ensemble achieves new luxury—comparable only to exquisite, modern drawing rooms.

The new Airman Limited sets the *style* and sets the *pace*. In a recent demonstration, Cannon Ball Baker drove a stock Franklin sedan from Los Angeles to New York and return—6,692 miles—in 6½ days! Proving conclusively that Franklin's speed, comfort, ease of control, ruggedness and air-cooling combine to produce the *world's fastest road car.*

Franklin holds the key to speed-with-comfort. Now, with sumptuous interiors and a new completeness of comfort features, the Airman Limited offers Luxurious Fast Travel. You can expect to be *surprised* when you see the Airman Limited—you can expect to be *thrilled* when you drive it—no other car is like the new Airman Limited . . . Franklin Automobile Company, Syracuse, New York.

The *New* MENNEN Shave

Dermutized lather now better than ever . . . . . Menthol-iced, too!

HERE'S news and good news. By a new process of blending we have developed in Mennen Shaving Cream an even quicker, richer lather, a denser, moister lather in which the exclusive Mennen beard-softening principle of *dermutation* completes its all-necessary function that much sooner and more completely. Not only that—but we have also included a dash of menthol which adds a brisk, tingling coolness to the lather at once reviving and refreshing.

To introduce to you the new Mennen "Menthol-iced" shave we are supplying your dealer a special value package—a full-size tube of the new Mennen Shaving Cream without menthol, and a big, free tube of the new cream "Menthol-iced"—both for the price of a single tube. *You owe it to your own comfort to get this special package and try out this even better Mennen shave to your own good satisfaction—today. 50c at your dealer.*

Dermutation instantly wilts the beard so the razor cuts the hairs off clean without painful razor-pull. *Dermutation* relaxes and levels the skin mounds around the hairs so the razor slides through without nicking or scraping. No rawness. No soreness. No free caustic to burn. Works in any water. Five soothing emollients in Mennen lather freshen and tone up the skin, increasing its fitness with every shave.

YOUR SHAVE IS ONLY AS GOOD AS YOUR LATHER

MENNEN

The Dermutized Shave

MENNEN TALCUM FOR MEN

A sprinkle of Mennen Talcum for Men adds a finishing touch that rounds out the comfort of the perfect shave. Tones down face-shine. Neutral tinted, doesn't show. 25c a tin. Also in stick form—50c.

"I can't say that I, personally, understand exactly what you mean, Pyne. How do you know it wasn't an accident?"

"I don't, sir," was the unperturbed answer. "But I know a bit about archery—if you'll pardon my saying so—and I saw right away that Mr. Robin had been killed by a hunting arrow."

"You're very observin', Pyne," nodded Vance. "And quite correct."

It was plain that no direct information was to be got from the butler, and Markham dismissed him abruptly, at the same time ordering Heath to send in the cook.

When she entered I noticed at once a resemblance between father and daughter. She was a slatternly woman of about forty, also tall and angular, with a thin, elongated face and large hands and feet. Hyperpituitarism evidently ran in the Pyne family.

A FEW preliminary questions brought out the information that she was a widow, named Beedle, and had, at the death of her husband, five years before, come to Professor Dillard as the result of Pyne's recommendation.

"What time did you leave the house this morning, Beedle?" Markham asked her.

"Right after half past ten." She seemed uneasy and on the alert, and her voice was defensively belligerent.

"And what time did you return?"

"About half past twelve. That man let me in"—she looked viciously at Heath—"and treated me like I'd been a criminal."

Heath grinned. "The time's O. K., Mr. Markham. She got sore because I wouldn't let her go down-stairs."

Markham nodded noncommittally.

"Do you know anything of what took place here this morning?" he went on, studying the woman closely.

"How should I know? I was at Jefferson Market."

"Did you see either Mr. Robin or Mr. Sperling?"

"They went down-stairs to the archery-room past the kitchen a little while before I went out."

"Did you overhear anything they said?"

"I don't listen at keyholes."

Markham set his jaw angrily and was about to speak when Vance addressed the woman suavely:

"The District Attorney thought that perhaps the door was open, and that you might have overheard some of their conversation despite your commendable effort not to listen."

"The door might've been open, but I didn't hear anything," she answered sullenly.

"Then you couldn't tell us if there was anyone else in the archery-room?"

Beedle narrowed her eyes and gave Vance a calculating look.

"Maybe there was someone else," she said slowly. "In fact, I thought I heard Mr. Drukker." A note of venom came into her voice, and the shadow of a hard smile passed over her thin lips. "He was here to call on Mr. Arnesson early this morning."

"Oh, was he, now?" Vance appeared surprised at this news. "You saw him perhaps?"

"I saw him come in, but I didn't see him go out—anyway, I didn't notice.

How Cheaply you can "Travel" by Telephone

An Advertisement for Bell Long Distance Telephone Service

UNDER the latest station to station day rates, you can now "travel" the thousands of miles to a point across the continent and return by telephone for only $9.00. From Dallas to New Orleans and return for only $2.20. From Detroit to Chicago and back for only $1.35. From San Diego to Mexico City and return for only $10.50.

A Chicago business man recently had to endeavor to close negotiations with 30 concerns in 12 cities. Preliminary work had been done, but personal contact was necessary. In one day, he saved 5000 miles of physical travel and at least ten days' time from his office. He made four long distance calls to New York. Two to Buffalo. One to Syracuse. One to Covington, Va. Six to Pittsburgh. Five to Cleveland. One to Louisville. Two to St. Louis. Two to Kansas City. Two to St. Paul. Three to Milwaukee and one to New Orleans.

His negotiations were successful in 60% of the calls. "In many cases," says this man, "the long distance telephone call is actually superior to a personal call. It gets an immediate audience."

The president of a large Philadelphia rubber company has each one of his salesmen call him at the end of the day. Often large sales that a man is about to give up as hopeless are saved by the suggestions received from his president by Long Distance.

What distant trips could you profitably make today by telephone? . . . *Number, please?*

A Sweeping Verdict against FORGETFULNESS

The Greatest Crime of Cold-Weather Motoring

A VERDICT has been handed down by the highest courts in the motor car industry. *A verdict against forgetfulness. Automatic motor protection is now standard on these fine cars.*

The car manufacturer had his choice of two ways. The one—a method that leaves this vital operation to memory and guesswork. The other—one that works positively, dependably, automatically and with scientific precision.

They chose the latter. And in their choice lies the biggest reason why you, too, must choose automatic motor protection—if you want to avoid the damage of cold.

Automatic Motor Protection on These Cars Dictates Automatic Motor Protection for Your Car

PIERCE-ARROW

LINCOLN

CHRYSLER 75 and 80

DODGE SENIOR SIX

HUPMOBILE 8

LA SALLE

CADILLAC

Equip at the first sign of cold weather

You get the warning signal in coughing, spitting noises and delayed starting. You reach for the "choke"—and instantly a flood of raw gasoline hits ice-cold metal. Oil is washed away from glass-like surfaces. Metal grinds against metal at a terrific speed, producing friction no motor can stand. Excessive dilution follows, fouled spark plugs, extreme carbonization, corrosion and rapid cylinder wear. This is the damage you pay for in the spring. *Damage that can now be totally avoided.*

Illustrating the Hupmobile 6 equipped with Pines Automatic Winterfront

Pines Winterfront stops the damage of cold

Pines Automatic Winterfront completely covers the radiator, and remains closed until the motor is warm enough to operate without damage to vital parts. The shutters then begin to open, *automatically,* allowing the entrance of exactly enough cool air to maintain a scientifically correct temperature.

When you park your car, Winterfront closes completely while your motor is still hot. You cannot walk away and forget it. There is no chance for dangerous neglect.

Motor Protection Must Be Automatic

With a Winterfront on your car, you "warm-up" in seconds. The "choke" habit disappears. Your motor starts quicker and easier with less battery strain. Your car is warm inside—your motor runs with summer smoothness and flexibility.

Winterfront is easily installed

Your dealer will equip your car with a Pines Automatic Winterfront in ten minutes. Moderately priced, it will pay for itself many times over, and will give you years of service. Thermostats are guaranteed. Accept no substitute. Pines Winterfront is the only *automatic* radiator shutter on the market. Pines Winterfront Company, 404 No. Sacramento Blvd., Chicago, Ill.

247

PINES WINTERFRONT — *It's Automatic*

He sneaks in and out at all hours."

"Sneaks, eh? Fancy that! . . . By the by, which door did you use when you went a-marketing?"

"The front door. Since Miss Belle made a club-room out of the basement, I always use the front door."

"Then you didn't enter the archery-room this morning?"

"No."

Vance raised himself in his chair.

"Thanks for your help, Beedle. We won't need you any more now."

When the woman had left us Vance rose and walked to the window.

"WE'RE expending too much zeal in irrelevant channels, Markham," he said. "We'll never get anywhere by ballyragging servants and questioning members of the household. There's a psychological wall to be battered down before we can begin storming the enemy's trenches. Everybody in this ménage has some pet privacy that he's afraid will leak out. Each person so far has told us either less or more than he knows. Disheartenin', but true. Nothing that we've learned dovetails with anything else; and when chronological events don't fit together, you may rest assured that the serrated points of contact have been deliberately distorted. I haven't found one clean joinder in all the tales that have been poured into our ears."

"It's more likely the connections are missing," Markham argued; "and we'll never find them if we don't pursue our questionings."

"You're much too trustin'." Vance walked back to the center-table. "The more questions we ask the farther afield we'll be taken. Even Professor Dillard didn't give us a wholly honest account. There's something he's keeping back—some suspicion he won't voice. Why did he bring that bow indoors? Arnesson put his finger on a vital spot when he asked the same question. Shrewd fella, Arnesson.— Then there's our athletic young lady with the muscular calves. She's entangled in various amat'ry meshes, and is endeavoring to extricate herself and her whole coterie without leaving a blemish on anyone. A praiseworthy aim, but not one conducive to the unadulterated truth. — Pyne has ideas, too. That flabby facial mask of his curtains many an entrancin' thought. But we'll never probe his cortex by chivyin' him with questions. Somethin' rum, too, about his matutinal labors. He says he was in Arnesson's room all morning; but he obviously didn't know that the professor took a sunnin' on Arnesson's veranda. And that linen-closet alibi—much too specious.— Also, Markham, let your mind flutter about the widowed Beedle's tale. She doesn't like the over-sociable Mr. Drukker; and when she saw a chance to involve him, she did so. She 'thought' she heard his voice in the archery-room. But did she? Who knows? True, he might have tarried among the slings and javelins on his way home and been joined later by Robin and Sperling. . . . Yes, it's a point we must investigate. In fact, a bit of polite converse with Mr. Drukker is strongly indicated. . . ."

Footsteps were heard descending the front stairs, and Arnesson appeared in the archway of the living-room.

More astonishing

than the minds of master mathematicians

Faster than any known method of making business calculations

AN adding, subtracting, figuring machine with only ten numeral keys. One of the simplest machines ever made, yet one of the most amazing. With the Sundstrand, calculations can be made at a speed that would defy the most celebrated minds in mathematics.

The Sundstrand *carries in its head* the most involved transactions and quickly gives you the result with uncanny accuracy. With this machine at your right hand and customers' ledger account at the left . . . without taking your eyes from the book . . . you can add debits and subtract credits in the same column of figures without any intermediate totals. The figures are carried in the machine until you reach the end of the account, when a single operation gives you the balance. This is just one of many applications where the Sundstrand puts incredible speed into business figuring.

The marvelously simple keyboard . . . only ten numeral keys . . . makes it easy to develop the touch system quickly. No multiple banks and columns to watch. You keep your eyes on the work . . . not on the keys. You touch the keys just as you would write down the figures with a pencil, and the machine automatically places them in the right columns. Direct subtraction and multiplication are just as easy. And the Sundstrand Credit Balance Feature enables you to subtract credits in excess of debits and get the answer—directly.

The Sundstrand sells for as little as $100, and its speed and accuracy soon pay its cost. Let us send you full information. The coupon below will bring you our illustrated descriptive folder showing the complete line of adding, figuring and bookkeeping machines and cash registers.

"Well, who killed Cock Robin?" he asked, with a satyr-like grin.

Markham rose, annoyed, and was about to protest at the intrusion; but Arnesson held up his hand.

"One moment, please. I'm here to offer my exalted services in the noble cause of justice—mundane justice, I would have you understand. Philosophically, of course, there's no such thing as justice. If there really were justice we'd all be in for a shingling in the cosmic woodshed." He sat down facing Markham, and chuckled cynically. "The fact is, the sad and precipitate departure of Mr. Robin appeals to my scientific nature. It makes a nice, orderly problem. It has a decidedly mathematical flavor—no undistributed terms, you understand; clear-cut integers with certain unknown quantities to be determined.— Well, I'm the genius to solve it."

"What would be your solution, Arnesson?" Markham knew and respected the man's intelligence, and seemed at once to sense a serious purpose beneath his attitude of sneering flippancy.

"Ah! As yet I haven't tackled the equation." Arnesson drew out an old briar pipe and fingered it affectionately. "But I've always wanted to do a little detective work on a purely earthly plane—the insatiable curiosity and natural inquisitiveness of the physicist, you understand. And I've long had a theory that the science of mathematics can be advantageously applied to the trivialities of our life on this unimportant planet. There's nothing but law in the universe—unless Eddington is right and there's no law at all—and I see no sufficient reason why the identity and position of a criminal can't be determined just as Leverrier calculated the mass and ephemeris of Neptune from the observed deviations in the orbit of Uranus. You remember how, after his computations, he told Galle, the Berlin astronomer, to look for the planet in a specified longitude of the ecliptic."

Arnesson paused and filled his pipe.

"NOW, Mr. Markham," he went on; and I tried to decide whether or not the man was in earnest, "I'd like the opportunity of applying to this absurd muddle the purely rational means used by Leverrier in discovering Neptune. But I've got to have the data on the perturbations of Uranus's orbit, so to speak—that is, I must know all the varying factors in the equation. The favor I've come here to ask is that you take me into your confidence and tell me all the facts. A sort of intellectual partnership. I'll figure out this problem for you along scientific lines. It'll be bully sport; and incidentally I'd like to prove my theory that mathematics is the basis of all truth however far removed from scholastic abstractions." He at last got his pipe going, and sank back in his chair. "Is it a bargain?"

"I'll be glad to tell you whatever we know, Arnesson," Markham replied after a brief pause. "But I can't promise to reveal everything that may arise from now on. It might work against the ends of justice and embarrass our investigation."

Vance had sat with half-closed eyes, apparently bored by Arnesson's astonishing request; but now he turned to Markham with a show of animation.

Makes your housecleaning easier . . . . *and your house* cleaner

POSITIVE AGITATION

WHAT a delight it is, when housecleaning is over, to see *everything* beautifully clean!

What a satisfaction it is, to know that dust is banished from furnishings, and that even to the bottommost depths of the rugs, the whole house is spotless.

And how essential it is, in creating this cleanliness, to have the aid of a Hoover.

There's not a corner or a crevice into which the searching Dusting Tools of The Hoover can not go. There's not a bit of upholstery, a drapery or lamp, a mattress or pillow that won't be the cleaner for their use.

Every rug and carpet will be fresher and lovelier for Hoover cleaning. For "Positive Agitation"—the exclusive cleaning principle of The Hoover removes more *dirt per minute*.

And it removes all types of dirt—the deeply-embedded, destructive grit against which other cleaning methods are ineffective as well as the surface dust and lint. In this dirt removal the rug nap is lifted and straightened and the rug colors brightened.

Now The Hoover offers a *new* helpfulness, in its motor-driven Floor Polishing Attachment. This new housekeeping-aid polishes quickly and brilliantly.

Why not have a demonstration in your home of The Hoover, its Dusting Tools and Floor Polishing Attachment? It will enable you to see for yourself, what repeated tests have proved, that The Hoover removes more *dirt per minute*. Because d. p. m. represents the real gauge of electric cleaner efficiency, you should have this test, before buying *any* cleaner. Telephone your local Hoover Dealer.

Cash prices: Model 700 Hoover, **$75.** *Model 543,* **$59.50.** *Dusting tools, $12.50. Model 972, $135.00; Dusting Tools, $15.00. Floor polishing attachment adaptable to models built in the last five years, $7.50. Easy payments if desired. Only $6.25 down. Hoover dealers will make you an allowance on your old machine.*

Do you really want bigger Earning Power—Larger Success?

PAUL F. BOURSCHEIDT
Assistant Secretary, Peoria Life Insurance Co.

There's only one sure way to get it, and here's the "secret formula"—

Do you know that in four words you can sum up every success in business—and do you know that this simple formula is just as sure to work for you as for any other man who ever lived?

Here is the formula, then—in just four words—and if you'll try it even for so short a period as six months, you'll be amazed at the things it will do for you! The formula is—DEFINITE OBJECTIVES, SYSTEMATICALLY FOLLOWED!

To put the formula another way—it's knowing what you want and preparing steadily to get it!

In Peoria there lives a man named Paul F. Bourscheidt, who a number of years ago began to apply this formula.

At this time Mr. Bourscheidt was Assistant Actuary of the Peoria Life Insurance Company, one of the outstanding insurance companies of the Middle West. He wanted to broaden his knowledge of business, so as to fit himself for larger responsibilities. That was his DEFINITE OBJECTIVE. So he enrolled with LaSalle for home-study training in Business Management.

Eleven months later he had completed the training; and if you were in business in 1922, you will remember what troublous times they were—profits shrinking, payrolls slashed, and only the fittest able to stand the gaff.

"As a result of my training," wrote Mr. Bourscheidt at that time, "I notice a big improvement in my work and my ability to cope with difficult situations. Already I can report a promotion and an increase of 30 per cent, which in these days is no small item."

* * *

Since that date, men have come and gone in the Peoria Life Insurance Company, but still Mr. Bourscheidt has held to that simple formula of DEFINITE OBJECTIVES.

Realizing the importance of legal knowledge in business, he enrolled again with LaSalle—this time for home-study training in Law. He set as his goal the Illinois Bar examinations, which he passed successfully in the fall of 1924.

Was it merely by chance, do you think, that in October of that year Mr. Bourscheidt was made Assistant Secretary and Office Manager of this great company, or that today he is being entrusted with greater and greater responsibilities?

Significant of the worth of this plan—in the eyes of Mr. Bourscheidt's associates—is the fact that 23 other people in the Peoria Life Insurance Company have enrolled with LaSalle for home-study business training. These other executives—both men and women—are out to compel larger success through the speeding up of practical experience.

Set Your Goal—Then Start Today

Why not pursue this plan of DEFINITE OBJECTIVES—try it out, at least, in the next few months?

In what field do you hope to gain success? Study the coupon below—then check the training that most clearly meets your needs, enter your name, address and present position, and mail the coupon to LaSalle.

It will bring you promptly—and without obligation—an interesting book descriptive of that field, together with a copy of "Ten Years' Promotion in One," the inspiring story that has set thousands of men on the shorter route to greater earning power.

Are you dreaming—drifting—or do you work toward DEFINITE OBJECTIVES?

Answer that question with pen or pencil—on the coupon NOW.

Name ..... Present Position ..... Address .....

"I say, y' know; there's really no reason why we shouldn't give Mr. Arnesson a chance to translate this crime into the realm of pure mathematics. I'm sure he'd be discreet and use our information only for scientific purposes. And—one never knows, does one?—we may need his highly trained assistance before we're through with this fascinatin' affair."

Markham knew Vance well enough to realize that his suggestion had not been made thoughtlessly; and I was in no wise astonished when he faced Arnesson and said:

"Very well, then. We'll give you whatever data you need to work out your mathematical formula. Anything special you want to know now?"

"Oh, no. I know the details thus far as well as you; and I'll strip Beedle and old Pyne of their contributions when you've gone. But if I solve this problem and determine the exact position of the criminal, don't pigeonhole my findings, as Sir George Airy did those of poor Adams when he submitted his Neptunean calculations prior to Leverrier's. . . ."

AT THIS moment the front door opened, and the uniformed officer stationed on the porch came in, followed by a stranger.

"This gent here says he wants to see the professor," he announced with radiating suspicion; and turning to the man he indicated Markham with a gesture of the head. "That's the District Attorney. Tell him your troubles."

The newcomer seemed somewhat embarrassed. He was a slender, well-groomed man with an unmistakable air of refinement. His age, I should say, was fifty, though his face held a perennially youthful look. His hair was thin and graying, his nose a trifle sharp, and his chin small but in no way weak. His eyes, surmounted by a high, broad forehead, were his most striking characteristic. They were the eyes of a disappointed and disillusioned dreamer—half sad, half resentful, as if life had tricked him and left him unhappy and bitter.

He was about to address Markham when he caught sight of Arnesson.

"Oh, good-morning, Arnesson," he said, in a quiet, well-modulated voice. "I hope there's nothing seriously wrong."

"A mere death, Pardee," the other replied carelessly. "The proverbial tempest in a teapot."

Markham was annoyed at the interruption.

"What can I do for you, sir?" he asked.

"I trust I am not intruding," the man apologized. "I am a friend of the family,—I live just across the street; and I perceived that something unusual had happened here. It occurred to me I might be of some service."

Arnesson chuckled. "My dear Pardee! Why clothe your natural curiosity in the habiliments of rhetoric?"

Pardee blushed.

"I assure you, Arnesson—" he began; but Vance interrupted him.

"You say you live opposite, Mr. Pardee. You have perhaps been observing this house during the forenoon?"

"Hardly that, sir. My study, however, overlooks Seventy-fifth Street, and it's true I was sitting at the window most of the morning. But I was busy writing.

"Civilization's curse can be conquered," says England's Great Surgeon

Sir W. Arbuthnot Lane, *Bart., C. B.*

Famous Guy's Hospital, London

Three years ago Sir W. Arbuthnot Lane *founded, with other prominent Britons, the now famous New Health Society, which is teaching millions how to lead healthier lives. Baronet, Companion of the Bath and Chevalier of the Legion of Honor, Sir Arbuthnot has won the following distinctions in his field: Fellow, Royal College of Surgeons; President, Fellowship of Medicine; Consulting Surgeon Guy's Hospital and Hospital for Sick Children; creator of modern methods of surgery copied throughout the world.*

"Constipation is civilization's curse. A shortage of Vitamin B is responsible for this complaint. Fresh yeast is particularly rich in Vitamin B. It stimulates intestinal action and has a most important effect on constipation and its related digestive troubles. The shortage of Vitamin B in the usual diet is most readily made up by fresh yeast."

W Arbuthnot Lane

When Sir William Arbuthnot Lane speaks the world listens!

Long famous as a brilliant surgeon, Sir Arbuthnot is today recognized as one of the greatest exponents of preventive medicine, health education and dietetic reform that England has ever known. He has devoted his life to the study of the intestinal tract.

In a recent interview Sir Arbuthnot made the characteristically forceful statement that constipation is "civilization's greatest curse." In his opinion constipation can be overcome through the important corrective food—fresh yeast.

Fleischmann's Yeast is as fresh as any garden vegetable. Unlike dangerous cathartic drugs, which "scour out" only the lower intestine, yeast keeps the entire digestive tract naturally clean, active—healthy.

In a recent survey covering every state in the United States, half the doctors reporting said they prescribed this remarkable food for health.

Eat 3 cakes of Fleischmann's Yeast daily, a cake before each meal or between meals. To get full benefit from yeast you must eat it regularly and over a sufficient period of time. Sold wherever food is sold.

Throat, stomach, intestines form one continuous tube. When the colon is clogged poisons spread quickly throughout the system. Colds, headaches, skin and stomach disorders develop. To be radiantly well and happy keep the entire intestinal tract *clean, active* and *healthy* with Fleischmann's Yeast.

Fleischmann's Yeast *for* Health

GASOLINE + ETHYL = *high compression performance*

YOU are hearing much about "high compression"..."high compression engines"...."high compression fuel"..."high compression performance."

"What," a great many car owners are asking, "does 'high compression' mean to me?" Here is a simple explanation:

Each cylinder of your engine may be likened to a muzzle-loading gun. The cylinder is the gun; the piston is the bullet; and the mixture of gasoline and air is the powder charge.

The tighter you pack the powder charge in the gun before firing, the greater the force to the bullet. Similarly, the tighter you squeeze—or compress—gas vapor and air in the combustion chamber before ignition, the greater the force of the piston's stroke. In other words, the higher the compression the greater the power.

Higher compression in a gasoline engine is obtained by decreasing the size of the combustion chamber—either by mechanical design or by carbon formation.

Up to the advent of Ethyl Gasoline, the compression of automobile engines was limited by the compression limits of gasoline. For gasoline is not a perfect fuel. It explodes too soon ("knocks") and loses power when squeezed beyond a certain point.

That is why General Motors Research Laboratories developed ETHYL fluid, a compound which controls the combustion rate of gasoline so that as engine compression is raised the "knock" is eliminated. And that is why oil companies are mixing ETHYL fluid with gasoline to form *Ethyl Gasoline*—the standard high compression fuel.

Within the last year, car manufacturers have been able to produce new models of higher compression and greater power. *But the most immediate benefits of Ethyl Gasoline are found among the millions of owners of cars of ordinary compression, because with its use in such cars carbon becomes an asset.*

Ride with ETHYL. See what a great difference it makes on hills and in traffic. No "knocking." Less shifting. Faster pickup. Stop at an ETHYL pump today—it bears the emblem shown at the left.

When I returned to my work from lunch I noticed the crowd and the police cars and also the officer in uniform at the door."

Vance had been studying him from the corner of his eye.

"Did you happen to see anyone enter or leave this house this morning, Mr. Pardee?" he asked.

The man shook his head slowly.

"No one in particular. I noticed two young men—friends of Miss Dillard—call about ten o'clock; and I saw Beedle go out with her market basket. But that's all I recall."

"Did you see either of these young men depart?"

"I don't remember." Pardee knit his brows. "And yet it seems to me one of them left by the range gate. But it's only an impression."

"What time would that have been?"

"Really, I couldn't say. Perhaps an hour or so after his arrival. I wouldn't care to be more specific."

"YOU recall no other person whatever either coming or going from the house this morning?"

"I saw Miss Dillard return from the tennis courts about half past twelve, just as I was called to lunch. In fact, she waved her racket to me."

"And no one else?"

"I'm afraid not." There was unmistakable regret in his quiet response.

"One of the young men you saw enter here has been killed," Vance told him.

"Mr. Robin—*alias* Cock Robin," supplemented Arnesson, with a comic grimace which affected me unpleasantly.

"Good heavens! How unfortunate!" Pardee appeared genuinely shocked. "Robin? Wasn't he the Champion Archer of Belle's club?"

"His one claim to immortality.—That's the chap."

"Poor Belle!" Something in the man's manner caused Vance to regard him sharply. "I hope she's not too greatly upset by the tragedy."

"She's dramatizing it, naturally," Arnesson returned. "So are the police, for that matter. Awful pother about nothing in particular. The earth is covered with 'small crawling masses of impure carbohydrates' like Robin—referred to in the aggregate as humanity."

Pardee smiled with tolerant sadness,—he was obviously familiar with Arnesson's cynicisms. Then he appealed to Markham.

"May I be permitted to see Miss Dillard and her uncle?"

"Oh, by all means." It was Vance who answered before Markham could reach a decision. "You'll find them in the library, Mr. Pardee."

The man left the room with a polite murmur of thanks.

"Queer fellow," commented Arnesson, when Pardee was out of hearing. "Cursed with money. Leads an indolent life. His one passion is solving chess problems. . . ."

"Chess?" Vance looked up with interest. "Is he, by any chance, John Pardee, the inventor of the famous Pardee gambit?"

"The same." Arnesson's face crinkled humorously. "Spent twenty years developing a cast-iron offensive that was to add new decimal points to the game. Wrote a book about it. Then went forth proselytizing like a crusader before the

"There's the new Ned Tyson
He's making big money *now*"

"SEE that man behind me—at the table on my right? That's Ned Tyson—sales manager for Brooks & Watson.

"I used to know him when I was a kid—we went to grammar school together.

"Then his father died and he had to go to work. Got a job with Brooks & Watson as a shipping clerk, but couldn't seem to get ahead. Finally grew discouraged and settled down into the rut—a typical office grind. Then overnight something seemed to wake him up. He began making suggestions to the firm—helped them to save a great deal of money.

"Then Old Man Brooks became interested—wanted to know how Ned happened to know so much about the business. Ned told him he'd been studying with the International Correspondence Schools. 'H'm,' said Mr. Brooks, 'I'll remember that.'

"He did too. Put Ned out on the road as a salesman for a year or so and then brought him back as sales manager.

"He's getting $6500 a year now and everybody calls him 'the new Ned Tyson.' It's a good name too. I've never seen such a change in a man. The I. C. S. deserves a lot of credit."

An International Correspondence Schools course will help *you* just as it helped Ned Tyson. It will help you to have the happy home—the bigger salary—the comforts you want for your wife and your family.

For spare-time study is that vital something which makes one man succeed where one hundred fail—that lifts a man out of the rut and makes him a trained worker instead of just a "hand."

One hour a day, spent with the I. C. S. in the quiet of your home, will prepare you for the position you want in the work you like. Put it up to us to prove it!

Mail this coupon. It has brought success to thousands of men

Even scientists do not fully understand its health-giving property

A DISCOVERY of deep interest to countless men and women! A new, simple safeguard that may help many protect themselves against common maladies!

The full importance of it is not yet known—even to scientists. But much is clear. A precious food element, entirely absent from the most of the foods we eat, has been found in familiar Japan green tea.

Thousands are now believed to be missing the happiness of perfect health for lack of this one element —Vitamin C.

"It now appears," writes one eminent scientist, "that this condition is rather common among grown people. Ill health characterized by certain symptoms may be looked for in those who habitually take too little Vitamin C. These symptoms are: *loss of energy, a muddy complexion, fleeting pains often mistaken for rheumatism.*"

Today it is known to have a remarkable health-building value—old familiar Japan green tea

A simple precaution

What trials and hardships loss of energy may bring in its train: needless fatigue, poor appetite, sleeplessness, lethargy, nervousness! For those who tire easily, who are "run down", the day is often spoiled before it has fairly begun.

How many there are, too, whose skin is lifeless and sallow! How many who are troubled with so-called rheumatic pains.

Scientists have found a rich source of precious Vitamin C in the leaves of simple Japan green tea

Of the men and women who suffer from these ailments, some can probably be helped by this simple precaution. Old familiar Japan green tea is certainly no cure-all. But in it there is now known to be a safeguard—a health-giving abundance of Vitamin C.

If you feel below par, try this easy, pleasant plan: Drink flavor-laden cups of Japan green tea *regularly*. Probably you will feel and look more vigorous—more joyously alive in a few weeks. Whenever you drink tea, be sure it is Japan green tea.

Japan green tea has been for years one of the two most popular kinds of tea in the country. It comes in several grades—in packages under various brand names and in bulk. Your grocer has it or can get it. American-Japanese Tea Committee, 782 Wrigley Building, Chicago.

gates of Damascus. He's always been a great patron of chess, contributing to tournaments, and scurrying round the world to attend the various chess jousting-bouts. Consequently was able to get his gambit tested. It made a great stir among the infra-champions of the Manhattan Chess Club. Then poor Pardee organized a series of Masters Tournaments. Paid all the expenses himself. Cost him a fortune, by the way. And of course he stipulated that the Pardee gambit be played exclusively. Well, well, it was very sad. When men like Doctor Lasker and Capablanca and Rubinstein and Finn got to combating it, it went to pieces. Almost every player who used it lost. It was disqualified—even worse than the ill-famed Rice gambit. Terrible blow for Pardee. It put snow in his hair, and took all the rubber out of his muscles. Aged him, in short. He's a broken man."

"I know the history of the gambit," murmured Vance, his eyes resting pensively on the ceiling. "I've used it myself. Edward Lasker* taught it to me. . . ."

THE uniformed officer again appeared in the archway and beckoned to Heath. The Sergeant rose with alacrity—the ramifications of chess obviously bored him—and went into the hall. A moment later he returned bearing a small sheet of paper.

"Here's a funny one, sir," he said, handing it to Markham. "The officer outside saw it sticking out a the mail box just now, and thought he'd take a peep at it.— What do you make of it, sir?"

Markham studied it with puzzled amazement, and then without a word handed it to Vance. I rose and looked over his shoulder. The paper was of the conventional typewriter size, and had been folded to fit into the mail box. It contained several lines of typing done on a machine with élite characters and a faded blue ribbon.

The first line read:

Joseph Cochrane Robin is dead.

The second line asked:

Who Killed Cock Robin?

Underneath was typed:

Sperling means sparrow.

And in the lower right-hand corner—the place of the signature—were the two words, in capitals:

THE BISHOP.

(*To be continued*)

*The American chess master—sometimes confused with Dr. Emanuel Lasker, the former world chess champion.

OCTAVUS ROY COHEN, Dixie Willson, William Dudley Pelley, Chester Crowell, and Edith Barnard Delano are the authors of five exceptionally interesting short stories in next month's magazine. One is the story of a father who would give more than his life for his son; another shows that a good home isn't good unless the heart is there; the third is the dramatic struggle of a man under heavy adversity; the fourth relates the strange and high revenge of a boy against a cruel old man, and the fifth is the story of a woman who never told her great secret. Strong tales, all of them!

Frigidaire Corporation, the world's largest makers of electric refrigerators

PRESENT

THE NEW FRIGIDAIRE

BEAUTIFUL • • POWERFUL • •
INCREDIBLY QUIET

IN the past twelve years, more Frigidaires have been manufactured, sold, and installed than all other electric refrigerators combined.

Surplus power . . . rapid ice freezing . . . beauty and convenience of design . . . greater value at low prices . . . proven dependability . . . these have established an overwhelming preference.

And now, as the logical outgrowth of twelve years of dependable service, twelve years of constant refinement and improvement, Frigidaire engineers present the New Frigidaire, *with these outstanding advantages:* **1.** Quiet . . . for a lifetime. **2.** Powered to freeze ice quickly . . . always. **3.** Practical beauty . . . concealed mechanism. **4.** Conveniences designed by domestic science experts. **5.** Complete simplicity and mechanical refinement. **6.** Low first cost . . . low operating cost. *Incredibly quiet operation* . . . greater cabinet beauty and convenience developed through a careful study of modern kitchen decoration and practice . . . greater refrigerating power built into a new and radically improved compressor . . . this is the New Frigidaire. Here is a powerful, dependable, automatic refrigerator which is truly quiet and truly beautiful. A *new* automatic refrigerator perfected by mechanical, electrical, and chemical engineers, working with practically unlimited facilities for research and experiment.

The New Frigidaire is now on display at Frigidaire show rooms in every part of the country. See these features for yourself . . . today. Frigidaire Corporation, Subsidiary of General Motors Corporation, Dayton, Ohio.

The New Frigidaire, incredibly quiet and powerful, has a wide variety of new models of every size, capacity and price. This beautiful Tu-Tone model, the AP-9, is finished in white and glacier gray porcelain enamel.

LIQUID GRANITE
FLOOR VARNISH

Make this famous million-step test in your own home

See for yourself that Liquid Granite outwears ordinary floor varnishes

ARE there bare and unsightly worn spots on your floors—places where foot traffic is a bit heavier than elsewhere about the home? Select one of these shabby points—or several—and apply Berry Brothers' Liquid Granite Floor Varnish.

You will find by actual comparison that on stairs, floors between adjoining rooms and similar spots, Liquid Granite will retain its beauty and protect the surface when ordinary varnishes have long worn through.

Naturally, you'll wish to use throughout your home a varnish so good that it withstands even the grinding wear on most-used floors. The flintlike surface of floors finished in Liquid Granite is *so* much easier to keep clean. Too, Liquid Granite will not turn white, water will not harm it, nor will it chip or flake.

Liquid Granite is produced by the manufacturer of Berry's Brushing Lacquer, Lionoil Floor Enamel, Luxeberry Enamel, Luxeberry Wood Finish, Berryloid and other wear-resisting finishes.

Principal Foreign Agencies: London, S. E. 15, Hatcham Road at Old Kent Road; Paris, 54 Rue de Paris, Charenton; Berlin, W 9, Potsdamerstrasse 13; Turin, 10 Via Arcivescovado.

TEST THIS VARNISH YOURSELF

What is Happening to the American Family?

(*Continued from page 21*)

time to face the question. At present, we undoubtedly are headed in that direction.

The proponents of companionate marriage constantly press to the front certain details of legal change which they desire. In particular, they say that two alterations in our laws are necessary:

First, they wish motherhood to be voluntary, and to that end they wish legal restrictions removed from the dissemination of information about methods of controlling birth. Very well, many of us would answer, let the shackles be removed from the physicians and let them be given discretion in the matter. This will certainly be done eventually; it may as well be done now. Let the physicians, who are the proper custodians, be legally empowered to give it or withhold it as they see fit. Ought not children to be wanted when they come? God pity the children that come when they are not wanted!

Second, the proponents of companionate marriage insist that divorce by mutual consent should be possible. They make a telling point against the hypocrisy entailed by our present legal requirements. When two married people hate each other, cannot abide living together, and, in consequence, have made a hell instead of a home out of their relationship, they cannot be divorced because they so hate each other but must go through the legal farce of a mutual agreement by which one brings charges against the other.

To this accusation that the present legal situation is hypocritical many of us would agree. Let divorce by mutual consent come—with one qualification: At least let us have it on the Scandinavian model, in accordance with which a whole year must elapse between the application for and the granting of the divorce. That would prevent cheap separations for temporary quarrels.

SUCH legal changes as these, however, are not the gist of our present problem. What is happening is much more serious than the advocacy of such changes can seriously affect. The entire perspective is awry when one supposes that changing birth control laws and extracting the hypocrisy from divorce laws will solve the problem precipitated by our revolt against the ancient family codes. For the pith of that problem lies in one question: Whether in rebelling against old marital ideals and customs we really intend to rebel into the ideals and customs of trial marriage.

When, at the beginning of this paper, we described the old-fashioned family we left something out. Here it is in a letter written in 1637 by John Winthrop, a Puritan. He had been married twenty years when he addressed this letter to his wife:

SWEETHEART:—I was unwillingly hindered from coming to thee, nor am I likely to see thee before the last day of this week: therefore I shall want a band or two: and cuffs. I pray thee also send me six or seven leaves of tobacco dried and powdered. Have care of thyself this cold

THE 5:15 BY AIR replaces the train of former days. Here Miss Mae Bryant bids friends goodbye with her charming smile Pepsodent guards so zealously.

McClelland Barclay, famous illustrator, and his model Miss Helen Goebels pause for a moment to show the part Pepsodent plays in making smiles so charming.

Gleaming Smiles— How They Are Gained and Kept

This special film-removing dentifrice is advised for twice-a-day use in making teeth whiter and brighter and in combating the commoner tooth and gum disorders

MODERN dental research has thrown a new light on dull, "off-color" teeth and on many of the commoner tooth and gum disturbances. Both conditions now are largely charged to a stubborn film that forms on teeth. To a film ordinary brushing has failed to remove successfully.

For that reason, a new and essentially different way in tooth and gum care—the Special Film-Removing Dentifrice called Pepsodent—is being widely advised by dental authorities. *A tooth paste different* in formula and action from any other dentifrice. Dentists widely urge its use at least twice each day—*every day*.

By running your tongue across your teeth, you can feel that film—a slippery, viscous coating. Film clings to teeth and stays. It absorbs food and nicotine stains, and makes teeth look dull and clouded. It supplies a breeding place for the germs of decay. Film, also, is the basis of tartar. And tartar, with germs, is a cause of pyorrhea.

Pepsodent removes that film in gentle protection of the enamel, giving teeth thorough cleanliness and high lustre. It aids in firming tender gums in accordance with the latest scientific findings. It increases the alkalinity of saliva and thus combats acids of decay.

Teeth lighten as dull film coats go. Gums harden and take on healthy coral color. You note a marked difference in both teeth and gums. Get a tube at your druggist — only a few cents — or write to nearest address below for free 10-day supply.

The Pepsodent Co., 1104 S. Wabash Ave., Chicago, Ill., U. S. A.; 191 George St., *Toronto 2*, Ont., Can.; 42 Southwark Bridge Rd., *London*, S. E. 1, Eng.; (Australia), Ltd., 72 Wentworth Ave., *Sydney*, N. S. W.

"MEN WOULDN'T *neglect their hair so if they knew how unattractive baldness and dandruff make them," girls of many colleges say. This famous treatment will prevent them or any other girls from saying such things about you*

SENIORS *at* WELLESLEY

. . don't care for men who are bald or have dandruff!

DANDRUFF is unbearable. Baldness most unattractive to women, seniors at Wellesley recently told us.

Do the women you know feel as these girls do that baldness and dandruff result from men's own carelessness?

Women are right. *Faithful daily care* is the *only* sure way to destroy dandruff—check baldness. This famous treatment, three minutes a day, *regularly*, every day, will make your hair vigorous, thick.

EVERY MORNING moisten scalp generously with Pinaud's Eau de Quinine. Then, with fingers pressed down firmly, *move scalp vigorously in every direction, working the tonic thoroughly into every inch* of scalp. Move scalp—not fingers. Brush your hair while moist. It will stay the way you want it.

Dashing Pinaud's Eau de Quinine over the scalp kills dandruff. *Working it into the scalp deeply every day* saves the hair.

Buy Pinaud's Eau de Quinine at any drug or department store today.

FREE: ***generous sample bottle of the*** famous Pinaud's Eau de Quinine. Write today to Pinaud, Inc., Dept. A-3, 220 East 21st Street, New York City.

IT'S VERY EVIDENT—*the baldness that will make this young man look like an old man long before his time. Daily Pinaud treatments begun even now, will destroy dandruff; check baldness; nourish and save his hair*

Look for Pinaud's signature on every bottle

PINAUD'S *Eau de Quinine*

Copr. 1928, by Pinaud, Inc.

KEEPS YOUR HAIR HEALTHY, YOUR SCALP CLEAN

wea her, and speak to the folks to keep the goats well out of the garden. . . . If any letters be come for me, send them by this bearer. I will trouble thee no further. The Lord bless and keep thee, my sweet wife, and all our family; and send us a comfortable meeting. So I kiss thee and love thee ever, and rest

Thy faithful husband,
JOHN WINTHROP.

That after twenty years!

THE gist of the American family problem today is the question whether for that element in the old-fashioned home we propose to substitute the sexual experimentation of trial marriage.

Personally, I do not for a moment believe that the American people in the long run will consent to that exchange. If they do consent to it, the degeneration of American civilization will come on apace. For the attitudes and actions involved in trial marriage are, first, psychologically disruptive to the individual and, second, socially ruinous to the nation.

The psychological aspect of the matter is primary. Nature has been at work a long time on the sex-problem and we cannot by any swift, slick changes outwit what Nature has had in mind. Today an immense amount of cheap thought and talk is going the rounds of novels, dramas, movies, magazines, and conversations, to the general effect that sex is an imperious urge toward personal pleasure in general and bodily gratification in particular.

The plain fact, however, is that from Nature's standpoint sex is only a lure to get two people to love each other deeply enough and long enough to bring up children. What Nature wants is children, and because Nature always makes attractive the road to the goal she seeks she has allured men and women into family life by pleasant paths. What she was getting at, however, was not the pleasure of the path but the goal of the children, and anybody who makes it his principle of action to steal the gratification of Nature's lure without fulfilling Nature's purpose is committing a psychological theft on which Nature wreaks inevitable vengeance.

The whipper-snappers in psychology may speak to the contrary; the seers tell the truth. Says Professor Overstreet:

> As I look around me, I seem to find that the one thing which deepens life, which gives it "resonance," which brings it great joy, is the putting one's self outside one's self into another personality. It is this *identification with another personality*, and not simply bodily gratification, to which the whole sex-process seems fundamentally to point. . . .
>
> If mating fails of this, it seems that it is no real mating. If it does achieve it, then a kind of conjoint personality is developed, which, in the highest sense of the word, is creative of new values in life. Sex-life, it seems to me, does not reach its full possibilities unless it reaches this level of creative love.

Trial marriage, therefore, in its ordinarily accepted meaning, is psychologically a truncated, arrested, balked experience. It means emotional repression and disruption. Some people assume that because the idea is new it is an advance. As well assume that being killed by an airplane or going to war with poison gas is an advance.

Nature is too old at this sex-game to be so easily circumvented. And what she signifies by the game and intends to get out of it is clear. The complete sex-experience means falling in love, learning

He stands out in the crowd

SWIFT COMPETITION in today's business gives every man his chance. If he is ready, he walks through the door to bigger things. If he hesitates, the door swings shut.

Today, the valued employee is the one who does his work well and is constantly on the alert for new ideas—ways and means of building profits.

Among other things, he is an authority on office equipment. He suggests ways for saving time and labor, speeding up work, increasing efficiency.

He stands out in the crowd! He is a profitable investment for his company.

He knows, for instance, that the Addressograph is more than an addressing machine—that it imprints, lists and addresses 165 distinct business forms 10 to 50 times faster than pen or typewriter.

The Addressograph Research Bureau is anxious to help such ambitious employees. This bureau is the centralization of the actual experiences over a period of 35 years of thousands of Addressograph users in over 3000 different lines of business and non-commercial activities. Upon request this Bureau will supply detailed information concerning profitable ways of using Addressograph equipment as outlined on the Profit Analysis Sheet.

Every business executive should check the Profit Analysis Sheet. It will give him a new conception of the broadness of Addressograph service. If desired, an individual survey of your business will be made.

"... Flashed right in his face"

"My young nephew, not 10 yet, was playing with an old powder can. He foolishly thought he would burn the pinch of powder he managed to shake out of the 'empty' can. There was an explosion right in the boy's face. One whole cheek was blackened. Eyebrows were singed off, and one hand was scorched. We treated the burns at once—with Unguentine. The first application soothed the pain. The burns were healed with surprising rapidity. And left no scars whatever."

WE shudder at the very thought of the touch of flame. But records show, all sorts of burns are common. With housewives at their daily tasks, with active, carefree children. And all too often remain scars that blemish a splendid body for life.

Doctors say, "Treat even a little burn on the spot!" There is one famous surgical dressing physicians and hospitals everywhere rely on. Keep a tube of Unguentine ready!

Apply Unguentine freely. At once comes blessed relief from pain. The scorched surface is protected at once; you are safeguarded against infection, and the tissue is repaired surely, promptly. Best of all, with Unguentine healing is so perfect that, even in severe cases invariably *not a trace of a scar is left.*

For all cuts, bruises and scratches as well as for burns. In severe cases, apply it on gauze and bandage lightly. Make it a part of your household equipment today. At your druggist's—50c. The Norwich Pharmacal Co., Norwich, N. Y.

LEFT

"I was taking out a cake. The oven door slid to on my arm—the left one. I received a burn about two inches long . . . A blister formed which I broke against the woodwork. The wound became inflamed, and was very painful. I was advised to use Unguentine. I applied it frequently and faithfully. Very quickly the pain left. Soon my arm was healed beautifully—and 'nary' a scar was left. Unguentine is a marvelous healer."

the secret of staying in love, mastering the art of growing up in love, enlarging the love-life into a family of children, until within the green cusp of a physical relation grow the flower and fruit of a spiritual union.

That is the complete sex-experience. Anything less than that is a pitiful truncation. As Mark Twain said out of his own experience: "No man and woman really know what perfect love is until they have been married a quarter of a century." The first and primary trouble with this new philosophy of marriage, as trying on a pair of shoes, is that it is utterly blind to the biological and psychological facts about sex. It represents not advance but ignorance.

Tragedy and comedy are mingled in the desperate endeavors with which some people cloak the facts of advancing age by superficial camouflage. By hook or crook, dress, cosmetics, or kittenish ways, they refuse the normal development involved in growing older and try to retain their adolescence. They try making their springtime permanent and, inevitably failing in the attempt, they thereby ruin the natural loveliness of their summer and autumn.

This same fatal blunder in the love-life is encouraged by trial marriage. People try to retain the age of romance. When it wears out with one person, they try to regain it with another. They are encouraged in this by the imbecility of our movies and novels, where romantic passion is pictured as the end of the love-life, whereas it is only the beginning. So, centering their attention on the romantic emotions as the essence of sex experience, they flit like butterflies from one honeyed spot to another. Meanwhile, they have utterly lost touch with psychological reality. The fact is that the only complete love-life moves out of adolescent romance as inevitably as spring moves into summer, and is consummated in a developing friendship, with common affection for children, common interest in work and play, and the restfulness of mutual trust. Any experience less than that, or other than that, is psychologically truncated and repressed.

THIS approach to the matter is of the utmost importance. The accumulating revolt against the old-fashioned family has attacked the marital laws; but there are two kinds of law—enacted law and discovered law. For the first kind, go to the legislatures, those legal rabbit warrens that with such amazing fecundity turn out laws by the thousands. But for the other kind of law, go to a scientific laboratory. There men do not make up laws but discover them. There the word "law" does not mean an imagined ideal as to how things ought to act but a veritable discovery of the ways in which they do act.

When, therefore, our new generation flouts the laws that hitherto have regulated the moral life of the family and the individual, it is exceedingly important to distinguish which of the two kinds of law is being flouted. The man-made variety may profitably be changed or rescinded. But the discovered variety, that man has not made up but has found out by the study of Nature's law-abiding processes, cannot be disobeyed with impunity.

Today loose conceptions of marriage as largely consisting in bodily gratification are defended in popular minds by a sup-

How I Made a Fortune With a "Fool" Idea

Learn my money-making secret—Be a Real Estate Specialist—Start at home, in your spare time—Use my successful system—Free book shows how.

"IT'S a fool idea!"

That's what my friends said, when I told them about my idea for starting a real estate business "on the side."

But with that "fool" idea I made more than one hundred thousand dollars net profit.

No matter who you are, where you are, or what your sex or present occupation, if you want to do what I did—if you want to get out of the $25-a-week crowd and build up a high-class money-making business of your own—right at home—in your spare time—send at once for my free book which opens wide the door of the biggest and best money-making business opportunity you ever heard of in your whole life.

Use My Successful System

When I started in real estate, I tossed overboard all the hit-or-miss, haphazard, rule-of-thumb methods of the past, and put into operation a system of my own which is as superior to the old way as the modern mazda lamp is superior to the tallow candle of our forefathers.

With little education—no experience—no influence—and less than five dollars capital—I started in my spare time and met with instant success.

If you want to follow in my footsteps—if you want to use my amazingly successful system—send for my free book now. It tells how I succeeded—how I have helped other men and women win big success—how you, too, can succeed—how you can have a splendid business of your own and make more money than you ever made before.

A Wonderful Business

Real estate—conducted my way—is a great business. It is as permanent as the earth itself. It is getting bigger and bigger as the country grows. It doesn't require years of study to learn, like most other businesses and professions. It offers enormous earnings to ambitious men and women. Users of my system are making $1,000—$5,000—$10,000 on single deals—as much as the average man gets for months and years of hard work. And the business is practically unlimited. Ten million properties are now on the market for rent, sale or exchange. And you can start with little or no capital—right at home—in your spare time. I did. So did others. So can you. My free book tells you how.

A well-known Cartoonist's conception of my Idea

Read These Records

Here are just a few brief extracts from the many letters received from happy users of my money-making real estate system:

"Made $5,500 on first deal after getting your system."—Mrs. Evalynn Balster, Chicago. (*Former School Teacher.*) "Sold a lot by your methods in less than one hour and my commission was $800."—J. A. Furguson, Fort Lauderdale, Fla. (*Former Dry Cleaner.*) "Sold over $100,000 worth of property my first year with your methods."—H. D. Van Houten, Passaic, N. J. (*Former Grocery Clerk.*) "Have sold thousands of dollars worth of property your way. Have deals that will go beyond the $300,000 mark."—Carrie Marshall, Ocean Springs, Miss. (*Former Housekeeper.*) "My first day's work in real estate netted me $435. I recommend your system to anyone wishing to get into a pleasant and profitable business."—F. B. Bennett, San Diego, Cal. (*Former Planing Mill Man.*) "Have sold one $5,000 lot and 3 houses so far, with your system."—Mrs. B. H. Morehouse, Brooklyn, N. Y. (*Former Housewife.*)

These are just a few samples of success that you will read about in my free book. Get it. Read it. Follow its instructions. Make big money my way.

Get Free Book Now

My big, new illustrated book is filled with fascinating facts about my kind of real estate business—what I did—what others are doing—what you can do.

Mail coupon right now and get this valuable, money-making information free. It doesn't cost you a nickel to find out what this book can do for you. So act at once. You will never forgive yourself if you turn your back on this unusual chance to win big business success. Address PRESIDENT, American Business Builders, Inc., Dept. 4-10, 18 East 18 Street, New York.

$1,000 Reward

We do not claim that all who follow our instructions make such amazing profits so quickly and so easily. But we do say that the fact that so many have done so is proof that the average person can make more money in less time *our way* than any other way we know of. And we back up this statement with an offer of *One Thousand Dollars* in gold, to any one furnishing proof of any other course of any kind that is helping as *many* men and women make *as much* money in as *short* a time as our Real Estate Course.

Galvanized Sheets

Years of experience and careful research enable us to manufacture highest quality Galvanized Sheets for roofing, siding and all purposes to which zinc coated sheets are suitable.

Apollo Galvanized Steel Sheets

for Better Sheet Metal Work

APOLLO BEST BLOOM GALVANIZED has been the leader since 1884—and is well known for its ductility, its splendid coating, and general excellence.

APOLLO-KEYSTONE GALVANIZED embodies all the excellent qualities of the Apollo brand, and in addition has a Keystone Rust-resisting Copper Steel alloy base. These sheets last longest for roofing and siding, spouting, and all exposed sheet metal work. Keystone quality also excels for tanks, culverts, flumes and similar uses.

For tin roofs for residences and public buildings, use Keystone Copper Steel Roofing Tin Plates; clean, fireproof, durable and satisfactory.

This Company is the oldest and largest manufacturer of a complete line of Black and Galvanized Sheets, Full Finished Sheets, Automobile Sheets, and Special Sheets for all known uses; also Tin and Terne Plates adapted to every requirement. Sold by leading metal merchants. Write for copy of our BETTER BUILDINGS booklet—also our ROOFING TIN booklet.

Products of QUALITY and Service!

posed psychological law to the effect that the sex-instinct must not be suppressed but expressed. To let yourself go, this teaching says, to do as you please, to give your emotions gangway, abandon yourself and have your fling—this is the law of a healthy sex-life. In consequence of this supposed psychological doctrine, we have wild talk among our young people about the value of promiscuous experimentation during youth, and among our older people about marriage being a temporary arrangement for mutual gratification.

As a matter of fact, this idea that the sex-instinct must not be controlled, and, when other interests make it wise, suppressed, is psychological nonsense.

CONSIDER the matter with reference to other instincts. We have, for example, the instinct of self-preservation. It is fundamental. If instincts must not be repressed, that of all others must be respected. But if with your wife and children you should be in a shipwreck and, your instinct of self-preservation becoming dominant and imperious, you should crowd into a life-boat and leave your wife and children behind and be saved while they drowned, how would you explain the matter to your friends? Would you say, I have just been reading a book on the new psychology—I felt that if I repressed my instinct of self-preservation I would be in danger of serious mental derangement? You would not get off by any such method from being an outlaw and a pariah.

Most of the cheap, popular talk about the danger of repressing instincts is nonsense. The fact is that we repress instincts or, better yet, sublimate them, every hour of our lives, or else we would be in an asylum or a jail. The psychological law of life is not to say to any instinct, Do as you please! but out of all our instincts to build a personality. At the beginning each one of us is a mess. "I'm not a man, but a mob," says a character in one of H. G. Wells's stories. Each one of us must start as a mob of unorganized instincts, and the law of successful living is to build a personality, until all the instincts—self-preservation, pugnacity, sex, and the rest—become driving power in a mental and spiritual engine, integrated, unified, purposeful, and going somewhere. That is not enacted moral law; that is discovered law.

If I write dogmatically, I ask pardon, because I see this thing so often. Here is a typical story of a woman early and miserably married. Her husband died, which, she said, was lucky, because she would have killed him if he hadn't. And then for years afterward came a long series of liaisons operated as decently as liaisons can be. She had not repressed any instincts; but she was not happy. She was in hell. A brilliant woman of high intellectual genius, she thought she had been fulfilling a psychological law, when she had been smashing it all to pieces.

The real psychiatrists, like Doctor Hadfield of London, see this thing clearly. He teaches that in the course of evolution we have long since outgrown the absolute sway of the polygamous impulse, and have come over into the real, if partial, sway of the monogamous impulse. The monogamous impulse is in us all, so that the trouble with this talk of letting yourself go is that it comes too late in the evolution of the race. The highest happiness for any well-developed man or woman lies in a single, loyal love that grows up from romance into abiding friendship. That is psychological law.

So far as enacted law is concerned, therefore, the endeavor must be to encourage, so far as law can help in the matter, this normal, healthy, monogamous relationship. I have emphasized the psychological importance of monogamy to the participants in the marriage. Of course the social significance of monogamy to the children and, therefore, to the nation is obvious. Nature, during the course of evolution, prolonged the infancy of the human child until the family became a biological necessity. The child's long dependence makes sustained paternal and maternal care indispensable, and from this prolonged mutual relationship came all our finest moral qualities.

Human virtue was created out of the family, and human virtue will perish with the family. There are no substitutes for parents.

This stake which society at large has in the matter, therefore, is tremendous, and whatever the State's laws can do to encourage monogamy should be done.

This does not mean, however, that this crucial problem can be solved at the divorce end. Making divorce merely difficult, restricting divorce to statutory grounds, and similar measures, are in themselves worse than useless. There is no good in pretending that we have true monogamy because two hopeless misfits still call themselves Mr. and Mrs., nor is there any profit in supposing that a single act of infidelity is a just cause for separation while years of secret brutality are not a cause. Treating divorce with more intelligence may help matters a little, but making divorce more difficult will not in itself help at all.

THE only solution of the problem, if there is such a thing, lies at the marriage end. Let us get clearly in our minds that in revolting from obsolete fashions in the ancient family we must not revolt to trial marriage. Let us see distinctly that the monogamous relationship is the only psychologically complete, emotionally satisfactory, ethically serviceable, and socially productive form of marriage. Let us get this truth clearly in our minds, and make it clear to our children. Then let this corollary be taught: that marriage is the most serious decision that men and women can face and that, therefore, it is "not to be entered into unadvisedly or lightly; but reverently, discreetly, advisedly, soberly, and in the fear of God."

OBSCURE one day, famous the next! Unknown, and then, suddenly, fourteen thousand newspapers printed stories about him! That was the fate of Roy L. Gray, *the* average man, selected by "The American Magazine" and interviewed one year ago. What effect did the storm of publicity and bewildering offers of money have upon this small-town merchant? How did he like his place in the sun? Next month he tells you about his adventures in fame, and it's a fascinating article!

What, oh, what a flavor there is to Heinz Cooked Spaghetti! What a snappy, tangy flavor. It's the special cheese you taste for one thing. And the sweet, spicy sauce of juicy, red, vine-ripened tomatoes. And the good tender Heinz made spaghetti, cooked just right. Serve it hot, serve it quick, serve it heaped up high. Italian style? Yes, sir—Heinz Cooked Spaghetti in Tomato Sauce with Cheese — cooked all ready for you — heat, serve, and enjoy.

There's a certain knack to making a real dish of spaghetti, as any good Italian chef will tell you. You know yourself how much depends upon the flavor of the tomato sauce — the blending — then the cooking ..... To get the sauce exactly right we grow our own tomato seed, start the plants, and use the tomatoes — fresh. The cheese is a special kind we import because of its remarkable savor. The dry spaghetti we make from a carefully selected hard, durum wheat. We go so far, even, as to wash and filter the air in which the spaghetti is dried. So you see one of the reasons why we have succeeded in catching the spaghetti *flavor* is because we take such extraordinary care that every ingredient is right. Such care with every Heinz product has made the name Heinz mean *Flavor* • *H. J. HEINZ CO., PITTSBURGH, PA.*

HEINZ COOKED SPAGHETTI IN TOMATO SAUCE WITH CHEESE

The "Applesauce Twins"
make painting a farce!

THE latest fashion in "cheap" paint applesauce is out. It goes like this . . .

"Our price is *very low* but our paint isn't 'cheap,' because, etc., etc., etc., etc."

Don't be fooled. A *low-price-per-gallon* means a *"cheap" paint*—a *skimped* paint—a *terribly costly* paint—*every time.* And there's no "because" that can explain it.

Only one thing is more costly than "cheap" paint. Just let "Cheap" Paint's twin brother, "Cheap" Painter, in on the deal.

There you have a combination that will make a farce of any house paint job.

CHEAP PAINT ISN'T CHEAP AT ALL

"Cheap" Paint is costly enough, *alone,* as thousands of home owners now know. But when you add the careless preparation and unskilled daubing of "Cheap" Painter—you have *the costliest paint job in the world.* Don't let these "Applesauce" Twins fool you. Don't throw good money away.

There is only one way to save money on a house painting job . . . use the *best* house paint and let a master painter do the work.

Fine old SWP House Paint, for example, is made of superfine materials. It may be a little higher priced by the gallon, BUT—for every 11 gallons of "cheap" paint required, *only 7 gallons of fine old SWP are needed.* That 4-gallon saving makes SWP cost about the same as "cheap" paint, on the wall or by the job.

The cost of any paint job divides about like this: *One-third* for paint. *Two-thirds* for labor.

Don't try to save money by hiring a "cheap" painter. His care-

Original from UNIVERSITY OF IOWA

For economy,

use the best paint and engage a good painter

less work *will cost you dearly—in repainting expense.*

Don't engage a *master* painter and then ask him to use "cheap" paint. With all his skill, he can't make "cheap" paint *last.*

It quickly cracks, chips, peels. The *cheap colors* fade. Every year or so it has to be "repainted" at heavy expense.

The only combination that will *save money* for you is a *master* painter and *the best paint money will buy.*

The master painter is an artist. He is trained. He knows his profession. He uses good equipment. He prepares the surface carefully. He applies the paint skillfully. He is conscientious and takes pride in his work.

So, when a master painter applies fine old SWP House Paint for you it assures a handsome job —*at lowest paint cost per square foot of wall*—a finish that will serve for many years—*at lowest cost per year.*

In other words, fine old SWP and a Master Painter is the most economical combination of all.

The "Master Touch"

You may hear arguments as to formulas—meant to lead you astray.

Just remember this. The SWP balanced formula has been openly printed for years. Anyone can have it. Yet the characteristic qualities of SWP have never been duplicated. Why? Because formula is only *one* factor. The *quality of ingredients* is equally important. These might be duplicated and still SWP would remain unchallenged. *Because* there is one element in fine old SWP that never has been and never can be copied successfully.

It is the "*master touch*" of the scientific men of Sherwin-Williams.

These laboratory experts are to "paint" what Edison is to *electricity*—what Marconi is to *wireless.*

Their "master touch," which makes SWP House Paint different from all others, is a *human* ingredient, impossible of imitation or duplication.

Only Sherwin-Williams has it. Only SWP House Paint users benefit by it.

Before you buy any "cheap" paint, visit Paint Headquarters, your local Sherwin-Williams dealer. Get his advice and material estimate *on the job.*

Compare it with "cheap" paint. And remember, that what is true of house paint is true of any other *exterior* or *interior* finish. It must be *good* to be *economical.*

See Paint Headquarters and save money

If you do not know a reputable painter who will apply fine old SWP House Paint for you, write us. We will send you the name and address of one who will.

We will also send a free copy of our famous Household Painting Guide, which saves costly mistakes in painting.

Stay Awake Nights?

Then Accept the Test Below

Because Ovaltine is not a drug, but a unique food-drink; because it brings instant, all-night sleep that builds up tremendous energy for the next day—over 20,000 doctors endorse this natural way to healthful sleep

Now!—INSTANT SLEEP *Utterly Without Drugs! All-Day Energy Tomorrow!*

There is now a way as free of drugs as the bread you eat or the milk you drink that induces almost instant sleep.

A way that does far more than merely foster sleep. That rebuilds your depleted tissues while you sleep. And thus provides the kind of sleep that brings all-day energy tomorrow.

Largely on physicians' advice, people are flocking to its use. Please use coupon for 3-day test.

Not a Medicine

It is called Ovaltine. A delicious food-drink. The discovery of a world-noted Swiss scientist. You take it at bed time. And soon you fall asleep.

Next morning you wake up feeling like a new person: For the peculiar dietetic property of Ovaltine re-supplies your system during the night with energy lost the previous, active day. Builds you up and rejuvenates you.

Over 20,000 doctors are advising it. Its use has spread over some 50 different nations. New to America, it has been used over 30 years in Europe.

Acts This Way

Ovaltine acts on entirely different principles from sleep-producing drugs. Remember, it's not a medicine. It contains no drugs. It's a food.

Thus, you can take it night after night and not only avoid a habit, as with drugs, but build up your health as well.

Instead of drugging your nerves to sleep, it acts to soothe you to sleep. For it corrects the digestive unrest to which most sleeplessness now is traced.

It marks one of the most important scientific findings of its time. And must not be confused with "Malt" or "Chocolate" preparations which may claim the same effects or taste like it. It is widely different in formula and result.

Doctors advise it not only for sleeplessness, but for nerve-strain, malnutrition, general run down conditions, for nervous, underweight children, for nursing mothers, and the aged. Thousands take it to relieve fatigue during the day.

Accept 3-Day Test

Please accept the 3-day test below. Note how quickly sleep comes. Mark how great your next day's energy. Mark the difference in your whole appearance.

Mail the coupon. Or obtain in regular size package at drug or grocery store. Also served at soda fountains.

MAIL FOR 3-DAY SUPPLY

Make this experiment. Drink a cup of Hot Ovaltine before retiring for three nights. Note how quickly you go to sleep; how refreshed you feel when you awaken; your unlimited energy next day. Mail coupon, with 10c, for a 3-day introductory package.

What Education Means to Me

(*Continued from page 13*)

Personally, I think the most encouraging curiosity a reader can have is the realization that these people whose record has come down to us over centuries were, after all, much like ourselves; and their lives, therefore, are fair parallels to what we would have done in similar circumstances. To read history with this point of view is to enlarge our knowledge of the life of today.

In many ways, the study of imaginative literature can be distinguished from the study of history. It is one of my own hobbies to insist that literature should not be studied as a record of the past, but rather as a picture of universal human nature. But for the moment, I am suggesting that history may be taken in this universal sense, and I prefer to make no further distinction here between works of imagination and works of supposed fact. If our minds are healthy, we ought to have some curiosity about the great books whose titles we constantly hear. We have known Plato, and Homer, and Dante, and Goethe, and all the others through the constant mention of their names, but perhaps we have never looked into their pages, and feel no great impulse to do so.

OUR excuse to ourselves is probably that these writers are difficult to understand, and we lack the adequate preparation. But the fact is that all the great writers address themselves to the general public—to people very much like ourselves.

The bold thing, and in the end the natural thing, is to take down Plato, or Shakespeare, or Dante from the library shelves, just as though their names were Smith, Brown, or Thompson, new authors whom our friends have happened to mention in our presence. I won't say that an approach to old masterpieces made in such a spontaneous and casual manner will yield all that a scholarly study of them might do; but it will yield the essence of their genius, and if we want further details we get it exactly as we study history; that is, we look up the author in some standard work of reference and begin to read the books suggested in the bibliography of the article. Having found out the principal works of the man, we pass on to criticism and biographies.

Next after the desire to know something of history probably comes our wish to know what might be called, in a large sense, geography. Not simply the outline of the map, but the present distribution of races, of peoples, of economic resources and tendencies, of politics and of ideals. We can't read our newspaper with its bulletins from all quarters of the globe without acquiring some curiosity as to those places and peoples. Geography so conceived is only a sort of horizontal history; it is the answer to our wish to know more of those who differ from us, not in time, but in place.

The study of geography can be undertaken in much the same way as the study of history. In this case, however, since it is the contemporary world we are dealing

The Sport Sedan

Priceless!

There is something outside of and beyond expert salesmanship and paid-for advertising.

It is the friend to friend, word of mouth recommendation expressed by the man in the street when he says, "I wouldn't change my Victory Six for any other car in the world!" An advertisement like that is priceless. It can't be bought. It must be *earned*.

It is because the Victory Six has *earned* this honor that it has become the most popular car in its price class in America.

We can only *suggest* the superiority of the Victory Six in a paid advertisement like this; the advertisement that can't be paid for *confirms* it.

The first step toward bringing you and the Victory Six together is a demonstration that any Dodge Brothers dealer will be glad to give you. Why not take it today—yourself at the wheel?

We are interested in the Harley-Davidson Package Truck. Send us literature. Our line of business is:

(Write name and address plainly in margin below, tear out ad and mail.)

with, the material is more likely to be found in the serious magazines than in the older encyclopedias.

We hear of the Balkans, of Russia, of India, of Africa; we see in the newspaper that the British Empire has changed itself into a Commonwealth of Nations; we are told that the former Empire of Austria-Hungary has been broken up. Our curiosity ought to be, and probably is, great in all these directions. But there, too, a lack of courage may hold us back. The subject seems too vast and too difficult for us to master without training.

Yet many of the large newspapers make a point of listing the latest books on contemporary international politics. We have only to begin with whatever book attracts us most. In its pages we shall find references to other books, and other articles, and if our curiosity lasts long enough for us to follow up these references, we shall find further titles to inquire into.

TWO or three months of such reading, even in the small intervals of time that I have assumed, would make any one of us competent to understand what is going on in the world and to make use of any further information which may come our way.

As far as geography is concerned, of course, the sources are less to be found in the record offices of governments than on the actual globe. A vital interest in what is going on in the world leads us finally to travel and see for ourselves. But I say that we really ought not to travel at all until we can take abroad with us some genuine curiosity. As a mere amusement, a way of spending a summer, travel is one of the most fruitless and expensive commotions we can make in the world. But if, before we go, we have organized our curiosity, and prepared ourselves by reading to appreciate what we see, foreign lands will have a meaning for us, and a visit to them will be a discovery of ourselves, a revelation of our own lives.

I can imagine many a man and woman arriving at this point in their self-education, and becoming once more discouraged; new obstacles will begin to show themselves: In the first place, geography as I have loosely defined it, the state of the contemporary world, is now involved with the study of geology. We believe nowadays that what happens on the surface of the earth is partly explained by the structure underneath; it is not by accident that great cities are located where they are. It is not at all by accident that so many battles have been fought on the same spots, or that races have migrated over the same wide thoroughfares.

We can easily admire the correlation of geography and geology, but at once we are scared off. How can we master geology? The answer is quite simple: We can master geology as we master any other subject. No field of knowledge is really difficult if we take the steps. The method in this case is still the simple one suggested before—to get from the encyclopedia, or from the most available book in our local library, all the information there given, and to read on in the more profound books there referred to. It is a great liberation for any one of us to realize that all the fields of knowledge are really open to us at any age, if we care to enter them. When we were in school we made excuses for our indolence by believing that we had not a mathematical mind, or that a gift for languages was left out of us. But if later we had any reason to master a language, or mathematics, somehow we did it, and the supposed obstacles melted away.

That leads me to speak of one final obstacle in our study of history and geography. Some of the best books on the subject are in other languages than ours, and are not yet translated. Instinctively we surrender before the foreign language. Yet it is only the literal truth that anyone can learn to read a foreign language—I don't say speak it, but read it—by a little examination of its grammar, and by the consistent use of a dictionary for a few months. If you stop to think, you will admit that the immigrant coming to our land with no knowledge of English often gets on very well after a month or two; he can express himself and he can understand.

When I was a young man and needed a certain foreign language for some work I was doing, a great scholar, genuinely sensible and humane, told me I could get that language in six weeks, for all practical purposes. I didn't believe him; but I found by experiment that he was quite right. What I did was to master the forms of the nouns and adjectives, and the forms of the verbs. After that, I read the books I needed with the help of a dictionary, and I took time to memorize carefully each new word as I came on it. In school we never took this precaution, and consequently had to look up the word again and again. But if you learn ten new words of a language in a day, you will have three hundred at the end of the month, and more words at the end of a year than perhaps you use in your native conversation.

In the third place, after we have attended to history and geography we can hardly escape some curiosity about the view of life which dominates the times in which we live. Perhaps even after so many years we are still in the state of infancy, content to accept without inquiry whatever philosophy of the universe is current at the moment. The grown-up person, however, wants to understand it for himself.

In another age, the dominant point of view would have been theological, and theological points of view are still vital among us, and need to be studied much more than they are, especially by those who profess to believe them. The Catholic or the Protestant or the Jew whose piety keeps him faithful to his religious tradition ought to have enough intellectual curiosity to find out what that tradition is. No aspect of middle life is more discouraging than the disposition of many good people who devote themselves to noble causes, but let their devotion end in the realm of action or conduct, and who make no connection between it and their minds.

TODAY, I suppose, the dominant philosophy is scientific; wherever we turn we make use of the practical results of the scientific spirit. But here, I think, we come on the same disturbing tendency as in the case of the theological philosophies. We are quite willing to assent to a scientific philosophy or to profit by its results; but we are rarely fired with any desire to know what science is, or to acquire for ourselves a scientific spirit. Looking back upon that period, upon what we too often call the "Dark Ages," we flatter ourselves that there is a contrast between their obscurity

TO MAKE DELICIOUS COCOA QUICKLY

The best and easiest way to make Baker's Cocoa is to put 4 tablespoons of cocoa and a cup of cold water into a saucepan. Stir it over heat until it's smooth; then let it boil two minutes. Then add three cups of milk, a dash of salt, and 2 to 4 tablespoons of sugar; heat it until it foams. Then beat it well, and serve it at once. This makes about 4 cups.

THERE IS SLEEP IN THE PILLOW AFTER THIS SOOTHING DRINK

SLEEP is the great restorer. To a tired body it brings new energy and life. To a jaded mind—new enthusiasm.

Insomnia is the great destroyer. Morning following in its wake finds both body and spirits low. The day is robbed of its ambition and its joys.

What folly to drink a beverage at night that your experience has shown causes wakefulness. How sensible to drink a delicious chocolate-flavored beverage that gives nourishment to sustain you through the night's long fast and invites peaceful sleep!

If other beverages tend to keep you wakeful, try a steaming cup of Baker's Cocoa made according to the wholesome recipe above, with its generous supply of milk, and the rare chocolate bouquet and flavor of the world's finest cocoa. And give it to your boys and girls for that rich, energy-building nourishment so essential in helping them to Optimal Health, the new physical ideal of childhood.

BAKER'S THE OUTSTANDING CHOICE OF EXPERTS ON QUALITY AND FLAVOR

Wherever assured quality, flavor and purity are demanded, an overwhelming preference is expressed for Baker's Cocoa. In recent investigations, 82% of domestic science teachers, 78% of professional nurses, 79% of home demonstration agents declared that their choice of all the cocoas made throughout the country is Baker's. Skilfully blended from the finest cocoa beans of the world's best crops—manufactured with most scrupulous care, Baker's Cocoa has set the standard for purity and excellence since 1780. Its nutritive value is high above government standard. Serve it tonight to the whole family for a good night's sleep.

and our light. We can see that the learning and wisdom of those times lodged in a very few minds; but our knowledge, we should like to think, is diffused among many. The truth is, however, that we are much like them.

All that the average citizen knows of science now are the general rules of conduct by which we keep ourselves in health, use the radio, and run our motor cars. We may know even less of scientific principles than a man in the Middle Ages knew of scholastic philosophy, for he did hear sermons quite regularly, and we as regularly avoid lectures. What is more unfortunate, we probably have less of the scientific spirit than the average man then had of true saintliness. If it is true that theology, when it ceases to be the enraptured expression of a deeply worshiping soul, too easily becomes a safe method of reasoning for the spiritually indolent, then it is still truer that science, if the scientific spirit is left out, converts the world into an enormous toy. Or, more seriously, into a fearful juggernaut, which we can start and to some extent direct, but which we can't stop.

When we think of science as a field of education, most of us wish we had taken more courses in biology, chemistry, physics, and geology. But we might excel in such studies and yet lack the scientific spirit. What most of us need is rather the companionship of minds like Darwin, or Pasteur. By associating with them we might catch their vision, and from their example acquire intellectual and spiritual modesty.

Our best method, again, is to consult the standard works of reference for the lives of the great scientists, then to read the standard biographies suggested in these articles, and from those books to read on into the lives of other scientists. The time will come in our reading when we wish to master the science itself in the laboratory. To accomplish this, we probably need only the courage to inquire at the local high school or college, Y. M. C. A., or other such organization. The mature person who wishes to learn would find the door closed nowhere.

FINALLY, a mature person will want to master to some degree what might be called the arts and sciences of life. The phase is formidable; so perhaps is the thing. By arts and sciences I mean all that kind of activity which is creative or expressive.

Much of the education which the Greeks had when Athens was at its peak, lay in this realm. Athenian boys seem to have been trained, as we say, for life. The amount of time they spent on books was small, and the preparation spent in the practice of some science or some art, in astronomy and geometry, in music and dancing, was great.

Since books have so fearfully multiplied in the world, we have to give far more time to them than did the Greeks; but I think a natural human being, even after he has passed from the crude stage of impulsive action to habits of thought and reflection, will always prefer to live, first of all, rather than to read how others have lived. The practice of some art, of some expression which is ourselves, and which adds beauty or comfort to our world, is essential for the happiness of every one of us. The art may be music, or painting, or dancing, or what not. But we say, "When I was young I wasn't trained in this art, and now it is too late."

Courage needed again, and a little common sense. Of course it is harder to excel in an art if we begin late than if we start early in childhood. But since we have only one life here, it is absurd not to start as soon as we feel the urge, no matter what our age. The kind of art we can practice may not please a large audience, nor bring us fame and fortune, but I assume that fame and fortune are not our purpose when in our mature success we try to educate ourselves to live richly.

Now we are after certain advantages for our own souls without which the end of our lives would be poor. The advantages are easy to name: in the first place, when you practice any art you teach yourself what every human being should know—you teach yourself what you really like; what really is your ideal. You may never have thought of it until you began to paint; but then you discover that certain things in the world please your eye more than others. The first great value of self-expression is that you learn your own taste. Until you have tried to dance, or to play music, you probably have had no idea what your taste in those directions was.

SINCE few of us, except professional artists, practice any arts today, we need not be surprised if we are confused in our ideals. The great periods of history, the Classical Age, the Medieval, the Renaissance, and the Victorian, were distinguished by a clear vision of what they liked and disliked. Men and women then got somewhere, because they knew where they wished to go. These periods were of course highly creative; that is, they were times when men practiced the arts. We do not sufficiently realize that any civilization which withholds itself from the arts will be confused in its own mind, spiritually drifting, knowing neither what it is doing, nor what it wishes to do.

The practice of arts improves our character and our manners. It is of necessity a training in taste through association with our better self. Many a man who could not easily be reasoned into the morality of a good life, can be persuaded into decency because a wrong way of living shocks his sense of beauty. I know that artists have sometimes been great in their works and disappointing in their lives; but while they were creating they were great men. I am inclined to believe that while the human race is creating it is at its best; but when it is living on the creations of other times it is open to all sorts of demoralization.

As to manners, if I were trying to correct the manners of a child, I should urge him to practice an art and to exhibit it; to play for an audience, or to show them his drawings. He would soon get what bad-mannered people lack—a sense of other people looking on and judging him. He would realize the pressure of public opinion, and if he had anything of the artist in him he would try to win the approval of those whose judgment he most respects. All good manners have something histrionic in them; they are not natural; they are a performance, and the best inspiration toward acquiring them is a fine desire to be agreeable to others.

YOU *CAN* CHOOSE IF YOU WILL

CHANCE governs the general trend of too many lives. By chance many people live in a certain place, attend a certain school, take the opportune job; they chance upon certain associates, books, and thoughts.

But by courage and determined effort they could choose often-times where to live, what to study and, to a large extent, what to accomplish.

Hundreds of thousands of ambitious people are studying at home in their leisure time. Increased earning capacity is the objective that many are attaining. But whether the attainment be greater efficiency in business, or a more interesting social life, or the real joy of developing a more cultured point of view, the studies that lead to these objectives are available, wherever one lives, through Columbia Home Study Courses. The range of subjects is wide.

COLUMBIA UNIVERSITY

Offers Home Study Courses of University Grade in the Following Subjects:

Accounting
Algebra
American Government
American History
American Literature
Applied Grammar
Astronomy
Banking
Biblical Literature
Biology
Botany
Boy Scouting
Business Administration
Business English
Business Law
Business Mathematics
Business Organization
Chemistry
Child Psychology
Classics
Contemporary Novel
Composition

Latin
Literature
Magazine Article Writing
Marketing
Mathematics
Personnel Administration
Philosophy
Photoplay Composition
Physics
Psychology
Psychology in Business
Public Speaking
Religion
Secretarial Studies
Short Story Writing
Sociology
Spanish, etc., etc.

THESE courses have been prepared by our instructors to meet the special requirements of study at home. While all basic material essential to the full understanding of each subject is fully covered, sufficient elasticity is allowed to permit adaptation to the individual needs of the student. Everyone who enrolls for a Columbia course is personally taught by a member of the University faculty. Special arrangements can be made for group study.

The University will send on request full information about these home study courses. A coupon is printed below for your convenience. If you care to write a letter briefly outlining your educational interests our instructors may be able to offer helpful suggestions. Mention subjects which are of interest to you, even if they are not listed here because additions to the courses offered are made from time to time.

HIGH SCHOOL AND COLLEGE PREPARATORY COURSES

COLUMBIA University Home Study Department has prepared courses covering the equivalent of four years of High School study. This complete High School or College Preparatory training is available to those who can not undertake class room work. We shall be glad to send you our special bulletin upon request.

COLUMBIA UNIVERSITY,
University Extension—Home Study Department,

to choose *right* Pro-phy-lac-tic

and to win brighter TEETH, *healthier* GUMS

1—*Masso Pro-phy-lac-tic. For dental arch that has tender gums. Massages as it cleans.*

2—*Oval Pro-phy-lac-tic. Scientifically designed for small, more sharply oval arch.*

3—*Tufted Pro-phy-lac-tic. Most dental arches are full-formed and require this type of brush.*

Small face shows small dental arch

Full-formed face and arch

Dental arches (teeth and gums) differ. Each requires a different type of tooth brush to win gloriously white teeth, coral firm gums. Read how easy it is to let your mirror tell your type, to know exactly what kind of brush is best for you to use.

THE very next time you look into a mirror, face your features with these facts: 1. Dental arches (teeth and gums) differ in shape and condition...2. No one tooth brush suits all arches, say dentists...3. Pro-phy-lac-tic now offers you a brush exactly designed for your specific type of dental arch.

If you have a full-formed face and dental arch, the Tufted Pro-phy-lac-tic is right for you. Or, your features may be more petite, revealing a smaller than average and more sharply oval arch. Then a smaller, tapering brush is the one you should use—the new Oval Pro-phy-lac-tic.

You may have either of these types and still require a totally different brush. For if your mirror shows soft or tender gums, you need the special care of the Masso Pro-phy-lac-tic. This brush massages as it cleans.

Pick yourself to win

Place yourself. It's easy and fascinating. And... pick yourself to win a sparkling new health of teeth and gums you never dreamed would be yours. The right Pro-phy-lac-tic will help you do it. Gloriously white teeth, coral firm gums, are a fitting reward for these few moments of study about the brush you use twice daily.

All three Pro-phy-lac-tics have been patiently, carefully, scientifically designed. All have high-grade bristles . . . super-polished, transparent handles in color. All are guaranteed.

Pro-phy-lac-tic Brush Co., Florence, Mass.
Pro-phy-lac-tic Brush Co. (Canada), Limited, Montreal

Pro-phy-lac-tic Tooth Brushes

different in shape and size . . . alike in quality

In one respect the amateur in the arts has a great advantage over the professional. The professional painter can operate in only a few limited ways; he can paint pictures and exhibit them in galleries, or he can sell them to private buyers. In either case, his own pleasure in the picture is limited somewhat strictly to the pleasure of creation; he may never see his work again, and perhaps he was compelled to paint the sort of thing the galleries and patrons like. The musician can operate only through concerts before audiences who are for the most part strangers to him.

The amateur, however, can be as original as he chooses. He can practice his arts in his own humble way in the directions which he and his household and his friends like. He can paint pictures, or he can paint the furniture, or, if his wife will let him, he can decorate the walls. Frequently he discovers in this way some new phase of art which later the professional will imitate and improve. But in any case there is no reason why man or woman, at any age, who feels the impulse to practice an art should not at once begin.

I don't mean, of course, that those who have no voice should torture society by singing, or that those who can't paint should make the world uglier than it already is. Some common sense, and some sense of humor is supposed to go along with all this advice. I mean to say only—and perhaps this is a great deal—that when middle-aged people like myself feel the need of more education in order to live fully the rich years before them, they can get this education for themselves with less difficulty than most of us suppose.

Your Cousin Mehitabel

(*Continued from page 45*)

sore spot a little when the first child was born—little Tudor Dainter Whipple-Smythe.

"So this is the new duke, huh?" said Granddad, looking at the baby. "Well, he's a Whifflesnoot all right—got the Whifflesnoot snoot!"

A perfectly detestable thing for a nice old man to say, I submit.

But Cousin Mehitabel is never permanently discouraged. She has the imperial imagination, and it draws her through the ages, and she picks up relations wherever she glides.

If ancestors are as proud of descendants as descendants are of ancestors, the spirit world must be just jammed with eminent ghosts quivering with pride every time they think of Dr. and Mrs. Whipple-Smythe.

Dr. Whipple-Smythe and Cousin Mehitabel went to England five or six years ago, and they visited the hamlet in Yorkshire from which the Whipple-Smythes set out on their voyage to America—the Three Brothers Whipple-Smythe, of course. Mehitabel and the doctor bought a dark and bulky piece of furniture in the village, and had it shipped all the way across the Atlantic. It is called, I believe, a cheese cupboard.

Now, there is no reason on earth why this dusky antique elephant may not really have belonged to one of the ancestors of

ATWATER KENT RADIO

1929 ELECTRIC SET GIVES YOU THE THRILL OF RADIO AT ITS BEST

$77 (without tubes)

MODEL 40 A.C. Set. For 110-120 volt, 50-60 cycle alternating current. Requires six A.C. tubes and one rectifying tube, $77.
Also Model 42 A. C. set, $86, and Model 44 A. C. set, $106 (without tubes).
Battery sets, $49 and $68 (less tubes and batteries).

SWING WIDE THE DOOR

WHAT a world—this new, ever-changing world of radio entertainment. And how easily the door swings back and lets you in. Snap a tiny switch, touch the FULL-VISION Dial—there you are!

A tender song of evenings long ago—flashing scimitars of the Turkish March—the stabbing pathos of Juliet on the balcony—music that makes you say "I could dance all night"—the latest news of the world—the Presidential campaign — baseball — football — everything to hold your interest.

No batteries to think about when your radio is the Atwater Kent all-electric set. No wondering whether your radio is going to work tonight—it always works. No mistaking the voice of a famous singer—the tone is pure. No need of counting the cost of listening—it's only a fraction of a cent an hour for electric current. Nothing but pleasure, relaxation — the true enjoyment of modern radio.

"Radio's truest voice"
Atwater Kent Radio Speakers: Models E, E-2, E-3, same quality, different in size, each $20.

Simple, compact, sturdy, beautiful—the highest development of all-electric radio that you can find today—the Atwater Kent all-electric set is so much better in every way that it leads by a wide margin.

So much better—and yet inexpensive, appealing to thrift as well as the senses of sight and hearing. More than you expect of radio—at less than you expect to pay . . . Consult an Atwater Kent dealer about a home demonstration. The satisfaction of more than 1,700,000 Atwater Kent owners must impress you.

A trial in your own home, with all the family gathered around to share the fun, will prove conclusively that here is *the* 1929 all-electric set.

On the air—every Sunday night—Atwater Kent Hour — listen in!

How soft food robs the gums of health

NO one who has studied the effect of our diet upon the tissues of the mouth can doubt that here lies the reason of modern gum troubles.

There's no mystery about it. The gum walls, like any other living tissue, need exercise. But these soft foods of today—these tender cuts of meat, these creamed vegetables, entrees, and fluffy puddings—they have no power to give to our gums the stimulation they need to vitalize and sustain them.

Gradually enervated by a life of too much ease, gums grow lazy and flabby. They become tender—they bleed. All too often "pink tooth brush" gives its warning that more serious troubles may be close at hand.

How massage and Ipana keep gums firm and healthy

Fortunately the dental profession offers a simple remedy for this difficulty—an easy, natural way to supply the stimulation so vital to the health of our gums. They recommend massage—a gentle frictionizing of the gum surfaces with the brush while brushing the teeth, or with the finger-tips after each twice daily brushing

And thousands of dentists order their patients to use Ipana Tooth Paste for both the massage and the regular brushing. For Ipana contains ziratol, an antiseptic and hemostatic well known to the profession for its value in toning the gums and in strengthening weak, under-nourished tissue.

The ten-day tube the coupon calls for is gladly sent. But a better plan is to get a full-size tube of Ipana at your druggist's. Use it for a month and then see how it has improved the health of your gums—the brilliance and beauty of your teeth.

IPANA TOOTH PASTE

BRISTOL-MYERS CO., Dept. J-108,
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

the good doctor; it is quite possible that it did. It looks old enough to have been on the Ark with the Noahs, and it is as rickety as if Noah had laid it from the deck of his ship to the top of Mt. Ararat and let the whole zoo walk ashore on it as a gangplank. On the other hand, there is not one iota of proof that it ever belonged to a Whipple-Smythe, or a Whipple, or a Smith, or a Whiffle, or a Whifflesnoot, not one single skinny scintilla of genuine evidence.

Nevertheless, in the course of a couple of years it became an heirloom and ancestral piece, handed down from Whifflesnoot to Whifflesnoot; it is now an article of faith with Cousin Mehitabel and the doctor that such is the case. Cousin Mehitabel began to believe it—to believe it honestly and sincerely, without knowing that she was lying to herself—within a few months. The doctor had qualms of conscience, perhaps, as befits his cloth. It was only after Mehitabel had thoroughly hypnotized herself that she was able to hypnotize him. He was doubtful for months; he would look at her uncertainly when she expatiated upon it to callers. But he believes in her; he knows she is a good woman, and honest and truthful; first, her faith conquered herself, and then it conquered him. He tells the story himself now, without blushing, without any remotest consciousness that he may be fibbing.

ANOTHER thing happened on that trip to England that temporarily jarred both of them a bit, however. Mehitabel and the doctor went to the village church, with the intention of looking up the doctor's family record, and the parish clerk gave them the old books to look at. They didn't find any Whipple-Smythes, but they did find that a number of pages had been carefully cut out of the old records. They inquired about it.

"Well, you see, sir," said the old clerk, "those are the records of two families that we're somewhat ashamed of, and the vestry voted—long ago it was, sir, when I was a boy—to cut out all the entries."

Inquiry revealed that a good many of the doctor's ancestors had been hanged, for one thing or another, in the old days. It looked bad. He would never have told the story himself; he felt rather hacked about it. But Cousin Mehitabel was scarcely back in this country (ancestral cheese cupboard and all) before she recovered from the blow.

Recovered is not really the word. She began to glory in it. She became romantic over it. She began to see the doctor's ancestors as the only people in that community who had ever amounted to anything at all—bold, picturesque, adventurous blades they became, in her mind, leading desperate causes sword in hand, going to the gallows out of loyalty to the House of York, fighting for the Stuarts when all others had betrayed them, and all that kind of thing. But still she has not yet aroused any great enthusiasm for this legend on the part of Dr. Whipple-Smythe. That will come later.

I suggested to her, not altogether innocently, not long ago, that probably when Charles II was escaping from England after Cromwell drubbed him at the battle of Worcester the cheese cupboard was one of the places he had hidden in while the Parliamentary armies were seeking him—and that the Whipple-Smythe of that date had been hanged for his share in helping the future Merry Monarch to escape. It seems perfectly possible to me, at that; if he didn't hide there it is about the only place in England a man could get into that he didn't spend at least one night in, according to reports.

COUSIN MEHITABEL frowned at me consideringly when I made the suggestion; 'way back in her mind she really knew I was kidding her. But the story, I could see, caught her fancy. I am watching the progress of the myth. Already there are little signs and tokens that she is beginning to believe it. She doesn't quite believe it yet. But she will. In a year she will be telling it casually, and the doctor will be looking at her with uncertainty and puzzlement in his eyes. In two more years he will be telling it himself—and he is a good and honest man.

Now, here is the interesting thing about Cousin Mehitabel: she's not really a snob at all. She doesn't high-hat anybody. She isn't stuck up. She's genuinely democratic. She doesn't think that she's any better than the generality of the rest of the world. She'll expend just as much time and pains and labor and enthusiasm treeing a Whifflesnoot for you (as Granddad calls it) as she will in treeing a Whifflesnoot for herself. And when she gets him treed she's just as happy and proud and excited and enthusiastic over your Whifflesnoot as she is over her own. The whole thing proceeds from a rich, romantic, historical sense—she likes to think of herself as somehow connected with the colorful, stirring, noble episodes of the past, and the people who participated in them and brought them about. It is *her* kind of poetry! She extends her personality through the ages, and drinks imaginatively from many springs and rivers of drama. She must know as well as anybody else that her thousands of ancestors (like the ancestors of all of us) necessarily include a good many crooks and ne'er-do-wells and outcasts; but she rejects this knowledge—she rejects these people. She will have nobility or nothing! She overdoes it, and makes a terrible bore of herself at times, but there's something admirable in the motive, too. Who can say that it hasn't had a beneficial effect on her character, this thing of living up to the Raleighs, and being worthy of the Whifflesnoots? For (outside of the lies she tells!) she is a very honest woman.

"SOMETHING for Nothing"—that is what the human race from the beginning of time has been trying to get. As a result, thousands of scientific fakers have cashed in on the credulity of people who hope for quick riches. Next month, William Hoskins, a distinguished consulting and research chemist, whose hobby has been the collection of records of hundreds of false scientific projects, tells about some of the most amazing schemes that have caused even hard-boiled business men to part with their capital.

The FOURSOME

Your electrical appliances need this smart new FOUR-WAY outlet

THE modern mode for color is emphasized by this new four-way electrical outlet. Doing away with makeshift wiring, the Foursome permits the simultaneous use of up to four electrical appliances within the limit of your current load. The Foursome is moulded from Coltrock, its mirrorlike finish adding richness to colors harmonizing with the motif of any surroundings. No decorative electrical utility has been so well received. In many homes distinguished by comfort and good taste a Foursome is provided for each room.

The Foursome is $2.50. The Kool-Pull Cord Set is $1.25. The Kool-Pull can be supplied with on-and-off switch at $1.75. All are furnished with Colt's sure-grip caps. Ask for these Coltrock products at Electrical, Hardware, Department Stores and all other progressive dealers

Booklet "G," describing FOURSOME and KOOL-PULL, mailed on request

COLT'S PATENT FIRE ARMS MFG. CO.
HARTFORD, CONN.

The KOOL-PULL CORD SET WITH THE RED PULL

Made from Coltrock, on entirely new mechanical principles which eliminate 80 per cent of the familiar cord set troubles. The new Red Pull protects the cord and prevents scorched fingers. Fits all standard electrical appliances. Easy to plug in and pull out. Approved by Underwriters' Laboratories, Inc. It pays to replace old cord sets with the KOOL-PULL.

(*Continued from page 33*)

admiration—if she'd only known when to stop. But she didn't. Having gone just far enough, she then began to go too far. She began to try to make Sid better than any human being could be expected to be.

She made him drop the Dancing Club, for instance. He had always been one of the most popular members, and we thought, of course, he and Girlie would be at every dance, now that he was in town all the time. But when they didn't show up for several weeks, people began asking Sid what was the matter. And Sid said that Girlie didn't approve of dancing for married people. Well, you could, as Will says, have knocked me over with a bed-slat. Why, the very nicest people in town belong to the Dancing Club.

"What the dickens is the matter with Sid's wife?" Will demanded a little later. "She doesn't seem to want him to go anywhere. He doesn't come to Lodge any more, says Girlie's afraid to stay home alone."

That seemed so ridiculous in the upstairs of a duplex that I couldn't believe it was anything but an excuse. It didn't seem possible that she could disapprove of Sid's going to Lodge, but she evidently did.

In fact, she disapproved of almost everything. She didn't want Sid to play basketball—the team took little trips to play other towns in the state, and she persuaded him it would be too expensive. She told me confidentially that she thought it was very bad for a man to get into the way of being away from home. Sid was planning to go to the Todd and Todd convention at Detroit, and Girlie was taken sick the night he was to start and he couldn't go. She got well the minute the convention ended, and I couldn't get over the feeling that it looked queer.

BUT the worst of all was really funny: Our crowd was trimming up the Sunday-school room for the Christmas tree, making evergreen ropes, filling net stockings with popcorn and candy for the infant class and so on. We didn't get through the first evening and decided to come back the next to finish up. The second night, Sid and Girlie didn't appear, and when I found out why, I nearly died. It seems that the first evening somebody had stuck a piece of mistletoe up over the door and Roger Lane caught Rosie under it and kissed her. Girlie thought that was awful, and wouldn't come back the second night.

Well, what sympathy I'd had for Girlie simply evaporated at that. When things get to the pass where it's improper to go to trim the Sunday-school room for the infant class Christmas tree it cuts down social life too far for me.

As a matter of fact, the Hinkels' social life was getting cut down to just about nothing, except going to church and once in a while out to supper with some special friend of Girlie's. Sid was dropping out of everything in town. I really felt sorry for him, he's such a sociable fellow. I tried to drop Girlie a hint that she was going too far, but she was very cool about it. She was getting a funny little way of pulling her mouth down into a mere button-hole and looking shocked at everything.

All the people who had begun to see what a fine fellow Sid was were commencing to say they'd like to see him show a little spunk.

Will was really worried about it. He had got to be awfully fond of Sid, and he hated seeing him leading such a dull life. Besides, it was hurting Sid's business. I heard of lots of customers Sid had lost, just by things Girlie had made him do. And we heard in a roundabout way that Todd and Todd didn't like his not appearing at the convention.

Will was really worried, and kept saying he was going to talk to Girlie, himself, about it. But that's the sort of thing you don't really want to do. Perhaps nothing would ever have been done if things hadn't come to a climax about Mrs. Tompkins.

WILL and I were walking home from church with the Hinkels one cold Sunday, when Sid spoke about Mrs. Tompkins. I've an idea that he did it in front of us for the reason that so many married men spring things on their wives in company—I suppose they think they've got a better chance to get away with them.

'Oh, by the way," he said casually, "I asked a friend to the house for dinner tomorrow night."

Girlie looked surprised, and Sidney went on hastily to explain: Mrs. Tompkins, it seems, was the wife of one of Sid's best friends.

"She's one brick of a little woman," he explained, ostensibly to Will and me but really to Girlie. "About two years ago they found that Tommie had T. B., and that his only chance was to go out to Arizona and live outdoors. The Tompkinses didn't have a red cent between them, and he wasn't in any shape to work—not even in Arizona. It looked to everybody as though Tommie was due to check out. But we didn't know little Mrs. Tommie then. He was traveling for Coster Cosmetics, and Mrs. Tommie went to see old Coster, himself, and persuaded him to give her a chance on Tommie's old territory. Coster didn't think she'd sell a nickel's worth, but he let her try it.

"Well, sir," Sid went on proudly, "Mrs. Tommie has done as well as any man they've ever had on that territory. She's been with the Coster people for two years now and has kept Tommie out in Arizona, only seeing him twice a year. And he's getting well. She wired me yesterday that she's going to be in Montrose, Dawson, and Verblen tomorrow, and I wired right back that she had a dinner date with me and the new Mrs."

There was an odd, uncomfortable silence, which Will and I filled the best we could by saying what a brick Mrs. Tompkins must be. Girlie didn't say anything, but it looked as though she thought there was more in this than met the eye, and I couldn't miss Sid's anxious sideway glances at her. When she did speak, her mouth had gone into that tight little buttonhole.

"She must have had an odd sort of bringing up," she said, "to accept a dinner

Every Car Needs SIMONIZ

Have you ever stopped to realize how important Simoniz is to the finish of your car? It's just about indispensable in the care of Duco and lacquers.

Simoniz withstands the tests of time and weather and gives lasting protection that is so necessary to make the finish last longer and keep colors from fading. It leaves a hard beautiful surface that lasts for months and stands the wear and tear the finish usually gets.

Then, too, it's so easy to keep a Simonized car looking clean and bright, as all dust and dirt can be wiped off with a dry cloth without danger of marring or scratching the finish.

Anyone can Simoniz a car, for Simoniz and Simoniz Kleener are easily applied with a cloth. Dull looking, tarnished and discolored finishes can be quickly restored to their original lustre and beauty with Simoniz Kleener. Then use Simoniz for that beautiful, lasting protection.

Insist on SIMONIZ *it makes the finish last longer*

invitation from a married man when she has never met his wife."

"Oh, she never thinks of that sort of thing at all," Sid said eagerly. "All Tommie's friends have done their best to give her a hand up, turn trade her way, and so on. She pals with us all, just like so many brothers."

GIRLIE said nothing, but it was evident to the naked eye that Sid hadn't helped matters any. There was a long silence, and then Girlie said, suspiciously:

"Isn't she the one in your snapshot album, sitting on a sample case, with fluffy blond hair?"

"Yes," said Sid eagerly, still apparently feeling he was going to get away with it.

"The one you said you thought had started out life a brunette?"

It was plain from Sid's face that he wished he had been more discreet about his snapshots, but it was too late now.

"We all kidded the life out of her when she bleached her hair," he explained, very uneasily. "Nobody ever could see why she did it, she's such a sensible little thing other ways."

"She must be," said Girlie.

Will and I would have given anything to have been in Gehenna or anywhere but there. Everybody hates being let in on a family row, and this was particularly bad, because I honestly believe it was the first real one Sid and Girlie had had. There was a long silence. Then:

"I don't think I care about entertaining bleached blondes who pal with married men," said Girlie. Her voice was as tight as her little buttonhole of a mouth. It was plain that she was prepared to make an issue of this.

I took an uneasy look at Sid's side view, and realized for the first time that, under his easy-going laughing look, he had a very firm jaw. And it was set now.

"I don't care if Mrs. Tompkins shaves her head and paints it green," he said, "she's one game little brick, and I wouldn't hurt her feelings and Tommie's for a million dollars. I've invited her for dinner, and she's coming."

The people who were beginning to say that Sid Hinkel ought to stand up for his rights should just have heard his voice as he said that.

"If you don't want her at the house and aren't going to be nice to her," he added, looking straight at his wife, "I'll take her to the hotel for dinner."

Just then, to my infinite relief, we got to our house. We asked the Hinkels to come in, which, of course, they refused.

AS THEY were leaving, I happened to get a square look at Girlie's face. Not the profile I'd been seeing all the way home—a full front look. Never in my life have I seen suffering standing out plainer on a human face.

She was saying good-by politely; she was even saying something pleasant, half-joking, to Sidney, to show us, of course, that this hadn't been any real quarrel we'd overheard, just a playful little argument between happily married people. And all the time, those queer, pinched lines in her face.

"Well, I'm certainly glad to see that Sid's got up a little gumption at last," said Will as soon as we were inside our house.

"I only hope he takes his Mrs. Tompkins

Spring-Air — the easiest mattress to handle. An eight-year-old child can carry it upstairs.

Charm — Keep It:
A Gift of "Spring-Air"

You'll never know what Joy it is to Sleep Completely Relaxed until you've tried Spring-Air

The only mattress you can roll up like this is Spring-Air — proving the flexibility of its oil-tempered steel coils.

To sleep soundly, quickly — what a blessing! But more to be desired is to sleep completely relaxed — the sleep that washes away sallowness, keeps the sparkle in your eyes, puts the spring in your step. You awaken refreshed, glad to greet the day. It is the giver of vitality, the secret of a more genial disposition, the source of true charm.

The Lifetime Goal of Francis Karr

The mattress that makes you sleep relaxed is called "Spring-Air." Francis Karr spent forty-five years in perfecting it. Leading up to it are more than thirty patents granted to this dean of bedding experts. Now that Francis Karr has achieved his goal, the benefits are yours to enjoy — and at a great saving because you buy direct from The Karr Company.

Incomparable!

How can we on this page tell you about Spring-Air? It is so different — so far advanced in all its features. Not alone is Spring-Air supreme in comfort, but never before has any mattress been so easy to handle, so light in weight, so flexible or durable, so sanitary. Let the free booklet, "Sleeping Relaxed," explain Spring-Air to you. Send for it today.

As easily as with a pillow can you remove Spring-Air's slip covers — a sanitary feature much appreciated. Only highest quality woven ticking used.

Foremost Sleep Critics Laud Spring-Air

To you, Spring-Air is new. But Spring-Air has had its test by America's foremost sleep critics — In two years, more than 600 leading hospitals and hotels have purchased Spring-Air and enthusiastically approve it. From them have come hundreds of letters like this one from Asa Bacon, Superintendent of Presbyterian Hospital, Chicago; Treasurer and past president of the American Hospital Association:

"Spring-Air mattresses are giving such wonderful satisfaction that I am equipping our entire hospital with them as rapidly as possible. Our patients as well as the doctors and nurses are perfectly delighted with these beds."

You Buy Direct

Actually, Spring-Air is the most costly of all mattresses to manufacture. Leading stores have been charging upwards of $60.00 for it. But our price to you is only $38.50 ($41.50 west of Denver) — more than a twenty-dollar saving. For narrow beds the price is less. Deferred payments if you wish. Let the booklet, "Sleeping Relaxed" — tell you why we ask so little.

There's only one way you can buy Spring-Air comfort — the way that the big hotels and hospitals do — direct from us. You save real money — more than $20.00, and gain real luxury. Spring-Air is delivered by prepaid express on ten days' trial. Good Housekeeping guarantees it — so do we for 20 years. Should any Spring-Air mattress be returned to us for any reason, the price will be promptly refunded, the mattress sterilized and disposed of to some charitable institution that buys sterilized mattresses — knowing it.

Housewives are proud of the beauty of this most luxurious mattress. Notice the absence of all tufting. Let the booklet, "Sleeping Relaxed," tell you all about Spring-Air.

THE KARR COMPANY

Champion X—For Model T Fords—packed in the Red Box—60c. *Champions*—For all other cars, including Model A Ford, and trucks, tractors, and stationary engines, 75c.

CHAMPION Spark Plugs outsell all other makes throughout the world, by the amazing ratio of two to one. Champion is accepted as the better spark plug.

The exclusive sillimanite insulator is impervious to electrical current, possessed of high heat conductivity, remains remarkably free from carbon and oily deposits and is practically unbreakable.

Special analysis electrodes, and a positive compression-tight copper gasket seal, make Champion specially adapted for dependable service in modern, high-compression engines.

A complete new set of Champion Spark Plugs quickly pay for themselves in gas and oil saved. They bring to your engine better all around and more economical car performance.

CHAMPION Sparkplugs

TOLEDO-O

to dinner at the hotel. It'll start a lot of gossip, and be a warning to Girlie. Show her that she can't run Sid, body and soul."

I didn't say anything. I hate that kind of narrow goody-goodyness as much as anybody, but some way I couldn't get that queer suffering look of Girlie's out of my mind.

All the afternoon, I kept figuring over it. Will had a date in the afternoon with a man from Chicago who was looking for a house for his married sister. Cousin Effie came over, and all the time I was listening to her symptoms and taking care of the twins, I was puzzling over Girlie. I remembered when it was that I had seen somebody look just like that before. It was Dulcie when I was helping her get ready to go to the hospital, a few hours before her baby was born.

Once you've seen the look of sheer suffering on a person's face—deep, sharp, up and down lines beside the eyes, cutting right across the laughter wrinkles, patches beside the nose pinched a deathly white, the mouth tight and drawn—if you've ever seen the look of suffering once, you know it when you see it again. Girlie might be being narrow and mean to Sid, but she was getting a thousand times the worst of it, herself.

AND suddenly I knew why. It all came to me in a rush. All the things she had let slip without meaning to tell me. Girlie wasn't narrow and goody-goody and mean. Not really. She didn't care anything about reforming Sid. She was just afraid—mortally afraid of losing him.

She guessed as well as Dulcie how he had happened to marry her. She knew she wasn't pretty, knew how little she had to hold a man with—hadn't her own mother as much as said that the marriage probably wouldn't last? Why, very likely the only time she felt safe was when Sid was right there alone with her. It seemed perilous when he went away, even to Lodge or the singing society. Girlie was afraid, that was all. Desperately, sickeningly afraid.

I don't think I ever felt so sorry for anybody in my life. And just then Will came in, and I knew the instant I saw him that he had something on his mind.

"Would you mind staying with the twins about fifteen minutes?" he asked Cousin Effie briskly.

When she said of course she'd stay, Will said for me to get my hat and coat on, and I was out on the street before I had the faintest idea where we were going. Once outside, Will told me.

"We're going down to the Hinkels," he said. "I've got something to tell Sid that Girlie's got to hear."

Will was very excited, and hastily he explained to me: The man he'd been showing houses to that afternoon was from the home office of Todd and Todd. He might really have been looking for a house for his sister on the side, Will said, or maybe that was nothing at all but a blind. At any rate, his real business was making some sort of state report for Todd and Todd, and he was in Montrose to check up on Sid Hinkel.

"You mark my words," said Will "they're planning on taking the agency away from Sid; he's making such a poor showing. This fellow asked me a million questions, especially hinting around to find out whether Sid was attending to business or skylarking around. Sid's got to be warned. And Girlie too. It's mainly her fault. She's reforming Sid right out of a job, and somebody's got to tell her so."

"Oh well," I began. "But—"

"IT'S got to be done," he went on firmly. "Didn't you hear Sid threaten to take Mrs. Tompkins to dinner at the hotel tomorrow? If he does, it's curtain for him with Todd and Todd. This home-office man's going to be in town for a couple of days. If Sid shows up at the hotel tomorrow night with a bleached blonde, the town will buzz with it the next day, and this fellow'll hear it."

Oh, there wasn't any doubt of its being our duty as real friends to warn the Hinkels. I could see that. But in the little half-block before we got to their house, I tried to tell Will what I'd figured out about Girlie, so that he'd be very gentle and careful in the way he said anything. But Will has a one-track mind. I felt he'd understand if I could only make him hear me. But his mind was on Sid's business future, and my voice was no more than the wind in the trees to him.

He rang the Hinkels' bell loudly and marched upstairs with a firm, one-purpose air. Girlie came to the door, looking as though she'd been crying. Sid wasn't in. He'd gone for a walk, she said. I twitched at Will's coat, to hint to him to wait for Sid; but, merciful heavens, I might as well have twitched at a steam roller. With no preliminaries whatsoever, he began, hammer and tongs, on Girlie.

He told her about the man from Todd and Todd; he told her about every customer Sid had lost through her. He told her what he thought of her way of reforming a man. He told her what all the town was saying about the way she was taking all the joy out of life for Sid. He told her she was ruining Sid's business, and that if she kept on that way, she'd wind up by ruining his life and her own too. By the time Will stopped for breath, there was very little that he hadn't told Girlie.

She didn't answer a word. Just sat looking at Will, listening. Or I couldn't be sure whether she was listening or not. Her eyes were preoccupied with something else. Terribly preoccupied. That pinched white suffering look she'd had at noon was a thousand times stronger. I knew then with a certainty that fairly made me sick that I'd been right in what I'd figured out.

And Will, blindly going on, telling Girlie how she must help Sid in his business, not hinder him, how she must let him have a normal amount of fun out of life, how she must be broad-minded and charitable and sensible, how—why, it was like telling a man with a raging toothache that he must be gay and jolly and sensible.

Girlie began to cry. Not the kind of crying that's noisy and a great relief. Girlie didn't make a sound; but tears ran down her cheeks. Dull, silent tears, as though they had been squeezed out of her very heart.

AND suddenly my blood ran cold. I stared at Will, fairly frozen with horror.

"Dot thinks it's because you're afraid of losing Sid," he was saying. "That it's because you think he doesn't love you. That, just because you haven't had a lot

Presenting the Masterpiece of Residence Boilers

the Capitol Red Cap

Today ushers in the crowning achievement of our thirty-eight years of progress in house heating — the *Capitol Red Cap* — built upon the precise principle, the identical design, that has been tried, proved, and accepted in homes from coast to coast.

The Capitol *round* boiler, with a snugly fitting *round* jacket, scientifically insulated, now stands in symmetrical beauty, trim and graceful, every line refined even to the door hinges. Cloaked in cobalt blue, capped with cardinal red, it is finished in baked enamel as finely as a Rolls-Royce fender. A wipe of a cloth will remove every vestige of dust from its mirror-smooth surface.

A thick blanket of rock wool, more costly and effective than any insulation used heretofore on jacketed boilers, insulates it.

No stripling experiment, this *Capitol Red Cap*. It is, we have been convinced by performance in thousands of actual installations, more frugal of fuel, freer from care, more efficient in operation, than any previous type of round boiler for heating residences by steam or hot water.

Moreover, *Capitol guaranteed heating*★ scientifically and automatically selects the right-sized *Capitol Red Cap* to properly warm your home. This written warranty leaves nothing to chance, avoids the selection of too large a boiler for your needs, eliminates the danger of one too small to meet the emergency of sudden drops in temperature.

The *Capitol Red Cap*, like all Capitol Boilers and Radiators, is sold and installed only by responsible heating contractors. They are our representatives in your community. Their skill in installing supplies the final assurance of your satisfaction in the masterpiece of residence boilers, the *Capitol Red Cap*.

UNITED STATES RADIATOR CORPORATION

8 Factories and 33 Assembling Plants Serve the Country — GENERAL OFFICES DETROIT, MICH. — *For 38 years, builders of dependable heating equipment*

★ **Guaranteed Heating.** *Your contractor receives a written guarantee on the heating capacity of every Capitol boiler. No other heating equipment assures you satisfaction so definitely.*

The Pacific Steel Boiler Corporation, Division of the United States Radiator Corporation, builds welded steel heating boilers for large installations—business buildings, factories, schools, hotels, and large apartments.

Original from UNIVERSITY OF IOWA

of beaux, you feel you've got to hang on to Sid. Now, take it from me, you're going at it all wrong."

"Will!" Was he stark, staring crazy! Didn't he know that's the sort of thing you should never under any circumstances say to a woman? Hadn't he a vestige of sense! He brushed my horrified protest aside as though it were nothing. An honest man who is intent on doing his duty is the most hopelessly dumb thing the Lord ever made.

"Now the way you're doing is the very way to lo—"

Will stopped short, his mouth open, a half-word left in mid-air. There, in the doorway, stood Sid.

I've no idea how long he'd been standing there. And talk about *mad!*

As though he didn't see Will and me at all, he strode across the room to Girlie, put his arm around her as though he were protecting her from a pair of fire-eating ogres. Then he turned on Will.

Will started very hastily to tell him about the man from the home office of Todd and Todd. But Sid wouldn't let him even get started.

When he'd finished off Will, he turned on me:

"So you think Girlie's afraid of losing me! Let me tell you, Girlie couldn't any more lose me than she could lose her right arm. You say she hasn't had many beaux. Let me tell you, Girlie's one of the most attractive girls in Montrose. She's got style and distinction and individuality. Get her in New York or any big city, and you'd see quick enough. Do you know why she hasn't had many beaux? It's because the men in this town are a bunch of hicks who don't see anything but a silly dolly-pretty face. That's why!"

And he glared at my face as though it made him sick at his stomach. It just shows how surprised I was that, in spite of such an insult as that, I was too dumfounded to get mad. Every other feeling in the world was swallowed up in sheer amazement.

Sidney Hinkel meant what he was saying!

He wasn't just sticking up for his wife from a sense of duty. He wasn't doing it because he was mad at Will and me. He honestly believed what he was saying. Whether he'd married Girlie on a fluke, as the girls thought, or not, I don't know. But I do know that he was in love with her now. And he honestly admired her. He went raving on and on about how lovely Girlie was, and how attractive and how lucky he'd been to get her.

GIRLIE sat there, just listening. Mad as I was, I couldn't take my eyes off Girlie. I swear I don't believe Sid had ever talked that way to her before. I honestly don't believe she'd ever known before that he felt that way. Why, she sat there listening, her eyes wide, taking it in, the way ground takes in rain after a long drought. Warm spring rain that was slowly washing out those sharp, pinched, suffering lines in her face. Was it soaking in still deeper, down to all those years when her mother and sisters had made her feel she didn't count? Washing away some of the hurt of that too?

On and on, Sid went. He'd rather lose all the agencies in the world than to have Girlie's little finger hurt. Girlie was worth a million Mrs. Tompkinses, with the girls in Montrose thrown in for good measure. Girlie was about as near perfect as a man ever found in this world. Girlie was—he stopped to press his face up against hers, rubbing her tears off onto his own cheek. I must admit that it was one of the tenderest gestures I've ever seen in my life. Girlie gave a queer, convulsive shudder, and then leaned limply against Sid. It was as though something tight and hard that had held her all her life had suddenly let up its grip.

I DECLARE I have never been able to remember how Will and I finally got out of that apartment. I have a vague memory of Sid following us out and all the way down the stairs, hurling imprecations after us. I only hope the Birdsells downstairs didn't hear him, though I don't see how anyone a block on either side could have failed to. Will grabbed my arm, hustled me through the door and slammed it with a loud clang, drowning out Sid's final opinions of us both.

As soon as the earth stopped whirling around me, I proceeded to tell Will what I thought of him for letting me in on a thing like that. I told him all the way home and for a good hour after we got home. In fact, though that was six months ago, I still add a little every now and then. And he always defends himself. He says that the things he said that made the most trouble would never in the world have occurred to him; that if I hadn't put them into his head in the first place, everything might have been all right.

As a matter of fact, though, if we didn't have human feelings, we might both feel very well pleased with that evening's work. In spite of everything, I still like to remember the way Girlie looked when Sid was telling what a marvel she was. And the way she's been taking Will's advice!

The very next evening they gave an impromptu buffet supper in honor of Mrs. Tompkins. We read all about it in the "Monitor"—we weren't invited. And we hear on all sides that Girlie doesn't seem to be reforming Sid any more. He appears to be mixing around everywhere, and is more popular than ever. The older people are saying that they always knew Sid Hinkel had good stuff in him. He's been made treasurer of the Boost Montrose Club, and we heard just last week that Todd and Todd had increased his territory, they were so pleased with the showing he was making.

I hear on all sides too that Sid is one of the most loverlike husbands in Montrose, and that Girlie is fairly blossoming out. Dulcie saw her at the last Dancing Club party in a black dress with close pearl earrings, and said she looked almost handsome.

I really believe they owe it to Will and me that their marriage took a sudden right turn at just the critical time. But it's enough to make us very cynical. Real sympathy and real friendliness—because, after all, Will, for all his dumbness, was certainly acting from the friendliest of motives—apparently count for nothing when you go interfering between husband and wife. Why, I imagine it will be years, if not forever, before we get back on so much as speaking terms with the Hinkels!

Your Mistakes in English STAND OUT!

YOU can not hide your mistakes in English—they stand out sharply, giving others an unfortunate impression of you. You may not make such glaring errors as "He don't," "You was," "I ain't." But perhaps you may make other mistakes which offend the ears of cultured people, and cause them to judge you unfairly.

No one will correct your mistakes in English. People are too polite. They fear you will feel insulted, and unconsciously you keep on making the same mistakes. And, though you may think your English is good, it may be dotted with errors which *others* notice, and which destroy many of your opportunities for advancement.

What Can You Do?

For many years Sherwin Cody studied the problem of creating *the habit* of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day.

Under old methods rules are memorized, but correct habits are not formed. Soon the rules themselves are forgotten. The new Sherwin Cody method provides, on the contrary, *for the formation of correct habits* by constantly calling attention only to the *mistakes you make*—and then showing you the right way, so that correct English soon becomes "second nature." Already over 50,000 people have used this method with the most marked results.

FREE Book on English

A command of polished and effective English denotes education and culture. It wins friends and favorably impresses those with whom you come in contact. Now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using Mr. Cody's "100% Self-Correcting Method."

A new book explaining Mr. Cody's invention is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if your vocabulary is limited, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 910 Searle Building, Rochester, N. Y.

Don't Short Change in the Little Things of Life

(*Continued from page 53*)

venom than any other man I know. It stung me the first time I heard him command his stenographer. He seems to act on the theory that politeness to one you have hired to work for you is a waste of words and time.

And yet that little word "please" would have saved him many a troubled day and made for him many a friend. There's no love for him among his employees. They're all afraid of him. Why doesn't he work into the canvas of his commercial success a little kindness and a little thoughtfulness for others? There isn't anything malicious about this man. I can get along with him, because I'm not working for him. But there is always a chip on his shoulder.

You remember the game we used to play when we were boys. One of us would put a little piece of wood on his shoulder and dare anybody to knock it off. Immediately someone would take the dare and the fight was on. We kept at that sort of thing until we grew up and had better sense.

But there are men who hang on to the chip-on-the-shoulder game long after they should have outgrown it. They keep right on fighting and quarreling and making people miserable and afraid over the trivial chips of the day's work, which the finer souls watch fall with a smile.

LETTERS of condolence and letters of congratulation are not always easy to write, and only the few seem to take the time to do it. People with plenty of time almost never do. It's the busy men who seem oftenest to find a few moments for the little thoughtful things of life.

It's the busy mother of five small children who runs across the street to the house of sorrow with the hot meal which she has prepared for the bereaved family. The rich friends have called, but the little deeds of kindness are done by the great souls of the neighborhood who have suffered themselves and understand.

I have often thought that the crowd at the funeral would be a great surprise to the dead man if he could only see it.

The house will scarcely accommodate sympathetic visitors now; but the living and lonely and suffering clay from which the spirit has at last fled knew many a lonely hour in its weeks of agony.

Most of us had no idea that he was so ill. Some of us wondered, but failed to ask why we saw him no more in his familiar haunts. Some of us were going to drop in and see him for a few minutes when we could get the time. Some of us actually passed the house day by day, but we were always in a hurry.

Now our flowers are in there with him to show that we once knew and admired him and looked upon him as our friend. And I wonder if he ever really knew and felt that we were his friends. There were three or four of the throng, however, whom he knew well. They were neither rich nor famous nor brilliant, but they were, what it is much better to be, faithful. They visited him often. They stopped for a few minutes' chat; they did little things for him down-town; they gave his children a holiday and an automobile ride. They were never too busy or too popular or too tired to be of service to him, and if they had failed to send a bouquet for his coffin, he would still have known them for his friends. They had proved their love to him in countless little ways.

I stood chatting the other morning with Julius Haass, president of the Wayne County and Home Savings Bank, when a stranger to me walked in. The banker greeted him warmly and introduced me to him. After the newcomer left us, Mr. Haass said to me:

"Do you want to hear a story of character? That man has it. Several years ago he endorsed notes for two of his friends who were having a hard time of it in business. Things were not going well, and one day he came to me and asked permission again to endorse for them for a sum greatly beyond the limit of his credit.

"I thought this unwise, and told him so. He was already deeply obligated, and with the new notes which he proposed to guarantee, he stood to lose fifty thousand dollars if the company failed. He felt that there was a chance of success, and I thought so, too. So anxious was he for his friends' sake that I consented to make the further loans. He was one of the heirs to a moderate estate.

"'Mr. Haass,' he said, 'if things go wrong I may not have the money to meet these notes when they fall due; but some day I will pay every dollar I owe this bank.'

"The company failed. The two friends went through bankruptcy, but that boy held fast to his word. He was advised time and again to relieve himself of that responsibility by the bankruptcy route, but he refused. 'The first thing I shall do when I come into that little fortune is to pay those notes,' he said. And last week he came into possession of the money, and those notes of several years' standing have been paid in full. It was a big thing to do; but it has its compensation also, for his credit has been established in this city beyond question for all time."

These are the sacrifices which character must make in order to grow in beauty and worth. If the great canvas of a lifetime is to be worth-while it must be filled with little details which have cost time and thought and courage and fidelity. One may attract attention by a single daring stroke, but the constant respect and admiration of those about him can be won and kept only by a sincere effort in the little tests of life.

IF THEY cannot be both, I would rather my boy and girl be thoughtful of others than be brilliant; kindly than clever; gentle than powerful; honest and God-fearing than eminent and successful.

It is a fine thing, I think, to have done work the cold-minded critics will praise; but I hold that it is an even finer thing to have lived and worked and played upon this earth and to have won the love and respect and friendship of all those with whom you have come in contact.

Is this tobacco a part of every college education?

Pipe-smoker still enjoys the same tobacco he learned to smoke fifteen years ago at college

Considering the age-old discussions pro and con on the value of college education it is interesting to hear from an old graduate who found at least one subject useful in later life.

When a group of "old grads" gets together some member of the party often brings up the subject of what his alma mater did for him. The good results mentioned are apt to range all the way from good fellowship to the development of brain power.

But here's a letter that brings to light an entirely different advantage of college education. Pipe-smoking is one of the things Mr. Wilson learned at college. He still enjoys his pipe, though he has given up playing football and the study of the dead languages.

Furthermore, he states that Edgeworth is the tobacco which he learned to smoke fifteen years ago, and that it was traditional for each fellow, at the proper time, to adopt the smoking of Edgeworth as a symbol of his entrance into man's estate.

All Edgeworthites, it seems, are part of a great informal brotherhood—a pipe-lovers' club—the members of which are knit closer by the bond of affection they hold for their favorite tobacco.

And although we have been told before that Edgeworth has comforted many a college lad in his den or on the campus, this gentleman seems to have brought to light an entirely unsuspected college chapter of the Edgeworth Club.

131 Germania Place,
Chicago, Ill.

Larus & Bro. Co.,
Richmond, Va.

Gentlemen:

It was at college that I learned to smoke Edgeworth. Of course I learned a few other things at college. One was to play football. Another was to study the dead languages. Now, fifteen years later, I have given up playing football and studying dead languages, but have not yet given up smoking Edgeworth Tobacco.

It was a sort of tradition for each fellow as he threw off the toga of boyhood and put on the cloak of young manhood to adopt the smoking of Edgeworth as a symbol of his entrance into man's estate. At the right time, each one followed the example of his predecessors and bought a pipe and a tin of Edgeworth.

Being fortunate enough to enjoy the surpassing mildness and sweetness of Edgeworth right at the threshold of his smoking career, each young fellow as a general rule found any other tobacco unsatisfying and adhered to Edgeworth year after year. When I have met some of them many years after and have seen them light up their pipes, I have often inquired: "Still smoking Edgeworth?"

Almost invariably the answer has been "Yes; I still like it better than any other; it's got a very pleasant flavor. And it's mild; it never burns the tongue."

Cordially yours,

FRANK H. WILSON

* * *

To anyone who has never tried Edgeworth, we now make this offer:

Let us send you free samples of Edgeworth Ready-Rubbed and Edgeworth Plug Slice. Put Edgeworth in your pipe and smoke it. If you like the samples, you can be sure you'll keep on liking Edgeworth no matter when or where you buy it because Edgeworth's quality is *always* the same. When you pack your pipe with Edgeworth you'll find it's not unlike meeting up with an old friend—the kind you can always count on.

To get the free samples, send your name and address to Larus & Brother Company, 45 S. 21st Street, Richmond, Va.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Ready-Rubbed and Edgeworth Plug Slice are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

Living Room..... Dining Room..... Bed Room..... Kitchen.....

It is no disgrace to have the chauffeur say that he is glad to be working for you. It is no disgrace to have the drunkard on the street tell another that once you took pity on him and fed him well. That may have been only a trifling incident in your life, which you instantly forgot, but it still looms large in that unfortunate wayfarer's experience. He has etched it into his memory as a detail greatly to your credit.

AFTER all, the big thrills of life weary us soonest. One tires very quickly of the plaudits of the public. No doubt fame is an irksome robe to wear day in and out. Colonel Lindbergh must long for rest and quiet and a little less adulation. President Coolidge probably looks forward to the day when he will be rid of his police guard and the pomp of ceremony. The big success was a joy when it first came, but it hasn't really altered life. One does not want forever to be living up to a great achievement. The real peace and beauty and glory of the years lie in the lesser activities.

I was at a birthday dinner given to a well-known and much-loved citizen of Detroit several months ago. It was his seventieth birthday. I was the youngest at the table. The others were all men whose fortunes were made and whose big works were all done.

It was interesting and instructive to me to hear those men talk. They all dwelt on the little things of that man's life. The laughter and the sadness of the evening had to do with affairs of everyday living. It might well have been a poor man they were talking of. Money and fame and position were never mentioned. They joked about his little traits and habits and they enlarged upon his little kindlinesses. They talked of his thought for others; his patience and his sympathy, and they recalled countless little trifling incidents which had happened during the years.

That guest of honor had been a neighbor and a friend and fellow sufferer. He had visited back and forth; had played games and known hardships; he had made mistakes and paid for them; he had attended weddings and christenings and funerals. In short, he had lived the same sort of life which we all must live, and had many memories to gladden his heart.

If we live that long, we shall all come to the twilight hours of life. Whether we be rich or poor, the little details will be all that we shall value. Toward the end of the journey, all that we see and recall will be our friendships and our memories of them. We shall rejoice over the trifles of life. And if others, remembering some little kindness of ours, rejoice that we have lived, we shall not have lived in vain!

DR. S. PARKES CADMAN, the famous preacher who counts his radio hearers, readers, and correspondents by the tens of thousands, has a remarkable article next month entitled "Are You Asking Too Much of Life?" He wrote it out of the intimate revelations of men and women and in it you will see your own hopes and fears, doubts and demands reflected. Doctor Cadman's wise counsel may help you make an adjustment of your daily life to your circumstances.

CROSLEY

PROVES BY COMPARISON

POWER SPEAKER RADIO RECEIVER

TO BE RADIO'S GREATEST VALUE·

·6 TUBE·A C·Electric·GEMBOX·$65·

1928 Features

Few radios AT ANY PRICE combine ALL these features which are essential to today's radio reception.

Neutrodyne 10·10·10·1,000
Other systems 5·5·5·125

Crosley Radios tune efficiently

Crosley Neutrodyne circuit is sharp, sensitive and selective. Distant stations are easily found. Local stations tune without squealing.

Crosley Radios are shielded Each element shielded from each other provides maximum selectivity and *is featured* in the most expensive sets.

Crosley Radios are selective In crowded districts where many local stations fill the air you find means of listening to ONE at a time.

Crosley Radios have volume Volume may be increased to tremendous proportions without distortion.

Crosley Radios can be softened to a whisper

A positive volume control enables operator to cut any program down to faint and scarcely audible reception.

Crosley radio sets have always been good sets. In them the public always got the utmost value. They have always been sold on a very close margin of profit in order to keep the price low. This margin does not permit extensive advertising as is possible with other radios.

Crosley radio is well advertised but not extravagantly. The growth of The Crosley Radio Corporation is due more to word of mouth by satisfied users than prodigious claims in printers' ink.

Last winter Crosley was first to announce that the place to buy radio is in the home, first to encourage demonstration in the home, first to give the public an opportunity to try, test and compare before buying. The growth of Crosley sales since that time has been phenomenal. *The first six months of 1928 showed sales almost four times greater than any preceding year, because Crosley sets demonstrated in the home in comparison with other sets immediately proved themselves to be the greatest value in the radio world.* Crosley dealers do not fear competitive demonstrations in any prospect's home—they encourage them. Satisfied customers are the greatest asset Crosley can have.

6 tube Battery Operated BANDBOX $55

5 tube Dry Cell Operated BANDBOX JR. $35

The improved MUSICONE the fastest selling magnetic loud speaker at $15

The Crosley Dynacone—a dynamic power speaker at $25, available for all Crosley models, introduces for the FIRST time in the popular priced field power, volume, depth of tone and rich reproduction never before believed possible. Immediately Crosley radio became comparable to the highest priced receivers on the market. Crosley radio with DYNACONE gives an entirely new conception of radio.

Crosley sweeps the field! Crosley out-sell ANY radio on the market today! Crosley's 5 DAY FREE TRIAL OFFER is closely imitated, but be sure you TEST and TRY a Crosley set against ANY OTHER. Such direct comparison is eye opening for the superior Crosley receivers with this new wonder power speaker give an amazing performance.

6 tube AC Electric GEMBOX $65

Just 15 Minutes *a Day*

What it will mean to you is told in the FREE BOOKLET below

HERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of science, though he had to stop school at fifteen. He is at home with history, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, answered that question in a free booklet that you can have for the asking.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me, besides, the way to a vast new world of pleasure." This free booklet describes the contents, plan and purpose of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

Every well-informed man and woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot put into his Five-Foot Shelf "the essentials of a liberal education," how he so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this magazine is invited to have a copy of this entertaining book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

This Free Booklet gives Dr. Eliot's own plan of reading

P. F. COLLIER & SON COMPANY
250 Park Avenue, New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot. Also, please advise how I may secure the books by small monthly payments.

Autumn

(*Continued from page 61*)

metaphor of human existence, they consider it a time of decline and decay. They feel as Macbeth did when he exclaimed despairingly:

"My way of life
Is fall'n into the sere, the yellow leaf!"

But that old Scotch murderer had ample reason to feel as he did. He had wasted his life, and he had small faith in immortality. No man who believes that the human spirit is imperishable can ever wholly identify autumn with old age, winter with death. Not autumn, nor death, nor sorrow, nor disappointment in our fairest hopes shall ever cloud the soul which has a radiant faith in life eternal.

Human happiness is ludicrous, pathetic, and grotesque unless it is tenoned and mortised in the foundation of a conviction in immortality. To those who love God and trust Him, all shall be well; here on this earth and in the world to come. Nothing shall permanently hurt God's children. However the storm may rave, God never made a storm to last. The blusterer always has something to conceal; behind the gale is the smile of the joyous sky. God was thinking of you and of me when He made trouble temporal and love eternal.

And the proof of immortality? He who believes in a loving Creator (and who can doubt Him?) cannot escape the divine solace of a belief in immortality. Moreover, each of us is aware that the spirit has an existence independent of its material associations. It does not feel or act mortal. Those are two reasons for this faith; there are many others.

THE Soul is like Cinderella of our childhood story-books; though she goes in rags and tatters, wearing the Body, yet she is a princess-born. She speaks of splendid things. Some day she will get a new gown—one to match her beauty—a gown woven of celestial light. The autumn of life promises every child of God a vesture immortal.

There is a beautiful similarity between autumn and night. The coming of darkness is a miniature of the fall of the year, and should bring only that happiness which is born of peace, full of "sweet dreams, and health, and quiet breathing."

Night does not mean a darkening mind, a failing hope; neither should autumn. Indeed, both the close of the day and the close of the summer are manifestations of divine plans and divine powers. All life, all nature, is a stately processional. Nature never seems asleep. Even in repose she is alive with dreams of some glorifying labor soon to be performed. The seasons march; and in the autumn Life is passing through a magic valley, resplendent with sundown refulgence. The sadness of autumn? Rather it is to be wondered why our hearts do not break with the very beauty and romance and tender enchantment of it all.

Nor should we forget the merry mystery of it, of which Hallowe'en is the high festival. Of course, being the night before

IN SAN FRANCISCO MEN WEAR
BOSTONIANS
SHOES FOR MEN

ALONG Post Street you can see Bostonians, too—symbols of smart style among men of San Francisco. Correct, yet styled for comfort, Bostonians mark the dress of a gentleman. Their price is far less than their fine quality indicates. *For most styles, $7 to $10.*

In San Francisco, well-dressed men will find the new Fall Bostonians conveniently located at Hasting's, Post at Kearny.

Our new Style Booklet A-2 shows the new styles and colors for Fall . . . and the correct Bostonians. Let us send you a copy.

Learn RADIO for BIGGER PAY!

J. E. Smith
President

Jobs paying $50 and all the way up to $200 a week are waiting for the Radio-trained man. Get into the new, growing Radio profession if you want to earn more money, have bigger opportunities for the future. I will train you **at home in your spare time.** Previous experience not needed—you learn quickly in a simple, clear and unforgettable way. Grade school education, or even less, is enough to start.

Earn Extra Money Weekly Right Away "On the Side"

You learn it all **by doing.** So practical is the training you get that almost from the time you start you can put your new knowledge to use. Little Radio jobs I'll show you how to do in your spare hours can bring you as much as $15, $20, $30 extra cash, weekly, after you get well started. This Radio training of mine is the one that's world famous as the "Course That Pays for Itself." Many of my students put aside enough extra cash to start their own Radio business on graduation—all earned by this spare-time Radio work done while they are learning.

64-Page Book Sent FREE

Free—a 64-page book that tells you all about the bigger opportunities in Radio—the big money to be earned—how I'll prepare you thoroughly and completely in the quiet of your own home to enter any one of the twenty some odd lines of the Radio profession. Book tells all about my ways of helping you earn extra spare-time cash almost from the day you start with me. **Gives all information** about the six big outfits of Radio material I send you to experiment with: you can build more than 100 Radio circuits with these outfits, yet there's no extra charge for them. Everything—all services and material—included in one tuition fee (and you'll find it's surprisingly low, and can be paid in very small monthly amounts). Get the proof for yourself. Radio needs you—learn right now what it has to offer you. No obligation for the book—it's sent free—just mail the coupon today.

All Saints' Day, it was originally a sacred time; but we have mellowed its meaning so that it is far more than a religious festival. I have often wondered whether the belief that on that night spirits walk the earth had not some explanation in the fact that the migration of many birds and of some animals is then in full swing: we come upon beautiful wild strangers in our streets and back yards, and the nights are filled with the beat of mysterious wings, with weird sweet cries from invisible voyagers.

Amid such real sorcery and honest necromancy we feel that autumn has really come, though the almanac tells us that it is at any time between the sun's southward passage across the equator, and its northward passage, three months later. O. Henry says when women with no fur coats grow kind to their husbands, then the fall of the year is at hand. But we can recognize its coming in ways far less sophisticated.

ONE day before the serene spell of summer had broken I went far back in the lonely mountains to see if I could find some fringed gentians; among wild flowers they are comparatively rare in our part of the country, and they are always of exquisite beauty. Driving twelve miles up Path Valley, I left my car in an old sumac-bordered lane, where goldenrod gleamed and dusty daisies nodded. Two miles back into the woods I walked, into the wild and fragrant heart of the solitary greenwood, into a veritable sanctuary of nature called by the Tuscarora Indians, long ago, Orquic Valley. Down the wooded glen of this vale bubbles a pure mountain stream.

I found one cluster of gentians, and they would have repaid me for my trip; but there were other rewards. As I sat on an old chestnut log that spanned the stream, autumn came to me through the suggestions of several beautiful reminders. First, from a huge old sugar maple rustling liquidly above me, a crimson leaf fell at my feet.

A little later, I saw a gray squirrel burying a hickory nut in a pile of old dead leaves. He knew that the fall had come, and I knew it, though there had been no frost, and though all nature was tranced in dreaming sunlight of a delicious quality. I thought of the dead of winter, with a deep snow over that hickory nut, and I knew that that squirrel would come back for it and dig it out, though he would have no map to guide him to his hidden treasure. In the fragrant little dells away from the stream the air was silent, having the listening stillness of expectancy; here, where of late the wild wood-warblers sang—the vireo, the towhee, the wood pewee, the veery, and the hooded warbler.

From the dew-drenching of the night before the woods were still and bright and aromatic. There was a richness about this quietness that told me autumn had come, and the hale odors from the hickory, the ash, and the oak mingled with the delicious fragrance from ripened wild grapes. I almost saw Autumn herself musing in her lovely garden of the world; she was wearing a little bunch of red berries in her hair. Thoughtful she stood while, raying from her on all sides, were the resplendent fruits of all her toil and love.

All the magic and mystery of those autumnal mountain woods were gathered for me into one sound that day when I heard, from a thicket far above me, the soft drumming of a ruffed grouse. There is no sound that has a more remote significance, a more fascinating unreality. Ordinary sounds break the spell of autumn, but here is an authentic voice of the woodland, ancient in origin, delicately golden in quality, as befits the season.

But there is one bird that chooses the fall of the year for a regular lyric festival. This is the mockingbird, perhaps our finest grand opera performer. Though he sings during the mating weeks in spring, and in a desultory manner throughout the summer, it is during the glamorous moonlit nights of October that he pours forth the full splendor of his song. There is a tone of richness, a contralto depth to this singing that is not heard at any other time. It is as if the bird were not rejoicing in his own personal happiness, as he does when he is in love, but rather as if he were trying to express to the world in gorgeous song the luxurious beauty of the autumnal days and nights. I hardly know what birds one should expect to hear in another world; but I hope the mockingbird will be there; and if he is, I know he will sing as he does during the full moon in October.

IT IS commonly accepted that autumn is an ending; but in a very real and vital sense it is a beginning. The law of the conservation of energy tells us that no force ever really has a termination. Autumn, while it is the wane of summer, is likewise the beginning of spring. It is astonishing what Nature knows about preparedness; she should be our ideal in all such matters.

Unhappily, we spend much of our time preparing for war, whereas Nature prepares for coming peace and happiness, for fruits and flowers, for beauty and abundance. She plans for life, not for death. There is not a tree that, in the autumn, does not hold in thousands of tiny tightly-clenched gloved hands the leaves and flowers for the coming season, months away, across the bleak expanse of winter.

Deep down in the heart of the strawberry plant, snuggling close to the earth in mid-November, there are even now our strawberry shortcakes of next June. The peaches and the apples are always on the trees, either ripe, or to be held in safe keeping until spring weather gives them a fair chance to develop. The hazel-nut blossoms in the autumn. Nature is always ahead of us in having an early garden. Her little perennials curl up and go to sleep under the leaves, or under the waters of the quiet pond. The first balmy sun, the first genial persuasive rain will awake them. Nothing seems to be an end or to have an end. What seems an end is merely the beginning of something else.

We live and move amid a million evidences of eternity. Nor is there a season more full of reassurances for the human spirit than the fall of the year, which is only superficially a time of fading and of silence. It makes death seem incidental, for both are apparently final, yet both presage immortality.

Wanted - men seeking opportunity

Somewhere east, there's a broad-shouldered, ambitious young doctor. He longs to go where life is real and interesting, where the country is growing and prosperous, where the air is invigorating and men snap into their work.

There's a place waiting for him in The Milwaukee Road's West—and the right sort of a man soon will find he's an important figure among the friendly folks of his chosen field.

Here is a great transcontinental railway concerning itself with the business needs of a community, with its baker, or butcher or garageman. The Milwaukee Road is interested in every individual and industrial opportunity that progress creates along its 11,200 miles of line from the Great Lakes to the Pacific Northwest.

It's good business to help those who help you—and that's the spirit that pervades The Milwaukee Road's West where the people look upon this railroad as their partner.

FAMOUS TRAINS

THEY *Won the* TRADE *of* 12,000 FARMERS

And B. E. Sisson, Managing Head of Miller's Store in Salem, Ore., Tells FARM & FIRESIDE How They Did It

WHAT methods did Miller's store use to attract 12,000 extra farm families to their sales counters?

What important farm service feature did they hit on that has added at least 40 miles to their trading radius?

If you are a small-city dealer—this is information that you ought to have.

For B. E. Sisson, managing head of Miller's, has given FARM & FIRESIDE the inside information on this big store's successful business methods. And his interview is now published in a folder—a copy of which you or any other small-city retailer can have free for the asking. Just fill in and return the attached coupon.

FARM & FIRESIDE'S Service to Small-City Retailers

This is another interview in FARM & FIRESIDE'S series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing more than 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine—edited straight to the *individual* and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

© Kennell-Ellis

Get More Farm Trade

One of the points Mr. Sisson stresses most emphatically in his interview is the necessity for the small-city dealer to go out after a bigger volume of farm trade. For, as he says, it's hard for outside competition to break into your territory *if you are solidly entrenched as the trading center for a large number of farm customers.*

Over-the-Counter Experience

Mr. Sisson frankly lays all cards on the table and tells the "inside" facts about the methods he has found to be most successful in running a modern small-city department store.

He gives a clear and interesting explanation of modern store operation—how he promotes sales efficiency among his department heads by means of his special system of budgetary control—the rate of turnover he gets on all classifications of merchandise in his 27 departments—and how he can actually regulate turnover so as to get maximum sales at minimum selling cost.

And he also tells how much it costs him to sell merchandise—what per cent of his gross sales he invests in advertising—and at least a dozen other inside over-the-counter facts that any small-city dealer can use to advantage in checking up on his own business.

Send for this Folder

You are invited to take advantage of FARM & FIRESIDE'S retail merchandising service to small-city dealers. This service is free—its sole objective being to enable you to win a bigger volume of farm trade.

Send the coupon today for your *free* copy of Mr. Sisson's business story.

Upton Close, the Man Who Cannot Stay Still

(*Continued from page 22*)

my Mongol pony and rode into town. And while Hayes pitched camp I made my way among flat-roofed mud houses to the telegraph station. I can still see the flowers in that town and feel the rest they brought to my tired eyes.

"There were several wires awaiting us. One was from my wife to Hayes. It read: 'Please bring the corpse.' In spite of my care, gossip over Hayes's wire for help had reached her, fifteen hundred miles away. I pinched myself. I felt like a pretty lively corpse, so I wired back: 'Bringing it myself,' and signed my name."

Upton Close smiled with a humorous melancholy.

"I don't like to bring home the corpse," he said. "I don't like to make folks worry about me. But I've had to fetch home the remains several times since then. I've died from dengue fever in Hongkong. I've been blown up in General Wu Pei-fu's private car, together with the rest of the Chinese general's staff. I've been 'pinched off' by a hostile Chinese general who captured me during the fighting on the Yangtze. Nor must I forget the narrow escape I had back in the old days when I rashly answered another man's call to preach!"

But let us go back a bit.

THERE are men who cannot wait for life to come to them. Impelled by an itching foot and a restless heart, they must go afield to meet life—if need be, around the globe and back again. Never for such as these the security of warm hearths and the comfort of soft beds. Instead, they find in hardship and hunger, in poverty and peril, the very breath of life itself. Theirs is the Spirit of Adventure. They are the explorers, the frontiersmen, the pioneers who must push on and on. They are the men who cannot stay still!

Upton Close is one of these.

Barely waiting for the ink to dry on his college diploma, twelve years ago he hoisted sail in quest of the unexpected. Still in his early thirties, he is today a confirmed rolling stone, with a passion for meeting adventure more than half way.

In the meantime, he has been twice around the world. He has taken part in one major Chinese revolution and has been an interested spectator in several minor ones. He has written half a dozen books. Two of these, "In the Land of the Laughing Buddha" and "The Revolt of Asia," have been acclaimed by many as the soundest appraisal of the Asiatic temper ever put into words. He has lectured all over America and China and in many European cities.

One night not long ago I was one of several who, gathered about a glowing hearth in the heart of steam-heated New York, listened until well past midnight while Upton Close recounted adventures that had befallen him in the far places of the earth.

"How did you happen to become a rolling stone?" asked somebody in the group of listeners.

How do they keep so lively, fresh and young?

YOUTH today is more than a mode. It is an obligation. Admiration goes to the freshness and vivacity that can come only from ample reserve strength and perfect poise. There is no substitute for a body tingling with fresh and buoyant vitality.

Nerve exhaustion in many cases, doctors say, comes from the *feet*—a source people least suspect. Painful feet squander your vitality; make you old before your time.

For real foot health, use Dr. Scholl's Foot Balm—a dainty emollient of remarkable curative, revitalizing and pain-allaying properties.

Massage your feet with it and you will be able to undergo lengthy exertions such as standing, walking, hiking, golfing or dancing that would ordinarily punish your feet—and not experience the slightest distress.

Even though you should not apply it until you are suffering keenly from your feet, you get immediate relief. Foot aches and pains, soreness, tenderness and burning sensations are gone in a few minutes. Any swelling quickly subsides.

Dr. Scholl's Foot Balm is delightfully soothing, cooling and healing. It stimulates the skin, casts off impurities, keeps the muscles and tissues healthily energetic...Relieves corns, callouses and bunions, too, and dispels foot odors.

Buy a jar today. At all drug, shoe and dept. stores—35c. For generous free sample, use coupon below.

Are you blinded by the *New Blade Fallacy?*

Men by the million miss the joy of velvet smooth shaves every day. They are blinded by the idea that a new blade shaves smoothly because it's new. They use a new blade every few days, thoughtlessly believing that they are getting the best shaves possible—but they are NOT.

The maker of fine razors would like to get his blades to you in perfect shaving condition—if he could. But tempered steel is sensitive to weather conditions and the finishing touches must be put on the blade by stropping *just before the shave.*

This is interesting

Fine razors have edges of tiny invisible teeth. Temperature changes, jolts and handling get these teeth out of alignment. That's why a blade pulls. Stropping smoothes them into line and restores a keen cutting edge.

A few turns on Twinplex puts an edge on a NEW blade that is a marvel for smooth shaving. And it's so easy to strop with Twinplex. No fussing—no reversing blade. Just slip blade in and turn—strops both edges at once and reverses blade at every turn, just as a barber does. You can't fail. 30 seconds a day will keep one blade marvelously keen, for weeks of the smoothest shaves you've ever known. Shaving is also easier and quicker with Twinplex, for a keen blade is a quick, safe shaver.

You can now buy a Twinplex at any dealer's for as little as $2.50. It pays for itself in a few months and saves more than its cost each year thereafter. Other attractive Twinplex models at $3.50 and $5.00.

Send for the DULL HOUSE and FREE NEW blade stropped

Clever little Dull House solves the problem of disposing of old blades safely. Send 10c for it and we will also send you, FREE, one brand NEW blade stropped on Twinplex, and specially packed to protect it. You will get from it a new idea of what a real shave is. Name your razor.

TWINPLEX SALES CO.
1601 Locust Street, Saint Louis
Chicago — Montreal — London

Twinplex Stropper

"I didn't *become* one," said Upton Close quickly. "I was *born* one. I long ago concluded that some of us are destined to be rolling stones, while others are designed to be the pillars that support the structure of society. It takes both kinds to make the world we live in. And each kind feels sorry for the other, and each secretly envies the other. Which is as it should be. For the adventurer yearns for the comforts and security of a settled place in life as often as the man who is tied dreams of 'golden atolls gleaming in the sun.'

"But no matter whether you roam the wide world over, or whether you spend your life in sight of the rooftree beneath which you were born, you can make up your mind to this: What will happen to you never before quite happened to any other human being. Whatever situation you find yourself in is yours alone to conquer; its possibilities can be explored to the uttermost by you alone.

"Adventure," he went on, "is a thing of the spirit. A man may spend his days moving from place to place, and yet find life as dull as ditch water. There are sailors who swing in and out of Bombay seeing nothing but filth, and feeling nothing but heat. There are thousands who would find no romance in Cairo, no color in Venice.

"On the other hand, there are people who have never traveled a hundred miles from their own doors and yet who find living an absorbing and exciting experience. They never turn a familiar corner without a lively thrill of anticipation. Such as these are indeed fortunate, for they know full well that some of the most tremendous adventures are lived in the secret places of the human soul."

UPTON CLOSE came honestly enough by his adventuresome spirit. His maternal grandfather began life in a little town in Switzerland and ended—nobody knew just when or how—in Rio de Janeiro. His grandmother's people were French Huguenots who had fled to Switzerland for religious refuge.

"After Grandfather dropped out of sight," said Mr. Close, "Grandmother migrated to Sweden, where she became a tutor in the royal family, and Mother, then a tiny girl, went to school with budding royalty. The next move was to England, where Mother finished growing up and married a Norwegian ship captain, who swore that he would never set sail again if only she would become his wife.

"But he soon roamed. Mother followed him to what was then the westernmost frontier town of the United States—Portland, Oregon—and there they started a home. Hardly had they got settled when he was killed while helping to launch a ship. To sustain her two small children and herself, Mother gave French and music lessons to the daughters of the pioneers. This was in the sixties.

"A little later, my father came on the scene. He was a six-foot-two Maine Yankee, who was prospecting his way north from California with his mining partner, Joaquin Miller, the poet of the Sierras. Father had been following the frontier westward since he was sixteen. Now, at fifty-two, he was a bachelor who neither smoked, gambled, nor drank, but who shot straight and lived the same way. He decided to settle down in the new country.

"One day while driving a herd of sheep to his ranch, he passed the rough board studio where my mother taught. He went in and asked for a drink of water, and when he came out he left his heart behind him. But he returned to woo and win the delicate but indomitable little music teacher. They were married and he took her to his ranch among the Siwash Indians, where the port of Kelso, Washington, and the newly created town of Longview now stand. It was on this ranch that I was born several years later.

"When I was fourteen, I entered a little junior college near Walla Walla, a town at the other end of the state. Money I had earned as a newsboy saw me through the first two terms. The following year, I made my expenses by selling books during vacation time in sparsely settled sections of Montana, Wyoming, and Washington. Later, I went to Washington, D. C., and to the George Washington University.

"It had long been the dream of my mother's life that I become a minister. Partly to please her, and partly because I was inclined toward the ministry myself, I had elected several courses in theology. By way of trying out theology, and because I needed the money, during my senior year I had preached on Sundays at a small negro church near Washington. Immediately after the close of school, the members of the mission board under whom I had served asked me to assist in a revival which was to be held in an isolated mountain section of West Virginia. The pay was to be fourteen dollars a week and I gladly accepted.

"When I arrived at the scene it did not take long to discover that I had landed in a community where for three or four generations a feud had flourished between the two principal families, the Dawsons and the Days, and their allies. I'm ashamed to admit it, but I was delighted. This seemed to me an excellent opportunity to demonstrate my soul-saving abilities.

"The only thing that seriously distressed me was the presence of a doughty retired sailor who lived just across the road from the spot where I was to conduct my meetings. It was whispered that he was an atheist. From the outset, it was plain that he resented my invasion of his peace and quiet.

"THE meetings were held in a big tent. The lighting arrangements consisted of large kerosene lamps swinging from the canvas roof. I was greatly encouraged the first night to see representatives of both the Dawson and Day clans present. Everything went well until the middle of the week, when a Dawson took issue with a Day about the proper way to sing a certain hymn, and the Day undertook to settle the argument by sticking a big pocketknife through the Dawson nose.

"For a tight-drawn moment, a riot threatened; but tragedy was averted when I abruptly dismissed the congregation, pausing only long enough to announce that hereafter I would preach to the Days and the Dawsons alternately.

"Then I came down from my pulpit and administered first aid by withdrawing the knife from the bleeding nose of the

Something new, fine and stimulating! BARBASOL SKIN FRESHENER. *After shaving, after bathing, any time.* For both men and women.

At all druggists. 35c and 65c for Barbasol. 65c for Barbasol Skin Freshener.

I made that 3-day test. I stacked Barbasol up against the very best soap I'd found in 20 years of rasslin' with this ol' haywire crop of mine.

Soaped up one side of my face, gave Soap & Co. all the breaks. Then spread Barbasol on the other half. And my face told me BARBASOL.

Your face wants to know Barbasol

Because Barbasol gives a cooler, smoother, closer, longer-lasting shave. It's 100% beard softener: No air bubbles.

Because Barbasol leaves the skin all fresh and young and soft. Leaves the natural oils right in the skin. Takes nothing away but the whiskers.

Because Barbasol is the Modern Way of Shaving —faster, simpler, cleaner. Look:

1 —Wash the face (and leave it wet)
2 —Spread on Barbasol (but don't rub in)
3 —Shave!

THE BARBASOL COMPANY, *Indianapolis, Indiana*

This Simmons Chain bespeaks the hidden Hamilton

HAMILTON owners are proud of their watches. They want chains every whit as fine. For this Robert Morris model of the Hamilton Watch, Simmons has designed the chain pictured above. It is an 18K white gold-filled Waldemar (30361), priced at $10.50.

Of course, the chain is not only for Hamilton Watches. It is fitted for Hamilton beauty, quality and durability. But it is also in character with any fine watch. Whatever your taste, or the design of your watch, some Simmons Chain will match it admirably. In many styles, priced from $4 to $15. R. F. Simmons Co., Attleboro, Mass.

The swivel says it's a Simmons

wounded Dawson and returning it to the Day who was waiting outside the tent for his property. He explained that the knife had belonged to his grandpappy, and that he 'shore would hate to part with it—fer good!'

"The next morning I heard that the Dawsons planned to cut the tent ropes that night while the Days were at meeting. To make matters worse, two thirds of the adult males in the community were packing guns. The situation was critical: If the Dawsons succeeded in making good their threat, nothing could save us from a horrible catastrophe, for the kerosene lamps would fire the tent instantly.

"While these thoughts were racing through my mind, I looked up and saw the retired sailor coming leisurely across the road with a huge club like a belaying pin in his hand. At first I thought the old man meant to add to the trouble that was boiling around me, but it turned out that he wanted to help me out.

HEAR you've got yourself into a purty big mess, young feller,' he drawled. 'Reckon you're too young to know thet savin' souls ain't sich a all-fired glib prop'sition as some sizes it up to be. Hit takes *time* fer a man to work out his own salvation, let alone thet of a whole county. Remindin' folks how much they hate each other don't do nuthin' but stir up strife. Thing to do is to let 'em fergit it. Recollect *His* way wuz the way o' peace. Seems like you kinder destroyed what little peace we had aroun' here. Reckon you sorter lost sight o' His glory thinkin' o' your own.'

"And then, after making me promise not to poke further into the hornet's nest of ill feeling existing between the Dawsons and the Days, he helped me to work out a plan whereby I could close my campaign with some show of dignity.

"We spent the day getting barbed wire and building entanglements around the tent. From the outside to the tent door we left a narrow lane through which all visitors would have to pass in single file. That night, the doughty old mate, club in hand, patrolled the barbed wire entanglements, while I stood at the tent entrance and relieved all arrivals of firearms, which an assistant stacked inside. Fortunately, the first-comer made no fuss about handing over his gun, and the others followed suit.

"The next evening we went through with the same program and, again, got through without trouble. After the services we rolled up the tent and took it back to headquarters.

"I was through with preaching. That quiet rebuke, 'Reckon you sorter lost sight o' His glory,' had opened my eyes to the truth. I admitted to myself what I already knew: I wanted adventure; I had not been called to preach.

"It was at this point that I gave up trying to 'blue print' my life, and decided to let destiny have her rightful share in shaping my career."

Some years before, Upton Close's elder sister had gone to China to work in a publishing house. She now wrote saying that another publishing concern with which she was in touch had an opening in the editorial department.

Destiny had spoken!

Without more ado, Upton Close and his young wife packed their slim belongings and were off.

But when the young man walked into the publishing house in Shanghai, expecting an editorial chair, he found that his first job consisted of traveling over half a dozen huge provinces to collect bills from Chinese newsdealers.

Fortified by three or four months' intensive study of the Chinese language, he plunged blithely into this new assignment of destiny. In the three years that followed he familiarized himself, as few white men have the opportunity to do, with countless Chinese dialects and customs. He got his invaluable knowledge of Oriental psychology by swapping yarns with fellow travelers on wheelbarrows, or canal boats, or on the sleeping platforms of the inns at evening.

He was in Shantung when the World War came on. Recognizing his peculiar fitness for the undertaking, the American Legation at Peking empowered the young bill collector to organize an intelligence service.

And thereby hangs a tale!

Upton Close was baptized Josef Washington Hall, and he was known by that name until the time I am now telling you about. Shortly after the beginning of his secret-service activities, an unsigned dispatch which he had concluded with the words, "Up close," as an indication of his dangerous proximity to events, was published in the American Press with the final two words accidentally used as a byline. Thereafter, it was thought wise to hide his identity by running later reports over the same signature, which speedily evolved into "Upton Close." Meanwhile, the man who was responsible for these reports was traveling freely about Shantung under the name of Josef Hall.

IN HIS intelligence work in Shantung, Upton Close used chiefly Chinese university students. Some of these boys later became the nucleus of a student revolution which overthrew the government that was selling the national sovereignty of China to Japan. When the young revolutionists were ready to reveal their plot, they invited Upton Close to come to Peking and take a leading part in their activities. Clad in Chinese costume, he was the only white man who marched in a great demonstration of more than twenty thousand students.

When General Wu Pei-fu and his army joined the student cause, it was natural that Close should become his friendly adviser, and, ultimately, a member of his staff. The Chinese commander liked the young American, and Close lived and worked and fought by his side through three wars, until China was under Wu's thumb and Close had become his chief adviser on foreign affairs.

It was during this time that a very circumstantial story came through to Peking. The gist of it was this: General Wu and his entire staff were blown up while traveling in Wu's private car. This report was taken quite seriously, and again Upton Close had to wire Peking the Chinese equivalent of Mark Twain's famous message: "The report of my death has been greatly exaggerated."

Adventures actually seemed to go out of their way to come to Upton Close. One day, while walking down a Peking street,

"The Beating Heart of Time..."

From "A Ride in the Cab of the Broadway Limited"

BY DUDLEY NICHOLS

Down the two bright ribbons of steel, amid a thundering world of glimmering signals, rides the great flyer of the rails. The grim pilot of the cab bows down to two gods of safety: the emerald green of the gleaming semaphore and his Hamilton Watch —the watch of railroad accuracy . . . How does it feel to ride with the pilot of such a thundering, demon of a locomotive? Dudley Nichols, staff correspondent of the New York World, knows. He has ridden — and captured the romance of railroading in a fast-moving, thrilling story packed with power and excitement.

Let us send you a copy of this thrilling account, illustrated with many unusual photographs. Also, if you would know something of the care with which Hamiltons are made let us send you our own interesting booklet, "The Timekeeper." Above, at the top, is shown the ultra-modern "Piping Rock" strap watch, which may be had in white or yellow 14k gold at $125. In the center is the "Robert Morris" pocket model, in filled white or green gold at $55. Below is the "Cushion," in filled or 14k green or white gold, plain or engraved, $50 to $77. Other Hamilton models, ranging from $48 to $685, are on display at any fine jeweler's.

"How long has this suit looked like *t-h-a-t?*"

Only when your clothes have been tailored to your "attitude" - your posture - by our improved method, can you be sure they will not pull out of shape with wear.

HASN'T it happened to you? Haven't you liked the appearance of a new suit only to find, after a few weeks, that it seemed to be losing its style and fit . . . bunching in the shoulders . . pulling away at the neck . . binding under the arms?

There's nothing mysterious about it. You can hardly expect anything else. After all, the suit was not made especially for *you.* It was made for an "average" man — cut to standard measurements.

If you really want your clothes to fit you as they should, it's necessary to go farther than that. Through serving as personal tailors to millions of men Ed. V. Price & Company has learned that *only when a suit is tailored to your "attitude"— your posture — will it be permanently satisfactory.*

When you buy an Ed. V. Price & Company suit, it is made not only to your measure, of finest fabric, in the latest, smartest style. *It is cut, draped and balanced to your "attitude"—your posture*—by our exclusive "Attitude Method."

If we cut only 40 or 50 such suits a day we would be unable to offer this unusual personal tailoring service for so little. But because of our great volume of business, our highly organized staff of skilled tailors, and our tremendous buying power, we can offer suits at $35 that carry $50 to $60 in value—higher priced suits at proportionate savings.

The coupon will bring you further interesting information about the "Attitude Method," actual samples of our latest exclusive fine woolens, and name of our local dealer. Fill in the coupon and mail it to us today.

These men are the same height, and have the same chest measurement, yet they cannot wear the same suit.

Note variation in area, each side of "balance line," extending down from peak of collar. The "Attitude Method" of tailoring makes perfect allowance for all such variations, and assures a correctly balanced suit.

38 Breast, Regular Chest, Back. | 38 Breast, Flat Chest, Round Back. | 38 Breast, Full Chest, Flat Back.

Note location of balance line and position of armholes affecting distribution of cloth.

Are your shoulders high, regular or sloping? Only when a suit is cut to the shoulder slant will it drape properly.

he met an old friend bound toward the railway station under armed guard. A minute's conversation, and he learned that his friend had been arrested for some indiscreet editorials in the Peking "Leader." He was being forcibly ejected not only from the editorial chair but also from the country. "Who's running the paper now?" asked Close. "Go and run it yourself!" yelled the fleeing editor over his shoulder.

And that's exactly what Close did.

He walked into the editorial sanctum, dusted off the editorial chair, rolled up his sleeves, and sat down. In a short time, backed by a loyal staff, he was boldly championing the patriotic cause. During the same period, he wrote for the Peking "Gazette," descendant of the oldest newspaper in the world.

But one of Upton Close's greatest adventures was still to come. At Christmas time, 1920, there occurred the great Kansu earthquake, which was followed by devastation and famine throughout Western China. It was on a relief mission connected with this disaster, coupled with a news-gathering expedition to discover exactly what had happened, that Close "brought home the corpse," as narrated in the beginning. Let him tell the rest of the story:

"THE Chinese have no word for landslides. The only term they use to describe this phenomenon is 'the mountains walked.'

"Never was a phrase more accurate. We came to places in the highway where for a quarter of a mile the road had dropped out of sight. It had been cut as if chopped with an ax, leaving giant poplars and cottonwoods uprooted upon the edge of the sixty-foot gully, like sentinels stricken at their posts.

"Mountains that moved hundreds of yards in the night, landslides that eddied like waterfalls, crevasses that swallowed houses and camel trains, and villages that were swept away under a rising sea of loose earth were a few of the horrors that met our eyes as we went from place to place trying to make some estimate of the damage to report to the relief committee that had sent us out.

"The only survivors in one valley—a peasant and his two sons—were saved as if by a miracle.

"Their farmstead, instead of being buried, was caught upon the back of one of the slides, carried down the valley to a point where it was diverted by two streams of earth from other directions and, as a result of the clashing forces, was catapulted another quarter of a mile up a small draw.

"House, orchard, and threshing floor made the journey intact. Even the crows' nests in the trees outside the house were undisturbed.

"As for the farmer and his two sons, they had already placidly begun to till the new location to which their establishment had been so unceremoniously transported."

Soon after his return to Peking and his family, Upton Close left to accompany General Wu on a campaign. His weakened condition and the hardships at the front made him an easy victim to typhoid. After ten weeks between life and death, he came out of the hospital to find that his

Today's style

. . . comfort. . . convenience

for the watch you now wear!

ADD a dash of style to your wrist watch. And at the same time enjoy new comfort, new convenience!

Distinctly the note of *Today* are these modish creations by Wadsworth—the same Wadsworth which has long enjoyed recognized style leadership in the fashioning of fine watch cases.

Made in white or green gold filled, or in solid gold, a Wadsworth Band is *one with your watch*—in lasting material as in style.

And Wadsworth Bands are so constructed that when properly adjusted by your jeweler, they assure utmost comfort on the wrist.

No danger of losing your watch, as with a worn strap or ribbon. No need for future replacements.

Ask your jeweler to show you a style that will harmonize exactly with the watch you're now wearing! He has many distinctive designs for both men and women—among them the new Lord and Lady Wadsworth Bands pictured here.

And it takes but a moment to fit one to any modern wrist watch, any size wrist!

WADSWORTH WATCH CASE COMPANY
Dayton, Kentucky, Opposite Cincinnati, Ohio
Case makers for the leading watch movements

The new Lady Wadsworth Band, for women. A bracelet style of distinguished beauty, with a special patented construction of links and springs that assures extra strength where most needed. Wadsworth Quality Gold Filled, decorated, $5.00 to $8.25

The new Lord Wadsworth Band, for men. A strikingly original style, fashioned in a series of slender links which afford an unusually trim, comfortable fit to the wrist. Quickly put on and taken off by means of a smart clasp at center. Wadsworth Quality Gold Filled; $10.00

The Improved Ben Hur Band, for men (and Amazon, narrower, for women). These models open in the center, are easily adjusted to conform to the wrist, and fastened by a special safety lock. Improved Ben Hur, 14-kt. Solid Gold: plain, $25; decorated, $27. Amazon priced lower in solid gold. Wadsworth Quality Gold Filled; plain, $6.50; decorated, $7.50

The Athena Band, for women (and Olympian, wider, for men). These models expand to slip over the hand, are readily adjusted to conform to the wrist, and secured by a snap lock. Athena, 14-kt. Solid Gold; plain, $20; decorated, $25. Olympian priced somewhat higher in solid gold. Wadsworth Quality Gold Filled: plain, $7.50; decorated, $8.50

A Fiction Writer *turns to facts for his most dramatic narrative*

"PROFESSIONAL story writing is a vocation hardly to be paralleled in its drain on nervous energy. For five years I held the pace, working at night and doping myself with caffein to keep awake and alert.

"Then came the inevitable break. I could no longer concentrate. I could not sleep. My nerves were on raw, vibrant edge.

"I tried Postum as a sort of last resort, suspecting that caffein might be the real cause of my insomnia and 'nerves'. It was! After a few weeks on Postum, I was back at my desk—still at night—in the full swing of a serial novel to be published shortly. I have gained twelve pounds, and haven't felt so fit in a long, long time."

—John Mersereau
1146 Cragmont Ave., Berkeley, Cal.
Author of "The Checkered Flag", starring Elaine Hammerstein; "The Whispering Canyon", starring Jane Novak; and many magazine stories.

JUST as in fiction, an apparently upright character often turns out to be a villain, so, in real life, the seemingly harmless habit of taking caffein with meals often proves to be a man's worst enemy, changing him slowly, slyly, from a healthy up-and-doing specimen of manhood to a rasping bundle of nerves.

Take Mr. Mersereau's advice and eliminate caffein from your diet—drink Postum with your meals instead. Try this simple diet change for thirty days—then judge!

You'll find Postum a delicious drink, with a rich, distinctive flavor that millions prefer. You'll find that Postum never keeps you awake, never gets on your nerves, or affects digestion. You'll make Postum your mealtime drink for life!

Postum is made of roasted whole wheat and bran—no trace of any artificial stimulant in it. Your grocer has it. Or mail the coupon—we will send you one week's supply free, as a start on your 30-day test. Please indicate on the coupon whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil.

© 1928, P. Co., Inc.

Postum is one of the Post Health Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

MAIL THE COUPON NOW!

political influence had been completely undermined and his property rendered valueless.

With his wife and children, the young American sailed for Seattle third-class on a Japanese ship. He landed almost without a cent.

But just as he was at his wits' end for funds, he received a gift of one hundred and fifty dollars from a Shanghai newspaper on which he had once served as political writer. With this money he bought an old automobile and, loading his little family into it, started south in search of health.

Just before he left Seattle, an old schoolmate, who was then teaching in the University of Washington, discovered Close and took him out to the college, where he arranged for him to address the students. When Close had driven as far south as central Oregon, a telegram caught up with him. It was from the university, offering him a lectureship on Oriental life and politics.

Destiny had given his fortunes another twist. He accepted the turn and took up his new life as a college professor. To help youth discover itself—here was adventure of a high order!

HE SETTLED down on the shores of Lake Washington, built a house, started a garden, and bought a cow. For a time he was content, and apparently had "settled down."

Then the old urge came on again; his feet grew restless, and he discovered once more that he is of that strange, venturesome class of men who cannot stay still.

But before he resigned his professorship Close had written and published, with his senior colleague, Doctor Gowen, "An Outline History of China," which the Book of the Month Club recommended to its subscribers as an invaluable guide to the study of China. This book amply justifies Close's adventure in scholarship and education.

In 1926, when the Southern armies of China started for the Yangtze and the symptoms of one of China's greatest conflicts began to materialize, Close again found that he could not stay still. He sailed in July aboard a Japanese freighter, sold the remainder of his property in China for a thousand dollars, sent half of it to his family in Seattle, and with the other half started 'round the world by way of South Asia.

Close went on through Siam, Burma, and Central India, talking to all who would talk to him; through Mesopotamia, Palestine, Egypt, and Turkey. He came home and wrote "The Revolt of Asia," a political book full of the fire of first-hand discovery, and instinct with the life of resurgent Asia as few white men have beheld it.

Last year, he went back again, through Siberia and North China, across Russia. He takes long journeys and long risks.

"Adventure?" says Close. "There is always more of it, more as you grow older in this world and more capacity to appreciate it. And when I face the last great shift from the adventures of this world to those of the next I shall know that I have just begun on the most glorious adventure of all!"

Perfect refrigeration is such a comfort!

...easier menu-planning, always plenty of ice and foods healthfully fresh

PLANNING menus, marketing, entertaining,—all of these are vastly simplified for the home-maker when she has a General Electric Refrigerator.

And, even more important, is the pleasant feeling of security—the absolute knowledge that her family's food is always safely fresh and wholesome. Even in winter scientifically correct refrigeration is vital. Kitchens are warm all year 'round, and food to be safe to eat needs to be kept at a temperature below 50 degrees always.

The General Electric Refrigerator is different from all others—different in important points of design. It is entirely automatic. It never even needs oiling. All its mechanism is enclosed in an air-tight steel casing, up on top.

It will give you perfect refrigeration automatically, quietly and economically—that is the General Electric guarantee. To get specifications of these roomy, easy-to-keep-clean refrigerators, write us today for a descriptive booklet—A-10.

Scattergood Compounds a Felony

(*Continued from page 39*)

the car. Not that there's need for it, but just to save possible embarrassment."

Mr. Pride grinned.

"You've duplicates of the Grant's Memoirs?"

"Right in my hand bag."

"That part of it," said Clayton, "is up to you sleight-of-hand boys."

"Don't worry about us," said Pride. "Thursday, eh? Well, sleep tight."

ON HIS way to the train in the morning Scattergood met Pride and Goodwin in the hotel.

"I'm a-hurryin' off," he said, "or I'd stop and ask suthin' of ye."

"If," said Pride, "we can be of any assistance, call upon us."

"Jest wanted to git your idees," said Scattergood. "You live in the city, and git around consid'able. More apt to know 'n what I be about how much things is wuth, and if they're what ye call antiques."

"Why, we are both interested in antiques. But more especially in rare books," said Pride. "Mr. Goodwin has a very fine collection of first editions."

"Jest the fellers I'm lookin' fur then," said Scattergood. "See ye when I git home tomorrer night."

"I only hope we can be of assistance," said the courtly Mr. Goodwin.

Scattergood returned Wednesday evening and made an engagement with Pride and Goodwin for the following afternoon to examine the Billings household belongings. Thursday morning he went to the bank, where Clayton's watchful eye saw him draw twenty thousand dollars in bills. With these in his pocket he ambled out to the Billings house, and disposed of them throughout the pages of the two volumes of General Grant's life.

He took his midday meal with Pride and Goodwin in the hotel dining-room, after which the trio walked up the hill, and Scattergood unlocked the Billings door.

"Jest look around," he said. "Kind of take in everythin', and if any of it's got value I wisht you'd make a note of it. I'll set right here and wait fur ye."

So he seated himself in the room that contained the library, but close to the window; not carelessly, but in a position from which he could watch the movements of his experts. He shivered and shrugged his heavy shoulders, for the spring day was chilly and he had not, like his companions, seen fit to wear an outer coat. They wore topcoats of the raglan variety, voluminous and comfortable. Voluminous and comfortable—and capable of concealment.

So it was that Scattergood, watchful as he might have been, could not see the deft movements with which Goodwin examined the Memoirs, saw the bills, as he hoped, and adroitly disposed of the books in the huge inner pockets of himself and Pride. As for Pride, he as adroitly substituted two blue volumes of his own bringing. The whole transaction required half a dozen seconds.

Then, with great pretense of interest, they pored over book after book, examined minutely pieces of furniture and luster and china until even Scattergood must have been satisfied with the thoroughness and good faith of their investigation.

"We find," said Goodwin, "many interesting things, and some of considerable value."

"Kind of s'prised, but glad to hear it. Now, where'll I find me a buyer?"

"Why, Pride and myself might be interested," said Goodwin. "Suppose you walk back to the hotel with us and we'll see what can be done."

"Suits me to a T," said Scattergood.

They went to the room occupied by Pride and seated themselves comfortably. Goodwin walked to the window, and looked down to see an automobile drive up before the hotel and stop. Clayton entered it and waited.

"W-al," said Scattergood, "what did you fellers find that was wuth money?"

"Nothing," said Goodwin, "but a few books—rather rare books."

"Wuth much?"

"I would be willing to pay a reasonable sum for them," said Goodwin.

"Reasonable sum, eh? Dunno jest what a reasonable sum is. Nobuddy hain't ever set down the exact figgers for a reasonable sum."

Goodwin laughed. "In this case, about two hundred and fifty dollars."

"Mebbe reasonable," said Scattergood; "but sca'cely interestin'. No, I got to git me more'n that out of all them books and furniture and what-not."

"But," said Goodwin, "neither of us want anything but those few books."

"All or nothin'," said Scattergood.

Goodwin raised his brows. "Say five hundred," he offered.

"I got an idee it's wuth more'n that. Somehow I got a notion. Suthin's jest put it into my head you fellers has found suthin' wuth a pile of money."

"No, indeed," said Goodwin impatiently. "Worth something, certainly—to a collector. We'll give you a check for a thousand dollars, and that's the outside figure."

"Maybe Mr. Baines would prefer cash," said Pride.

"CASH is allus best," said Scattergood. "No, sir, what I aim to git fur that truck is exactly twelve thousand five hundred dollars, and not a cent less. I calc'late to know what a thing's wuth."

Pride looked at Goodwin and smiled. "Mr. Baines has taken other advice than ours," he said. He shrugged his shoulders. "I see you know pretty well what you have there. Well, any man may be excused for trying to get a bargain. Goodwin, if we don't close with this man he's going to boost his price."

"Twelve thousand five isn't such a bargain," Goodwin said dourly, "but—well, I guess we can stand that. Cash, eh?" He glanced at his watch. "Bank's open yet, isn't it?"

"Till three-thutty," said Scattergood.

"Very well, you stay here. Pride and I will step down and draw the cash. You might be writing a receipt or a bill of sale while we're gone."

Kaffee Hag Coffee

has brought a new conception of sleep to thousands

ONE night of *complete sleep* can amaze you with the difference it makes in the way you feel and look!

Complete sleep! It is not a question of hours—but of relaxation. It comes when muscles are at ease and nerves are reposed. That is why it is so important to safeguard the *quality* of your sleep even more than the quantity. Many used to give up the pleasure of coffee because they felt that caffeine affected nerves and sleep.

The coffee that lets you sleep

Nowadays, people are simply changing their coffee brand to a pure, delightful coffee that is 97% free of the drug caffeine. Kaffee Hag Coffee.

And, thanks to science, they don't forego a single delight by changing! Kaffee Hag is a blend of the world's finest coffees. All the strength, all the cheery coffee flavor, is present. Only the tasteless, odorless caffeine is gone.

The original decaffeinated coffee

Kaffee Hag Coffee is science's answer to the age-old problem of removing caffeine without hurting coffee. You'll say you've never tasted finer coffee. And you can enjoy a strong cup even at midnight—it will not affect nerves nor rest. Doctors recommend it. How much better than cheerless substitutes that can never satisfy a coffee lover.

Change to Kellogg's* Kaffee Hag Coffee for a week . . . and see if it doesn't make a worthwhile difference in the way you sleep and feel and look! Let tomorrow night begin your test.

REMAIN AWAKE 115 HOURS IN TEST

Chicago Scientists Suffer Agonies in Study of Effects of Wakefulness

FIRST DAY WAS EASY

What is probably a world's record for continued wakefulness was established recently by two experimenters of the University of Chicago, who remained awake for five days and four nights in order to study the effects of long lack of sleep on the human body.

This grueling experiment in insomnia was undertaken voluntarily by Dr. Nathaniel Kleitman and Dr. N. F. Fisher. They went through their trying experiences at different times, observing each other in turn. Two assistants attended them to keep them awake.

Physical tests during the experiment led to the following conclusions about insomnia:

Sleep comes as a result of complete muscular relaxation. You can help bring on sleep by relaxing the muscles; you can ward it off by muscular contraction.

Full-pound freshly sealed cans at your dealer's. Ground or in the bean. Order at hotels, restaurants. On dining cars.

For ten cents we will send you a generous sample. And with it a booklet on *complete sleep*. Mail the coupon below.

KAFFEE HAG CORPORATION
1813 Davenport Ave., Cleveland, Ohio

Please send me, postpaid, enough Kaffee Hag to make ten cups of good coffee. I enclose ten cents (stamps or coin).

Have you tried it AFTER SHAVING?

exhilarates protects cools

AFTER your next shave, douse Listerine on the face full strength.

What a nice reaction. Cooling! A new sense of vigor and freshness. Amazing stimulation for tired skin. And all the usual smarting and burning gone at once. Also you have the satisfaction of knowing that the antiseptic essential oils of Listerine are enemies of infection.

One trial of Listerine this way will win you. Why not today? Lambert Pharmacal Co., St. Louis, Mo., U.S.A.

Have you tried the new Listerine **Shaving Cream?**

Cools your skin while you shave and keeps it cool afterward. An outstanding shaving cream in every respect.

LISTERINE

THE SAFE ANTISEPTIC

Digitized by Google Original from UNIVERSITY OF IOWA

"To be sure," said Scattergood.

The gentlemen got up, moved to the door, closed it after them and locked it softly. Then they went down-stairs, stepped into the car beside Clayton, and were driven away rapidly in a westerly direction.

"Got it?" asked Clayton.

"Twenty perfectly good thousand-dollar bills," said Pride, "and two volumes of General Grant."

"Which," said Goodwin, "doesn't make such a bad day's wages. Neat, I call it, very neat."

"And our fat friend hasn't even a ten-dollar bill out of us to plaster his burns," said Clayton.

"We'll be twenty miles away before he is suspicious," said Pride.

THEN the motor sputtered. Clayton, who was driving the rented car, knew that curious, helpless, gone feeling which comes to every chauffeur when his sense of touch tells him his motor is without fuel. He said a forceful word forcefully.

"Pile out, Pride, and look at that tank," he snapped.

Pride did so, anxiously. "No gas," he said.

"Here comes another car. Nothing to do but buy or beg a ride. What we need is distance," said Goodwin, and then his eyes narrowed as the approaching car stopped and Scattergood Baines spoke to them from the seat beside the driver.

"Kind of fur from the bank, hain't ye, boys? Don't see no payin' teller's winder hereabouts. See any bankin' dee-vices anywheres, Sheriff?" he asked over his shoulder to one of the men in the rear seat.

"What do you want?" demanded Goodwin belligerently.

"Nothin' much," said Scattergood. "We jest drove out a ways into the country. We kind of figgered it was a pleasant day fur compoundin' a felony. Allus like sunny weather fur sich doin's. Dunno why, but my conscience bites a heap harder on a cloudy day. Ever notice that, Sheriff?"

"Come to the point," said Goodwin. "Do you think you've got business with us?"

"Not what you'd call business," said Scattergood. "I hold it comes more under the headin' of pleasure."

"I suppose you are going to make some sort of a holler," said Pride. "Not a chance, fat man, not a chance. We know where we're at. Nobody's got a thing on us. If you think you can get anything out of us with rube sheriffs, you have a couple more thinks coming. This time we're on the right side of the law."

"Reegardin' what?" asked Scattergood.

"That little Billings transaction," said Pride. "You don't stand so pretty yourself, trying to gold-brick a couple of strangers."

"Um. . . . I see Mr. Clayton's with ye. Didn't expect that. Didn't figger you and him was on friendly terms with one another."

"Trouble with you," said Clayton, "is that you didn't figure much. So take your medicine, and like it."

"Know what these boys is talkin' about, Sheriff?" asked Scattergood. "They speak like I had some grievance. I dunno how they come to figger I'm used wrong. So

Now Comes the *New* Shorthand!

AT last! The answer to the urgent need of modern business for a really scientific system of shorthand! *Speedwriting*, the natural shorthand, sets new standards for speed and accuracy. So simple that anyone can learn its principle in one evening.

Miss Emma B. Dearborn, originator of Speedwriting, has taught practically all systems in such leading educational institutions as Columbia University, Simmons College, Boston, and the University of California.

SHORTHAND is now made the time-saving device of everyone! The months of tedious study required to master a "foreign language" of arbitrary signs and symbols are eliminated. Now you can write shorthand in the familiar A-B-C's you have been using all your life!

Everywhere this new shorthand is hailed with enthusiasm. It is saving time and increasing efficiency in busy offices. Executives are finding it invaluable for personal use. So are professional men and women, lawyers, writers, clergymen, public speakers, engineers, doctors, reporters, students. Experienced stenographers are adopting it in place of the old, conventional systems. Beginners welcome it as a short-cut to a successful business career.

Speedwriting
The NATURAL SHORTHAND

Speedwriting was given to the world by Miss Emma B. Dearborn, eminent authority on shorthand, who, for eighteen years, had taught practically all systems in such leading educational institutions as Columbia University, Rochester Business Institute, Simmons College and the University of California.

Her experience brought home to her the inadequacies of the conventional sign systems. She saw how few students were successful in mastering them. (Government statistics show that only *twelve per cent* of those who study shorthand ever have employment as stenographers.) For years Miss Dearborn devoted herself to the development of an entirely new kind of shorthand, without the dots, dashes, hooks, curves, shadings and other arbitrary symbols that tax the memory and require months and years of practice.

Speedwriting is simply a scientific condensation of the English language, based upon natural habits of speech. It is the quickest known method of recording thought. It can be written either in pencil or on the typewriter. You can begin using Speedwriting almost at once. Amazing speed is quickly developed.

Mail Coupon for Free Booklet

An interesting, illustrated booklet tells you all about Speedwriting and demonstrates its practical usefulness to *you* whether you are an executive, a professional man or woman, an experienced stenographer or a beginner. Also, how you can learn Speed TYPING at home. No cost or obligation. Mail the coupon now.

fur as I know, I hain't got a complaint in the world agin 'em personal."

"Jest talk," said the sheriff. "W-al, you can't talk yourself out of this here. Federal matters hain't talked off, mostly. When Uncle Sam gits riled, he gits riled dangerous."

"Federal matter!" exclaimed Pride.

"Uh-huh," said the sheriff. "We aim to hold ye for the gov'ment marshal. I dunno jest the name of the charge he's got agin ye, but it's got suthin' to do with counterfeitin'."

"What?" roared Goodwin.

"Havin' in your possession, and aimin' to pass off on folks and utter and circulate, and all sich legal names, the sum of twenty thousand dollars of counterfeit money in the denominations of thousand-dollar bills. That's how the story come to me, and that's how we come to traipse out after ye when ye skedaddled from town."

"Man," said Pride, "you're crazy! You're crazy as a loon. We never touched a counterfeit bill in our lives. It's out of our line."

"Be kind of hard for fellers in your line of work to prove it," said Scattergood. "'Tain't a-goin' to be hard for them Federal officers to identify ye. And men havin' your characters hain't apt to be carryin' twenty counterfeit thousand-dollar bills jest fur sociability's sake."

"But I tell you—" commenced Clayton.

"We know ye got 'em," said the sheriff, "and we know how ye got 'em concealed. They're hid inside the pages of the Memo'rs of Gen'l Grant, and I calc'late he'd turn over in that there tomb of hisn if he knowed it."

"Memoirs of Grant," said Goodwin in a queer voice, and he turned his eyes upon Scattergood Baines.

"Seems as though. Um. . . . Don't seem noways possible boys like you, smart and all, would figger them was *real* bills. Not takin' into consideration all the circumstances of it. Some of which the sheriff knows, and some of which he won't never know. I calc'late you boys has encountered your come-uppance, as Mandy says."

"Ye might," said the sheriff, "commence by handin' over them books, and ye might do it spry and peaceable, 'cause I'm short of temper when I git crossed."

He extended a very large hand. His companion stepped forward in readiness. The three gentlemen looked at one another and became reconciled to the hopelessness of the case. Pride handed over the books.

"COUNT 'em," said the sheriff to Scattergood, who did as he was directed. "Full number expected," he said. "Perty good-lookin' bills too. Fool anybudy but an expert."

"Listen here, Mr. Baines," said Clayton, "you know this is a frame. You know we haven't anything to do with counterfeit money. Surely, you're not going to give us a deal like this—railroad us for something we haven't done."

"Calc'late on jailin' ye fur the good of the order," said Scattergood. "You wa'n't expectin' to come into Coldriver and connive around like you been, and then git off scot free, was ye?"

"But you *know* we're not guilty of this."

"Hain't nobuddy kin prove I do."

"Say, now, we know when we've monkeyed with the buzz saw. We've been bad, and we admit it. Isn't there any way to square this thing? Can't you give us some kind of an out—short of five or ten years in Atlanta?"

Scattergood tweaked his nose and squinted an eye at the tree tops. "When I fust got here," he said, "I declared it was jest the day fur compoundin' a felony."

Pride's eyes became intent.

"Name it," he said. "*Kamerad!* We'll give up."

"The ladies of Coldriver," said Scattergood, "all belong to what they call the Village Welfare Society. The puppose of it is good works and gen'al improvements. They been over-ambitious to build 'em a kind of a thing they call a Community Buildin', with a hall and rooms to play things in, and a place fur the young fellers to spend evenin's instid of loafin' on the bridge and oglin' the girls."

"What," asked Clayton uneasily, "has that to do with it?"

"Consid'able," said Scattergood. "Them wimmin got about four hundred dollars saved up, and in mebbe fifty year they'll have enough. Most folks livin' now won't git much benefit out of that there buildin'. But you boys kin forrard it a heap. I dunno's them wimmin 'ud object to compoundin' a felony, especial if they never knowed it."

"Meaning?" asked Mr. Pride.

"IF YOU boys feel like donatin', say, twenty thousand cash to sich a good cause, I dunno but me'n' the sheriff and the deppity and all might give ye a start 's fur as twenty-thirty mile. Ye could kind of write a letter makin' the donation, and I bet ye your names'll git carved on the corner stone or suthin'."

"Twenty thousand!" bellowed Goodwin.

"Or ten year," said Scattergood softly. "Ye just drawed a little more'n twenty thousand out o' the bank, so I know you got it. An' I got paper and a fountain pen. Ye kin all sign your names. Coldriver's a-goin' to be mighty grateful to ye. . . . And time's a-passin'. I calc'late to leave here in four minutes—with you boys along, or with twenty thousand for the wimmin."

"Clayton," said Goodwin venomously, "you thought up this country excursion. . . . You do the writing."

"But we want all your autographs," said Scattergood. "And we won't neglect the money."

Five minutes later the deputy poured ten gallons of gasolene into the drained tank of the car of Messrs. Pride and Company. Scattergood beamed upon them as he said good-by, and offered the thanks, vicariously, of the Village Welfare Society. He even turned to wave a pudgy hand as his car turned the curve toward Coldriver.

The sheriff cleared his throat. "What I don't git through my head," he said, "is where you got that counterfeit money. I didn't know none was allowed to git loose."

"Tain't," said Scattergood succinctly.

"But you got it, didn't ye?"

"No," said Scattergood, patting his trousers pocket. "Them was as good bills as ever was printed. I jest drawed 'em out of the bank this mornin'."

"Dog-gone!" said the sheriff.

Madam, please compare these models

Which one meets your needs?

No matter what size Premier Electric Cleaner you may choose you will be amazed at the speed, ease and thoroughness with which it cleans.

And there is a Premier especially designed for every purse and purpose.

The Premier Family makes it unnecessary to purchase a cleaner larger than your need requires—or to pay a price in excess of that need. And each Premier Cleaner is scientifically designed and built to perform a variety of tasks in the most perfect manner. Each bears the Premier name and guarantee, backed by a world wide reputation for quality, integrity and fair dealing.

Go to the nearest authorized Premier dealer or ask him to come to you and demonstrate the Premier Family right in your own home. Select the one that will serve you best and see how much more leisure you'll have—how much brighter your home will be.

ELECTRIC VACUUM CLEANER CO., Inc., Dept. 210, Cleveland, Ohio
Distributed and serviced throughout the United States by The Premier Service Company, with branches in all leading cities. ¶ Manufactured and distributed in Canada by the Premier Vacuum Cleaner Co., Ltd., General Offices, Toronto. ¶ Sold over the entire world, outside of the U. S. and Canada by the International General Electric Co., Inc., Schenectady, New York.

The **Premier Family**

$20

PREMIER PIC-UP

⅓ the size and ⅓ the price of Premier Duplex but the same high quality, durability and sterling value. Far more satisfactory than attachments for thorough cleaning of automobiles, clothing, stair carpets, draperies, upholstered furniture, mattresses and other household articles. As easy to use as an electric iron. Has the same motor-driven brush and powerful suction as the Premier Duplex.

$40

PREMIER JUNIOR

⅔ the size, ⅔ the price of Premier Duplex, but the same dependable quality and performance! A compact cleaner for use in small homes, apartments and bungalows where cleaning areas are limited. The Premier Junior takes one-third less closet room and costs a third less. Has the same motor-driven brush and powerful super-suction as the Premier Duplex. The only difference in action between this model and the Premier Duplex is that it requires three strokes of the Junior to clean the same area that the Duplex cleans in two. Premier Junior is furnished with a complete set of attachments—FREE!

$60

PREMIER DUPLEX

Hundreds of thousands are giving daily satisfaction in homes throughout the world. Its powerful motor-driven brush and super-suction quickly and easily bag all the dirt with a speed that cuts cleaning hours in half. Neither motor nor brush ever requires oiling.

Prices slightly higher on Pacific coast and in Canada

Keeps Hair Neat

Rich-looking — Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place it is very easy to give it that rich, glossy, refined and . . . orderly appearance . . . so essential to well-groomed men.

Just rub a little Glostora through your hair . . . once or twice . . . a week—or after shampooing, and your hair will then stay, each day . . . just as you comb it.

Glostora softens the hair and makes it pliable. Then—even stubborn hair—will stay in place of its own accord.

It gives your hair that natural, rich, well-groomed effect, instead of leaving it stiff and artificial looking as pastes and creams do.

Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it!—See how easy it is to keep your hair combed—any style you like . . . whether brushed lightly or combed down flat. If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

Try It FREE

THE R. L. WATKINS CO. 28-G-27
1276 West 3rd Street, Cleveland, Ohio

Champion White Water Pilot of the North

(*Continued from page 30*)

in town had joined them. Instead of twelve guests, I had twenty-five. But the more the merrier, I thought, and I nailed them in so that none should get frisky and go up on the deck in view of the tug.

"Well, when I boarded the tug there was a nasty sea running, but we headed out into the Bering, towing my barge with my boat on top of it. In an hour we were fighting a regular granddaddy of a storm. The tug felt like a bucking bronco as it shot to the tops of waves and came down ker-flop into the trough of the sea. The captain, with all he could do to handle her, was cussing himself for allowing a kid like me to talk him into starting out in such a blow. He was cussing me too, as I stood beside him shaking in my boots for the safety of those twenty-five old-timers nailed in on my steamer skittering along behind.

"But we hadn't seen the worst yet. The storm got so bad the captain said he'd have to cut my barge adrift. Those helpless old boys adrift in Bering Sea! I was desperate! I began talking to him—yelling to make myself heard above the roar of the gale. While my barge yanked at us, threatening every moment to pull the tug to pieces, I used every bit of seamanship I knew in my arguments trying to persuade him to hang on to it; first, for an hour longer; then, half an hour. As the storm increased, I was coaxing him along in ten-minute stretches.

"I managed to keep him hanging on to that scow for twelve terrible hours—and believe me every hour was sixty minutes of hell. Then we reached Nome."

Captain Syd made a sound between a laugh and a groan. "Say! You should have seen the sight aboard my new steamboat when I took the lid off the twenty-five. They were all mad enough to kill me, and every last one had been seasick! They'd made such an awful mess that the tugboat captain, when he saw it, hadn't the nerve to take any money from me for their fares. And he was mad at me too!

"AFTER I'd landed those confounded passengers safely I felt as if the cares of a lifetime had rolled from my shoulders. I went up-town to see what diversion I might find among the bright lights of Nome.

"The brightest of these shone from Tex Ricard's Northern, the biggest gambling hall in the North. I sauntered in, looked the place over, then planted myself before the faro bank. With a great show of nonchalance I unbuckled my currency belt from about my waist. I can see myself—a crazy, red-headed kid sitting there feeling like the king of the world because I had thirty-two thousand dollars in cash and owned my first steamboat and barge in a live camp where freight was worth its weight in gold dust! That was at nine o'clock in the evening.

"When I got up from that table at six the next morning, I had nothing. Money, steamer, and scow were all gone."

After a moment's pause, he continued: "I didn't mind losing the money, but to lose my first steamboat without ever turning her wheel—and on the gambling table! Gosh, that set me back a peg or two! I borrowed forty dollars from Tex, bought a third-class ticket to Seattle, and began to figure how I could get back to Dawson and get another boat. I'd learned my lesson!"

WITH the captain today are men who were members of the crews that manned his various river boats when he was the youngest skipper on the Yukon. "Captain Syd usually was the first one to get to the new camp," one of his mates told me. "Once, when the news of a strike came in, he didn't even own a boat; but he got there just the same. It was after he'd gone broke against that faro bank down in Nome, and he had come in over the ice from Whitehorse to Dawson, riding a bicycle all that four hundred miles of winter trail because he didn't have the price of his fare on the stage.

"He'd been in Dawson only a few days when the river ice broke and went out, and news of the Koyukuk strike sifted in to town. Syd was among the first to hear it.

"He knew a man who was wintering a steamboat near Dawson. To show you how quick he is under the hat, inside of an hour he had arranged to buy that boat on credit for fifteen thousand dollars. The very paper that carried the news of the strike ran an advertisement stating that the first boat for the new diggings would be the Barrington Transportation Company's, carrying passengers at two hundred dollars a head and a limited amount of freight. The stampede was on and before that edition of the paper was sold out he had booked a hundred people, all he could carry, and had the money in his pocket to pay for his boat and a fair sum over. A year later, he and his brothers were running a fleet of six sternwheelers on the Yukon.

"During all the years I've been steamboating with Captain Syd I've never known him to run up against a river he couldn't master. For all he's one of those quiet-spoken chaps he craves excitement, and that's how he gets it—fighting white water. All he asks is to get his hands on the wheel, and there he'll stand, leaning out the pilot-house window reading a river as easy as a fellow reads his sweetheart's face.

"You know a lot has been written about the danger of bringing a small boat through Miles Canyon and the White Horse Rapids, where more than two hundred men have lost their lives; but very few know that four steamboats were taken through. The first, third, and fourth were very small craft. The second was the 'Clifford Sifton.' She was a double-stacker, the largest and finest river boat in the North. The owners had been running her on Lake Bennet, but on the completion of the White Pass Railway her usefulness there was at an end.

"They had to get her below Whitehorse, and to do that they had to take a chance with her in the canyon and the rapids. Their toughest job was to find a pilot who

For the face that would be FIT

Fine face fitness comes from physical condition,—has to do with wisdom in food and air and exercise. But it has to do, too, with what you put on your face.

Trust to Williams. Be guided by 88 years of study of what is best for beard and skin. Use this tested formula, —first Williams Shaving Cream; then Aqua Velva.

Start the day with Williams Shaving Cream. Pure . . . uncolored . . . supremely mild. A thoroughly softened beard leaves nothing to check a speedy razor. At the finish, a skin soothed, clear, velvet smooth. Pores cleansed. *Fit!*

Then follow with Aqua Velva. Splash it on. Made expressly for after shaving, it picks up where Williams lather leaves off. It tingles buoyantly. Wakens, livens, guards the skin. Conserves its natural moisture. Helps to heal tiny nicks and cuts. *Keeps* the skin as Williams lather *leaves* it.

50 cents for a 5-ounce bottle.

The pleasant and sensible way to good face care is the Williams way. Try it for awhile. You haven't had the best until you do.

THE J. B. WILLIAMS CO., GLASTONBURY, CONN.—MONTREAL, CAN.

Collier's Radio Hour

had nerve enough to take the big craft through. They sent for Captain Syd. When he said he'd do it, I tell you the eyes of the whole country were on him!

"If you stand on the bridge they have today over Miles Canyon, and look down into that torrent rushing so furiously that it combs to a crest in midstream, you'll get some idea of what he was up against. The canyon's one mile long, only eighty feet wide, and its rock walls rear up in some places two hundred feet high. One second's uncertainty on the part of the 'Sifton's' pilot and she'd shatter herself against those flint-like walls. Or if her bow slid a foot off the center of that surging crest, she'd swing sideways, block the canyon, and the powerful current would bulge her through like a straw. Running the canyon with the 'Sifton' was really like kissing yourself good-by; but Captain Syd, knowing all this, went about his preparations as serenely as if he'd been going to step across a mud puddle.

"Just before he was ready to start through, he pulled a stunt that set the whole river talking: he fastened baled hay all around that steamer! Then, with only four of us aboard to help him, he threw her wide open and swung her into that roaring, watery hole!

"Don't ask me how I felt going through—there wasn't time to feel! I only know it took a man of iron nerve and lightning judgment to keep that big sternwheeler on top of the break. Three minutes, and he had shot her through that mile, and was plunging into Squaw Rapids with a rock dead in midstream. He stopped her, backed her, flanked around the rock, and hit the galloping combers of the White-horse! A shivering jar, a leap, and a quick turn almost in the air! Then we were in quiet water below the rapids, and young Syd, cool as an icicle, was leaning out of the pilot-house window grinning at the rest of us and telling us we'd done a fine job!

"That was the greatest feat of piloting ever performed on the Yukon.

"BUT what he likes best is a new river. I remember well the time the big strike was made up the White River, which, as you probably know, joins the Yukon in Canadian territory. There wasn't a railroad or a wagon road in the country then, and thousands of people with tons of supplies were begging for quick transportation to the new diggings. They could get up in small poling boats, but the river was such a terror that no pilot dared tackle it with a steamer.

The Canadian Government finally offered five thousand dollars for the man who'd be the first to take a sternwheeler up to where the Klotassin joins the White—a distance of about ninety-five miles. The offer stood for three years and no one tried for the money.

"All this time Captain Syd had been tied up with contracts on the upper Yukon. The minute he was free, he announced his intention of going up to the Klotassin. Everyone, including his own men, laughed at him, for the White isn't really a navigable stream. Sometimes it hasn't enough water to float a peanut shell, and at other times the hot sun melting the glaciers lets loose a freshet that comes charging down the valley in a great bore four or five feet high. Captain

Digitized by Google Original from UNIVERSITY OF IOWA

Syd, however, took some of us fellows who were willing to risk a chance with him, and started out with the best steamer in his fleet.

"In due time, we swung into the mouth of that devil stream. Imagine a green valley seven miles wide, and serpentining all over the bottom of it this river, swift and shallow as a creek, creamy-white and thick from the volcanic ash it churned up from its bottom, and actually split into fifteen or twenty channels by sandbars that shifted while you looked at them!

"It's nearly impossible to read water that looks like a milk-shake in action, but Captain Syd can do it. He gave all those channels a look, and finally picked out the one he thought best. We started up-stream and—wow! What a commotion! The roar of our furnaces and the eternal pounding of water under our hull deafened us and tickled our eardrums; our teeth were nearly shaken loose from vibration as the boat bucked against that current; and how the old baby did eat up the wood!

"YOU know what it means to handle a canoe in swift water? Well, you can imagine how much harder it is to control a big sternwheeler. Even when we'd strike a stretch of fairly good water, the banks would be undermined, and great trees, falling, but still attached to the earth, would lean out, trailing their branches on the river. The current was so strong at some of these places that the captain had all he could do to keep from swinging under those "sweepers," which would have cracked our windows like egg shells and raked our decks clean.

"Maybe just after he'd grazed by a dozen or so of these, the channel would suddenly split and he'd have to choose between two. This is sure a ticklish job when you're risking your own steamboat and maybe a dozen lives on a river no one has ever dared tackle before.

"Captain Syd would battle ahead half a mile, crunch on a sandbar, and have to come back and take the other channel. He'd go a mile up this one, only to find himself barred by shallow water clear across the stream. Then he'd give the word to "bull it." Bulling is tough work for the crew. It means that we'd unreel several hundred feet of steel cable from that wound about the capstan on the bow, load it into a rowboat, leave the steamer, and pole up-river with it to a dry bar.

"There we'd fasten our end of the cable to the biggest log we could find, and then bury this so-called 'dead-man' deep in the gravel. When it was securely anchored, the engines on the boat would work the capstan and wind up the cable. In this way, the steamer would literally drag herself up-stream scraping over the bar until she found deeper water. Sometimes she'd hit a rock and gouge a hole in her bottom. The thick white river would pour into her until we could get a soft patch on her with some boards and a wad of oakum. (She had fourteen of those patches before we got through with that trip!)

"Some of our men got cold feet and wanted to give up because the whole river bed was changing so rapidly that there were ten chances to one if we did make the Klotassin we'd never be able to get the steamer back down again. No other steamboat man on the Yukon would have taken such chances with his property; but

CHEERS

from the men greeted her biscuits and home-made cake

¶ *The Shortcake is made from the recipe at the top of page 21 of the Royal Cook Book using oranges instead of strawberries. Bake the dough in a deep tin, split and place orange sections between and on top. Sprinkle with powdered sugar before serving.*

WHEN the biscuits came in, the men rose as one and burst into shouts of joy.

Such gorgeous, home-made biscuits—flaky and light and piping hot from the oven.

And as for the cake—they would hardly believe it was real. It took three large slices to convince one man.

They begged for more Sunday suppers with biscuits and home-made cake. And she smiled to herself as she promised to ask them all again soon. For there never was such a successful party so amazingly easy to give.

How long do you suppose it took to make those marvelous biscuits? Just 20 minutes—10 minutes to mix them and 10 minutes to bake them golden brown.

And the cake, of course, was a sure success—with a Royal recipe and Royal Baking Powder.

Royal is known all over the world as the very best baking powder. Made always with the finest cream of tartar, a natural fruit product from ripe grapes, Royal never fails you.

Royal, the Cream of Tartar Baking Powder. Absolutely pure.

¶ *You can mix the dough ahead of time and keep it in a cool place until you are ready to bake your biscuits.*

FREE—*Complete Cook Book—nearly 350 recipes*

The Royal Baking Powder Company,
Dept. J, 117 East 42nd Street, New York City

I'd like a copy of the famous Royal Cook Book.

NOW..

before WINTER comes

let your heating contractor perform this inexpensive miracle

DON'T put it off another day. Phone your heating and plumbing contractor. Say this: "Put my heating system in order, clean out the boiler—and show me how to vacuum-ize my system with Hoffman No. 2 Valves."

He will tell you: "To vacuum-ize your system requires the locking out of air, the element that robs the boiler of its ability to deliver all its heat. Mortal enemies—air and steam. Air destroys steam, takes away its heat. Get that air out and lock it out with Hoffman No. 2 Valves—and the steam won't have to fight every inch of its way into radiators, pushing out air every time drafts are opened."

With air shut out and no resistance to overcome, radiators fill with steam *15 minutes* (instead of an hour) after drafts are opened. When the fire is banked radiators give off heat for *3 hours* (instead of 30 minutes), because air cannot get in to dissipate it.

What comfort this one simple change can bring! How easy it is to figure out the dollars saved in fuel!

Look up your heating contractor's telephone number now. Just the above 23 words to him will take the bite out of icy weather promised soon.

FREE BOOK, "How to Lock Out Air—the Heat Thief," tells clearly in word and picture the amazing story of Hoffman No. 2 Vacuum Valves. Send for this book and if you wish, the name of a reliable heating and plumbing contractor near you. Hoffman Specialty Company, Inc., Dep't P-13, 25 West 45th Street, New York City.

THE WATCHMAN OF THE COAL PILE

HOFFMAN No. 2 VACUUM VALVES

(and Hoffman Controlled Heat)

the captain wasn't even listening to predictions of disaster. He stood at the wheel day and night working that river, and you could see with half an eye that he actually liked it!

"After battling up-stream for six days and nights—it never gets dark at that time of year—all the rest of us were nervous wrecks. I remember once, after the captain had tried two channels and had to come back, he couldn't find any other deep enough to float us. We weren't sorry, because we figured now he would have to quit. But not Captain Syd! He can make a steamboat act like a snake or a worm. He had us line the old girl *sideways* over a wide bar into another section of the river! But still we stuck in shallow water. He told us to go up ahead with the cable and bull it. We did; but the steamer wouldn't budge an inch.

"Then he tried the last trick—the double purchase, and finally we made it into deeper water. But by this time the crew was at such a tension that one of our best men cried like a kid every minute he was working to carry out the captain's orders.

"Well, we reached the Klotassin all right, but do you think Captain Syd was content to win that five thousand dollars? No, ma'am! He wanted to see how bad the water was up above, so he kept going a *hundred and twenty-five miles farther* till he made the Donjek, something no one else has ever done so far as I know. And by the time we got back down river again, he knew the old White's tricks so well that he made regular trips with a scow as long as the camps up there needed supplies.

"THERE'S a saying in Alaska to the effect that when any Northerner needs money in any part of the world he wires Syd Barrington—and gets it. He'd give you the shirt off his back when it's twenty below, if you needed it," my informant went on. "And during all his years of steamboating he has never refused to carry a man who couldn't pay his fare. There are hundreds of such fellows up along the Yukon and its tributaries, solitary prospectors, most of them dog-poor, who spend their summers going through the country with nothing but the packs on their backs as they look for 'pay.'

"They'll stay in the hills looking until they run out of grub and wear the very shoes off their feet. Then they'll hit for a navigable river, hoping some kind of a boat will pick them up and carry them back to where they can get another grubstake.

"It was downright pitiful to see them waiting on the bank, lonely, bewhiskered, ragged old-timers waving a battered hat; pitiful because in those days of keen competition few steamers would leave the channel to pick up one man who, it was a cinch, couldn't even pay his way. In fact, Captain Syd was the only one who would do it. No matter how bad the water was or how many other steamers he was racing, he never passed up a man who hailed him. 'Hop on, pardner,' he'd say, 'and ride as far as you're going.' Often he'd end up by giving the fellow a new grubstake.

"He'd been doing this sort of thing some years, never giving it a thought, when George Black, the sourdough

Can Easily Raise $100

The Crowell Church Service Bureau's dignified, quick and pleasant fund-raising plan for churches and church organizations has been adopted and successfully carried out by over a thousand churches.

Now is the time to begin thinking about your Fall church activity. Let us co-operate by furnishing cash to you for extra unexpected church expenses just as we are co-operating with other church societies.

THE AMERICAN MAGAZINE and other Crowell Magazines will pay your church society handsomely for any renewals or new subscriptions you can secure. Many members of your church are regular readers of these magazines and will gladly let you take care of their renewals.

It costs nothing to try. Free outfit, instructions, sample copies for complete Church Service Week Campaign sent when you return this coupon.

Director Church Service Bureau, Desk 1

Insulating the boiler of one of the New York Central "Fifty-two-hundreds." These huge locomotives pull the Twentieth Century Limited, and no small part of their efficiency is due to Johns-Manville Insulating materials.

50,000 Locomotives *Conserve Power* with Johns-Manville Insulation

THROUGH chilling rain, freezing sleet, and biting cold, the engine crew must drive their train on schedule time. Every ounce of steam must be conserved. If the great boiler area of an engine were exposed, enormous losses of heat and power would result. GOOD insulation is such an important factor in locomotive efficiency that more than 50,000 of America's "iron horses" today have their boilers covered with a protective blanket of Johns-Manville Magnesia Blocks.

More power and greater comfort

On the swift fliers that pull the limited trains, on the mighty freight locomotives, on the powerful yard switching engines—Johns-Manville is aiding in power conservation with boiler insulation, steam pipe covering, and special railroad packings and high temperature cements.

Johns-Manville renders a real "Service to Railroads"—and it extends back along the entire train. Insulation for the pipes which heat passenger cars—an insulation which lines the steel walls of the cars themselves and guards the passenger against excessive heat or cold.

From the head end of the locomotive to the rear of the last car, Johns-Manville products contribute to safety, comfort and economy in modern transportation. It is a real tribute to Johns-Manville that the engineering officials of the leading railroads of the country have standardized on J-M products—choosing them because of their outstanding superiority.

And for the same reason engineers and operating men in every phase of industrial activity have adopted J-M products wherever quality and maximum results are needed.

Meeting the needs of industry

From fire-safe roofing to power-conserving packings—from insulations to industrial flooring—there are hundreds of J-M articles which are built to satisfy industry's constant need for products that deliver a full measure of service.

Let us tell you the full story of Johns-Manville's contributions to *your* operating requirements.

governor of the Yukon Territory, did something that had never been done before, and has never been done since. Because of Captain Syd's aid to prospectors, who, as you know, are the backbone of a gold country, the Canadian Government subsidized him, an American, giving him four thousand dollars a year as long as he ran steamboats on British Columbia rivers! When he was notified, you never saw such a surprised man in your life. He never has understood to this day why he should have been paid for giving the old-timers a lift once in a while."

WHILE the gold rush had long been over, these were still the young, reckless days of the country when men's blood, and women's too, ran swift as the rivers they rode to fortune. Travelers were always eager to take passage with Captain Syd Barrington, especially immediately after the spring break-up, when a certain distinction attached to those who ventured down the Yukon on the first boat.

At Whitehorse, the terminal of the White Pass Railway, they congregated to wait for the ice to go out, an event which varied each year. From Whitehorse ran a twenty-five-mile stretch of river; then came Lake Lebarge, at the foot of which many of the sternwheelers wintered.

The river ice above and below Lebarge broke first. That on the lake held precariously for three weeks longer. The minute the river broke, passengers were rushed to the steamers waiting at the foot of Lebarge. The man who first got his people across the lake's twenty-eight miles of rotting surface to his gangplank was the one who stood the best chance of winning that spring race down the Yukon, a race which was a sporting event of such interest that as much as a hundred and fifty thousand dollars sometimes changed hands on it.

"I remember one spring, Captain Syd had the majority of passengers booked for his first trip, as usual," the mate went on to tell me. "There were three hundred, every man and woman banking on him to win. He says he would have lost out that year if it hadn't been for his brother Hill, who was junior pilot with him, and Splotus. "No," he explained in answer to my question about the big negro, who was a well-known character along the Yukon, "Splote never did anything heavier than play his banjo and sing songs, most of which he composed himself; but each year he'd turn up C. O. D. in Whitehorse to go steamboating with Captain Syd. On this occasion, he happened to be with Hill, who always took charge of the passengers at Whitehorse while the captain got his boat ready at the foot of the lake.

"Hill had brought the crowd safely down the river from Whitehorse to the still-frozen Lebarge, where he had a tribe of Indians waiting to transport them down the lake with dog teams at fifteen dollars per head. Every minute was precious, for the ice was settling fast, and already overflowed with great soft black spots showing up all over the lake. The mountain of baggage hadn't been piled up more than ten minutes before the passengers standing around it were ankle deep in water. Splotus was so scared that instead of helping he was tiptoeing about in the offing bellowing to Hill: 'Hey, come away from dere! Dat ice rotten and dose people is goin' fru as sure as shootin'!'

"Everyone was wild to be off, of course, but the chief of the tribe, a wily old bird, lined his teams up and then flatly refused to start unless he was paid twenty-five dollars a passenger, cash on the spot. Hill, having contracted at fifteen dollars, had no such sum with him and there was no time to get it. His only chance lay in persuading the chief to keep his bargain.

"He had just started to reason with the fellow, when there came a terrific yell, and he turned to find that Splotus, despite his caution, had gone plumb through the ice until only his black frightened face stuck out. By the time Hill had fished him up and sent him ashore to a nearby stable to dry, the whole place was in an uproar. The temperature took a sudden rise, the ice began to settle faster, and our competitors with their passengers on sleds were already starting down the lake, giving the laugh to our three hundred, who were mad as hornets and clamoring for action. As a final touch the chief had entirely disappeared, and not one of his Indians would budge until he gave the word!

"Poor Hill was at his wits end running through the crowd trying to locate the chief when he heard more yells coming from the stable. Then mighty calls for help. He rushed up and threw open the door.

"INSIDE was Splotus dripping wet, his thick lips rolled back baring his teeth, one hand about the chief's neck pinning him to the wall, the other making horrible passes with a razor, while he roared: 'You-all goin' back on Cap'n Syd, is you? Uggggg! Wait, Injine, till I slice part of your ear off! Wait till I amputate de end of your black, no-account nose!' Just as Hill leaped in to prevent a murder, the chief gurgled his willingness to live up to his contract!

"Well, the incident put all the passengers in good humor again, especially when Hill punished the chief by making him go ahead with Splotus the only one on his sled. And Splotus certainly got speed out of that savage! The procession, racing down that twenty-eight miles of sinking ice, soon began passing our competitors, some of whom were using dog teams, some sleds with horses.

"At times the poor horses would bog down to their bellies and be hauled out by other horses. But our crowd was lucky, because the chief knew his lake, and he wasn't going to take any chances with that darky on his sled. Of course our passengers got a bit wet when the sleds sank into two feet or so of slush, but the dogs always managed to pull them out all right, and Splotus, riding ahead like a prince in his fur robes, kept up their spirits by singing, in a voice you could hear a mile, songs he composed as he went along. He'd got hold of a bottle of brandy some place, and whenever the chief slacked his pace, he'd pull it out and with a great smacking of lips take a long swig. The Indian would run alongside him, begging for just one drink. 'Go wan dere!' Splote would bellow, pleased as Punch to be in the public eye. 'Hump yourself, Injine, for you don't get nothin' till we's parked on de Captain's boat!'

"River men still talk of that race down

Digitized by Google Original from UNIVERSITY OF IOWA

Lebarge, for while Hill and his three hundred were yet nearly four miles from the foot of the lake, where the steamboats wintered, the ice began to sink so fast that traveling was just like trying to commit suicide. Hill knew that, despite the protests of the passengers, he'd have to give up and get his crowd ashore to safety. Accordingly, he gave the word, and the party spread out and began floundering through the rapidly rising water toward a point of land ahead.

"They'd gone only a little way when those up front stopped, unable to believe their own eyes. The next moment a big yell arose, for there, on the other side of the promontory not a quarter of a mile off, was a steamboat in the frozen lake! It was backing, then rushing forward again, rammng the ice and sending it splintering high into the air.

"It was Captain Syd with his steamer 'Vidette!' Yes, ma'am, he had again done one of those daring and spectacular stunts that made him sort of a hero to the sport-loving Northerners. He had staked his prize steamer on his own skill, and, using the boat as a battering ram, had broken a channel through lake ice for over *three miles* to meet his passengers!

"Five minutes after that dripping, jubilant crowd had stepped from their submerged sleds to the 'Vidette's' gangplank, Captain Syd had her headed downstream. The other steamers at the foot of the lake were unable to get their passengers aboard before the ice became unpassable, so they had to wait until the lake broke and cleared before they started. Captain Syd reached Dawson three days ahead of any of our competitors that spring."

Captain Syd might have retired years ago with the fortune he has made in the precarious business of steamboating, but the dare, the challenge of rivers, and that fierce joy of fighting swift water still holds him. At fifty-two, he is lean and keen-eyed, a lightning thinker, and swift as a panther in action. One day last summer as I stood with him in his pilot-house, one of the passengers on the lower deck fell from the bow into the swirling river. Before those who were beside the unfortunate man could make a move, the captain had leaped from the pilot-house and clutched the fellow by the collar as he came up the first time.

FOR eleven years now on the Stickine he has been running a line of gasolene steamers, which he designed especially for this fastest-flowing navigable stream in the North. These boats, conceded by river men to be the finest ever built for the purpose, are the result of his long years' study of swift waters. While they are strong as steel, they are also resilient. They give to the pressure under them and go up over bars as limber as an eel. In addition, they have a propeller which may be lifted up into a tunnel when the boat is running through drift logs or ice.

The Stickine is Alaska's most noted river. It has been the highway for stampeders in three great gold rushes—the Cassiar in the 70's, the Klondike in '98, and the Dease Lake excitement in '25. During the Cassiar boom, the Hudson Bay Company, at great labor and expense, managed twice a year to line a sternwheeler up as far as Telegraph, one

(Above) "To keep your skin healthy and firm, nothing can touch Pinaud's Lilac," says William de Rham, who is breaking sales-records for Stutz

(Left) "Pinaud's Lilac is the best bet yet to sterilize razor nicks—makes your skin clear," declares O. C. Meyer, Jr., who rates a big sales star at Stutz

These 3 Star Salesmen of STUTZ MOTOR CARS use this *skin bracer* daily

UNBELIEVABLY spruce and smart are the keen young business men who roll up sales volume for the Stutz New York Company.

Three of them told us lately of the famous skin bracer that helps so much to keep them looking fit.

"For a spic and span skin just try Pinaud's Lilac. It gives a glorious after-shaving feel," says Harry Flinn who makes Stutz business hum. He, like so many others, has found the sure way to keep skin safe. No blemishes, no infections, with Lilac slapped on every day

It's no wonder, they declare, that skin toned with Pinaud's is so healthy and fresh. Lilac has exactly the same invigorating effect on the muscles of the skin that exercise has on the body.

And Pinaud's Lilac is a famous antiseptic, too. It sterilizes razor scrapes and nicks—absolutely prevents after-shaving infections and blemishes.

Ask for Pinaud's Lilac at your drug or department store. Protect your skin each morning with a generous after-shaving douse. (You'll enjoy its wholesome outdoor lilac odor.) Keep looking fit and healthy by the faithful use of Pinaud's—*every day.*

FREE: ***good-sized sample bottle of this*** famous skin bracer—write today to Pinaud, Incorporated, Dept. M-2, 220 East 21st St., New York.

Look for Pinaud's signature on every bottle

Does she dare approach marriage

without knowing the truth about feminine hygiene?

MARRIAGE brings many new outlooks to the young wife. In most ways she has prepared herself for the new responsibilities. Yet how often is the intimate matter of feminine hygiene approached blindly! Frankly, in this enlightened day there is no reason why any woman should be misinformed.

Why Zonite is recommended for feminine hygiene

There is certainly no excuse for her running the risks that follow the use of powerful poisonous antiseptics. Physicians *know* what deadly effect these compounds produce upon delicate internal membranes.

But how can real surgical cleanliness be attained without resort to bichloride of mercury or carbolic acid compounds? The answer is *Zonite*. This remarkable non-poisonous antiseptic will not irritate. Nor cause areas of scar-tissue. Yet it is actually *far stronger* than any dilution of carbolic acid that can be allowed on the body.

• • •

Learn more about Zonite! A new frank booklet is free on request. Zonite Products Corporation, 250 Park Avenue, New York, N.Y.

Use Zonite Ointment for burns, abrasions, insect bites or chapped skin. Also as a powerful deodorant in vanishing cream form. Large tubes, 50c.

In bottles: 30c, 60c, $1

Both in U. S. A. and Canada

hundred and sixty miles. But after that died down, the river men who tried to operate on the Stickine either failed to get up stream, or they found the risk too great. The river's reputation for danger grew with the years.

"WHAT I heard of the Stickine made me think it would be interesting and profitable," the captain told me. "When I arrived in Wrangell, the nearest port, and made the announcement that I would run regularly once a week to Telegraph, leaving at ten o'clock every Tuesday morning, the people there laughed at me and at my gas river boats. Because I was an outsider they resented my presumption. I couldn't even get a pilot to go aboard with me for the first trip. No one would show me where the river came out. But I found the yellow streak she made as she joined the bay, and I followed that."

For nearly a dozen years he has been following that yellow streak, and has never had a disaster.

"She's the only river that has ever held me," he continued, as our steamer glided atop the crest of a Stickine canyon. "She has a different mood for every foot of her channel, and she's three times faster than she looks, because the water is yellow with silt. I don't dare take my eyes off her a minute.

"She's always got some new trick to spring on me. I love her. I have men aboard now who have been steamboating with me for nearly thirty years. They feel the same way about her. I watch her, and they watch her—every minute."

The Stronger Voice

(*Continued from page 17*)

"You mean it, Paddy? Honest!"

"Sure. Honest—and maybe you'll forget, Dan, and ride the rails to the valleys of the black singers. Who knows?"

"I'm glad you're going to stay a little longer, Paddy. I felt kind of sorry last night about quitting you. I thought I'd be kind of lonely, and maybe you would too. It'll be like old times for us—a new job—kind of exciting, kind of dangerous. Me an' you together. But I can't go South with you, Paddy. Honest, I can't!"

Black Paddy chuckled. "Wait!"

AS BIG as a mountain, as strong as a thousand horses, as terrible as the sea—the giant trench machine. Across the plain it left a long straight scar, a trench over two feet wide and twenty feet deep. With each turn of its engines the caterpillars carried it forward, and an iron bucket with iron teeth, one of an endless chain, moved downward on the boom that sank into the ground. Men, grimy with grease and oil, toiled at its side and scampered around it like futile, attacking pygmies.

In the underground gloom on the slippery bottom of the trench worked Alamo Dan and Black Paddy. They were close, almost touching the teeth of the iron buckets which tipped at the end of the boom, sank into the blue, sticky clay, and moved steadily upward with their loads.

Above in the sunlight, the surface men watched for signals, listened for orders from the toilers in the hole.

"Down with a crock!" Two men lowered the big pipe on a chain. Dan caught it, swung it into place, circled its end with a strip of oakum.

"Grade-stick!" The inspector dropped his measure to the flow line and sighted through a notch at his marks.

"Aw-r-i-i!"

Every two minutes they laid a pipe, graded it, and cemented the joint. Backs bending, muscles straining, sweat pouring into their eyes. Damp wet smells, dim light, the rumble of machinery. Voices of men above, the vague tremble of the earth.

There was tremendous rhythm. Ahead, always stealing ahead, were the buckets carrying away the ground. Tunk. Tunk. Tunk. Pipe. Oakum. Grade-stick. Cement. Tunk. Tunk. Tunk. Tiny faces peering down, low talk above like humming.

Suddenly Black Paddy's leg came too near the descending buckets.

"Look out, Paddy! They'll *get* you!"

Dan leaped to grasp Paddy's leg and snatch it back. His own foot slipped in the slime. He fell forward. Black Paddy's hands were trying to tear him away. He heard Black Paddy's voice.

"*Stop! Stop! Stop the engine!*"

'Way, 'way up on top someone screamed. Voices—men with white faces staring down—hands lifting and tugging. . . .

The voices died, the faces vanished. No longer could he feel the hands lifting and tugging. . . .

It was as if he had been toiling up through a long black distance. There were no sights or sounds—just the strain of stumbling alone beside the dark edges of another world.

Ann was looking at him out of the sky. He could see her face, and her hair waving in the wind, and her hands reaching toward him. Then confused pictures: A V-shaped flock of wild geese black against the sky; Black Paddy watching them, and smiling a strange far-away smile; men running and waving their hands. . . .

DAN opened his eyes.

The ceiling and all the walls were white, and three thin cracks in the plaster formed a triangle above the door. There were clean smells in the room, like the inside of a drug store only not quite so nice. By the open window stood Black Paddy. A curtain trembled in the breeze and heat-waves shimmered upward from the radiator. Paddy looked kind of gray and serious; but it was pretty good to see him again after wandering alone in the dark places.

Dan stirred. Why, shucks! There were sheets on the bed! Clean, too. You could still see the little ridges where someone had folded and ironed them. Kind of nice and cool, they were. Made you feel all comfortable and rested.

"Paddy, old-timer. Where are we, anyways?"

Unanimous

The Coca-Cola Company, Atlanta, Ga.

On the edge of the tumult and the shouting, where men pause to refresh themselves, all think alike—about Coca-Cola. Thirst for this wholesome refreshment knows no season, no geographical boundaries and no party lines.

The Best Served Drink in the World

A pure drink of natural flavors served ice-cold in its own bottle—the Coca-Cola bottle you can identify even in the dark. Every bottle is sterilized, filled and sealed air-tight by automatic machines, without the touch of human hands—insuring purity and wholesomeness.

8 million a day

IT HAD TO BE GOOD TO GET WHERE IT IS

UNIVERSITY OF IOWA

Paddy started. "You're in the hospital, son. You've been hurt."

"Hurt?" Dan chuckled. "Well, I don't feel hurt. I don't feel bad at all."

"That's good. I'm glad."

Dan moved his body, then his legs. He tried to move his arms, looked suddenly at the bandages.

"*Paddy! Paddy! One of my arms is gone!*"

Dan lay thinking of the horrible hour that had passed after he had found out. He had been pretty weak and mean. He had said pretty bad things to Black Paddy, and Paddy had just stood calm and white, staring out of the window. Dan thought he must have gone crazy to talk and yell the way he had. Kind of wrecked a fellow's nerve to go to sleep whole and wake up broken. But he should have fought it out with himself instead of raving that way.

"Say, Paddy. I'm all right now. I'm used to it already. I didn't mean any of those things, Paddy. I'm sorry!"

Black Paddy came quickly to the side of the bed and looked down at him. "Good kid! That's all right."

"Say, Paddy. I been dreamin' about my girl. I think I could see her when I was asleep. The room kind of smells as if she'd been here—you know, hair, and sweet smells like that. Don't know what they are—just her."

"She was here, son. This morning."

"What did she say, Paddy? What did she do? Didn't you think she was pretty fine?"

"She just looked at you, and—"

"What?"

"Well, then she went away; but before she did she kissed you."

"Honest? Didn't she say when she'd be back?"

"Well, no, she didn't say anything. But don't you worry about that, Dan. She'll come back."

"Are you sure, Paddy?" Dan looked at a rectangle of sunlight on the floor.

"Why, yes. Sure, she'll be back."

"How do you know?"

"Well, I *don't* know, Dan. I *don't* know. It was mighty awful for her to come in and see you lying there that way. I saw her when she found out. I tell you, Dan, it frightened her. She's got a big battle to fight out with herself. If she really wants you, she'll come back. If she doesn't, why, then—why, then— You've got to face it straight, son."

Dan lay quiet, scarcely breathing, wondering, fearing.

"Paddy, . . . do you think she'll come back?"

"I—don't know!"

THE doctors said it would be three weeks before he could leave. One week had passed. Dan lay with his face toward the wall.

"I guess she isn't coming," he thought. "I guess she knows I'm all smashed up." A great fear and a great hunger, an ache more terrible than the pain in his body. "I guess she isn't coming 'cause I'm not the same as other people any more."

But maybe she *had* come, and they'd sent her away. You couldn't tell *what* they'd do in a hospital.

He rang the bell and asked for the head nurse. In a minute she was there in white dress and cap, very stiff and clean.

"Say, ma'am, has there been anyone to see me? I mean a girl with yellow hair?"

"No. No one except that man."

"Oh, ma'am, please don't go yet. Are you *sure* there hasn't been a girl here asking for me? They might have sent her away."

"Sorry. No one." The nurse went out, closing the door softly.

Dan stared at the three cracks in the plaster above the door. P'raps Ann didn't want to live with a guy that had only one arm. P'raps Black Paddy was right. All the adventure was gone now and that had been what she loved. Well, he didn't blame her.

"I wisht," he said aloud to the three thin cracks, "I wisht I'd never seen her. It wouldn't be so much like hell. But now I wisht—I wisht I'd never woke up out of that smash!"

That night Black Paddy came bringing some Malaga grapes. He was cheerful, smiling, and his eyes shone with the light of far horizons. "Here, son. Here's some grapes. They'll taste good."

Dan did not reach for them. He lifted his head so that he could look at Paddy. "I'm goin' South with you, Black Paddy!"

Paddy nodded, for he knew. "Good kid. We'll stick together."

"Aw, Paddy. You're great, honest. I was a fool to think I ever loved that girl. I sure was."

"Well, maybe you were, son."

"I guess so, Paddy."

THE third week was nearly gone. Only two more days, and Dan would escape from the white walls and the smells and the soft footfalls. Black Paddy was working every day to earn their stake. Every night he came to the hospital room, sat with his feet on the radiator and his hands locked at the back of his head.

He talked of construction jobs, and men of other days who had cracked their whips over the backs of twelve-horse teams. Dan lay listening, sometimes fascinated by the names of men and places, and sometimes hearing nothing of what Black Paddy said.

All the last day Dan lay thinking. There *would* be good times ahead. Down South with the bunch he'd be a marked man. He'd take his place beside Step-and-a-half Smith and Sunny North. Both of them had got it—and always they could find jobs as watchmen or time-keepers. But it *had* been good to stoop, reach down, lift a bag of cement under each arm and walk off. Two hundred pounds! Easy!

It was nearly sunset. The wind was dying down. The white walls were turning gray. Black Paddy came in.

"We're goin' to move, son. Right away. We'll hit for Chi tonight and ride classy for once in our lives. Then down the map we'll go. The sawbones say you're fit as a fiddle."

"I'm glad, Paddy. I never want to see this place again!"

He was all dressed. Funny to be dressed again. Paddy was pinning up the empty sleeve. Outside, the sky was full of just about a hundred colors. Felt kind of wobbly standing up again. Maybe you had to learn all over how to walk. The sawbones said some guys did. Paddy was

Wanted Home Women to Decorate Giftwares

No Special Ability Needed

This is the wonderfully interesting occupation that it is now possible for you to enter through the instruction of Fireside Industries. The work pays exceptionally well. There is no canvassing, no monotonous drudgery. Many say they never dreamed that such a wonderful way of earning money at home existed. New system of instruction devised by M. Gabriel Andre Petit makes the work so easy that almost anyone can do it.

Fascinating Home Work

Can you imagine anything so fascinating as decorating Giftwares at home? Could any other kind of work be so pleasant as applying beautiful designs in colors to such artistic objects as candlesticks, wooden toys, parchment lamp shades, wall plaques, picture frames, sewing tables, gateleg tables? Then there are greeting cards to be colored, and cushion tops and other textile articles to be decorated in Batik, and fascinating objects of copper and brass to be etched in beautiful designs.

Many women do this work solely for pleasure, but it also is a splendid way to make money at home for there is a tremendous demand for these giftwares.

Satisfaction Assured

Fireside Industries assures entire satisfaction to each of its members. If, after completing your instruction, you are not entirely pleased and satisfied, your money will be refunded in full. You have only to follow the directions and it is amazing to see what beautiful things one can make. Think of earning $2.00 in just one hour, for example, by decorating a magazine rack! Do you wonder that members of Fireside Industries are so enthusiastic about the work?

BEAUTIFUL BOOK SENT FREE

The beautiful Book of Fireside Industries, illustrated in color, which explains all about this new way to earn money at home, will be sent to you on request. Read how women earn money and beautify their homes and their lives. Just like a beautiful dream come true. Wonderful outfit furnished without extra charge. Simply mail coupon, or write, enclosing 2c stamp to help pay postage.

FIRESIDE INDUSTRIES
Dept. 60-P, Adrian, Mich.

"THIS is what is happening. Music, so long misrepresented to the child thru scales and finger exercises, is breaking away from these old traditions and is now coming into home and school in its true guise as rhythm, melody and harmony."

Mothers...here's an important message that will bring greater happiness into the lives of thousands of boys and girls

New, quicker and interesting methods of piano instruction are today in widespread use. Every mother should know about these simple methods that now make it so easy to learn to play the piano.

YOU—and every other Mother in America—will welcome this news. Look back to your own youth and recall your own piano lessons. Compare your experience with today—children learning to play selections, with both hands, in a single week!

This new idea in piano study is the most inspiring cultural development in child education in decades. Musicians and educators have united in making it possible for every child to learn to play the piano quickly and easily, *regardless of talent.*

Try It For Yourself

Why not try the possibilities of this new method for yourself at home? The famous Look-and-Play Books are good examples of what we mean.

If you have no piano, your dealer will gladly let you use a piano at his store. With this simple introductory method, you or your boy or girl can pick up enough piano fundamentals to continue your study delightfully under a private teacher. There is a music teacher in your town, who probably can tell you more about the new, interesting and happy ways to piano mastery.

free to Parents Who Have No Piano in Their Home:

A four-octave keyboard on heavy paper. A wonderful help to beginners.

Get These Books Today!

The Look-and-Play Books open a new piano world for everybody. They are the most helpful and interesting books of their kind ever published. You will agree when you see them.

Your music dealer can supply both "Twelve Look-and-Play Lessons for Young People" and "Everybody's Look-and-Play Book". They are 50c a piece. If he cannot supply you, we will ship, postpaid, on receipt of cash or stamps.

National Piano Manufacturers Association
247 Park Avenue New York City

The PIANO THE BASIC MUSICAL INSTRUMENT

awfully happy, smiling and humming all the time. He was always that way when he was ready to travel.

Someone had opened the door. Kind of dark in the corridor. Someone was—

Black Paddy moved quickly, so that his huge body blocked the doorway. He turned his head, looking back over his shoulder.

"Wait a minute, Dan! You get all fixed up ready to go, and pretty soon I'll be back to get you."

Dan fumbled with the buttons on his coat. "All right, Paddy." He felt strangely nervous. Sort of made you tingle all over, getting ready. You could never tell what was going to happen. Black Paddy ought to hurry up. What was he wasting time for, anyway? P'raps he had to fix up something or other with the sawbones.

IN THE waiting-room at the end of the corridor Black Paddy was talking softly to a small, dim figure.

"Why did you come back again? I thought I'd told you some things about Dan. I thought you said you could *see* how it was with him and me."

"You did—and I *do* see," she said, and Black Paddy, looking into her face, saw that it was very beautiful with earnestness. "I understand." Her voice was low, trembling. "I understand. Can't you see how much?"

"Then why do you want to stir him all up? Why didn't you stay away? You said—when we talked—you said you could see how it was best for him and me to keep on together. And we're going to! We're goin' to move *tonight!* Me an' Alamo Dan!"

Ann suddenly reached out, as if with her small hands to push him away.

"No! Don't—don't take him away!"

Black Paddy walked slowly to a window. He leaned against the casing, stared out into the twilight. Maybe he had been wrong about Alamo Dan. Maybe he had wanted Dan to travel with so much that he had convinced himself it was the right thing for Dan to do. Folks had a way of doing that sometimes.

Yet surely he knew Dan too well to make a mistake. They had seen great sights together and done big things with machinery and horses and earth and steel. Those were the things that counted and Dan loved them. Why shouldn't they go on forever that way?

But Black Paddy was troubled. He had tried to explain it all to Ann, when she had come back the day after the accident to see Dan. He was sure she had understood, for she had gone away without seeing him, believing what Paddy told her, that she was not for Dan, nor Dan for her, that Dan didn't really want to settle down.

But now she had come back! There was something strange about it, something pretty serious, something you couldn't just make out. He could feel her looking at him. She was standing beside him, watching his face. He turned from the window. "Why did you come back after that talk we had?"

"Because I *had* to come! Because I love Dan. Because I—I just belong with him and he belongs with me. That's all! Don't you know? Can't you see how it is?" Her eyes were dark, wide. "If you

Digitized by Google Original from UNIVERSITY OF IOWA

are right, he's got to tell me so *himself!*"

Black Paddy bent his head toward her. "But you said—"

"Oh, I know! I know what you're going to say! You made me believe it for a while. But I've thought and thought—and remembered. And I understand more than you do, now. And if you take him away, I'll just follow and follow and follow. . . ."

Through the window Black Paddy watched the color of the sky, some black lines of smoke and the tall, grim stacks.

"Say—you care quite a lot about that boy, don't you? I guess you'd do just about anything for him, wouldn't you?"

"*Yes—yes—yes!*"

Faintly from the river came a long, deep, departing signal of a lake steamer. Black Paddy smiled vaguely, and reached out his hand as if he would touch her on the shoulder.

"Well—" He drew back his hand, straightened, and walked quietly away. At the door he hesitated, turned.

"I guess it wasn't right, what I did," he said. "I guess what I told you was only what I wanted to be true. But I—I got to ask you—"

"I know," she said quickly. "I'll never tell him you sent me away that day!"

ALAMO DAN walked up and down, up and down in the white room. He hated the room, because he knew it so well. The chair, the grim floor, the high bed, the walls, the window, and above the door the three thin cracks. He hated to be alone in the room. The thrill of a long, long journey wasn't quite so strong when Black Paddy wasn't there. Black Paddy kind of got you so you didn't care about anything except just traveling around—everywheres.

"I wisht—" He tried to think what it was that he wished.

Someone stopped outside in the corridor. Someone opened the door. Black Paddy would be ready now—all ready for the long, long journey. He was trembling a little. He turned quickly toward the door. . .

"Ann!"

Her arms moved in a pleading gesture. She was trying to tell him something.

"Dan—I thought—I thought maybe you didn't want to stay with me. And I wouldn't try to keep you. But I've come back. I *want* to stay with you, Dan. I never want to leave you any more—and you want me, Dan, . . . don't you?"

"Ann! Ann!" He stumbled toward her.

"I LIKE ALLIGATORS," says Herbert Ravenel Sass, "and the bigger the 'gator is the better I like him! He adds something of mystery, something of prehistoric strangeness to the plantation country. He is not beautiful, but he is interesting; and he is practically the only wild animal left in the East that can bring back the thrill of pioneer days by raiding the farmer's herds." You surely will be fascinated (and at times you may shudder a bit!) when you read, next month, Mr. Sass's remarkable personal experiences with these huge and ancient dwellers in lagoons.

So lustrous—so smooth!

A damp cloth keeps it spotless

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The microscope shows the difference!

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keepclean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

WHAT happens to ordinary interior paint? It gets hopelessly dirty. Hard scrubbing may remove the dirt, but it also wears away the paint. Repainting is soon necessary.

The wide popularity of Barreled Sunlight has been won by its satin-smooth surface that washes easily like tile, and is so durable that washing cannot injure it!

A richly handsome enamel finish with a "depth" peculiar to itself.

Guaranteed to remain white longest.

Gloss, Semi-Gloss and Flat finishes, in cans and drums. For priming, use Barreled Sunlight Undercoat.

A great variety of beautiful tints can be obtained by mixing oil colors with Barreled Sunlight. Ask your dealer about the easy-mixing Barreled Sunlight Tinting Colors in handy tubes.

Also ask about the new *exterior* paint—Outside Barreled Sunlight.

U. S. Gutta Percha Paint Co., 33-F Dudley Street, Providence, R. I. Branches: New York—Chicago—San Francisco. Distributors in principal cities. Over 7000 retail dealers.

What the "Auction" Means to Me

FIRST PRIZE

If You Want to Keep Going You've Got to Go!

WHAT does that picture mean to me? Just one thing. "Hustle, hustle, hustle!" It's not a bit reminiscent, for I never saw an auction in my life. But as a forecast, as a warning, as thunder rolling out of the future, and as lightning flashing out of the ways of life, it fairly shouts at me from the page: "Produce, produce, or move on and make way for men and women of better stuff!"

Now if you're seventy and you've finished a good job, you needn't be afraid to look at all those garden tools lying out such a long, long way from any garden. You can just sit back and chuckle at the commotion, remembering that you had a good long row—and that you hoed it good and strong.

And if you're sixty and feeling a bit grim and battle-scarred, you needn't flinch at looking at those gnarled old trees. They have felt the same storms that wore down and loosened and riffled and beat to a dry rot the shingles on that ancient ell. But the trees, thank God, still have the courage to reach out toward life and give to the world and their own twisted limbs the blessing and sweet comfort of new leaves!

And if you're fifty and beginning to swell a bit with your success, take a saving look at that portrait of the smug middle-aged, and the derisive face beside it of the supplanting generation.

But if you're forty—beware of Life's Ben Badens. They'll cart you off as second-hand at the first sign of moths in your spirit. If you want to keep going *you've got to go*. If you want to keep a place in the world's hallelujah of progress, you've got to *sing*. You may have just a poor little halting, miserable song. You may have one that the winds and the world will hush and listen to. But whatever it is you've been hoarding in your heart, sing it, sing it, *sing it!* Even though the lightning strike you as you stand beneath your tree of life which the weatherbeaten years have raised above you. E. C. R.

SECOND PRIZE

It Seems Like Desecrating Hallowed Ground

TONIGHT I am sitting alone, in sadness and sorrow, a victim of the ever onward surge of modern business.

Little did I think I would ever leave the place that had been my home for so many years, the place where I was born. Parents, husband, and only child gone, it has been my one remaining solace, a place of peace.

Today was the hardest of all, "The Auction." It meant the disposal of the many things of, perhaps, no value to others, but so long mine, so familiar, so associated with the years gone by!

Many were the tears that fell as I heard the "Going—Going—Gone!" of the auctioneer, and one more piece passed into the hands of strangers, to be lightly valued. My heart was torn with grief as I heard the ribald jests of the milling crowd as it passed among the time-worn pieces so long treasured as mine.

I visualize the future, and I see the land subdivided, many buildings erected. I see, perhaps, a bakery, a soft-drink emporium, a department store, a restaurant and, where once stood the shed that sheltered "Nellie," the faithful gray, so often hitched to the old sleigh—then off to "singing school"—I see a huge garage. In my garden of old-fashioned flowers I see a pool-room. And I can only feel that it is desecrating hallowed ground.

Tonight I face a new life. Comforts? Yes. Money? Enough. But what modern comfort can replace the associations of olden times? What money can dim the poignant memories of days long gone?

I pray to God that I may be brave, that I may so live the remainder of my days that when the sands of life are "Going—Going—Gone," and earthly possessions are gone forever, I may find treasures in heaven. R. F.

THIRD PRIZE

Memories of the Old Swimming Hole

IT TAKES but a glance at Charles Gatchell's picture, "The Auction," to carry one back over the road to yesterday, to the early 90's, and to a little boy, barefoot in the dusty road; to poles and bait cans; to the old swimming hole; and to lusty mockingbirds singing in the trees. So Memory waves her magic wand before the picture, and lights spring up in the old windows, and smoke again curls lazily upward from the chimneys, and the sound of singing issues from the open kitchen window, along with that enticing odor of freshly baked cookies, and out under the shady trees and through the hedge it wanders until it comes at last to the stubby nose of the little boy in the road, and the first whiff sends him scurrying to the open kitchen door.

Then there may appear a little boy, sitting up so big in the spring seat on the wagon—and such a monstrous big wagon it was to childish eyes, but now, such a small wagon—and what a thrill it is to slap the lines on Molly's broad back, and to say, "Get Up," in as deep and loud a voice as may be, for a little boy.

But sweeter yet will be the evening hour, the blazing hearth, and that dear voice unfolding the story, and as the little boy listens and gazes into the fire, the fairy castles, and the knights, and the dragon shall take form in the flames as the voice shall speak. Presently the voice shall cease, and tired little limbs and drowsy head will find themselves gathered up in arms, and again will be heard the soft cadence of the voice in the evening's Bible lesson. So, presently, as the flames die down, the sand-man will come, and thus will close the little boy's day, and then silence, except for the measured ticking of the big clock in the hall. E. D. S.

CORONA *for* College

The best investment a freshman can make . .

IT takes a sturdy typewriter to stand four years of student life —and Corona is *sturdy!* It is the only portable typewriter with a twenty-year durability record. That's one reason why every college freshman should own a Corona.

The other reason is that Corona is the most convenient portable. There are more big machine features, more of the little conveniences that make typing easy for the amateur.

For instance — the back spacer and margin release are right on the keyboard within easy reach of the operator's fingers. Another convenient feature is the big line space lever, up out of the way of all other mechanism where one easy motion returns the carriage and spaces for another line.

The keyboard is standard, and full size. The ribbon is full twelve yards long, and reverses automatically. The wide carriage takes a ten inch envelope.

Yet with all these refinements, Corona costs only $60 for either the black or the colored finishes. Easy monthly terms.

See Corona today at any typewriter store—a postal will bring you the latest Corona catalog.

Colored Coronas are beautiful and cost only $60 with case. Write for catalog.

My Last Hope for Freedom Has Flown

(*Continued from page 51*)

the editor of the weekly, even to maintain a toe-hold.

The fact that my country weekly has been picked as one of the fifteen outstanding country weeklies out of twelve thousand country weeklies in America means that I have had to put a lot of human-interest material into my paper week after week. No leisurely scissors-and-paste-pot editor am I, but a hard and fast worker who has to make it snappy or hit the toboggan.

And the sight of that boy growing up and taking an interest in the craft encouraged me. He started me off on another fool's dream of freedom. I dreamed that he would take the load off the shoulders of his dad; I was editing a weekly paper at twenty without the educational advantages that my boy has had, and without more native intelligence. In a few years now he would be running the paper, and I would have time to do so many of the things I have always wanted to do. I would even read Burton's translation of the "Arabian Nights," and Tissot's "Life of Christ," odd purchases made full twenty years ago, because I was told I should read them, but which I haven't read yet. I would take up the sport of fishing, at which I spent much time when a boy. I would even take a trip to Europe. But I should have known better; for that boy is very like his dad.

KEITH is very like his dad and he's going to plow his own furrow, just as Dad has done; when I put him on the train that night and started him off to college, I knew instinctively and for a certainty that he would never come back. He has his own dreams, his own ideals, his own aspirations, and that certain pride in self-accomplishment that will never permit him to come back and try to fill his old man's shoes. He's going to carve his own niche. He is going to be William Keith Saunders and not just a son of "W. O." I know it now. I should have known it sooner. But then I wouldn't have enjoyed my dreams so long.

If I hadn't been blind as a bat, I would have got my eyes open back in 1924, when I took my boy to New York on a trip with me. He had never been to a city before, and I had planned to show him great sights. But I had been in New York only a few hours when a physician ordered me into a hospital. Now, that was a deuce of a predicament for a country boy fourteen years old in the world's biggest city for the first time.

What to do with that boy? I couldn't keep him in the hospital with me: I couldn't park him in a hotel: I had no friends with whom I could entrust him. I finally worked out a scheme. New York is one of the easiest places on earth to find one's way in. It is actually harder to get lost in New York than to find one's way in most cities.

I procured a map of New York City, mapped out a day's itinerary for the boy—an elevated railway trip from Herald Square to the Battery, a visit to the Aquarium; up Broadway to Wall Street, Old Trinity and St. Paul's, the Stock Exchange; farther up, the Woolworth Building, a trip to the tower; thence over to City Hall Park Row, Brooklyn Bridge. Back up town via the subway. If he got lost, he should ask a policeman for directions. If then not sure, call a taxi and tell the driver where to take him. No chance to get lost. I wasn't afraid to trust the youngster alone in New York.

While at the City Hall he should go in and speak to the mayor of New York. Yes. And why not? Keith thought that seeking an interview with so important a person was unthinkable for a fourteen-year-old boy. I reminded him of the autobiography of Edward Bok. I also explained that mayors, governors, congressmen, senators, Presidents and all the rest of them are essentially human—very human. If they were not human they wouldn't be popular.

Before I got through I think the boy felt sorry for the mayor of New York and rather looked down upon him. He saw Mayor Hylan on his first day out. It was this way: The big policeman at the information desk in the waiting-room outside the mayor's office was nice to the boy. A newspaper reporter standing near by, waiting for an interview with the mayor, was attracted by the boy. The reporter took him into the mayor's inner office. Mayor Hylan was nice to him, asked him about himself, about North Carolina, about the South.

Keith told me of it that night with obvious pride, and I mapped out another itinerary for him next day. The Democratic National Convention was about to get under way in Madison Square Garden. Encouraged and thrilled by his adventure at the City Hall, Keith wanted to meet William G. McAdoo. He had been reading McAdoo papers and believed McAdoo the biggest man on earth. He even wore a McAdoo button that he had picked up some place.

BUT he didn't see Mr. McAdoo. Some politician at the McAdoo headquarters was not so good a politician. The gentleman at McAdoo's headquarters told him to run along, that Mr. McAdoo didn't have time to be bothered by a kid. I guess that would have knocked me cold when I was Keith's age, but it didn't daunt that boy. His pride was hurt. But he didn't cry about it. He'd at least try to see Al Smith. From what he had heard about Al Smith down South, Smith wasn't so high and mighty.

I don't know how he found Smith's headquarters, but he found them. And there he met the big, kindly, lovable Franklin D. Roosevelt. Mr. Roosevelt smiled upon him, chatted with him, told him about his own little boy, took him into the presence of Governor Smith. And Governor Smith talked about his own boys, told my boy to come and see him again some day.

Keith came in that night with an Al Smith button, an Al Smith hat band and an Al Smith handkerchief. He was all for Smith. And he'll be for Al Smith as long

Digitized by Google Original from UNIVERSITY OF IOWA

as he lives, such is the loyalty of a boy to the strong man who shows him kindness.

The next day the boy's picture was in several of the New York papers:

Fourteen-Year-Old North Carolina Boy Sees New York by Himself

I couldn't give the boy further directions about seeing New York; he was having more fun finding his own way. On his own initiative he horned into the Democratic National Convention as a page and stayed through that long-drawn-out affair, while his dad went back home to be berated by the neighbors for leaving a little boy like that all alone in a big city.

Keith came home after it was all over, and I asked him how he liked New York. "I like it," he replied matter-of-factly.

"When do you think you'll go back there?" I asked him playfully.

"After I've gone to college, I'm going up there and work on one of the big papers for a year," he replied.

THAT should have opened my eyes. The boy expressed no idle dream; he had found himself, and his future was clearly charted for him, as he saw it. But I didn't take him seriously; I went right on planning for him to succeed me as editor of "The Independent." I put him in the composing-room to learn the mechanical end of my business during his vacation and gave him some writing to do on the side. He worked faithfully enough, but his thoughts were not in the shop of "The Independent." I couldn't see it then, but I recall vividly now the serious, far-away look in the eyes of that boy as he plugged away at his tasks.

They made him editor of the high-school paper in his senior year. I butted into the situation with suggestions for editorials. The boy would listen attentively and indicate that he would write as I had suggested. He used my ideas all right, but he invariably applied them in a new and unexpected way. He never would use one of my suggestions outright. And that too should have opened my eyes; but it didn't. I kept right on planning his future for him.

My wife was wiser than I. Intuitively, she knew all along exactly what was coming. For months before the boy went off to college she contemplated his going sadly. She would tenderly pick up his things dropped around the house, fondle them, and say: "It will not be long now before we won't have a little boy any more."

Another time she said to me: "William, you really ought to spend more time with your boy now; he's going off soon, and he'll never be the same to you again."

I tried to take her advice, but it was too late; a great gulf had divided that boy from me before I had become aware of it. His mind was preoccupied; he was evasive and reticent, although respectful. I suspect now that he wasn't communicative because he didn't want to hurt my feelings; he knew that he was approaching a parting of the ways, and that I had planned through all these years for him to go the way of his father.

I'll have to get some more dream stuff now to build me some more castles in the air, for things are not the same around my home any more. Funny how much room a boy takes up in a home and what a

Powder

"Cleans Teeth Best"

Just ask your dentist

When you go to your dentist to have your teeth cleaned . . . what does he use? — POWDER!

If, like your dentist, you are interested in really clean teeth—and safety—use what your dentist uses . . . for he knows best.

There is nothing known that will clean and polish teeth so quickly, and leave them so gleaming white—as POWDER.

Powder—is the one thing that all forms of dentifrice must depend upon for cleaning.

As powder is the essential cleansing part of any dentifrice; a dentifrice that is . . . ALL POWDER . . . just naturally cleans best.

In use over 60 years

Established 1866

For over SIXTY YEARS, since 1866, dentists everywhere have prescribed Dr. Lyon's Tooth Powder, because—teeth . . . simply cannot . . . remain dull and film coated when it is used. It cleans off all stains and tartar, and polishes the teeth in a harmless and practical way that gives them perfect whiteness.

It cannot possibly scratch, or injure, the finest enamel . . . as SIXTY YEARS of constant use has shown. Dr. Lyon's is the only dentifrice old enough to prove it can be safely used for life.

Dr. Lyon's Tooth Powder keeps your teeth REALLY CLEAN, and clean teeth mean firm, healthy gums and the least possible tooth decay.

Brush your teeth with it regularly—consult your dentist periodically—and you will be doing the very utmost to protect your teeth.

Once you use tooth powder, you will never be satisfied to use anything else.

Tooth powder leaves your teeth feeling so much cleaner, your mouth so refreshed, and your breath so sweet and pure.

Dr. Lyon's Tooth Powder is not only more efficient, but it costs . . . much less . . . to use. A 35c package lasts over three months.

A Million Dollar CAN OPENER

Will You Make This Free Test?

Here is an amazing new chance for big money! A simple but startling ten-second demonstration now brings you one or more sales in every home. Now, $4 to $7 an hour is easy anywhere! Just send for details of my FREE OFFER shown below and get set to test the fastest, dizziest profit makers of your life.

See For Yourself Why "Real Money" Is Easy Anywhere

MEN, there are no "strings" to this offer. All I ask is that you test this opportunity at my risk. This is something absolutely novel and unique. It's a new kind of can opener that is radically different. Needed in every home. Patented, so there is no competition! No wonder the dollars simply roll in for Speedo representatives everywhere.

A $1,000,000 CAN OPENER

This almost magical little device—so small that you can easily slip it into your coat pocket—ends forever all the stabbing and hacking, all the danger and bother of old-style can openers! It holds the can—opens it—flips up the top so you can grab it—and gives you back the can in a couple of seconds with the entire top completely cut out slick as a whistle!

Women all hate the old-style can opener. They know how dangerous it is. Imagine, then, how they welcome this startling new method—this automatic way of doing their most distasteful kitchen task!

288 Orders In One week

"Here is my record for my first 30 days with Speedo: June 13, 60 Speedos—June 20, 84 Speedos—June 30, 192 Speedos—July 6, 288 Speedos. Speedo sells to 9 out of 10 prospects. I made $265 in one week."
M. Ornoff, Va.

14 Orders In 2 Hours

"I now realize that Speedo is the best ever—sold 14 orders in 2 hours at Grand Canyon!"
J. J. Corwin, Ariz.

SELLS ON SIGHT

And men, here's the best part of it. We have worked out a sure-fire demonstration for you that just simply "knocks all of them cold." It opens every door for you instantly—closes sales in 10 seconds by the clock—and gives you 4 orders out of every 5 calls!

NO COST OR OBLIGATION

There is not space in this short message to go into all the sensational details of this new money maker. So I now offer you the opportunity to test your profits absolutely without risk or obligation. Territories are closing fast. So take me up on this Trial Offer today—get the facts about $75 to $150 a week. Mail the coupon at once.

vacancy he leaves when he gets out.

And he used to take up such an awful lot of room with his books, his clothes, his playthings. If there were four vacant chairs in the sitting-room when he came home from school, his books would go into one chair, his hat in another, his coat or baseball bat went on the floor.

Door mats didn't interest him either; he always tracked in mud or snow on his feet, and if the weather was very cold he left the doors open. And he always left the cap off the tube of tooth paste, left the bath soap soaking in the tub, stubbed his toes on the rugs, and left them all bunched up and awry. He left the lights burning when he was the last to go to bed at night; turned on the draft in the furnace and forgot to shut it off; forgot to wind up the clock, and always dropped his bread buttered side down. Oh, how I wished that boy would grow up! And now I've got my wish.

That boy did a lot of useful things around the house that fall to my lot now. Nobody to run around the corner to the grocery when we sit down to breakfast and discover there is no butter in the house; no one to tend the furnace, run errands, and do little odd jobs around the home. I wished for less disorder and a little more room. I've got it. The house gets bigger and emptier every day.

I WENT up-state to see my boy the other day. I motored up and it was a wet, nasty day. I wired the boy to meet me at the hotel. It took me all day to make the trip; first, water in my coils and timer: then, tire trouble; and, lastly, I skidded into a ditch on a detour and had to sit in the wet for hours until a pair of mules could be found to pull me out.

I made my toilet and took the boy out to dinner. After dinner I asked him what he wanted to do; he had no plans, and said he too was tired and rather sleepy. That sounded good to me and I said, "Let's go up to the room, get comfortable, and talk a while."

"All right, Dad," said he; "go on up, and I'll join you presently." It was then eight o'clock in the evening.

At eleven P. M. that boy hadn't shown up and I dozed off to sleep. He came in a few minutes later and proceeded to undress for bed.

"Where have you been, son?" I asked.

"I bought a magazine at the newsstand, and have been sitting in the lobby reading," he replied.

I related this incident to Bill, a hometown friend who has had two boys in college.

Bill smiled cynically. "That's the way it goes," said Bill; "once they get out from under you they don't give a darn for you."

I DON'T quite agree with Bill. My boy is proceeding about the business of living his own life. It isn't that he doesn't give a darn for Dad any more, but he wants to explore and decide some things for himself. And I shall not upbraid him or interfere, because he is following in my footsteps after all. But this I know: I have lost my boy, and he must find himself in the maze of life's perplexities and illusions through which I, before him, had to pass.

Of course I might have made my boy fit into my plans for him by taking him in hand early, keeping a strong grip on him, and bending him to my will. And by doing that I might have destroyed his initiative and that phenomenal thing called Personality.

I may be wrong in my ideas about bringing up children; I may yet be written down as a colossal failure as a father; but, with all my dreams, I shall not dissuade that boy from choosing his own career. He can't, after all, make more mistakes than I have made.

I have not loaded him down with much parental advice. I have, however, tried in many ways to impress upon him the few simple, understandable rules that I have found practicable, desirable, and satisfying in my own life: It pays to be thoughtful, industrious, courteous, truthful, and fair. Be all these things, and you have put many cares and much fear out of your life; and you will have won the respect, the confidence, and the friendship of worthy citizens—the greatest assets social man may acquire; without which no man may walk confidently among his fellow men and live on terms with God.

If You Had Leisure and Money What Would You Do With Them?

Prize Contest Announcement

LIKE W. O. Saunders, every one of us has day-dreamed about what we are going to do with our leisure time and money when we get them. With our eyes on the far horizon, we have planned to visit out-of-the-way places—see the four corners of the earth; or we have planned to satisfy our longing to read and study, which the hurly-burly of business has never allowed us. Sports call to some of us; others long just to sleep and rest. Day-dreaming is a pleasant occupation, and although we may see our dreams quashed, as our friend Saunders has, hope springs eternal in the human breast. So indulge in a little day-dreaming, and tell us what you would do if you had leisure and money to enjoy it.

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes October 20th. Winning letters will appear in the January, 1929, issue.

Address "Leisure" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

The White Fireman safeguards the American cotton crop

COTTON is one of America's great assets. A considerable loss of it might affect manufacturers, retailers and consumers everywhere. The White Fireman, therefore, has not overlooked cotton protection as a part of his all-inclusive loss-prevention service.

In the last decade he has effected improvements in the fire-safeness of a thousand warehouses at cotton concentration ports. 44,000,000 square feet of sheds have been constructed to reduce the hazard of fires from sparks. 48 miles of fire walls have been erected to minimize the number of bales subject to a single fire. 140 miles of water mains, 75 miles of fire hose, thousands of hydrants and hundreds of automatic sprinkler systems have been added to fire-fighting equipment.

That the White Fireman's work has not been in vain is evidenced by the fact that the average annual cotton loss for the past five years was considerably lower than for the preceding five years.

THE White Fireman symbolizes the Loss-Prevention Service supported by insurance companies. This service includes: Consultation on proposed structures, that they may be as fire-safe as possible. Inspection of property, with recommendations for the reduction of fire-hazards. Maintenance of the Underwriters' Laboratories for the testing of building materials, the practical trial of fire extinguishers and other protective equipment, the examination of electrical apparatus and materials. Various other kinds of technical assistance for the furtherance of property conservation. The North America Agent will tell you how to secure this valuable service.

How to Make Real Money Just Doing This

New Shaving Invention Offers Excellent Money to Men Who Will Act As Our Local Representatives in Their Home Territories. $30—$40—$50 a Day. Full or Spare Time! No Investment Required. Write for Details On

GENEROUS OFFER

Probably you have heard of KRISS-KROSS—the amazing stropper and razor blade-renewer pictured above. It makes any kind of blade **keener than new** and prolongs its life for weeks and even months! But that's not all. KRISS-KROSS is one of the most surpassing money-makers ever seen. Hundreds of demonstrators and agents all over the country are making from $200 to $500 a month just taking orders for it in their home towns. KRISS-KROSS is heavily advertised in magazines but **never sold in stores,** so we must have people to take the orders in each locality. We pay generously for your time and give special bonuses that run your earnings up into **real money.** Even spare-time workers earn $15 or more in a single evening or Saturday afternoon.

An Astonishing Invention

KRISS-KROSS' mechanical ingenuity is little short of marvelous. It strops your blade (any make) on the diagonal just like a master barber. Eight "lucky" leather grooves do the trick in 11 seconds. Automatic reverse. Strops heavy at the start—light at the finish, and leaves your blade with the keenest cutting edge steel can take! No wonder it sells like wildfire!

Profits Waiting For You

So great is the present demand for KRISS-KROSS that agents are reaping profits almost beyond belief. During the month K. P. Rapf made $602. R. C. Walker (Idaho) made $9 his very first demonstration. H. King of Massachusetts, made $66 in one day—and J. C. Kellogg cleared $200 in 7 days at spare time alone!

Get Details—Special Offer

Right now we are willing to make an extremely generous offer to new agents and demonstrators. Find out about this money-making business without delay. See how simple it is to make $100—$225 a week with KRISS-KROSS. Others are doing it—why not you? Send the coupon now!

Kate Gleason's Adventures in a Man's Job

(*Continued from page 43*)

me; men talked to each other about me and spread my fame far and wide, and"—here she began to laugh—"men were so eager to give me due credit that they set their imaginations working, and told yarn after yarn about things I had never done. Nobody could stop those yarns. They were a wonderful help in selling; but they were monstrously unfair to my father and brothers.

"One day I went to a shop that used our machine tools, and while there I noticed a loud squeaking from one of the planers. I investigated. I found that the two fingers that controlled the reverse were too close, causing the belts to squeak. I reported this to Father and he sent a man to put on a new set of fingers.

"The yarn that arose from that simple act thrived and grew into a wonderful tale. Father had visited the shop a short time before I did. He also noticed the squeak, but as it did not impair the work forgot to send the new fingers until I reminded him. The owner of the mill began spreading the story of how Old Man Gleason himself, the inventor of the machine, had been there and never fixed that noise, and then his girl came along and fixed it in two minutes.

"Soon I was credited with carrying a tool bag and wearing overalls. As a matter of fact, I never have worn overalls and never will wear them, but *that* tale spread all over the country. I met it everywhere I went to sell and," here her eyes grew droll, "I contradicted it every time I heard it, and still they believed it! Incidentally, it brought two hundred letters containing proposals of marriage!

"READ them—did you ask?" she burst into hearty laughter. "I should say I did! I am not married. I have never married, but I have received enough proposals from those absurd yarns to satisfy any woman. Many of them are unforgettable. In pouring forth his impassioned request one writer concluded: "'Miss Gleason, you will make no mistake in marrying me. I am pure as the dew at dawn.'

"I am sentimental, as you will find out, but I have never approved of the dew at dawn; it is a bit chill. Another ardent letter stated that the writer was a friend of the ex-Kaiser's, who then was not an 'ex.' It ran:

"My mother has taught me that I must realize my life to the full. But I cannot do this without marriage. If only you, Miss Gleason, will help me thus to realize it! But if, for any reason, you feel you cannot, will you not pass this letter along to one of your friends?"

She rocked with merriment. And now you have met the real Kate Gleason, a handsome, stalwart, robust woman with magnificent white hair, a woman of great gifts, of great achievements, who lives heartily and candidly; a woman whose abundant vitality and rollicking humor is finely matched by her great mental ability.

"I am what the world calls a success," she said frankly. "I have done what I set out to do, and much more. And," her irrepressible laughter bubbled over, "here I am, and what do I want now? *I want to go where people want me, and work for them!* That is why I went to France, that is why I am working in Beaufort.

"My girlish ambitions were fiercely personal. I felt keenly that girls in this world were accorded second place, and I resented being second. My grandmother always wanted my brothers to take her about; she thought little of me. Friends and neighbors used to watch me, and shake their heads and remark:

"'She should have been a boy.' They were justified, for I was trying my best to be as nearly a boy as I could. I wore my hair short and straight in a day when girls wore long curls or braids. I played with the boys. They didn't want me, but I earned my right.

"If we were jumping from the shed roofs I chose the highest spot; if we vaulted fences I picked the tallest. I was husky and able, and to this I added a bit of recklessness that carried me through. It took just that added bit of daring to outdo the rest. I carried that lesson into business. A bold front, determination, and the willingness to risk more than the crowd, plus some common sense, and hard work, wins out.

"MY BROTHER Tom, the born fighter and the most tender nurse a girl ever had, died at twenty. I was then eleven. Young as Tom was, he was my father's right hand in the business. I was next, and my two brothers, James and Andrew, were younger. One afternoon soon after Tom's death as I was coming into the house from school I heard my father say:

"'Oh, if Kate had *only* been a boy!' It was bad enough to have the neighbors say that. But Father! I almost worshiped Father. That I should fail him in anything was not to be endured.

"The next Saturday I walked down to the shop, mounted a stool and demanded work. Father smiled and gave me some bills to make out. From that time on I worked regularly.

"When I was fourteen I decided that I could do the bookkeeping. So I acted. Father backed me up then, as he backed me up all his life. At the close of the day he handed me one dollar, my first pay. I had no pocket, so I tucked it in my dress, and lost it on the way home. My mother and grandmother made a terrible fuss.

"'Lost your first pay!' they wailed. 'Oh, Kate!'

"'Oh, what's the matter?' I protested. 'I can soon make another dollar.' It was later that I learned to count every penny and to know the real value of money earned.

"Although I was young, I was a great big girl and looked much older. Mother thought it wise for me to learn something of the business, after Tom went, 'just,' as she said, 'in case something happened.' That 'something,' of course, was the death of my father, upon whom we depended. He lived to the hale and hearty age of almost ninety, and was active and vital to his end.

"However, their apprehension served my purpose well. At fourteen, I got up at

Digitized by Google Original from UNIVERSITY OF IOWA

four A. M. and studied, went to school at eight, got out at one, went home to dinner, then to the office, worked until six, went home, ate supper, and went to bed. The neighbors used to expostulate with Mother, and when she wanted me to go to dancing school, I rebelled.

"She told me Jim, my younger brother, was so shy that I must go to stir him up a bit; I found later she had told Jim I was so uncouth I must be made more civilized, and so we each endured it for the other, both hating it with all our hearts."

THE Gleason Works of that day consisted of a small machine shop that employed about a dozen men. William Gleason, its head, was an inventor and became one of the best known machine-tool designers in the world. Under his training Kate developed rapidly. She finished high school at sixteen and then entered Cornell University. A man was engaged at a "tremendous salary, eleven hundred dollars a year," to take over her part of the work. Before the year ended, her father wrote her he could not get along without her help. She must give up college and return at once.

"That was my first big sorrow," she said, "and my heart broke utterly. I took Father's letter out on the campus and sat under a tree where I thought no one would find me, and wept and wept. I had planned to finish the engineering course. I was the only woman in it, and it meant so much.

"As I sat there one of my friends who had been a pal saw me and came to me. He asked what was the matter. When I sobbed that I had to leave, he choked up and said brokenly that he was awfully sorry, but that just at present he couldn't be more than a brother to me. My tears stopped. I tried to convince him that I was crying at leaving *college*, but he attributed that statement to my maidenly modesty, and in the end I walked off furious, if broken-hearted.

"Twice in my life I have gone down into the depths of despair because the way I wanted to go was suddenly shut off from me. Both times the way I *had* to go was the best possible way for me. Take this leaving of college: Since I was nine I had been reading books on machines and engineering; my one year had given me the essentials of the profession. The rest I could do, and did do, for myself. My fierce determination to equal the young men I left at college served as a spur, and I worked with every bit of energy I possessed.

"As far as I could see, our business was about the worst in the world. There were alternate periods of inflation and depression that were utterly beyond our control. We made just as good tools at any time; but in boom years when orders rolled in we had to extend our plant facilities to get out the work, and to do this we borrowed money. Then bad times came, and we found ourselves with notes due and no work to bring in money to pay them.

"I ARGUED that I ought to get out on the road and sell, but Father was not willing. However, things grew worse and worse and at last he agreed to let me try. I decided to go after a particular order, one for which there were sure to be many competitors. Father was so afraid experienced salesmen would laugh at me that he

Her hair tends to be oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair tends to be dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and no drying alcohol). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use Packer's Tar Soap

. . . the soap that made pine tar famous for shampooing. Pine tar is antiseptic, healing, with properties valuable in the treatment of dandruff. Packer's Tar Soap is endorsed by dermatologists for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need the care of a dermatologist—a doctor who is a skin specialist. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon below is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

There's an Old Man ahead *you* ought to know~

HE HAS your eyes, your nose, your walk. He talks like you, acts like you, thinks like you. And whether he hates you or loves you, respects you or despises you, depends upon YOU.

Low Rate ~ Low Cost

Provident Mutual

Life Insurance Company of Philadelphia, Penna.

© P.M.L.I.Co., 1928 Founded 1865

suggested I go early and tell people I was going to the town for an exhibition that was being held there.

When I arrived at the plant, I found a new manager, a young man who had just arrived. It was *his* first order as well as mine, and he was more scared of me than I of him. And, naturally, as I sensed his timidity I grew bolder. It ended with his giving me the entire order. Father had thought we *might* get a part—for ten thousand dollars' worth of tools! Triumphantly I marched home with two lessons learned:

"*There is no sense in being scared of anyone; he may be more scared of you than you of him.*

"*It pays to be first in any field, if you can.*

"When I started selling, I believed that, as a woman, I would suffer many disadvantages. I soon discovered I was wrong. But there was one disadvantage I never managed to get over. Men salesmen would ask a prospective customer to lunch, dinner, theatre, or some kind of entertainment. By all the known laws of my day I could not do this. On one trip to Cleveland I was greatly downcast. The owner of a certain factory had been lunched and dined by every salesman there except me.

"I was low in my mind, but I determined not to give up, and the next day I breezed in with a good yarn and got the order. I got it on the sheer merit of the machine I was selling. The only fight a woman has against this luncheon-dinner business is to ignore it, and keep steadily at the job itself."

From the beginning Kate Gleason was a good saleswoman.

"Most people were curious to see me," she said. "Our agents had talked about me, and when I traveled I found the story of Kate Gleason helping her father in the machine shop had preceded me, and it helped. Susan B. Anthony, who was a great friend of my mother, had impressed one fact upon me while I was growing up:

"'Any advertising is good,' she said. 'Get praise if possible, blame if you have to. *But never stop being talked about.*'

"I have come to believe that absolutely. In those early days I was a freak; I talked of gears when a woman was not supposed to know what a gear was. It did me much good. For, no matter how much men disapproved of me, they were at least interested in seeing me, one distinct advantage I had over the ordinary salesman. I dealt wholly with men—no women were then running factories and foundries."

THE Gleason works were increasing. Part of this Kate Gleason credits to the family efforts, part, she says frankly, was due to a business boom. Three years after she started there were a hundred and twenty-five men working in place of the original dozen and the business gained steadily until the panic of 1893. Then the bottom dropped out of the tool business along with everything else.

The Gleasons had extended their facilities and were under great obligations.

"As I was in charge of selling and finance I did my best to get orders, and did get some," she said. "But no orders could save us unless I could induce the banks to accept customers' notes to pay our notes. As I tried to persuade bank officers to extend our credits I began to appreciate what feminine charm might do.

For you MADE him. He is YOU.

Every sunrise brings us just a little bit closer to the old man who is in the making in all of us. It is up to us to provide for him and his through life insurance. It is up to us, in our productive days, to put funds to work, through life insurance, for his non-productive days.

There's an old man ahead of you. He has your eyes, your nose, your walk. He talks like you. He acts like you. He thinks like you. Let him think well of you. For you — YOU are his youth.

There is a Provident Mutual representative near you who will be glad to cooperate in establishing a program of insurance protection that will cover all the needs of your family and yourself. You can depend upon his counsel.

"It Takes Money!"

"YES, and a big lump of it for our own home", muttered Jim almost savagely.

"If I could only help", was Ann's thought. But she did not say it out loud—June brides seldom do. Yet there was the thought—a very exciting one if . . . . . *it could only come true.*

Just about this time of the year, as the days grow cooler, we get a longing for things that we want to do, or have.

Some of us are going away to college for the first time; some to business—

And there are the June brides, like Ann—young wives, now—dreaming their lovely, unselfish dreams, and wishing they could earn some extra money *themselves.*

They can—and all the rest of you can!

No, it isn't some fairy tale . . . although it sounds almost as fascinating. Right here in the Pin Money Club, are thousands of girls who do earn $5, $10 and more every month, just in their spare time. They carry on our pleasant, easy work—and are paid for it.

They are such busy folk, too—even their spare moments are few. But the P.M.C. was especially organized to help them—so, of course, it does.

Mrs. Dan Morris of Oklahoma, upon joining us, wrote—

"The P.M.C. is to me a sealed packet of delightful possibilities, and oh, what fun in breaking the seal. Having moved to a place where every face was strange and their ways stranger still, I had decided my days of real events were over, when by some happy chance I stumbled into this Club.

"That day", she said, "was the beginning of a new era for me"!

AND "that day" was more than seven years ago. She has been a member ever since. She has earned hundreds of dollars—won innumerable Cash Prizes, one a Check for $50. And in her home are a great many mementoes of her Club work—silver candlesticks, and many other gifts.

As much money as you want and need is here for you, too! Write today to—

I thought of all the wiles of all the great adventuresses and wished I could learn some to use on the bank executives.

"Every sales trip made me bluer than ever. There were so many salesmen hunting orders that we were like a lot of hungry crows fighting about a small mess of corn.

"On one trip during panic time I visited Plainfield, New Jersey, and the head of a tool company there, sympathizing with me about dull times, said:

"'Anyone who can make a *living* out of the machine-tool business could make a *fortune* out of anything else.'

"That hit me hard. All the way home I thought of our business, and the one thing that held hope was our gear planing machine, which was then a very small part.

"'Father,' I said, on my return, 'We have to get out of this machine-tool business. Now, how about gears? They wear out much quicker than tools. We could sell the same people year after year. Nobody has such a machine as yours!' Father was always ready to listen to me, and give my ideas a chance. So he went to work on the perfecting of his machine, and I began to try to get more gear orders.

"I fell ill that year and the doctor ordered Atlantic City. But as there were no orders there, I got together two hundred dollars, and decided to visit manufacturers in England, Scotland, France, and Germany.

"Three days before I sailed I mentioned my going to a salesman from Brown and Sharpe. He was aghast.

"'But—do you know anyone there?' he asked.

"I said I did not. I sold people in America whom I did not know, so why not abroad? He shook his head, went back and told his firm, and they sent me a sheaf of letters of introduction. This firm was larger than ours, and in the same line. On my return, knowing what those letters had done for me, I sent them a check as commission on my orders. They returned it to me. That is one of the many times men have gone out of their way to lend me a helping hand.

"I WAS so hard up that I had just one dress to wear every day of that trip—a black cashmere. Owing to my limited funds I traveled on a cattle ship and I was the only woman passenger. There were fourteen men, and they ran a stop watch to measure their turns in promenading the deck with me. Naturally, I was feeling pretty good. But the purser spoiled it all for me. He told a story of a time when, after six months in the Congo without sight of a white woman, his major's wife got on the return steamer and he found her beautiful beyond words. But a few days later some young English girls boarded the ship, and he suddenly saw that the major's wife wore a wig and had false teeth. The moral was obvious. I said good-by to my fourteen ship admirers, got my letters, and prepared to work for orders. I was fortunate enough to bring some back from the best firms in Scotland, England, France, and Germany, and that was the beginning of a real foreign business for us.

"Shortly after this trip I began to consider my clothes. Apparently, everybody else had been considering them for some time; but to me dress had seemed of little importance. But when one of my

If You Live in DETROIT

meet

"Bob" Reynolds

WHETHER you are the owner of a small home or the purchasing agent of a large factory—whatever your status or position—you should meet Robert A. Reynolds. He has a service to perform that may save you thousands of dollars, or even your life!

A MILLION DOLLARS' WORTH OF SERVICE—FREE

Research costing well over a million dollars is behind the training which Mr. Reynolds has received and which enables him to give his service to you.

He is a trained Fire Prevention Expert. He will appraise and chart your fire hazards and advise you regarding equipment for fully protecting you and yours against fire—the nation's greatest peril.

If you are already equipped, he will inspect and report on your equipment periodically without one cent of cost to you.

A SERIOUS MAN—DOING AN IMPORTANT JOB

The job "Bob" Reynolds is doing is an important one. Last year fire losses in the United States mounted to over $550,000,000 with a loss of over 15,000 lives. And Mr. Reynolds, you will quickly see, takes his work seriously.

The equipment he recommends is approved by Underwriters' Laboratory and recommended by State Safety Commissioners and hundreds of Fire Chiefs.

Fyr-Fyter equipment has been chosen to protect such places as the Ford Motor Co., Bethlehem Steel Corp., Standard Oil Corp., International Harvester, and over 20,000 other nationally known institutions. The U. S. Government alone has purchased 260,000 Fyr-Fyters for use on battleships, aircraft and in government departments.

AN OPPORTUNITY
For a Few Reliable Men

Because of an ever increasing demand, we must make additions to our field forces. We will consider applications from a few reliable men who are capable of earning from $3,600 to $12,500 a year.

For men who can appreciate the advantages of being connected with a prominent firm and a sales organization noted for its exceptional high income, the Fyr-Fyter Company offers a genuine opportunity.

Those interested, please give full details regarding yourself in the first letter. Applications will be treated most confidentially.

If You Do Not Live In Detroit

In many of the nation's important centers we have men like "Bob" Reynolds, trained to give you complete fire prevention service. Look for "Fyr-Fyter" in your Telephone directory—if you do not find it, write us. We will answer by return mail giving you the name of our nearest expert. Remember, the Fyr-Fyter man will call and make his report without wasting your time. His call will mean protection to you that can not be valued, alone, in dollars and cents.

former teachers, and even Miss Anthony, chided me about my appearance, I decided to try a change. So I went in for extremely feminine attire. I had my hair dressed and wore violets on my muff, and had some soft, frivolous gowns made. This attention to dress repaid me well. Some of my customers spoke to me twenty years after about a certain dress or hat that I wore when I made a sale. I learned to value clothes, to love clothes, and to use clothes.

"In 1900 we arranged for an exhibit at the Paris Exposition. We were pushing our gear planers, and this exhibit had cost us much thought and money. Our Paris agents wired us that we had been given space under a stair in a dark corner, and that they could do nothing. I had intended going over later, but I sailed at once. I found a dozen other protesting firms in that dark spot. One Swedish firm had called to its aid the Minister to France. But I slipped back to my hotel, put on my prettiest frock, and the most feminine, laciest hat you ever saw, and went boldly to the general manager's office. There were many exhibitors waiting there, but I was admitted right away. I sympathized with the manager. I told him I did not see how he endured the complaints of the exhibitors, and the abuse and the great strain of his position. I encouraged him to talk and I listened long to his tale of woe and condoled with him all along. *I asked nothing.*

"In the end he inquired about *my* exhibit, and when I mentioned its location he rose at once, took me out and offered me a choice of nine of the best places in the building. The other American exhibitors kindly helped me to move, and the remaining denizens of the dark corner watched open-mouthed.

"'Now,' said the general manager. 'If anyone tells you to move again, stand by your exhibit with guns.' I thanked him. But I knew better. I stood by with my lace hat."

FIVE years after Kate Gleason had urged her father and brothers to turn their attention to gears and gear planing machines, the Gleasons had discontinued tool making. The new venture was a success. The automobile was just beginning to look practical. There was a great future in sight.

With prosperity, Kate Gleason decided upon a home of her own. When she was nine years old she had read Bulwer-Lytton's "Leila, or The Siege of Granada." The word picture of the Alhambra so stirred her childish imagination that she decided to have a home just like that. She sent for plans and pictures of the Alhambra, but she was dismayed at the building price.

"At this time," she said, with her blue eyes sparkling, "I was in the throes of a theory that made it impossible for anyone to own a home worth more than fifteen thousand dollars. But we humans can always adjust our theories to the terms of our desires, and I decided that *my* Alhambra was absolutely essential, and that any expense was justified. So I built Clones, named for my mother's birthplace in Ireland, and many a good time we have had here."

From the moment I had halted in the doorway and looked with wonder up the

Original from UNIVERSITY OF IOWA

stone steps railed with red silken ropes and listened to the drip, drip of water running down the stair arms into tiny pools at each landing, I had marveled at this unique dwelling. The patio with its fountains and vaulted glass roof, beneath which grew palms thirty feet tall, the rock gardens, the huge living-room with its great fireplace, and its Spanish chimney for burning charcoal in a huge brass-hooded brazier; the suite that is Miss Gleason's very own, to which she climbs a sublimated wooden stepladder and then draws it up after her, and stays as she wills, secure from all interruption, were like parts of a dream from another world. Through the arched windows, however, stretched a thoroughly contradictory vista of American rolling fields and woodlands.

"I'VE enjoyed building beyond most other things I have done," said Kate Gleason. "Before I built this place our business had far outgrown its plant, so we decided to enlarge it. When we set out to plan the buildings, I remembered that Father had remarked, on his return from a trip abroad, about the vastness and emptiness of some of the cathedrals. 'What a chance for a traveling crane!' he had exclaimed.

"Now a cathedral is usually built on lines that are exactly right for traveling cranes, so I sent for photographs and plans of cathedrals, and we selected the one at Pisa as having the lines best adapted to our plans. Our present foundry building is modeled after this cathedral, even to the string course over which the vines climb. The office building we decided to model after the Pan-American Building at Washington."

After twenty years these buildings are among the show places at Rochester. They are beautiful, substantial, and efficient. Within their walls Kate Gleason worked happily for a dozen years. With the development of the automobile, the camera, and all modern machinery, the gear business continued to prosper.

"Kate," said her brother, James Gleason, who is the president of the Gleason works, "was one first-class salesman and one grand entertainer. She could spin a marvelous yarn. Many a time I've heard Father give one snort at a yarn of Kate's, and then give way to helpless laughter."

But as the Gleason works became more and more successful, the family, united by great mutual need, began to suffer grave differences of opinion.

"The differences," said Miss Gleason candidly, "were those that almost invariably come to a successful business when the drudgery of selling and hiring or borrowing money or making drawings can be passed on to others, and the founders have not enough to do. It seemed to me that my experience would make it easier for me to go into a totally different line of business than it would be for my brothers, who, up to that time, had specialized on the shop end of the work. It was heartbreaking, because it meant leaving Father and all the friends I loved. The break came in 1913, and fortunately a job developed that kept me in the machine business for almost two years longer.

This job began in January, 1914, when Kate Gleason had the distinction of being the first woman appointed receiver by a bankruptcy court. She was made manager

"No bond is good enough to forget"

Even the best of bonds are sometimes weakened by unfavorable changes in economic conditions. Certain bonds may be less desirable for you today than they were when purchased, because of changes since in your own personal investment needs. These are reasons why you should check over your holdings occasionally with competent advisors.

At National City offices in over fifty American cities you will find experienced bond men ready to advise you on new investments and on the suitability of your present holdings. They may be able to suggest revisions in your investment list which will improve your security or increase your income without sacrificing any investment quality you really need.

as well, and took over a machine-tool shop which was in such bad shape that it was supposed to pay about ten cents on the dollar. The stock was turned over as worthless. The debts were one hundred and forty thousand dollars. She took charge January 1st, 1914. By August 1st, 1915, the debts were paid in full, the stock had been returned to the stockholders, and the plant was a going concern. This was before the orders generated by the World War had become large enough to aid. By 1917, the old management had made a million dollars.

In the year 1914 Miss Gleason received a second honor. In recognition of her work in gear design, the American Society of Mechanical Engineers unanimously elected her a member, the first woman to join their numbers.

WITH the great need for efficient workers developed by the World War it was not likely that a woman of Miss Gleason's abilities would be allowed to retire from business. When she built her palace at Clones she had employed workmen from East Rochester. They, and business men from that town, sought to interest her in its upbuilding. She assisted in financing, and personally helped to plan eight factories there, factories which, like all the buildings she has been interested in, are trim, smart, well-lighted places that any town might be proud to own. While she was at work on these, the president of the First National Bank at East Rochester was called to war service, and the directors made Miss Gleason president, the first woman to become the president of a national bank in this country.

"But I was no great shakes as a bank president," said Kate Gleason. "The fact that the bank was more prosperous when I resigned than when I was made president was due mainly to circumstances."

The bank at East Rochester had loaned to a local builder a sum of money with which to finance the construction of a number of modest homes. The builder did not complete the houses, and, as bank president, in order to make the bank loan good, Kate Gleason tried to get someone to complete them. No one would undertake the job, so she finished them herself and paid the loan. While building these houses she became greatly interested in home construction, and decided to demonstrate that a neat, substantial, concrete house could be built at low cost. To finance her building in addition to her many thousands she had already invested in East Rochester, she had to borrow. The banks promised the loans, and then failed her. She put up her Gleason stock as collateral, and at one time owed six hundred thousand dollars on demand notes.

Around this time Rochester and East Rochester thought Kate Gleason was done for, and Kate Gleason herself was a pretty anxious woman. Every penny she had was pledged, and she still needed more money to complete the houses. Rescue came from an unexpected quarter. Some years before she had helped a young woman start in business in New York City. This young woman, now flourishing in her own line, went to her banker.

"Miss Gleason started me," she said. "You have to help me to save Miss Gleason."

Digitized by Google Original from UNIVERSITY OF IOWA

Through their efforts there came to Rochester a visitor, the head of the loan department of one of the largest insurance companies. He went over the houses and returned to his company. The morning after Miss Gleason received a wire:

"Your homes are the best we have as yet seen. Your loan is granted."

The houses were saved; the stock was saved. Kate Gleason triumphantly finished over a hundred attractive homes. In three years the mortgage loan and the six hundred thousand dollars were paid off entirely.

Other building followed, a golf course, a clubhouse, and apartment houses. But Miss Gleason's interest is in building modest homes calculated to stand, she says, "at least a hundred years." To this end she traveled and studied architecture in this country and in France.

Three months each fall she spends in her home at Septmont, France. Near this is the library and motion picture theatre she has established, and maintains as a memorial to the first division A. E. F. Three thousand American soldiers were killed, and seven thousand wounded at or near this spot, in the successful endeavor to take the road and the railroad to Soissons. In the spring and summers she is at Clones with her work at Rochester and East Rochester, and in the winters she is at the new work at Beaufort, South Carolina.

"I want to tell you," Kate Gleason said, "the things I live by." She recited slowly the lines by Owen Meredith:

"The man who seeks one thing in life and but one
May hope to achieve it before life is done.
But he who seeks all things wherever he goes,
Only reaps from the hopes which around him he sows,
A harvest of barren regrets.

"I wanted one thing—to demonstrate that a business woman can work as well as a man. And this is my guide." She pushed toward me one of the curious and comfortable Moorish chairs, and I read a carving on the back.

"*Possum volo*" ("I can, if I will").

The Sheriff

(*Continued from page* 57)

hand that had jerked the shirt between the shoulder blades clutched convulsively the arm of his chair. For a moment his spirit became one with that of the mob, now rolling toward him from the square.

The room was growing silent. It startled him, as the sudden stopping of engines in mid-ocean startles passengers from sleep. He looked quickly at the long table, whose dim, shiny surface reflected the fading dusk. The fan was running down—had stopped.

He crossed the room and pushed the electric button in the wall. It clicked, but the room remained dark. He stood looking across the table at the deputy with eyes of terrible anger. He had taken a man's pride in his jail!

The ringing of the bell that connected the front gate with the office was like a slap in the face. They had violated his jail; now they demanded that he betray

Hotels Need Hundreds of Trained Men and Women

Will you accept one of these big paying positions in America's 3rd Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

CLIFFORD LEWIS, President
Lewis Hotel Training Schools

Formerly U. S. Gov't Hotel and Restaurant Expert, now Managing Consultant to over 225 hotels, who has qualified thousands of men and women for success in the fascinating hotel and institutional field.

These Students "Made Good"

Thru Mr. Lewis' efforts a Lewis Student was appointed Executive Housekeeper in a State Governor's Mansion. Another, without previous experience, became Manager of a large hotel—3 months after enrolling! A Lewis Trained woman is now Hostess and Manager of a fashionable apartment house—salary $3,600 a year apartment included, while the an recently made Assistant Manager of a 15-story residential hotel in New York, knew absolutely nothing about hotel work before taking the Lewis Course! YOU can do as well.

MANAGE AN APARTMENT HOTEL

Men and women needed as Managers for $200,000,000 worth of apartment hotels now being built. Interesting work, big pay. YOU can qualify!

Thousands Make $2,500 to $10,000 a Year

The Lewis Schools have qualified thousands of men and women for $2,500 to $10,000 a year hotel jobs. Get into this delightful profession—earn $45 to $125 weekly! Learn in your spare time at home. Many students obtained well-paid hotel jobs *before* finishing the course!

Big Pay—Fine Living—Fascinating Work

America's 3rd Largest Industry offers many big advantages. Salaries are liberal, meals and apartments usually furnished FREE—advancement quick!

I Absolutely Contract to Teach You

in my home study course all that leading hotelmen know about the business. Age is no obstacle—previous experience unnecessary. A common school education is all you need. I put my students in touch with positions everywhere!

BE A HOTEL HOSTESS

Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for *you!*

Soft Gums *need more than* nice flavor

DESPITE faithful brushing with flavored pastes, gum troubles are steadily on the increase. Soft, easily-irritated gums need a dentifrice that concentrates on *results* instead of taste. Pyrozide Powder has been doing this for twenty-two years.

This sterilized powder is not flavored. It contains *only* those ingredients that dental clinics have proved the most effective gum-stimulating and tooth-cleansing agents. It is medicated with Dentinol, used by dentists to promote gum healing.

Regular brushing with Pyrozide Powder allays irritated gums. It aids in making soft gums firm and resistant. It keeps the teeth clean and white. The economical dollar package contains six months' supply. At all drug stores.

Free sample sent on request.

The Dentinol & Pyrozide Co., Sole Distributors, 1472 Broadway, New York City.

it by a lie. The bell was ringing again. The room was full of its insistent, imperious buzz. He started for the door. Ben Allen was clinging to his arm. He had forgotten, Ben gasped—forgotten his bunch of keys.

He shook the deputy loose. Out in the corridor he passed the jailer and the other deputy. The arc light out on the street just above the front gates had sputtered on. In the white, hard shafts of light that streamed through the barred front doors down the lower corridor, they looked more like frightened shadows than men.

He passed them, face set. His steps rang out boldly on the cement walk. Twenty feet from the front gate he stopped, the light above falling full upon him.

"Joe!" he cried.

Through the gate he glimpsed the street, vacant for a square, then packed with a dense mass, and the lighted drug store on the corner, crowded with waiting men.

"Step out, Joe!"

From behind the wall a big man in white trousers and shirt and Panama hat stepped boldly before the gates.

"What in thunder's the matter, Noah?" he demanded.

"JOE,—I'm no saint; but I'm no sneak. I'd throttle the nigger with my own hands; I'd bring him out here in the open and hand him over—before I'd play this game. I sent for you, Joe. You might a-come. I'd a-come to you. I tell you, you can push that button till you drop, before I or any man under me comes sneakin' down this walk, crawlin' on his hands and knees before you an' your crowd!"

"I give you your chance, Noah," said the man at the gate. "You'll be sorry you never took it. You go back on them that elected you. All right." He turned away. "Come on, boys."

The sheriff went back up the walk to the jail, mopping his face. "Boys," he spoke to the men in the corridor, "we couldn't play that game. Close the doors."

Quietly as he spoke, there was something in his drawn face they feared more than they feared the mob. They closed the barred front doors. They hurried behind him down the pale corridor. They crowded after him up the narrow iron steps. The corridor above, like the one below, was lighted by the rays of the arc light swung above the gate.

The interior of the jail had awakened to a realization of what it all meant. "Give 'em the nigger!" a prisoner yelled, and shook his bars like an ape. From cell to cell the terror spread. The hoarse cries and imprecations sounded hollow down the stone and cement corridors, like voices from the tombs.

The sheriff turned, facing his men. "You two git to the rear window. Ben, you come with me."

He narrowly watched the two go off down the corridor. Then he and Allen hurried to the front.

From the long barred window, into which the arc poured its level rays, the sheriff looked dizzily down on the oncoming wave of the mob. It jammed the street of little stores from side to side.

Play **anything**—jazz to classical! **Even if** you know **nothing** about piano music—I'll have your fingers dancing over **the** keyboard **with confidence** in 90 **days.** If you can hum or whistle a tune **you can play it!** My students are broadcasting—making money. **MAKE ME PROVE IT!** Without puzzling notes! Without practicing tedious scales! **I've** found the way to bring out **your** musical instinct. New and original system does away with years of work. **YOU WANT THE PROOF!** I'll send it. Write me now.

D. M. SUTTLE, Director
ILLINOIS SCHOOL OF MUSIC
136 Hunter Bldg.
Chicago, Ill.

Send NOW for PROOF!

My shin still hurts

I DID an impromptu hurdle over the lawn-mower one night. Of course, it was dark, but that's no alibi. I didn't own a flashlight then. Need I say that now I *do* own one? Eveready, by name, and it's always that—ever-ready. I keep it that way with Eveready Batteries—greatest little light-producers you ever saw. From the amount of use they stand, you'd think they were twice their size. Pardon my enthusiasm, but I've got the flashlight habit.

My advice to you is to follow suit and save your shins. The good word is "Eveready" whether it's flashlight or battery. Where light is concerned you can't make a mistake on *those* batteries—made in the same good way as the famous Eveready Radio Batteries.

HEAT YOUR GARAGE
—5 *cents a day*

A Wasco Heating System (hot water) saves repair bills—the eternal bugaboo.

In a warm garage—

The engine starts sooner—no excess gas to cause carbon deposits and dilute the oil.

Bearings are saved from scoring—frequent when oil is cold and sluggish.

The battery is needed less—charges more easily.

The finish is protected—moisture under varnish does not freeze.

The radiator is happy on a sub-zero night — to say nothing of the water jacket and pump.

Tires are preserved — no frozen moisture to loosen the fabric.

The self-regulating Wasco hot water system needs only a scuttle of coal a day. Any handy man can set one up in a few hours. Made for 1 to 15 car garages. Systems include heater with regulators, radiators and all pipe and fittings. Write for illustrated catalog.

It was like a dragon that had lain coiled in the square all afternoon, and was now stretching forth from its lair, its tail disappearing in the darkness toward the square. Above the din of the corridors came the irregular shuffle of its thousand feet, the murmur from its thousand throats, and under the lights the sheriff saw the menace of its thousand upraised faces.

"Boys!" he shouted.

The mob halted, pressing back against one another, and scores of faces looked quickly up. Men turned around to those behind and pointed up at him. "Give us the nigger!" yelled a voice, and the hoarse demand ran over the mass down the street to the square, swelling into an angry roar. It came in shouts from the streets to the side of the jail. It drowned the impotent prayers of prisoners.

"Let him talk!" somebody cried. "Give us the prisoner! Stand back, there—stand back. Say your prayers, Noah!"

THEY were shoving back. Four men ran from the drug store and disappeared under the protection of the wall. The sheriff reached quickly to his hip pocket. Ben Allen caught him by the arm.

"My God, Noah!" he demanded hoarsely, "would you kill a man for a—?"

The sheriff stood suddenly motionless, staring at Ben. Down on the street the four men ran back across the intervening space and were swallowed up by the mob. There was a moment's silence. Then a mass of flame leaped up before the sheriff's eyes. A deafening roar filled the air and bellowed down the corridor. Through the white fog of smoke that boiled in at the window, the jailer and deputy were running toward him along a floor that seemed to rock. And in that bedlam of shouts and cries and curses, the groping soul of big Noah Burts found itself; the thing that had struggled all day to get through into consciousness was there—and he knew.

"Stand back, Ben!" He shook the deputy powerfully loose. "Git back!" he called to the others. "Git back to your places! By God, it *ain't* the nigger—it's the law!"

He saw them retreating before his waving hand in which the pistol gleamed. When he turned to the window, below the lifting smoke that swirled above the arc, he saw a group of men streaming toward the gap where the gates had been. The silence continued. Entrapped prisoners had ceased to pray where neither prayers nor curses prevailed. The voice of Noah Burts rang down the corridor and over the mob.

"In the name of the law! I'll kill the first man that crosses that gap. So help me God!"

They stopped, all but one. He came on, stumbling over fallen débris. He turned around, big, masterful, conspicuous in his white clothes and hat.

"Come on!" he yelled. "The door's next!"

The sheriff hardly heard the bullets that went singing about his head. Twice he shot down into the yard, three times into the mob, then grabbed for Ben Allen's pistol. In a haze he saw the mob hesitate, then break into fragments that scampered for side streets. Its mass

rolled backward. He saw two of them limping, he saw one helped off by others. Then he looked straight down before him into the yard. There lay a white figure, face downward, sprawled out among fallen rocks.

In this upper corridor near the window were some chairs. They used to come up here on hot afternoons to catch the upstairs breeze. Just a few days ago, this morning it seemed, they had sat here and talked about the next election. The sheriff sank into one of these chairs.

"Ben," he said, "did you see?"

"Yes, Sheriff . . . I . . . seen."

"You men go out and bring him into the office. There's a pillow somewhere, Ben, . . . I'll wait here," he went on. "They might come back. . . . Ben, get a doctor."

He heard them descending the stairs, heard them open the door below, heard their shuffling, heavy-burdened feet in the corridor down-stairs, then silence—the office was carpeted. Down the street from the square a bell was coming, clanging wildly—the police. They would bring a doctor. But he had shot straight down—twice. He sat staring, his pistol held limp between his knees.

He did not ask the question when Ben Allen came up to him. Just a look into Ben's eyes—a quick, momentary gleam of eager hope that died at a glance—and he rose and went to the steps. Half way down, he stopped and leaned against the wall. He pulled himself together and went into the office.

ABOUT the end of the long table stood a group of uniformed men, bareheaded. A candle in their midst choked the room with enormous shadows. At sight of him they stepped back, and he saw beside the clear steady candle flame a white face upturned. He went to it and looked down. His mouth clamped bitterly, and for a moment he wished it were himself lying there.

He turned 'round to look full into the eyes of the chief of police.

"Have you sent—for the coroner?"

"He's on his way, Sheriff."

He sat down in his swivel chair by the desk. He leaned slightly forward, his big hands clasped in front of him, and stared at nothing, straight ahead. And the men in that room, motionless as their giant shadows back of them, looked everywhere but at his face.

And yet, through the fog of his grief, a light was flickering in the soul of Noah Burts. A tiny light, but clear as the little candle flame upon the table there. The sheriff's office was no longer a reproach. The wire connecting it with the garage was cut forever. Joe Burts was dead, by his brother's hand. But because of that deed, civilization itself had taken a forward step there in that little Southern town.

The tiny flame in his soul steadied, grew clearer, brighter. And in its light big Noah Burts found solace. He knew, with no words for his knowledge, the eternal truth that man is dust . . . as a flower of the field so he flourisheth . . . the wind passeth over it, and it is gone; and the place thereof shall know it no more. . . . But righteousness is unto children's children!

Snobs

SILK STOCKINGS are snobs. They must be pampered. Ordinary silk stockings can't withstand the strain of repeated washings and repeated wear.

But Iron Clads will surprise you with their beauty and their wear. In their silken sheerness hides a strength you'd never guess was there. Wear them and wash them again and again. Iron Clads will not lose their lustre—will not lose the graceful lines that accent the natural loveliness of calf and ankle.

Iron Clads No. 907 are made to *wear* and *wear*—and *wear*. Full fashioned, pure silk to the hem—mercerized garter top that outlaws runs, reinforced heel and toe for longer life, and an Iron Clad *guarantee* of satisfactory service or a brand new pair of hose.

This super-value stocking costs only $1.50 a pair! If your dealer can't supply you, send us your remittance, stating size (8 to 10½) and color (black, white, Reveree, Cuban sand, beach tan, mauve taupe, gun metal, French nude, parchment, atmosphere, champagne, blond, grain, silver grey, moonlight, skin, peachbloom, Aloma, rose blush, flesh pink, evenglow, pearl blush, pastel parchment, light gun metal, Manon, Merida, dust, tawny, Kasha beige, white jade, honey beige, sandust, and mirage) and we'll mail your hose direct, *postage prepaid.*

Note: If you want a companion number to 907, ask for No. 811—pure silk to the hem and with a pointed heel—which sells for only $1.00 a pair.

"If You Wish to Know Whether or Not You Really Want a Thing, Try Giving It Up," Says Wayman Adams

(*Continued from page 27*)

something else! Grasp at some other dream! You may find out whether something else will do as well.

"I can imagine a man making a huge success in a material way, gaining more money than he knows what to do with—and in the end he might feel that he is but the shell, the ghost, the shadow, of what he might and should have been. And that's tragic, that's failure.

"In Indianapolis, during that year in the dairy lunch, I had kept on painting. In Louisville, I gave it up. I had my materials with me. I don't think I touched them—not till the last week or so.

"Well, . . . if there's something definite you want to do, you'll some day have to cross a sort of Rubicon! You'll make up your mind to burn your bridges. I don't mean throw away chances of financial support before you've learned your apprenticeship. That's reckless, foolish! You'll somehow come to know that the thing you want to do is worth trying for good and all.

"That's about all there is to being born with a particular gift, a bent. Some know sooner, or more easily than others, what they want to do. They, too, must pay the price. But they *know!*"

IN a mood such as this, he left Louisville and went to Philadelphia, where he found the art school closed for the summer. By the fall he was homesick, paintsick. Hearing that the John Herron Art School had opened with a new building and new teachers, he returned to Indianapolis.

"I was young," he observed. "I was glad. It seemed to me that I had found something beyond price. In Indianapolis, the restaurant chain gave me charge of the store in the Traction Terminal Building. It was a twelve-hour shift, six in the evening to six in the morning. After work, I slept a little while and went to school at nine. At twelve-thirty, I went to my room and slept some more and went back to class in the afternoon, returning to the store at six."

It was fun. He had found himself. At all events the Rubicon was passed!

Presently, a friend counseled that he must get more sleep and rest. After that, as a regular thing, he slept Thursday afternoons, missing class that day. A year or so went by. Then a trifling incident occurred. A little thing, but it had a great effect upon the course of events.

"One week," he said, "my friend told me that I ought to get my sleep in on Thursday morning and come to sketch class that afternoon, as a well-to-do family of the city were sending their four-year-old girl to the school in the hope that some of the students might make an acceptable portrait of her."

These pictures show Mr. Shirley's improvement in drawing. Read his letter.

From Drudgery to a Fine Income as an Artist

Just a few years ago Lloyd Shirley had a small-pay clerical job with no future. It was drudgery. He liked to draw, but could not quit and go to art school. One day his wife read a Federal School ad, and sent for "Your Future," telling about the Federal Course. Mr. Shirley enrolled, studying evenings. *In just a few months* he accepted a position as artist for a paper company, at a better salary. He's been climbing steadily since—read his letter:

"I feel as though my old days of drudgery were a bad dream. Now I am earning $3800.00 a year and I have just started. This commercial drawing is work I love to do. If it had not been for the opportunity of studying art in my spare time, and the kindly interest of the Federal faculty, I would never have gotten out of the rut I was in. The practical, thorough, short course I took with the Federal School made my success possible."

Send for "Your Future"

Mr. Shirley is typical of hundreds of Federal Students who have gotten out of the rut, doubled and tripled their incomes in a short time. If you like to draw, and have a little ambition, read "Your Future" and find out what amazing progress you can make *with the right art training.* Use the coupon now.

Here's Why Women Say "I *Must* Have Energine"

INSISTENCE protects you against disappointment. No one knows it better than the *Energine* user who experiments with other preparations.

She hears about some new cleaner—"as good as *Energine.*" She buys it. She tries it. She compares results. After that she always tells her druggist: "I *must* have *Energine.* Nothing else will do."

It's no accident that *Energine* is the world's largest-selling cleaning-fluid—it's the result of 23 years of study in the perfection of a superior spot-remover. Users prefer *Energine* because it leaves no clinging odor. No unsightly ring. (Simple directions on every can.)

Removes dirt and grease spots—easily—quickly—completely. From any garment—any fabric.

Economical, too. Ten-ounce can, 35c. Family size, 20 ounces, 60c. At all druggists. Be sure you get the red and green can labeled *"Energine."*

HERE'S a new invention that's twenty years ahead of the ordinary check book. Ready-Ref is a simplified check book that gives you a whole month's record of deposits and withdrawals at a glance. Provides an easy way to keep track of a budget, income tax information, paid bills, investments, etc. Easier to use than your present check book—ends fumbling through check stubs (which you may lose or mislay)—makes unnecessary adding, subtracting and carrying totals every time you write a check. Handsome leatheroid cover, hand-tooled—your choice of three different types of records.

Salesmen Wanted

Wonderful money-maker, full or spare time. Income tax time is just ahead. Used and endorsed by bankers, professional men, estate trustees, small business men. Rapid fire sales—one glance tells all. Territories open everywhere. High class prospects. Write for special demonstrator offer and plan for getting "leads." Ready Reference Cash & Check Book Co., Room P-30, Central Nat'l Bank Bldg., St. Louis, Mo.

Adams's portrait of that little girl (she was Mary Brandon, who years later made a success on Broadway in "Welcome Stranger") was *more* than acceptable. It was the little girl all right, her likeness—and something more. There was the beginning of vision in it. It made a great deal of talk. He began as a portrait painter outside the school. Presently, doing portraits at five dollars each, and later at five dollars a sitting, he was earning thirty to forty dollars a week. That meant the end of the dairy lunch.

SHORTLY, when he was twenty-four, there came to the city an exhibition of fifty-three paintings by William M. Chase. "I was struck by his skill," observed Mr. Adams. "His brush work. So broad, free, accurate! I wanted to get my ideas onto canvas with similar ease. And when a circular came to the school to the effect that Mr. Chase was taking an art class to Italy, I made up my mind to go."

The trip was to cost five hundred dollars. He had two hundred and fifty dollars ahead. By a business arrangement, he borrowed the remainder at the bank.

And now Florence! The inspiration of another land, a new people, a different atmosphere. . . . And when the class in Italy closed, Mr. Chase awarded him a prize for his work, and in addition this advice: "Don't let anything stop you, Adams, and nothing will!"

Upon his return to Indianapolis he had, for the first time, a real studio. Better work, better pictures, better prices. Patronage was slow in coming. But it came. And two years later a trip to Madrid with a class under Robert Henri.

Three months in Spain! The characters of old Madrid! The gay, sparkling, picturesque life of the streets and the bull ring! Color! Toreadors! Action!

And talk! Inspiring talk from a master teacher noted for his art and his humanness, as he accompanied his pupils on sketching expeditions throughout the city.

"You have a beautiful sense of color, Adams," he said on one occasion. "And memory of life, which you've shown many times. I like the sketch of this gypsy woman. I like the way the red of the cheek goes into the eye. I like the nose. All the things are *used.* She's ready to destroy. Rich, strong, powerful, brutal!"

Again, with reference to the sketch of a Spanish mother: "The feeling of a man for a woman with a child in her arms! The great human feeling. The real beautiful thing. Something far beyond the mere incident of this mother and child. Way beyond!"

And again, on a still more momentous occasion, the teacher said: "Work with great speed. Have your energies alert, up and active. Finish as quickly as you can. Do it all in one sitting if you can. In one minute if you can! There's no virtue in delaying."

"Coming at that time, it was a revelation to me," observed Mr. Adams. "Until now I had been hearing critics say, 'You paint too rapidly.' Or, 'It isn't finished. It's only a sketch. Why isn't there more detail?' Now at last a man was saying, 'Do it in a minute, Adams, if you can!'

"When we go to take counsel of a man of great experience, are we not all par-

Digitized by Google Original from UNIVERSITY OF IOWA

ticularly impressed if words of his illuminate some half-formed purpose, some vision of our own, as yet dimly understood? Such words sink home. They mean much to us because we are ready for them. How strange, how prophetic they seem, yet how familiar!

"One day, I remember, Mr. Henri said to the class something like this: 'Your first idea, your first *seeing* of the subject may be more valuable than anything the subject will suggest to you after months of study. What is wanted is your idea of the subject *now*, not eighty years from now! Paint like a fiend when the idea is upon you! Paint like a man going over the top of a hill, singing! Paint like a house afire!'"

And Adams did just that.

Picture him one afternoon months later, back in his Indianapolis studio, ready for a sitting, awaiting the arrival of Professor Alexander Ernestinoff, conductor of the Indianapolis Symphony Orchestra. In comes the professor, a genial, cultured, interesting man. Easily, with a jest, he drops into a chair, his overcoat and hat on. Presently, he pauses in his talk, leans back—it's as though he were waiting a response to some quip or other—and something happens. It's all so natural, so miraculous (a man's real self coming to the front in a pose, a gesture, a word!) that it might have passed in a second and, once gone, been lost forever.

But the artist *saw* it—saw the man as he really was! One hour, two hours, three hours. . . . The portrait is practically finished. Only a few touches were ever to be added, and these before the paint had dried.

"Oh, ho!" cried the professor as he looked at his portrait. "So my mouth was a little bit open! What?"

AND some praised this picture. Some condemned it. It was something new, fresh, spontaneous, and it had a tang. But it didn't make a hit right away. The artist himself was in doubt, for it's not so easy to be sure when you've hit the truth. But one day he chanced to meet the professor in a restaurant. He was wearing his overcoat and was seated in exactly the pose of the portrait—the same look, the same characteristic gesture of the hand holding the cigarette. And the painter felt that he was facing the portrait he had painted.

A little later it was offered for exhibition to the National Academy of Design in New York in 1914. It was accepted, and awarded the Thomas R. Proctor Portrait Prize.

There were other successes at about this time; and a little later came the famous portrait of Joseph Pennell—the one in which the etcher sits with drawing pad on his knee. A great portrait of a great personality, it was exhibited at the Chicago Art Institute and was awarded the Frank G. Logan Medal with a prize of fifteen hundred dollars.

Meanwhile, the artist had been attracting attention in New York. He opened a studio there. Once the critics had said: "A new and promising talent is on the way!" Now they spoke of his "exhilarating technique," the clarity and simplicity in his novel way of seeing things.

"What makes one subject easy to do and another difficult?" I asked.

The Sargent School For Physical Education
For Young Women
Founded 1881 by Dr. D. A. Sargent
L. W. Sargent, President
Cambridge, Mass.

"It's hard to say," he returned, "but maybe an illustration will answer. I remember the day when Irvin Cobb and his daughter Elizabeth sat for me. 'So this is where you want me to sit?' he said, and he seated himself. Immediately his daughter ran to his side and seated herself on the arm of his chair. It was all in fun, to be sure, as though she were saying, 'Me, too, Daddy! I want to get into the picture!' Spontaneous. Natural. I felt how fond they were of each other. It was around this feeling that I painted the portrait. It was the genuineness of *their* feeling that made it easy to do.

"I like what Mr. Cobb said of it once: 'I don't know whether that man looks like me, or not. But I know he'd write the things I write, and say the things I say!'

"BACK in the days when I was starting professionally, Booth Tarkington frequently sat for me in my Indianapolis studio. Perhaps I was too anxious one day. It didn't come off well. I was keenly disappointed; I told him so, and asked what he thought of it.

"For a moment he sat down, facing the picture. He was ready to go. He had his big overcoat on, his hands resting on his walking stick, which was between his knees. 'We all have our bad days,' he remarked, and he went on to say that they were often due to trifles, the weather, or what not. The keen, intelligent face! The sympathetic way in which he spoke! It wasn't what he said, but the tone was so kind. He understood so well! I felt like going to work on another portrait at once. I wanted to paint him as I saw him at that moment. And so the following day I did so, and it went much better. This portrait of Mr. Tarkington with his walking stick between his knees became rather well known in time.

"People who have done something, who have lived much, thought much, experienced much, they are the easiest to paint. A child? Exceedingly difficult. A baby? Still more so. To paint a boy and make him look like a *little man* is easy. But to paint a boy and make him all boy, sitting in a chair with all the restless urge in him bursting through his inactivity—that's *hard!*"

"Among all the celebrities you have painted is there one who made a more profound impression upon you than the others?"

"Yes, . . . perhaps . . . a poet. One whom we all know. James Whitcomb Riley. Our most *loved* poet. Mr. Tarkington commissioned me to paint him. He came to my little studio back there in Indianapolis days. As though it were yesterday I can see his white, fine, slender hand drooping at his side—just as I painted it. He talked as I worked.

"'How old are you, Adams?' he asked me suddenly.

"When I told him twenty-six, he fell to musing. 'I wish I were twenty-six again, and starting over,' he said.

"'You could hardly make more of a mark than you have!'

"'I don't mean that exactly,' he returned; 'but I think I could better some things. But it's utterly vain to think of such matters, Adams. Vain. What is to happen to a man is foreordained, and he can't change it.'

"Again he fell to musing, and pres-

Stop Crooked Heels

Keep your shoes smart

IT is the way you *walk* that makes your heels wear crooked, or shoes "run-over." It mars your grace and spoils the otherwise good impression your appearance makes. It also causes your ankles to wobble, weaken and thicken by throwing your body out of balance.

Correct this fault by wearing Dr. Scholl's scientific Walk-Strate Heel Pads. They equalize your weight, remove all strain and make walking a pleasure. You save heel repairs and preserve the shape of your shoes. Easily attached in any shoe. Sizes for men and women. At all shoe, dept. and drug stores—35c per pair.

Dr Scholl's
Walk-Strate Heel Pads

ently, as though talking to himself, he added this:

"So runs my dream—
But what am I?
A child crying for the light;
So runs my dream—
But what am I?
A child groping in the night.
So runs my dream. . . ."

At the moment, the artist and I were still standing there by the great north light . . . evening glow streaked the western sky . . . the sound of motor horns had died away. . . .

"And do you agree that whether a man succeeds or fails is foreordained?" I asked.

"I don't know. It's a big question—as big as life. We know so little! What we want is not to ask ourselves too much these anxious questions about the degree of our natural ability, the percentage of our so-called genius. Forget all that! Fight like a fiend! The man who has in him the power to dream of accomplishing a specific thing, and *wills* to do it so hard that he won't give in—he'll find the ways and the means. Power and skill will come. Somehow or other, if he'll continue to explore he'll discover, or invent—forge for himself and *in* himself the power and the technique he needs.

"To be sure, he'll probably never achieve that of which he first dreamed. Something more—or less—or maybe *different*. He'l learn to smile at the mind pictures of yesterday. In the beginning, we dream so small. A lifetime of study, thought, patience, toil, is not too much to spend in learning how to dream."

De-Bunking the Glands

(*Continued from page 40*)

deeds by some imperfect working of their glands that upset their personalities.

"The reason I am so particular to obtain your opinion on this point," I said, "is that I was recently in a town in one of the Western states where a young man had stolen an automobile and later had been mixed up in a railroad hold-up. I was given a history of the young man's parents, and they had been excellent, stable people. The boy himself had been rated as exceptionally bright and had been graduated from school with high honors. He was said to be the most widely read young man in the school.

"What I want to call especially to your attention with reference to this gland boom is that I talked with eight or ten business men and with several lawyers. Almost to a man, they told me in the course of the conversation that they felt sure there was something the matter with the young man's glands. I had several talks with the young man myself, and he seemed to be in robust health."

"If he was pretty obviously in good physical health," replied Doctor Barker, "I would venture a guess that his glands had not caused his wrong-doing. It is true that serious deficiency or excess of the glands of internal secretion may in certain cases be a contributing factor in delinquency. However, where glandular imbalance has reached such an advanced stage that it causes marked misconduct, the condition has usually shown such dis-

By the advice of friends, I bought a BUESCHER True Tone SAXOPHONE

"Greatest Saxophone on the Market"

If you are interested in music, you will want to read the following letter by Harry Dixon Loes, Three Rivers, Mich.: "I am an evangelistic singer and for 13 years have been traveling from town to town, directing the music for special gospel services. By the advice of friends, I decided on a Buescher. After using it for over a year, I know I made the right choice.

"The beauty of the instrument, the easy action and latest improvements all combine to make the Buescher the greatest Saxophone on the market. I use it in duets, trios, and quartets with other instruments and also with congregational singing. It gives perfect satisfaction."

Only a Buescher
Gives You All These Features

Patented Snap-on Pads—the greatest improvement for beauty of tone—easy to replace—no more cementing. Found only on the Buescher.

Patented Automatic Octave Key—always positive.

Perfect Scale Accuracy—every tone **always** full, clear and true.

Hands never moved from one playing position.

Convenient key arrangement simplifies fingering of rapid passages.

Scale accuracy, perfect tone, easy blowing, simple fingering assure easy and rapid progress. The Buescher is the choice of most of the great professionals, because of more perfect recording.

FREE BOOK Illustrates all the various models and contains pictures of many famous professionals — also first lesson chart. Send name for copy or ask for circular on any instrument in which you are interested.

6 Days' Trial in your own home on any Buescher Saxophone, Cornet, Trumpet, Trombone, or other instrument.

tinct symptoms that they are not likely to escape the notice of the family and friends. Such persons exhibit usually a number of signs of ill health.

"Moreover, we do not find any large percentage of the men and women confined in our prisons to be suffering from the well-known and marked types of glandular imbalance. Another point worth considering is that of the thousands of persons studied and treated for gland disturbances in various hospitals through the country and in private practice, not many manifest criminal tendencies. Persons with glands out of order may feel miserable, of course, and some of them are extremely nervous; but similar feelings are experienced in many other bodily disorders without leading the sufferers into crime.

"Of course," Doctor Barker continued, "speaking on the positive instead of the negative side, it is true that we are more and more forced to realize that the general form and external appearance of our bodies are influenced, especially during childhood, by the functioning of the endocrine or ductless glands. Our stature, the kind of faces we have, the length of our arms and legs, the quantity and location of fat, the amount and distribution of hair on our bodies, the tone of our muscles, the sound of our voices, the shape and size of our heads, hands, and feet, as well as the emotions to which our gestures give expression, all seem, *to a certain extent*, to be conditioned by the health or ill health of our glands of internal secretion. Please note, however, I do not say that glands are the *sole agents* in determining personality, temperament, and emotional expression, stature, and appearance. But they are known to play an important part in their determination. And if the glands are 'thrown out of gear' our bodily structure, health, appearance, and personality are likely to be more or less affected."

"COULD you give me an idea," I inquired, "as to just how the glands exert their influence upon our bodily organs and functions? Do the glands have nerves that extend through the body, so that they may send out nerve impulses to the various organs as the brain is known to do?"

"No, there are no nerves emanating from the glands, although the nerves and glands exert much influence upon each other, and in many ways combine to bring about bodily processes and reactions. We know only partly how the glands effect the important changes they bring about. But it has been determined that a large part of their function is to manufacture what the physiologist Starling called 'hormones.'

"These hormones or 'self-remedies' are minute chemical bodies carried in the blood stream to the cells of the different tissues in the body, and they are for that reason sometimes called 'chemical messengers.' For example, when the gastric juice enters the small intestine from the stomach it stimulates the intestinal glands to manufacture a hormone, called 'secretin.' This secretin runs ahead, so to speak, in the blood, and stimulates the pancreas to produce its digestive secretion, so that when the food arrives at that point, the secretion is ready in proper amount for that phase of digestion. Hormones are believed also profoundly to influence the circulation of the blood, the elimination of wastes, the emotional reactions of the brain and the involuntary nervous system, and also many other bodily processes. It is largely by means of these strange substances that the endocrine glands so markedly influence our bodily chemistry, and through it our mental and physical life."

"What are some of the influences which these glands exert upon our lives and personalities?" I inquired.

"Well, I could best answer that by pointing out a few things that happen when one, or more, of the glands of internal secretion is not working properly. By observing what takes place when a gland is out of order, we learn much about what its true function is.

"PERHAPS the glandular disease you hear most about is goiter, or enlargment of the thyroid gland. This gland is situated in the neck on both sides of the 'Adam's apple,' and, in health, weighs from one to three ounces.

"Now, when this gland is over-active the four commonest things you may observe are the following: a persistently rapid pulse, running sometimes as high as 170 or 180 per minute instead of the normal 70 or 72; enlargement of the thyroid gland, known as goiter; a peculiar fine tremor, especially of the fingers; and a bulging of the eyeballs, giving one a staring, startled look.

"This is the condition you hear of as 'exophthalmic goiter' because of the bulging eyeball and the large visible goiter. But right here is another instance that illustrates how easily the public can be misled about the endocrine or ductless glands. For, while one goiter may be an over-active thyroid, another goiter may be an under-active thyroid. Sometimes, also, a goiter extends inwardly, down into the chest, and is invisible except by means of X-rays.

"You see from this what folly it is for the layman to swallow some advertised compound for his glands, when so obvious a symptom as a large swelling on his neck may mean one thing in one person and something quite different in another person."

"Are there any other symptoms," I asked, "which may be observed by a layman that suggest over-active or under-active thyroid conditions?"

"Well, besides the four cardinal symptoms of over-active thyroid that I have mentioned, such persons are likely to be tall, to be spare-built, and to have long, slender fingers. Some patients—not all—develop high blood pressure. You can easily notice the fine trembling of the fingers when the hand is outstretched. Such persons tend to sweat easily, especially on the palms and soles; their skin is usually thin and delicate. They are prone to be over-alert mentally, and they talk rapidly and are often highly emotional. They may lose weight, even when they eat large quantities of food, as they often do. The reason for this is that the thyroid acts like a fan to the body fires.

"You have perhaps heard a good deal recently about the 'basal metabolic rate' or 'basal metabolism.' That means the rate with which substances combine with oxygen or are 'burned' within the body, with the resulting production of heat and energy. In exophthalmic goiter the me-

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

Raises* CHURCH FUNDS *Like Magic

Mrs. Seawell of Missouri found DUSTAWAY — the amazing mop innovation — the greatest money raiser ever heard of. A West Virginia auxiliary raised $276 with it — and one Sunday School class made $60 in one week.

DUSTAWAY sells everywhere like wild-fire. Has 13 novel features. Makes broom into a mop in one minute. Washes out in a jiffy. Gets into hard places, under radiators, between banisters, etc. Holds dust without oil. No metal to scratch. Exactly what women have always wanted. Approved by Good Housekeeping Institute!

Test Sample Sent FREE

Test sample of this clever work-saver now sent for free inspection, on request, to officer of any recognized church, society, club or other organization. A two-minute test will show you tremendous money-raising possibilities. Our special plan increases church funds quickly without investing one penny. Write for sample and details. today! Generous proposition to spare-time workers, too.
GLENCO PRODUCTS CO., Dept. M-612, Quincy, Ill.

tabolism or body-fires 'flame high,' even without any muscular exertion. Such patients are often extremely nervous—oversensitive to all their surroundings. They are often hard to take care of, fault-finding: the nurse is wrong, the doctor wrong, everything is wrong. The least disturbance may upset their emotions.

"I remember a clergyman who came here from the South, a typical case of this kind of goiter. He was thin, weak, and so nervous that even a slight prick of a needle threw him into a panic. The surgeon who was to operate on him deemed it unwise even to let him know the exact time of an operation on his thyroid. So, after some preliminary treatment, one morning the surgeon suggested that he be given an enema. With his wife's consent a little ether was put into the enema and this put him to sleep. In this state he was taken to the operating-room, the operation completed, and he was returned to bed before he knew anything had been done.

"Well, that man gained thirty pounds in weight within three months, went back to work, and has become a different creature.

"That is an example of one of those happily successful cases of a marked change of personality due to the glands. While most hospitals could report similar successes yet they are far from common. Unfortunately, exaggerated impressions of such cases go abroad, and they are utilized for commercial profit. Quacks have also made use of such cases to support exaggerated views of the glands as being much more frequent causes of disease and defects of personality than they are.

"It is true that, if you find your pulse rate frequently running 90 or 100 when you are resting, and in addition you have no infectious disease or organic heart trouble, you will certainly be of interest to your doctor. Such a pulse rate, if continuous, would lead any physician to think of excessive thyroid activity as a possible cause. Also, if you have unexplained and profuse sweating of your hands and feet, especially the palms and soles, and you also have a thin, delicate skin, you may properly be suspicious of over-active thyroid. Again, if you have unexplained diarrhea, four to ten or more movements daily, accompanied by nausea, and not accounted for by indiscretions in diet, the symptom is suggestive of the same condition."

"What happens?" I inquired, "if you have under-active thyroid?"

"WHEN the thyroid gland is under-active you see people with a set of symptoms the opposite of the foregoing. The thyroid is deficient at birth, or shortly thereafter, in children who suffer from what is called 'cretinism'; in older children and adults deficient thyroid brings on a condition called 'myxedema.'

"It would be well for parents to note any such symptoms as the following in their children: In cretinism, the child is usually sleepy and grows fat and pudgy; its skin becomes coarse and wrinkled, and the tongue enlarges, often protruding from the mouth. The mouth may be held open and the saliva often drips from it. The lips are thick, the hair scanty and lusterless, the hands plump, the fingers short and thick. The child becomes pot-bellied, constipated, and anemic. Both

Become an Expert Accountant

The Profession That Pays

The demand for skilled accountants—*men who really know their business*—is unceasing. Big corporations are in constant need of expert counsel in matters relating to Auditing, Cost Accounting, Business Law, Organization, Management, Finance. Men who prove their qualifications in this important branch of business are rapidly promoted to responsible executive positions—given an opportunity to earn real salaries. The range is from $3,000 to $15,000 a year—even to higher income-figures.

Send for Free Book—
"Accountancy, the Profession that Pays"

Why let the other fellow walk away with the better job, when right in your own home you can equip yourself for a splendid future in this profitable profession?

Preliminary knowledge of bookkeeping is unnecessary. Our free book on accountancy fully explains how we train you from the ground up, according to your individual needs. Low cost; easy terms.

The facts about LaSalle training in Accountancy and the opportunities in this highly profitable field are clearly outlined in a 64-page book which LaSalle will send you *free*.

The man in earnest to get ahead will find this coupon a most profitable aid to progress. If you have the urge and the will to increase your income, clip and mail the coupon NOW.

mental development and physical growth are retarded.

"In some of these cases, the feeding of thyroid extract yields results little short of the miraculous. The child gradually begins to grow again, a pleasing expression replaces the blank look, the mental alertness improves under our eyes, the tongue recedes, the mouth closes, and the child begins to play and behave more like normal children.

"Small wonder, perhaps, that the news of a rare success such as this flies abroad, is reported in the newspapers, and leads a host of parents to hope that their own defective, backward children can be made normal by 'supplying the right gland.' That is a natural reaction of human nature.

"When the thyroid function is lost or diminished in adults, it gives rise, as I have said, to what is called 'myxedema.' A person with myxedema shows the following outstanding symptoms: first, a leather-like thickening of the skin; second, falling out of the hair; third, mental dullness and torpor; fourth, great sensitiveness to cold; fifth, a tendency to obesity; sixth, constipation; seventh, marked slowing of the metabolic rate, that is, a dying down of the body fires and energy; and, eighth, mucus-like edema or swelling of the skin. The feeding of thyroid extract in such cases often works a marvelous transformation."

"IS IT true, Doctor Barker," I asked, "that goiter is due to lack of iodine in the water and food?"

"Well, in the Middle West and other regions far from the sea there is often a lack of iodine in the water and in the air, and in the fish and other foods, and it does seem as though goiter were commoner in those sections.

"Some scientists have gone as far as to argue that the tall, angular appearance of the New Englander may be due to activity of the thyroid owing to abundance of iodine in food, water, and air from the sea in that region, and, on the other hand, that the more rotund, chubby-faced Mississippi Valley type may be due to some extent to under-active thyroid, caused by insufficiency of iodine in that part of the country. It has even been said that families which have moved West have changed their body form, becoming more round-faced and less angular.

"And while still on the subject of the thyroid gland it would be well to warn your readers earnestly against the indiscriminate use of 'iodized salt.' That is another unfortunate result of the gland boom. In some instances serious over-activity of the thyroid seems to have been excited by the use of too much such salt. It should be used only under medical supervision."

"I met a woman recently," I remarked, "who said she had read a great deal about the influence of the pituitary gland upon growth and development, and she was giving gland extract to her little daughter."

"That would certainly be a dangerous procedure unless it were upon the advice of a physician," Doctor Barker commented. "The pituitary gland, which is a small organ near the base of the brain, is known to play an important part in the growth of the skeleton, and also to influence the development of the sex functions. It is believed that if it is over-active during early years you get giants, and that if it is very under-active in childhood you may get dwarfs. When the pituitary gland is over-active in adult life there results a strange enlargement of the bones and joints. It is most noticeable in the face, which becomes large and angular, the cheek bones and jaw bone becoming unduly prominent and massive. It is sometimes called the 'nutcracker' face.

"This condition comes on so slowly that sometimes the patient himself does not notice it. A story is told of an English physician whose colleagues saw this disease coming on for years. However, the doctor did not notice it until one day he thought he saw in the mirror a man with that disease, and he discovered it was himself!"

"WHAT is an uninformed person to do about the glands?" I inquired. "For example, I read the other day a lecture by a British biologist in which he was quoted as saying that during the war the soldiers had had their suprarenal glands over-stimulated, and that that has permanently increased the activity of these glands, causing ex-soldiers to be over-active and restless, and to live on a higher plane of energy. I also read another address by a London physician who was reported as saying just the opposite; namely, that the war had made such a frightful drain on the suprarenal glands of the soldiers that their glands were now exhausted, and that the ex-service men are now, as a consequence, suffering from lack of energy and physical drive. What's a layman going to believe out of all this maze of contradictory statements—made apparently by scientists who ought to know?"

"Personally I think *the less attention the public pays to such statements and to the general literature about glands the better.* Both of these statements make fine newspaper stories, but they are largely mere speculation. I do not think we have sufficient evidence to support either theory.

"It is true that the suprarenal glands, which are situated just above the kidneys, are sometimes called in popular parlance 'the fighting glands.' This is because many experiments have indicated that these glands throw secretions into the blood during periods of hunger, anger, and fright—periods when great muscular activity may be called for. These secretions are helpful in such crises. The suprarenals also have other functions, and profoundly influence the emotional life. But I know of no crucial evidence that proves that our ex-service men in general have either more active or less active suprarenal glands than they would have had if there had been no war."

"Are there any other of these so-called glands of personality or 'glands of destiny' that you can tell me about?" I inquired.

"I should not call them 'glands of destiny' particularly; but there are the parathyroid glands, the secretion of which seems to regulate the amount of lime in the blood; then there is the thymus gland, situated under the breastbone in animals, and also the pineal gland, a small gland about the size of a pea, situated above and behind the pituitary. They are all believed to play a part in a number of bodily processes, but too little is known about them to justify any definite statement to the public regarding them. Then there are islands of cells in the pancreas that are

Digitized by Google Original from UNIVERSITY OF IOWA

very important, for they produce a substance that prevents diabetes."

"What, Doctor Barker, can you tell me about the Steinach and Voronoff rejuvenation operations that we all have read and heard so much about—the operations which are said to cause women to become young and beautiful again and old men strong and virile? Are these operations really effective?"

"With all due scientific respect to Doctor Steinach and Doctor Voronoff for their investigative work in this field," Doctor Barker replied, "my observations have led me to the conviction that, to put it in common parlance, the game is not worth the candle, since the effects in the majority of cases do not extend beyond a few weeks. Anyway, if by the time men and women around fifty or sixty years of age have not yet learned that every period of life is valuable for its own sake, and that it has its own meanings, joys, interests, and responsibilities, they have given evidence that they are not capable of learning one of the greatest lessons of human life.

"But because of my feelings regarding these so-called rejuvenation operations, you must not interpret me as referring in any way but with the highest commendation, even enthusiasm, to the splendid experimental and clinical work on the glands of internal secretion being carried on by numerous chemists, biologists, physiologists, and physicians. The new knowledge of the glands has placed in the hands of physicians an instrument of very great value for the understanding and cure of a number of diseases and the relief of a number of forms of suffering. But it is rare, even with this new knowledge that has come to them, that doctors can transform personality or perform the 'miracles' that the public has been led to expect.

"As we look ahead, one of the most hopeful things is the manufacture in the laboratory of those products of the glands which have hitherto been manufactured only by the glands themselves. The development of such products as insulin, for use in diabetes; thyroxin, for use in deficient thyroid activity; adrenalin, for correcting insufficient secretion of the suprarenal glands, and pituitrin, which is of some benefit in certain circumstances—all of these are of first-class importance.

"But the glands of internal secretion are far from being subject to the easy manipulation the public imagination has been led to believe. No doctor can prescribe something to swallow that will give you the new personality you desire, nor can he graft any gland into your body that will permanently renew your youth. The skilled man of medicine can aid many sufferers by the new knowledge of the glands, and in a few cases work most gratifying cures. But, personally, I'm of the opinion that the less the layman concerns himself with his glands so much the better for him.

"My advice to him is to visit his doctor for a general overhauling once a year, and if there is anything wrong with his glands let the doctor undertake to remedy the situation. *In no circumstances should gland extracts be taken by anyone except under medical supervision.*"

Why the Mills Boys Did Not Leave Home

(*Continued from page 35*)

did start it. The elder Mills, who was the representative of several life and fire insurance companies for that territory, was well liked in Sodus, and when he said that he was willing for the boys to try the experiment it went a long way.

Warner and Ray had saved a little out of their earnings as newspaper correspondents, but when they got out the first number of the "Record" they had less than five hundred dollars, mostly borrowed. Their father negotiated a small loan at the local bank, which was their principal capital.

Sodus folks thought it was a great joke, when the new paper was announced. So did the editor-proprietor of the "Alliance." But when the first issue of the "Record" came off the second-hand press, they all read it. And they had to admit that it had more news of Sodus and the adjoining towns in northern Wayne County than the "Alliance" had ever carried. Also, it had some news about fishing.

There isn't any better fresh-water fishing anywhere than in Sodus Bay and the adjacent waters of Lake Ontario; wealthy sportsmen go there every season, many of them maintaining cottages or fishing camps. Warner Mills knew them all, and he sent each of them a copy of that first number, with his fishing column marked. A good many sent in their subscriptions at once, and most of them are still subscribers.

What made the people of Sodus take notice, however, was the decided attitude which the youthful editor took on a political question of local importance, which the older paper had consistently dodged. The "Record" lined itself up against the most powerful personality, politically, in the district.

And right there the Mills brothers began to make the collection of enemies which has been one of their most valuable assets. They made it a point to attack every project which was intended to put money into somebody's personal pocket at the expense of the people of Sodus. Sodus had been a sort of "pocket borough" for a little group of men who were feathering their own nests. At first these men didn't take the new paper seriously; but after a few issues had come out they decided that the Mills brothers were not joking.

The "Record" was started in the spring of 1897. Ray hustled for business and saw to getting the paper out, while Warner, the editor, continued his college work at Syracuse, only fifty miles from Sodus.

BUT things did not go so well with the new paper as its young promoters had hoped. Their capital was speedily exhausted, and they had nothing but the week-to-week income from advertising and subscriptions to fall back upon. And this was the crucial moment which the opposition picked to put the Mills brothers out of business with one wallop. Among the articles which they had published was one reflecting upon a lawyer in a neighboring town, and he promptly sued the "Record" for libel.

Digitized by Google Original from UNIVERSITY OF IOWA

"It looked like a catastrophe at first," said one of the Mills brothers, recalling this first crisis in the affairs of their paper. "We were wrong, and we knew we were wrong, after a little investigation. But if we were going to be sunk, we decided we would go down with our flag flying.

The little printing office worked all night, getting out handbills and posters enough to cover the whole country.

"We've been sued for libel!" was the substance of the placards. "We're going to report the trial in full in the 'Record.' Subscribe now! Ten weeks for ten cents!"

The young men's courage and audacity made a hit with the people of Wayne County, and they got more than a thousand subscriptions at the ten-cent rate. And most of these new readers stuck. The "Record" published every word of the testimony in the libel suit, and the Mills brothers gladly paid the six cents' damages which the court awarded the lawyer who had sued them.

"It made the paper," said Ray Mills. "When the libel case was ended everybody in the country knew that we had a newspaper, and we could go to the merchants of Sodus and other nearby towns with something real in the way of circulation to sell them."

ANOTHER valuable asset which arose from the libel suit was a share of the county printing. The suit had been tried at Lyons, the county seat, and the way the Mills boys had conducted themselves and their paper during the trial had attracted the attention and won the admiration of the county officials. "County printing" (legal notices and official announcements) came their way after that, and that sort of advertising is the most profitable that any country weekly can have.

The old "Alliance" felt the new competition keenly, but kept on until a fire destroyed the building in which it was published. And to clear that part of the story now, although it did not occur for two or three years later, it should be set down here that the Mills brothers went to the editor of the "Alliance" and offered him the free use of their plant and any other assistance they could give him until he got on his feet. But he decided that it was time for him to retire, and he did so.

Back in the Mills boys' minds all this time had been the idea of doing something for the good of the town. They had a genuine love for Sodus and intimate personal knowledge of the lack of anything to keep the young people of the town—and their elders—interested in life.

Amusement of some kind which would lift the people out of themselves, at least once in a while, was what was needed most, they decided. So they leased the old discarded skating rink, rechristened it the "Sodus Opera House," and booked a road show called "Gorton's Minstrels."

It was the first time in the history of Sodus that anything in the theatrical line of greater consequence than a "medicine show" or an "Uncle Tom's Cabin" troupe had ever visited the town. I happened to be in the village when the announcement was made in the "Record," and well remember the excitement it caused.

The Mills brothers canvassed the town personally and sold enough fifty-cent tickets in advance to cover the cost of

A GREAT STATE sends you this Message

To the people of AMERICA

FOR CENTURIES the glamour of romance has obscured the basic wealth of an inherently great State. Florida, the "Land of Flowers," named and claimed by the Spanish explorers, achieving destiny under five flags, emerged from its chrysalis a world-famous playground. Now a migratory million, responding to the beckoning call of Florida's sunshine, claim winter comfort, happiness and health in North America's own sub-tropics.

¶ Now a new era dawns. America's "last frontier" has passed—converted through vision and energy into a region where youth and maturity alike are challenged to carve a new and greater destiny with the raw materials Nature has placed at hand. Now the business man, the industrialist, the financier, the scientist, the teacher, the tiller of the soil, finds new phases of commerce impending, new industries gaining a substantial foothold, and millions of acres of virgin soil awaiting the plow in a state already famous as one of the world's great garden spots.

¶ The blessed comfort Florida offers seekers of health and sunshine will remain always. But through a searching survey authorized and recently completed by the State, new and basic facts about Florida industries, commerce, agriculture, community resources, recreation and sports facilities, health and climatic benefits, are available to you.

¶ Know Florida and its opportunities. Your questions are invited.

Town.....

bringing the minstrel show from Rochester. Handbills over the countryside brought farm families to town, and on show night the "Opera House" was crowded. It was a good show, and everybody was satisfied. The boys had hit upon one thing the town needed.

They put on other shows and people got the habit of driving in for miles to see them. Sodus merchants appreciated the enterprise of the publishers of the "Record," in bringing possible customers to town, and began to keep their stores open on show nights and advertise special bargains. It worked for the good of all concerned.

It was not long before the Mills brothers realized that they were in the show business as well as the newspaper business; also that they were facing a terrific liability if the rickety old rink should collapse or catch fire. So they decided to build a fireproof theatre.

"We had been seven years in the newspaper business then," Ray Mills told me. "We were out of debt and had seven hundred dollars in the bank. A hundred dollars a year net profits to date!"

Back of the block of stores which fronted on Main Street was an acre or so of waste land, utterly valueless as yet; and there was a ten-foot strip, unbuilt on, running through from the street to the back lot. The Mills boys picked up the vacant piece and its connecting strip at a bargain, and began to study theatre construction. They visited New York and other cities to learn what was needed, and built their theatre of concrete. Its seating capacity was only eight hundred; but its equipment was complete and modern in every detail. Alongside the theatre they tacked on a concrete ell to house the printing and publishing plant of the "Record."

THE new theatre was a great success, and it was not long before the Mills brothers had gained an enviable reputation as showmen, not only with the public but in the show business. One or the other of them made a point of seeing every show before it was brought to Sodus. It must be clean first of all, attractively staged, and well acted.

Sodus alone did not have people enough to fill even a small theatre, so the Mills brothers chartered special trains to bring out-of-town patrons to the theatre and customers to Sodus merchants.

To make the new theatre up-to-date in every respect, they decided that it must have electric lights. The nearest electric lighting station was at Rochester, thirty-five miles away. The town board of Sodus, some years before, had granted an electric-lighting franchise to a group of promoters, who had subsequently decided that the town was too small for electric lights. The Mills brothers hunted up the promoters and demanded electric lights for their new theatre.

"Take the franchise off our hands and make your own lights," said the promoters. The Mills brothers bought the franchise for forty dollars, and found themselves with another enterprise on their hands.

The electric lighting business was the last thing they had dreamed of going into; but now that they were in it they went at it with the same intelligent thoroughness they had applied to the newspaper and show businesses. They canvassed the village and obtained nearly a hundred contracts to light stores and dwellings. They bought a second-hand electric generating plant, installed it in the rear of the theatre, and turned on the current the day the first show was given.

But it did not take them long to discover that the original franchise holders were right—Sodus was too small a town to maintain an electric lighting plant of its own. They lost thirty-five hundred dollars in the first two years of operation; but they were determined to stick it out. A contract with the town for lighting the streets would save them, so they canvassed Sodus again, and got a majority of the taxpayers to vote, at a special election, to give them a street-lighting contract.

It looked as if their troubles were over; but only for a little while. The politicians of the town, as I have already indicated, did not love the Mills boys. They saw a chance to get even for some of the attacks upon them in the columns of the "Record," and refused to sign the contract for which the people had voted. Matters were at a deadlock, when a tragedy occurred which forced the politicians' hands.

THERE was one bank in Sodus, a private one, owned by the proprietor of the village drug store. The police force of the town consisted of a night watchman. Late one night, a band of yeggs slipped into Sodus unobserved, because of the dark streets, forced the door of the Bank of Sodus, although it fronted on Main Street, and blew open the safe. The night watchman, a well-beloved old resident, came upon the robbers just as they were leaving the wrecked bank. He gave battle courageously, but was shot and killed, and the thieves got away. Two or three years afterward they were captured and one was convicted and executed for the murder.

As a result of the terror which this crime—the only serious one in the records of the town—inspired among its people, pressure was put upon the politicians to sign the street-lighting contract with the Mills brothers.

A new spirit had already come over Sodus. The people of the village and the farmers in the nearby country were beginning to realize the advantages of modern improvements, and the demand for electric current quickly became greater than the little plant back of the theatre could supply.

For several years there had been talk of a trolley line direct from Rochester to Sodus Point, but the project had lagged. The Mills brothers got behind the trolley scheme, helped to smooth out the last difficulties which lay in its way, and gave it the final impetus which put it over. In return for their efforts, they obtained a contract from the trolley company giving them the exclusive right to buy surplus electric current at wholesale, for resale at retail.

For the first time, they began to make some profits on their electrical project. They secured the franchise for lighting Williamson, the town next west of Sodus. In a few years they were supplying power to townships and villages east and west of them.

The Mills brothers, however, were distributors of power, rather than producers, for several years. After they began get-

Digitized by Google Original from UNIVERSITY OF IOWA

ting power from trolley lines, they shut down their original little steam plant; it was cheaper to buy power than to make it.

But the making of electric current by water power appealed to them as sound economics, and they wanted to try it. There were several undeveloped water powers in the territory which they served through their Wayne Power Company, in the southern part of the state. They secured these water rights and then decided they did not have sufficient outlet for the current they could generate. If they could buy the Hornell Company, its connections would give them an ample outlet. They found some bankers who would back them for whatever was needed beyond what they could raise themselves and one day Ray Mills went to Philadelphia, where the Hornell Company was owned, with a certified check for fifty thousand dollars in his pocket with which to bind whatever bargain he might be able to make.

AS RAY stepped off the rear platform of a Philadelphia surface car he noticed a lame man, walking with a cane, who got off the front platform at the same time. A few minutes later he met the lame man, in the outer office of the owners of the Hornell Company. Both sent in their cards, and though Ray had reached the office first, his innate courtesy impelled him to ask the other to go in first to the private office.

Forty-five minutes later the lame man came out and Ray Mills was ushered in.

"I want to buy the Hornell Company," he said.

"I wish we had known that your letters meant business," said the man he had come to see. "We sold the Hornell Company ten minutes ago to the gentleman who just went out!"

The lame man had not left the offices, and the head of the concern called him in and introduced the two competitors. Negotiations were begun at once. The Mills brothers needed the Hornell connection, and the other, impressed by the fact that only Ray's courtesy had prevented them from getting it, did not try to hold them up. The result was a connection which brought the Mills Brothers into the electric power business on a bigger scale than they had ever dreamed of.

Their latest venture, the Lamoka Power Company, will develop, when completed, more than one hundred million kilowatt hours per year, and all of that immense output has been contracted for in advance.

But when Warner Mills was telling me about this, he spoke with even more enthusiasm of their pet little private water-power development on Salmon Creek, the little stream which runs through the village of Sodus. "That," he said, "will enable us to give better service to the people of our home town."

As I write this, negotiations are under way for the sale of their entire power interests for a figure high up in the millions. Both of the brothers want to spend more time in their home town of Sodus.

"The trouble with these big business enterprises is that they keep a fellow away from home so much," said Ray. "It's interesting, going around the country, negotiating with big business men, bankers, and power magnates; but I can't see spending the rest of my life that way."

Then he went on to tell me of his pet

How to make teeth more beautiful

A LESSON IN ONE WORD

THIS is the astonishing story of a certain health-and-beauty treatment for teeth . . . It is the simplest, easiest treatment in the world. It costs nothing. It is as old as mankind's first tooth — yet so efficacious, so beneficial in its results, that all the skill of modern dental science cannot improve upon it.

Centuries ago the primitive races of the world faithfully used this treatment—and knew no dental ills. Today, we highly civilized moderns neglect it—and the less said about *our* teeth and gums the better!

Nature gave the original prescription for this treatment. A simple one-word prescription—

"Chew!"

TEETH and gums, to be healthy and beautiful, *must have exercise.* Mind you, though, this advice doesn't mean that you must do a lot of tiresome "special exercises" in chewing! All that is required is the pleasant, normal chewing of enjoyable food. Eat every day some food that requires thorough mastication.

Ask your dentist to give you a list of foods that especially benefit teeth. High on that list you will probably find Grape-Nuts. For these golden kernels have an irresistible crispness which, combined with the delicious nut-like flavor of Grape-Nuts, tempts you to chew thoroughly. When you eat a dish of Grape-Nuts each morning you know that at that one meal your teeth have benefited by the natural exercise they should have.

Moreover, the nourishment Grape-Nuts contains helps to build and maintain sound tooth structure and is of great benefit to the entire body. Grape-Nuts supplies phosphorus for teeth and bones; iron for the blood; proteins for muscle and body-building; dextrins, maltose and other carbohydrates for heat and energy; and the essential vitamin-B, a builder of appetite. Eaten with milk or cream, Grape-Nuts is an admirably balanced ration, very easy to digest.

Get Grape-Nuts from your grocer . . . or mail the coupon below for two trial packages.

for dog owners—

a new publication

COMPLETE TEXT BOOK—*free!*

Written by a veterinarian with many years of scientific experience in practice, research and Government work in dog and other animal diseases throughout this country... This book is interesting and easy to understand. Contains the latest information about causes, symptoms and treatment of dog diseases...

Tells all about different intestinal worms which cause severe losses in puppies—the separate medicine needed to expel each kind.

—recent discoveries of the United States Public Health Service in preventing Black Tongue

—feeding of puppies by accurate schedules—general care, etc. Write for a free copy.

GLOVER'S

The Standard of Safety and Efficacy in Dog Medicines

CONSTANT research and a half century's experience are your assurance of perfect safety in treating a dog of any age or breed with any preparation bearing the name "Glover's"

New Glover Products of unexcelled merit

GLOVER'S CRESOL DISINFECTANT—A positive germicide and antiseptic, six times as powerful as carbolic acid. For killing germs and virus of contagious diseases, destroying insects—and as a deodorant for use in the kennel or house—this disinfectant is essential for every dog owner to have. Special pamphlet, sent on request, explains wide range of uses. Pint can—65 cents.

GLOVER'S FLEA & INSECT POWDER—The powdered insecticide recommended by the U. S. Government. Just that—pure—and no filler added to weaken its killing powers. Safe for dogs and cats of any breed. Kills lice on animals and poultry. Will not discolor white hair or feathers. Explanatory pamphlet and instructions sent upon request. Large shakertop can—50 cents.

GLOVER'S

IMPERIAL

DOG MEDICINES

Sold by Drug Stores, Pet Shops, Kennels and Sporting Goods Dealers

FREE ADVICE BY OUR VETERINARIAN

Our Veterinarian will personally advise you in any matter concerning sanitation—and the health, care and feeding of your dog. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc., etc.

project, born in his mind one night in France during the war, when he was on Y. M. C. A. service overseas, and which he has been nursing along ever since. It isn't ready to spring on the world yet; but when Ray Mills does announce his thoroughly practical and novel philanthropic enterprise a good many other rich men who want to be helpful with their money, especially in the interest of children, will wonder why they hadn't thought of it. A good many of them, in fact, have asked for the privilege of putting their dollars in with his, to finance philanthropy for juveniles on a huge scale.

"How do you find the attitude of big city bankers and business men toward small-town people?" I asked the Mills brothers. "Are they easier or harder to do business with than those in smaller communities?"

"There isn't any difference between the really big man in the city and the big man in a country town," said Ray. "Years ago we used to think that the big-city business man was a sort of superman; we stood somewhat in awe of him. That is a common fallacy, especially among people whose lives have been spent in small towns. They think because a man does business in millions instead of in thousands he must have abilities which are lacking in the country places. But when you come to analyze it, the difference between a thousand and a million is nothing—it's just a matter of adding more ciphers.

"As we extended our activities and acquaintance we found that the small towns have their full quota of keen citizens. In fact, I think the proportion, to total population, of men of outstanding ability, is greater in the small towns. Brains are not confined to the city. Most of the really big men in the big cities got their early training either in rural districts, or in small cities.

"But there is always a percentage of men in any community, born and reared in the small town, who have no urge to leave home but prefer, as Warner and I did, to make good in their own fields. And among them we have found some of the finest business men we have ever had contact with. This is especially true of bankers."

"WHY don't more young men stay in their home towns and make good, as you two have?" I asked them.

"Well," replied Warner, after thinking it over a bit, "I should say that one reason is the expectation of getting something for nothing. In a small town everybody knows how hard everybody else has to work. In the big cities men work more in seclusion. Their contacts with their neighbors are not so close, and unless the neighbors actually see them working they think they are getting their money without doing much for it. And when the small-town young men reads about the big-city business men playing polo and giving parties, and taking trips to Europe and Florida, while at the same time piling up a fortune, he thinks that's the life for him.

"Of course, that idea about city men is all wrong. There isn't any way to succeed anywhere without hard work and plenty of it; and the time when a man has to do his hardest work is in the beginning.

"We didn't have any capital, nothing but ambition, enthusiasm, and youth, when we started the 'Record.' We had to learn by hard experience that we had many problems to solve. It meant the use of all the brains we had, all the time. It meant using plain common sense, which helped us over many obstacles.

"If I were going to make a general criticism of the average young men starting in business today I should say that his weakness is the notion that he can succeed without working hard, which means putting in long hours. Most of the successful business men of my acquaintance have won their spurs by years of hard work and self-denial."

"Then you don't believe in vacations?"

"On the contrary, I do believe in vacations, and long ones when a man has got far enough along so that he can delegate details to others.

"I learned the value of vacations twelve years ago, when my physician bluntly told me that I must drop business at once and leave for a warmer climate, and not return North until the spring. I knew I could not be contented away from business, unless my mind had something else to occupy it, so, as fishing is my principal hobby, I looked for a place where I could get plenty of it. I found that in Florida, where I now go every February and stay until June.

"I discovered the importance of vacations earlier than many men do. Most executives delay these periods of absence from strenuous work until it is too late for them to get the physical and mental benefit from them. They postpone learning how to play until they are too old to learn.

"ONE of the most satisfactory parts of our business life has been the building up of an organization of loyal workers, many of whom have been with us almost from our beginnings. We have employees who are as deeply interested in our success as we are. We believe that we are indebted for this loyalty to the fact that we have endeavored to be considerate and to render assistance when it was needed.

"Some of our most efficient employees have come to us after years in city business life. They all declare that they will not return to their old environment as long as they can remain in the rural district under such pleasant circumstances. And why not? Today the small town has practically all the city improvements and conveniences; the automobile has made the rest of the world as accessible from Sodus as it is from New York, and the dweller in the small town has what few city people have—real neighbors and friends. Life is far sweeter and more enjoyable in the small town. And I believe that there is more real thinking done, clearer and freer thinking, in the country than in the cities. Certainly I think the average small-town dweller of today is far more broad-minded than his city cousins.

"We have never," Warner continued, "asked anybody in Sodus, or elsewhere, to give us anything but an opportunity to serve them. We have asked no donations from any town to which our electric lines have been run, nor have we received any. Neither have we asked anybody to buy stock in our enterprises. We have done everything on our own responsibility. We asked nobody to share a chance of failure. We owe our success to the opportunities which Sodus and its people have given us

Digitized by Google Original from UNIVERSITY OF IOWA

to serve them; but we have put service first and profits second. Profits will always come to any business which concentrates on service and lets the money end more or less take care of itself.

"But after all's said and done, we're newspaper men first, and everything else incidentally. All that we have done has grown out of our idea that to make a newspaper succeed it must first serve its community, find out what was needed, and then supply it or see that somebody else supplied it. And as nobody else wanted to supply the things we thought Sodus needed, we just had to do it ourselves."

As I said in the beginning, this is a simple, plain tale, about two simple, plain country boys. It isn't the fact that they've made a lot of money which makes it an interesting story to me: it's the immense satisfaction both of them have got out of their work—the satisfaction which comes only out of doing things which benefit others.

INTO the blackness of the tumultuous gale rasped the imploring call S O S, S O S. And out into the wild night rode the gallant little coastguard cutter "Manning" on its errand of mercy. Next month we tell the story of this veteran cutter, with its magnificent record of over thirty years' service in the Coast Guard—a service packed with stories of heroism and loyalty performed in "the daily round, the common task."

Popular Beliefs About Animals

(*Continued from page 19*)

tissue, the tail will grow again to normal dimensions. Connective tissue in man or any other animal tends to replace itself quite completely, which is not true when nervous tissue has been destroyed.

The snake stories we used to believe do not stand up so well. There are no hoop snakes that can put their tails in their mouths, stiffen their bodies into circles, and roll down-grade like barrel hoops. No joint snake exists who can separate himself into pieces and later assemble the sections into a whole snake again; nor a coach-whip snake able to lash his assailant with a stinging tail. There is a milk snake, but since his capacity for liquid is about a spoonful someone else must be blamed when the cow comes in from pasture with her udder dry of the expected two gallons of milk.

A horsehair lariat laid around your camp site will not deter a rattlesnake who wants to come visiting, as photographs of rattlers crossing just such barriers amply prove. Nor is it impossible to miss the head of a coiled rattlesnake with a revolver, on the pleasant theory that the obliging creature moves its head into a direct line with the sights. And captive serpents do not have to be fed live food, as we have demonstrated here, where no living animal has been given to a snake in years.

Not wanting to demolish all the usual beliefs about the snake world, I hasten to

It used to be unladylike . . .

THE modern woman *refuses* to be old. In this frank, enlightened age she protects the precious qualities which have so much to do with her charm, and her happiness. It used to be unfeminine . . . unladylike . . . to understand those intimate details of the toilette which make a marriage successful and happy. But not today.

That is why the makers of "Lysol" Disinfectant asked a woman physician to prepare a booklet setting forth the *facts* about feminine hygiene. Just clip the coupon below—the booklet will be sent to you free. When you read it, you will see why the simple directions it contains are kept for constant reference by thousands of women.

But in the meantime, take no dangerous chances. Buy a bottle of "Lysol" Disinfectant today from your druggist. Complete directions come with every bottle.

The Name Ingersoll means STURDINESS DEPENDABILITY and GOOD LOOKS

—in Wrist Watches

WRIST WATCH $3.50

Illustration 5/8 actual size

A sturdy, dependable wrist watch at a low price. Now with chromium finish back that won't corrode and mark your wrist; double sunk effect on mat finish metal dial. Wrist Radiolite, $4.00.

—in Pocket Watches

WATERBURY $5.00

Illustration 1/2 actual size

Jeweled movement. Handsome engraved design. Smart 12-size. Chromium finish case that combines durability with platinum-like appearance. The best watch $5.00 can buy. With radium dial, $6.00.

—in Alarm Clocks

TYPE-T $1.50

Height 5 5/8 inches

With its Yankee qualities of sturdiness, dependability and good looks, the TYPE-T is fast gaining the position in the clock field that the Ingersoll Yankee Watch holds in the watch industry. Now in colors, too. Radiolite $2.25.

refer to one frequently denied that is absolutely true. There is a species of snake that can really "throw" its poison. No American reptile, fortunately, has this appalling faculty. The first specimens of the species, the African spitting cobra, were added to our collections a year or so ago, and a lively time we had unpacking them. The spitting cobra is a slender, shining black fellow, six to eight feet long, with a flaring hood that adds to his alarming appearance. When aroused, he can eject his venom for ten or twelve, perhaps fifteen, feet, aiming, apparently, for the eyes of his victim. The poison is quickly absorbed wherever it strikes mucous membrane, and in a short time will produce serious results. Blindness will follow if the eyes are reached.

As boys, we used to say after killing a snake and seeing his tail continue to writhe, "He'll die when the sun goes down." There was possibly a grain of truth to that, to the extent that the evening's coolness might cause a sort of paralysis of the involuntary muscular activity that continues even after the snake is beheaded.

I have sometimes been asked, in this connection, about the vitality of a frog frozen in ice. Experiments have determined that if the ice is not frozen too hard, so that a certain space remains about the frog, he may live a week or possibly longer, and again become normally active; providing, however, that the ice is thawed gradually, as it would be by action of the sun.

Another common saying, not wholly confined to boyhood, is that a fisherman must keep quiet or the noise will frighten the fish away. The fact is that ordinary conversation will not penetrate down into the water. But footfalls on the bank of a stream, or scraping or knocking on the bottom and sides of a boat, will create sound waves that do reach into the water.

You may have spent some of your childhood hours leaning over the edge of a water tank watching a horsehair, with the confident expectation of seeing it transformed into a squirming hair-snake or hair-eel. Possibly the movements of the hair produced by the effects of its oil in the water lent strength to your hope. But the metamorphosis never took place under your eye, even though days later you may have found a real hair-snake. What you found was an insect which lays its eggs in water to hatch into parasitical larvæ, living at various stages in the bodies of small fish and of other insects.

AMONG the most widespread of all the numerous false notions about animals is the belief that a camel can flourish for two weeks without a drink of water. Camels are used extensively by the British army in certain branches of its service. One of the strictest service regulations is that the camels be watered every day. An authority on the subject writes me that the animals in caravan travel will drink four or five gallons daily, five or six if watered only every second day, and if deprived of water until the third day are most difficult to restrain from injuring themselves by overdrinking.

A camel might survive two weeks without a drink, but at the end of that time he would be an emaciated creature. His hump would be shrunken and fallen completely over to one side, for it is a fact that a camel draws upon the fat stored in the hump when without food or water for long.

The heaviest drinker in the Zoo, incidentally, is the seventy-five-hundred-pound elephant, Khartoum, whose consumption was carefully measured one hot day. He drank thirty-two gallons!

If you have spent any time in the big woods, or in the mountains, you have doubtless heard that the porcupine throws his quills, and that the puma, otherwise known as the panther and mountain lion, utters a cry indistinguishable from that of a frightened woman.

The porcupine's quills have peculiarly barbed ends that, once penetrating the flesh, are most difficult to extract. One is like a straightened fish hook with several barbs. The quill will break off, or part from the porcupine, before it will leave the flesh. This insures sufficient respect for the formidable aspect of this little animal without any need for him to be able to throw his quills, which he cannot do.

The puma's call is another matter. So closely does this weird, blood-curdling signal resemble the distress cry of a screeching human that a person unfamiliar with it would be put to it to distinguish the one from the other.

Aside from this, there seem to be very few widely accepted beliefs or misbeliefs about the larger felines, although those that cluster about the domestic cat make up for this lack.

Probably no one believes any more that a cat actually owns nine lives, often as we refer to that old faith. A dead cat is just as dead as a dead dog.

THE saying that a cat is attached to a place, and a dog to a person, is measurably true. Cats are less dependent upon people than are dogs. Glad to avail themselves of human generosity when it is extended, if necessary they will quickly revert to the primitive, and forage for themselves in fields and garbage cans. Probably the cat's first domestication took place when the rats and mice that beset the Egyptian granaries were found to be easy prey, and the felines found themselves encouraged to remain by the subjects of the ancestral Pharaohs. The dog, on the other hand, became man's hunting companion and fireside friend.

With a single exception, most of the current beliefs about the dog are in his favor. The exception, that he is predisposed to "go mad" in the heated "dog days" of late summer, is untrue. A dog will contract rabies only when he is inoculated with the germ of rabies, or a poison that will produce the disease.

Certain myths cluster about other domestic animals in some rural regions. "Hollow horn" and "wolf-in-the-tail" are not infrequently heard of as the causes of enfeebled condition of cattle, and horns and tails sometimes are cut off to cure an ailment with which they have absolutely nothing to do.

In the same category is the superstition that worms get into a dog's tail, that goats eat tin cans, and that a sick cow has lost her cud, which a rag shoved into her mouth will replace so as to set her on the way back to health. The cow does not lose her cud literally. Her digestive processes may be suspended so that she will cease ruminating.

The horns that make the bull an es-

Digitized by Google Original from UNIVERSITY OF IOWA

pecially dangerous creature are his for life, as is the case with all of the bovine species. That the deer loses his antlers annually is true, however; so does the elk, the moose, and caribou.

I HAVE often wondered how many boys have searched the woods in springtime for a young crow, with the hope of having an amusing talking pet after the crow had been captured and his tongue split. How the idea got started that a crow with a split tongue will become a superior conversationalist I have no information. A crow will learn to talk if he is an intelligent bird, but his tongue, whole or divided, has little to do with his speech.

I once knew intimately a crow that talked exceptionally well. His two longest speeches were, "Joe, hitch up the horse!" and the impolite assertion, "Uncle Ned, you're a liar."

A talking bird produces his sounds largely with the use of his larynx. Obviously he has no lips to use, and, as I have said, he employs his tongue very little. Perhaps the loudest voiced of the eight hundred species of birds in our Zoo aviary is the Brazilian bellbird, whose call penetrates the distance of several blocks. He makes two sounds, each distinctly different from the other. One is shrill, the other a clang like the ringing of an anvil. So far as we can observe, he keeps his mouth and tongue in exactly the same positions for each sound, producing his effects entirely by the larynx. For years the bellbird was a puzzle to Amazonian explorers, who were a long time connecting his prodigious call with this rather small, unimposing white bird.

The parrot has, of course, the greatest reputation among birds as an imitator of human speech, although other species are equally skillful if not more so. One of the ablest of all is a relative of the blackbird, the hill myna from Java, of which the Zoo has a talkative specimen.

I recall a startling experience with a cockatoo, the property of some acquaintances, who assured me that the bird was vicious and not trustworthy. Nevertheless, I offered my finger as a perch and the bird, apparently friendly, climbed on. Looking pertly out of his little black eyes, the cockatoo repeated twice: "I'll pick your eye out! I'll pick your eye out!" He made no effort to suit the action to the word, but I was willing to accept as true the character already given to him, and to agree that he could talk plainly enough without having his tongue split!

No, toads do not cause warts; and yes, flying fishes do really fly!

Graham McNamee has met The Man Who, The Man Than Whom, The Man Without Whom, and all the other great figures in political life. He has covered conventions, Democratic and Republican; he has listened to speeches, world without end; he has seen the funny sights behind the scenes at vast political gatherings, and he has heard the funny wisecracks that never found their way into a microphone. A rich experience—and next month he tells you all about it in an article called "The Elephant and the Donkey Take the Air."

Bad breath is a warning from a poisoned system!

Don't "cover it up" Get at its cause

THINK over the business man's average menu! A superabundance of proteins and very little roughage! Then take into account his day's work—stooped over his desk all day! Lastly, judge of the exercise he takes—or rather doesn't take!

Is it any wonder doctors say that practically every one of us suffers from constipation; and from its attendant train of ills—tired digestion, headaches, bad breath?

And the trouble is that so many of us turn for relief to drastic cathartics or to drugs whose use may create undesirable habits....

There is, however, an ever-increasing group of people who are combating constipation with more natural means—fresh air, a balanced diet, plenty of water—and complement these by the regular use of Eno, the gentle yet thorough saline laxative.

Try this famous saline for one week, morning or evening. You'll use it regularly once you have tried it. You'll like its delightful sparkling taste and you'll appreciate its gentle cleansing . . . its freedom from griping.

Unpleasant breath . . . and the condition of intestinal poisoning that usually causes it . . . is just as inexcusable hygienically as it is socially. It is a symptom of importance—a warning of intestinal toxicity. Try Eno—at all druggists, 75c and $1.25 a bottle.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

Eno — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of Eno. Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.

For a business headache, nothing is better than a glass of Eno. You can get it at the better soda fountains everywhere.

Sunset Pass

(*Continued from page 49*)

the round-up," replied a lean-jawed rider, whose face showed drops of sweat and pale freckles.

"Jimmy Dunne's shot," added an older man warily, his narrow slits of eyes shifting all over Rock.

"Who did it?"

"Ash Preston."

"Where is Dunne?"

"Layin' in the cabin thar."

Rock brushed the men aside.

"Get out of my way," he ordered sharply, and, forcing entrance to the cabin, he surveyed the interior. A line of dusty, sweaty cowboys fell back, to disclose a man lying on the floor, with another kneeling in attendance. A pan full of bloody water, the odor of rum! Rock saw a face of deathly pallor, clammy and leaden, and eyes black with pain. He stepped in and knelt, to take up Dunne's inert wrist and feel for his pulse.

At that the other man looked up quickly. It was Clink Peeples.

"Howdy, Rock. . . . I don't know, but I'm afeared Jim is— Still, I'm no good hand at judgin' bullet holes."

"Let me see."

THE angry wound was situated high up on the left side, and it was bleeding freely, though not dangerously. Rock, calculating grimly, saw that Preston had missed the heart by several inches. The bullet had no doubt nicked the lung. But there was no sign of internal hemorrhage.

"Has he been spittin' blood?" asked Rock.

"No, I reckon he hasn't. I shore looked fer that," answered Peeples.

"Did the bullet come out?"

"It went clean through, clean as a whistle."

"Good!" exclaimed Rock, with satisfaction. "Dunne, can you hear me?"

"Why, sure," replied Dunne faintly. A bloody froth showed on his lips. "Rock, reckon Preston—beat you—to this job."

"Reckon I'd never have done it. . . . Listen, Dunne. This is a bad gunshot, but not necessarily fatal. If you do what you're told, you'll live."

"You—think so, Rock? I've got—a wife—an' kid."

"I know it," returned Rock forcefully. "Understand? . . . I know!"

"Rock, thet's shore . . . good news," panted Peeples, wiping his face. "I was plumb scared. Tell us what to do."

"Make a bed for him here," said Rock, rising. "But don't move him till he's bandaged tight. Then, awful careful. Make him lie quiet. . . . Heat water boilin' hot. Put salt in it. Wash your hands clean. Get clean bandages. A clean shirt, if there's nothin' else. Fold a pad and wet it. Bind it tight. Then send to town for a doctor."

"Thet's tellin' us," returned Peeples, gratefully. "Frank, you heard. Rustle some boys now."

"Peeples, was it an even break?" inquired Rock, coolly.

"Wal, I'm bound to admit it was. So we've nothin' on Preston thet way."

"What was it about?"

Dunne spoke up for himself, in stronger voice: "Rock, I had the—proofs on him—much as I didn't—have on you."

"Ahuh . . . Don't talk any more, Dunne," replied Rock, and turned to Peeples. "Did he accuse Ash?"

"He shore did. Braced him soon as he got here with his outfit. I didn't see the fight. But thar's a dozen fellars who did. You talk to them."

Rock did not need, except out of curiosity, to question anyone further.

"Where are the Prestons?" asked Rock, stalking out.

"Over at the third cabin," replied someone. "Ash is stalkin' to an' fro over thar, like a hyena behind bars."

ROCK elbowed his way out of the crowd. Soon his glance fell upon those he sought, and in him surged the instinct of the lion that hated the hyena. Ash Preston stalked to and fro, away from the cabin, and when he faced back toward the watching men he appeared to do it sidewise. Two of his tall brothers sat together, backs to the cabin wall. A third, probably Range Preston, stood in the doorway, smoking a cigarette. Apart from them sat Gage Preston, his burly form sagging, his bare head bowed. His sombrero lay on the ground. Rock's impression was that Gage awaited only the sheriff.

Long ago Rock's mind had been made up and set. He grasped at inevitability—strode forth to meet it, aware of the low, excited murmur that ran through the crowd behind him.

Ash, espying Rock, halted in his tracks. The two brothers rose in single action, as if actuated by the same spring. Range Preston stepped outside to join his brothers. Gage Preston did not see, nor look up until Rock hailed him. Then, with spasmodic start, he staggered erect.

Ash Preston, seeing that Rock had sheered a little off a direct line to approach his father, hurled an imprecation, and fell to his swift, striding, sidelong walk.

"ROCK, I'm done!" rasped Preston, when Rock got to him. "So double-crossin' you like I did means nothin' to me."

"Preston, have you been in any of these last butcherin' deals?" queried Rock.

"No. An', so help me heaven, I couldn't stop Ash."

"Why did you send Thiry—persuadin' me to come in with you?"

"Thet was why. I wasn't beat then. I figgered I could fight it out an' I wanted you. So I drove Thiry to it. . . . But now! You had it figgered, Rock. I'm sorry, sorry most fer Thiry, an' Ma, an' the girls. If I had it to do over again, I'd—"

"Do it now," interrupted Rock, ringingly. "Come with me to Wagontongue. The situation is no worse—for you. Come, Preston, be quick. Will you give up—go with me?"

"Rock, by heaven! I will—if you—"

"Yell that to Ash!" hissed Rock, strung like a whipcord.

Preston, with face purpling, shouted to his son, "Hey, Ash."

Come into Drafting!

Men who can read blue-prints and draw plans are "sitting pretty" these days. No wonder, when you consider that every machine, every building, all industrial activities *start* on the Drafting table! Intensive production, record-breaking construction operations, have created a great demand for expert Draftsmen capable of designing and calculating original plans.

Expert Draftsmen Get BIG Pay Checks!

Get this point—that Drafting isn't just *one* line of work—it reaches out into the Electrical, Manufacturing, Building Construction, Automotive and Structural industries. That is why you'll find well-paid Drafting positions advertised in all industrial centers of the U. S. 70,000 vacancies reported in the past 12 months. And that is why I advise men to go into Drafting, particularly if handicapped by lack of high-school or college education. Today you are in competition with high-school and college graduates for the better-paid jobs. You must have *specialized training* to win.

The Entering Wedge to Success in all Building and Manufacturing Lines

I recommend Drafting, too, because it can be QUICKLY learned at home, in spare time—without quitting your job, without losing a day's time or a dollar in pay. Because you're sure there will be a good position waiting when you are ready for it. And because the work is so fascinating and offers better-than-ordinary chances for advancement. For the Draftsman is in close contact with important work and BIG MEN, and he is right in line for promotion to Superintendent and other executive positions.

Home-training backed with an agreement to get you a DRAFTING JOB *at a* BIG RAISE *—or money refunded*

Now, at a cost you can afford, on terms of only $6 per month, you can actually BUY a fine Drafting position and a 50% increase in pay. A million-dollar institution contracts to give both—the training, then the employment. *Under money-back penalty.*

This agreement brings you your SECOND CHANCE. To repair a neglected education, to specialize, to change to a line where you can get ahead more rapidly. Read it, and investigate it!

The American School

Chartered 30 years as an EDUCATIONAL institution. We offer complete, thorough up-to-date instruction, built by 200 leading Educators, Engineers and Executives. A unique instruction, built to meet the specifications of well-paid jobs as laid down by employers themselves, yet simplified for ready understanding by men with only common schooling.

O. C. MILLER
Director Extension Work

And we are the first in the home study field to recognize the need of giving a COMPLETE SERVICE to ambitious men—*training, plus employment.* Which takes you as you are, supplies the equipment you lack, and lands you in the better job you seek. Without risk to you!

3 Drafting Lessons! *Actually* FREE!

to prove you can learn at home, in your spare time!

You will never have a more serious personal problem than deciding your future life-work—so we merely urge you to LOOK INTO Drafting. See how you like it, see if you learn as readily as most men do, get the facts about the opportunities, the salaries paid, the jobs open, the chances for promotion. This is why, on receipt of your name, we will send you *the first three lessons of our Drafting course* without cost or obligation.

O. C. MILLER, Director Extension Work,
THE AMERICAN SCHOOL,

Dept. D-71, Drexel Ave. & 58th St.,
Chicago, Illinois

Please send without cost or obligation:

1. Three Drafting Lessons.
2. Facts about the opportunities in Drafting.
3. Your Guarantee to train and place me under money-back penalty.

"What you want?" came the snarling answer.

"I'm goin' to town with Rock."

"What fer?" yelled Ash, as if stung.

"Wal, just off, I'm gettin' a marriage license fer Thiry! Haw! Haw! Haw!"

"Preston, get to one side. Quick!" warned Rock, risking one long stride forward, when he froze in his tracks, his right side toward Ash, his quivering hand low.

Ash Preston spat one curse at his father—then saw him no more. Again he began that strange sidelong stalk, only now he sheered a little, out toward Rock, forward a few strides, then backward the same, never turning that slim left side away from Rock. Rock learned something then he never had known—Ash Preston was left-handed. He approached no closer than thirty paces. Then he did not or could not keep still.

"Howdy, spy!" he called.

"Glad to meet you, beef rustler," returned Rock.

"Am givin' you my card pronto," called Ash, louder, more derisively.

"Gave you mine at the dance. But I got six left! *Caramba!*"

That stopped the restless crouching steps, but not the singular activity of body. Ash's muscles seemed to ripple. He crouched yet a little more. Rock could catch gleams of blue fire under the wide black brim of Ash's hat.

"*Señor del Toro!*" He had recognized the Spanish word.

"Yes. And here's Thiry's mask—where she put it herself," flashed Rock, striking his breast. "See if you can hit it!"

At the last, he had the wit to throw Ash off a cool and deadly balance—so precious to men who would live by the gun. When Ash jerked to his fatal move, Rock was the quicker. His shot cracked a fraction of a second before his adversary's. Both took effect. It was as if Ash had been hit in the head by a club. Almost he turned a somersault.

Rock felt a shock, but no pain. He did not know where he was hit, until his right leg gave way under him, letting him down. He fell, but caught himself with left hand, and went no farther than his knees, the right of which buckled under him.

Gage Preston hurried to Rock's side. Men came running with hoarse shouts.

WHEN Rock came to his senses again, he was lying on the floor of the cabin where, seemingly only a few moments before, he had given advice as to the proper care of the wounded Dunne.

He gazed around up at the grave faces of cowboys and cattlemen, at Gage Preston, who, grim and white, was binding his leg, at Peeples, still working over the prostrate Dunne.

"Preston, how is it—with Rock?" asked Dunne huskily.

"Wal, the top bullet glanced off the bone," replied the rancher. "Ugly hole, but nothin' fer this fellar. The leg shot, though, is bleedin' bad."

Rock became conscious of awakening pain, of a burning in his breast, and a dull spreading fire in his right leg. Presently Preston rose from his task, wiping his hands, and the voices of watchers ceased.

"Somebody get Rock to town pronto," he said gruffly. "Ain't safe to let him wait fer the doctor."

"Lon Bailey has his four-seat buckboard," replied a cowboy. "We can take out the hind seat, an' fix a place for Rock to lie."

"Rustle now," replied Preston, and then bent his gloomy gaze down. "Rock, if the artery ain't cut, you've nothin' bad. No bones broke."

"Gage, I'm . . . sorry," whispered Rock faintly. "No . . . other way."

"Ha! You needn't be. Shore, I'm not," rejoined the rancher.

"Will you . . . come to town?"

"Tomorrow. Me an' the boys will see Dabb. Mebbe it ain't too late."

"It . . . never . . . is, Preston."

"I'm thankin' you. Good-by an' good luck," he returned, and stamped out of the cabin.

Rock closed his eyes.

"Say, fellars, nobody hain't told me what happened to thet Ash Preston," spoke up Dunne. "He's done fer me, an' 'most the same fer Rock. If you-all let him—"

"Daid," interrupted a blunt cowboy, without solemnity.

"Rock, you heah me?" said Dunne. "I had you wrong—an' I'm askin' pardon. An', fellars, if I have—to die—I'll go happy."

MERCIFUL unconsciousness did not return to Rock. When strong and gentle hands lifted him into the buckboard he knew agony. When the swift wheels ran over a bump in the road it was like a rending of flesh and bone. He set his teeth and endured. Gray dawn and Wagontongue found him spent and in a daze of agony.

Rock was lying in the pleasant sitting-room of the Winters' home, where a couch had been improvised for him. He had awakened to less torture; but he could move only one arm and his head. A fire crackled cheerfully in the small grate. Outside the window waved the branches of a pine tree, and a soft sough of wind came strangely, like an accompaniment of something sad in the past.

Another day, Rock awoke to rest, if not ease, and slowly the stream of consciousness resumed its flow.

The little doctor was cheerful that day. "You're like an Indian," he said, rubbing his hands in satisfaction. "Another week will see you up. Then pretty soon you can fork a hoss."

"How is your other patient?" asked Rock.

"Dunne is out of danger, I'm glad to say. But he will be a good while in bed."

Sol Winter came bustling in with an armful of firewood.

"Mornin', son, you shore look fitter to me. How about him, Doc? Can we throw off the restrictions on grub an' talk?"

"I reckon," replied the physician, taking up his hat and satchel. "Now, Rock, brighten up. You've been so thick and gloomy. Good day."

"Wal, son, I almost feel young again this mornin'," said Sol cheerfully, as he kindled the fire. "Shore is some fine mornin'. First frost."

Then Mrs. Winter entered with breakfast for Rock. She was a slim, plain, busy little body, with gray hair, kindly eyes, and a motherly manner.

"Do you hear the church bell?" she asked, as she deposited the tray on his lap.

"Sure. Then it's Sunday?"

"Yes, and another Sunday you might go to church, with a crutch."

"Me go to church? . . . Lord, can't you see the congregation scatter?"

"Trueman, there's news," said Winter, after his wife left the room. "Might as well get it over, huh?"

"I reckon so," rejoined Rock slowly.

"Gage Preston paid me the money you gave Slagle. Yesterday, before he left."

"Left?" echoed Rock.

"Yep, he left on Number Ten for Colorado," replied Winter, evidently gratified over the news he had to impart. "Go on with your breakfast, son. I'll talk. I've been wantin' to for days. . . . Rock, it all turned out better'n we dared hope. They tell me Hesbitt was stubborn as a mule; but Dabb an' Lincoln together flattened him out soft. I got it all from Amy, who has been most darn keen to help. Rock, thet little lady has a bad conscience over somethin'. . . . Wal, with the steer market jumpin' to seventy-five even, Hesbitt couldn't stay sore long. They fixed it up out of court. Dabb an' Lincoln made it easy for Preston. They bought him out, ranch, stock, an' all. Cost Preston somethin' big to square up; but at thet he went away heeled. I seen him at the station."

"Did he go—alone?" asked Rock, gazing away out of the window.

"No, his three grown sons were with him. All slicked up. Shore is an adventure for them. Looked to me they didn't care much. At thet, there's darned little gossip. The rest of the Prestons are in town; but I haven't seen them. Funny Thiry doesn't run in to see me. I met Sam Whipple's wife. She saw Thiry an' Alice, who are stayin' at Farrell's. She said she couldn't see much sign of Thiry's takin' Ash's death very hard. Thet shore stumped me. But Thiry is game."

HE WENT out, leaving Rock prey to rediscovered emotions; stronger, darker, for the sad resignation. He had sacrificed his love to save Thiry's father, and, therefore, her, from ignominy. The thing could not have been helped. It had from the very first, that day in the corral here at Wagontongue, been fixed, and as fateful as the beautiful passion Thiry had roused in him. He had no regret. He would not have changed it, at cost to her.

But with the accepted catastrophe faced now, there came pangs that dwarfed those of gunshot wounds. His heart would not break, because he had wonderful assurance of her love, of the sacrifice she had tried to make for him. How that memory stung and vibrated over him! His sluggish blood stirred to swift heat. She would go away with her family, and in some other state recover from this disaster, forget, and touch happiness, perhaps with some fortunate man who might win her regard. But she owed that to him. And he realized that when the poignancy of first grief had softened, he would find melancholy consolation in the memory of the service he had rendered her.

"Son, lady to see you," announced Winter, not long after he had made Rock presentable.

"Who?" asked Rock, with a start.

"No one but Amy."

"Tell her I'm sleepin' or—or somethin'," implored Rock.

"Like hob he will," replied a gay voice

from behind the door. And Amy entered, just a little fearful despite her nerve.

"Well, how-do, Amy," said Rock, and then he laughed. Amy's presence was always difficult to deny gladly.

"Trueman, are you all right?" she asked timidly, as she sat down beside him and took his hand. "Oh, Trueman, I've been in a horrible state ever since I came home!"

"Well! I'm sorry, Amy. How so?"

"I hate to tell you, but I've got to," she replied. "For it was my last miserable, horrible trick! . . . Trueman, the day I got back I met Ash Preston on the street. I told him you—you were Señor del Toro. He laughed in my face, called me a jealous liar. But afterward I began to fear he'd believe me, and I fell to worrying. You cannot imagine what I felt when they fetched you here, all shot up. . . . Trueman, I don't want to abase myself utterly in your sight, but—well, I am a chastened woman. It made me merciless to myself. It opened my eyes. I told my husband, and since then we've grown closer than we ever were."

"Then, Amy, I forgive you."

Quick as a bird she pecked at his cheek, to lift a flushing, radiant face. "There! The first sisterly one I ever gave you. . . . Trueman, I am the bearer of good news. You are a big man now. Yes, sir, in spite of—or perhaps because of—that awful gun of yours. But your honesty has gone farther with John and Tom Lincoln. I have the pleasure of telling you that you've been chosen to run the Sunset Pass Ranch for them. On shares."

"Never, Amy, never!" cried Rock, shivering. "I shall leave Wagontongue again—soon as I can walk."

"Not if *we* all know it," she retorted, as she rose, with inscrutable eyes on him. "You've got more friends than you think. . . . Now I'll go. I've excited you enough today. But I'll come again soon. Good-by."

AMY had hardly gone when a squeak of the door and a deep expulsion of breath from someone entering aroused Rock. He gave such a start that his stiff injured leg acutely reminded him of its condition. Thiry had entered. She leaned against the wall. She was bareheaded, and her soft hat dropped from nerveless hands.

"Thiry!—how good—of you!"

Haltingly she approached, as if the impelling force that drew her was only slightly stronger than something which held her back.

"Trueman, are you . . . all right?" she asked, apparently awed at the helpless length of him there on the bed. She, too, sat down beside him, and her eyes, black with thought and pain, followed her reaching hand to rest on the coverlet over his knee.

"Reckon I'm 'most all right—now," he replied, sensitive to her touch.

"Mr. Winter told me everything," she went on; "but *seeing* you is so strange. . . . Can you move?"

"Sure. All but my left leg."

"Was that broken?"

"No, I'm glad to tell you."

"Then you can ride again?"

"Some day."

"And the other hurt, was that here?" she asked, pale, almost reverent, as she laid a soft hand high upon his left shoulder.

"Lower down, Thiry."

Fascinated, she gently slipped her hand down over the bandage.

"Here?"

"Still lower."

Then she felt the throbbing of his heart. "But, Trueman, it couldn't be there."

"You bet it is."

"What?"

"The hurt you asked about."

"I was speaking of your latest wounds," she replied. Then she looked him squarely in the face, which she had failed to do before. How tragic, deep with sorrow, yet soul-searching that gaze! It changed. "I had to fight myself to come," she said. "There was a cold, dead, horrible something inside me. . . . But it's leaving! Trueman, you're so white and thin. So helpless, lying there! I—I want to nurse you. I should have come. . . . Have you suffered?"

"A little, I reckon," he replied unsteadily. "But it's gone now."

"Has Amy Dabb been here?" she asked jealously.

"Yes. Today. She was very nice."

"Nice! Because she wheedled John Dabb to offer you the running of Sunset Pass Ranch?"

"Oh, no; I mean, just kind," returned Rock uncertainly. He was of half a mind to believe this delirium.

"TRUEMAN, you will accept that offer?" she queried earnestly. "I don't care what Amy says. I know it was my father's advice to Dabb."

"Me ever go to . . . Sunset Pass . . . again? Never in this world."

"Trueman, you would not leave this country?" she asked, in quick alarm.

"Soon as I can walk."

"But *I* do not want to leave Sunset Pass," she returned, with spirit.

"I'm glad you don't. Reckon that's a surprise, Thiry. . . . It's very beautiful . . . out there. Perhaps, somehow, it can be arranged for you. Someone, of course, will take the place. . . . Is your mother leavin' soon?"

"She is terribly angry with Dad," replied Thiry seriously. "But I think some day she'll get over it, when Dad makes a new home, and go back to him."

She edged a little closer, grave and sweet, and suddenly bent to kiss his knee, where the bandage made a lump, and then she moved up to lay her cheek over his heart, with a long, low sigh.

"Trueman, did you think I'd . . . hate you for killing Ash?" she whispered.

He could not speak.

"I thought I would. And it was a sickening, terrible blow. . . . But before that same night was over I knew I couldn't hate you. . . . And I believe, even if I hadn't learned what changed it all, I would have forgiven you—some day."

"What changed all?" burst out Rock, in insupportable suspense.

"What Dad told me."

"Thiry, have mercy!"

"Ash was not my brother," she said, in a smothered voice.

That dear bright head on his breast seemed to be lifting his heart, rather than pressing against it. A thousand thoughts tried to pierce to clarity.

Rising, Thiry slipped to the floor on her knees, and leaned upon her elbows, clasping his hands, regarding him with remorseful tenderness.

"MY BROTHER Range beat the others home that night with the news of the fight. I had my terrible black hours. Thank God they are past. . . . I knew we were ruined, that Ash in some way had brought it about. Perhaps my love for him turned then. But I want you to know that, even then, believing Ash my brother, I'd have forgiven you in time. I know it. After the agony was spent, I was learning how deathlessly I loved you. . . . Sometime in the night, late, Dad came to me. Never had I seen him gentle, sad, defeated, yet something better for that. He told me not to take it too hard, not to visit the sins of others upon your head. You had been driven to kill Ash. Someone *had* to do it, for the good of all, and no one but you *could*. He told me how he had inflamed Ash. Then the fight! Ah, God, he did—not—spare me.

"Then came the story, torn from his most secret heart. Ash was not his son, but the illegitimate son of a girl whom he had loved long ago, who, abandoned and dying, gave him her child. That child was Ash. And Dad said he was what his father had been. . . . I was not yet born. But when I came, Ash was my playmate. I remember when we were children. He was always vicious to everyone except me. And so I grew up loving him, perhaps for that. . . . Next day I went to Mother, and she corroborated Dad's story. It seemed I was delivered from fiendish bonds."

"Thiry darlin', there must be somethin' in prayer," cried Rock fervently.

"I was to learn how you had bought Slagle's silence, how you persuaded Dabb and Lincoln to force Hesbitt to settle out of court, oh, how, from the very beginning, you had meant good by all of us! Yet I could not drag myself to you. It took time. I had such dreadful fear of seeing you lying in danger of death, bloody, pale, with awful eyes that would have accused me. . . . Oh, I suffered. . . . But now I'm here—on my knees."

"Please get up," asked Rock, lifting her to a seat beside him.

"Now will you accept Dabb's offer, and take me back to Sunset Pass?" she asked, bending to him.

"Yes, Thiry, if you will have it so," he replied. "If you are sure you love me that well."

She gave him awakening, passionate proof of that. "Dear, I understand better. Dad told me you were one of the marked men of the ranges. Our West is in the making. Such men as Ash—and those others you—"

Sol Winter came in upon them.

"Wal, I knocked twice, an' then I says, 'I'd better go in.'" He beamed down upon them. "Son an' lass, I'm glad to see you holdin' each other thet way—as if now you'd never let go. For I've grown old on the frontier, an' I've seen but little of the kind of love you have for each other. We Westerners are a hard pioneerin' outfit. I see in you, an' Allie, an' some more of our young friends, a leanin' more to finer, better things."

THE FAMILY'S PROBLEMS

Is This Man's First Duty to His Family?

I WAS very much interested in the article "Women Haven't Enough to Do," by Graham Pierce, in the July issue of THE AMERICAN MAGAZINE. Probably it is all true. But there is imminent danger of my family going on the rocks at the present time, for a reason that I have never yet heard given by any writer.

I wonder if our little town is alone in the world with its problem, or if other communities and other wives have the same trouble that some of the women of my community are facing today. I wish someone might discuss it in the columns of "THE AMERICAN MAGAZINE," for I can assure you that I would give almost anything I own to find a solution.

I have been married twenty-two years to a man who is considered by all who know him, and by his wife in particular, as one of the highest types of men. After twenty-two years of married life, I know that I love him as truly and as romantically as I did when I married him, and I know that he loves me.

I tell you all this to show you what a fine, man My Man is. I have two grown-up children who adore their father and have never given either of us an unkind word nor a moment's worry, except in sickness, and we have had very little of that.

I married when I was twenty and my husband is one year older. I was a stenographer, and was earning one hundred dollars a month, which was good pay for a girl in those days. But I didn't care a thing in this world for success in business; I believed with all my heart that woman's true happiness was in her home, and that that was her most exalted place.

WE HAD been married less than two years when my husband asked if I felt it would be all right for him to join the National Guard. He explained that he felt very keenly that every citizen should give some service to his country, and that his mother would never consent to it before he was married, for he was helping to support her. Our first child was then little more than one year old and the second baby was on the way.

We had always been very straightforward with each other, talking things over reasonably, so I did not hesitate to tell him that I did not feel that I could spare him just then, any more than his mother had been able to, and that I thought that his place was with me in the home until our babies were at least partly raised.

I shall never forget the scene that followed. Hot words were said on both sides and some of those he said to me are burning in my heart today just as fiercely as they did twenty years ago. I learned from that scene that he had a high ideal of what a man owes to his community, and that his duty to his home, wife, and children would always come second to that.

I lay awake many nights over that scene, and wondered if I were just a selfish, money-grabbing wife who wanted everything for herself out of our marriage, as I had been accused of doing. I determined that I would have to make the best of it, and try to be sufficient unto myself for, of course, he joined the Guard. For three years he never spent more than one evening a week with me, and often he did not get home until three A. M.

I was not altogether unhappy; in fact, I soon learned to stay alone with the babies —even had my second child while he was on a camping trip. Just before his enlistment ran out, the skies began to gather war clouds, and he said, and I agreed with him, that only a coward would get out when the country was in trouble; so he reënlisted.

HE WENT to the Mexican border on fifteen dollars a month with no provision for me or the children. As it happened, his firm paid me his salary while he was gone; but neither of us knew they would when he left. One of our children died while he was away, and I went through that alone.

He had been home from the Border three months when he was called into service in the World War. He had been commissioned a second lieutenant by that time, so that his pay was one hundred and twenty-five dollars a month. He had to buy his uniforms and support himself out of it, so we had nothing left for myself, the baby, who was then six, and the baby who was coming. In fact, we found ourselves two hundred dollars in debt. But again his firm paid me his full salary for the first year he was gone, and one third of it for the rest of the twenty-five months he was in the service.

He was promoted to first lieutenant and then to captain, with salary increases each time. He allotted me a goodly portion, but also kept a goodly portion for himself and enough to save a little for us, also. I was able to save four hundred dollars, pay up our debts and take care of myself and babies, the third of whom was born when he was in France.

As soon as he came back he got into the rehabilitation work with the sick and wounded boys, and worked every afternoon after he left his place of business, and every night until after midnight, helping the men who had been less fortunate than he. He did this for two years, and I mean it when I say it was every single night.

At the end of two years he had a nervous breakdown and was frightfully ill for a year. He had left his old firm before he was taken sick because they protested with him about so much outside work. He was so ill that I could not leave him to go to work. So I borrowed the money and stayed at home to care for him and the babies. After thirteen months we came South for his health, and now, after five years, he is as well as a man can be, full of life and enthusiasm.

He is probably the most popular man in this little town.

He has always drawn a good salary except for the year when he was sick; and he received enough compensation from the Government to pay back the money we borrowed at that time. I have no servant and have never had one. I do all my own work except the laundry.

We have no car; I make all of my own clothes, and haven't had a new dress in so long that I have forgotten how it would seem to walk into a store and buy something nice. I "make over" and dye my dresses, and carefully plan every cent I spend for the home. We have no home of our own and no furniture. We have had a start on these several times, but they have had to be sold each time to help out on debts or extra expenses. Our son is ready for college, has worked hard all summer to save something toward his expenses at the university, and cannot go.

Since I have known that he could not go to school, I have begun to rebel. I am forty-three years old. I have been as careful as I could be about money. I travel with all the wealthy ladies in town, because my husband is so prominent. They all have cars, servants, and beautiful homes, and something ahead for their future. While I try to keep the feeling down, I cannot help but wonder what they think when I have to accept the use of their cars when I go any place, and it humiliates me.

MY HUSBAND has changed his position five times in seven years. Each time there has been a different reason given, but I have come to know that the real one is, and always has been, that he has too many irons in the fire. The head of the firm he is with now made it his business to tell me that the reason they cut his salary just recently was because he was running the whole town, and neglecting the work he was paid to do. That woke me up.

I feel as if I were caught in a web, and I simply can't find a way out.

Should a woman just trust to luck to keep her out of the poorhouse in her old age? If I say a thing about wanting a home of my own, my husband cheerfully assures me that in a few years now he will build me one that will knock the eye out of anyone who looks at it. The fact that by that time my children will have left home and I won't care about having a home that is so elegant, never enters his head. He goes blithely on doing his community service, and each year his family has less and less.

What shall I do, if anything? B. F.

The Art of Making Friends

By EDGAR A. GUEST

HE WAS a go-getter salesman.

I sensed that the minute he came into my office. I knew what he was going to say before he had uttered a word of it. And, strangely enough, I knew I was not going to sign on the dotted line for that man. I'd never seen him before, but I didn't like him. However, I let him talk, and the more he talked, the more I disliked him.

In no time at all, I gathered that he was a great salesman. He made no effort whatever to conceal this fact from me. He was once the sales manager for a large concern, so he told me; but he failed to add why he gave up the job. I had my own ideas on the subject.

But in spite of his ability to sell any- and everything, he had been a wanderer, going from city to city and from job to job. I learned *that* when he asked me to give him the names of a few of my friends to whom he could present his proposition.

"Any friends of your own here?" I asked.

"No," he said; "you see, I'm so busy doing big things, I don't have much time to make friends. Then, you see, I've changed about so much. You have to be on the go when you're selling."

In other words, this go-getter salesman could sell anything but himself. He could make stocks and bonds and merchandise attractive to others, but he couldn't make himself attractive. Even if he managed to make a good impression at first, it never lasted after people got to know him. Nobody, it seemed, cared to make any permanent business arrangement with him. He was good enough to sell goods; but he lacked that something which would make you invite him to the house for dinner.

HE HAD the art of salesmanship, but he hadn't the art of making friends.

And the genius for friendship is the greatest of all gifts.

Through one of my clubs passed a citizen of note one day. He has had everything this world can give him—wealth, position, power, respect—but he has few intimate friends. He has never been known to open his heart to another individual.

He walked through that room,

God is Not the Only One Who Loves a Cheerful Giver!

"NEVER set out to make a gift, or to do another a favor, unless you are prepared to do it graciously and wholeheartedly," says Mr. Guest. "The grudging giver spoils his gift in the making. Over and over, I've seen men and women struggling with themselves to be generous. They start out bravely to do the handsome thing, but they soon waver. It hurts them to part with quite so much, so they reduce the quantity. They can't bring themselves to go quite all the way with the one they started out to please, so they stop at the half-way mark.

"The result is cheap, tawdry, and insignificant. It would have been much better if they had given nothing at all. Where they meant to plant delight, only disappointment grew. Instead of gratitude, resentment and derision are their reward.

"Remember, a grudging gift never yet made a new friend, or helped to hold an old one!"

filled with men he knew, as though nobody were there. He recognized a nod of greeting with a nod. He answered every "Hello" that was given to him, but that's all there was to it. If you had been away for six months or more, he would not have gone a step out of his way to welcome you home. Coming face to face with you, perhaps he would express pleasure at seeing you again. But you still would feel that if he could have passed you without speaking, he would have done so. He lacks interest in others.

I've known that man for years. I know that he values friends, and that he wishes he had more of them. But he probably never will, for he hasn't a genuine interest in people. It is too late now for him to start to win them. He has built up for himself a reputation for coldness and reserve and indifference. People expect him to be distant. Any attempt he made to be hail-fellow-well-met would be looked upon as insincere.

SOMEBODY got to a man of this type in a certain big business in Detroit. He was the millionaire stockholder who had the last word in the institution. What he said was the law, and everybody about the place knew it. He always had kept himself aloof. Day after day he entered that office without ever saying good morning to anyone.

The meddling somebody told this impersonal employer that he was all wrong. "You ought to be friendlier with the boys and girls in the plant," he said. "It would do you and them a lot of good if you walked among them occasionally and talked to them. They're all afraid of you. They think you're the Big Bear that is ready to gobble them up."

"I've never had the knack of making friends," said he, "and I'm sorry I've given the wrong impression. I'll try my best to treat the boys a little better from now on."

He started the very next morning. As he stepped into the elevator, he noticed in the car the foreman of one of the departments.

"Good morning, Jim," he said. "This is a beautiful day."

The reply was not what he expected.

Jim looked him straight in the eyes and said:

"Mr. ——, I've worked for this institution a little over twenty-five years now, and I've done fairly well for the company and my family without ever having you say 'Good morning' to me. You don't need to start now." And with that he stepped out of the car and went to his work.

It was too late. You can't slight a man for twenty-five years, and then decide to turn over a new leaf and greet him like a brother. You may mean to be friendly, but the other man will suspect your motive.

The comedian may long to play Hamlet, but the public won't have it. The tragedian may think he can do a better song-and-dance act than the vaudeville artist does; but the managers know better than to let him try.

Illustrations by Joseph Simont

To have friends, a man must first be a friend. He who has many friends has been a friend to many.

The art of friendship is self-acquired. Men go to schools to learn to paint, and carve, and draw, and write; there are dancing-schools and finishing-schools for girls where etiquette and deportment are taught for a price; there are correspondence schools for many crafts and many arts; but the greatest of all the arts—that of making friends—comes to a man from within, and only when he makes patient effort to deserve it.

Friendship must be a lifetime habit. The most important thing you can teach a boy is how to get along with his fellows. Nature, I suppose, has something to do with our likes and dislikes; our moods and fancies; our strengths and weaknesses. But the control of our conduct is in our own hands. He who comes to the end of life's road with few or no devoted friends has only himself to blame.

I have in mind a man in Detroit who is liked by all who know him. Even men he has discharged from his employ still cherish his friendship.

He hasn't found it necessary to sacrifice discipline to be kindly. He can run his business well, and still be human.

I was riding with him one day when he suddenly swerved his car off the main street.

"Do you mind going a few blocks out of the way?" he said. "It just occurred to me that I ought to make a stop on the way out."

In a few minutes, we were in a section of town inhabited by foreign workmen. The cottages looked all alike.

"Here's the place I'm looking for," he said and stopped. "I won't be a minute."

I NOTICED crape on the door which he was approaching. He had said nothing to me of his mission, but when he came out he remarked:

"I'm glad I did that. I hope you didn't mind waiting."

"Someone in trouble?" I asked.

"Yes," he said. "We've had a young Pole working in our foundry for the past three or four years, a good, clean, honest, hard-working boy. I liked his manner the first time I saw him, and when I go through the plant, I usually stop to talk to him. I always get a laugh out of his quaint expressions. You know you really get to like those boys. His baby died yesterday. The firm sent out a few flowers, but I thought I'd just stop by myself and see if there was anything I could do."

"And was there anything you could do?" I asked.

"No, not a thing," he replied. "He had saved up some money, and everything's all right so far as the finances are concerned. But it seemed to cheer him up a lot to have me walk into his house. His wife kissed my hand and he introduced me to his people as 'the boss.' I couldn't understand a word they said, but I got enough to know how glad he was to know that I had called on him as his friend."

They don't teach that sort of thing in schools. That's inside art. That's friendship as practiced by one who knows what real friendship means. That millionaire employer went to the little cottage as the friend of a Polish father. I can reconstruct

that scene. He talked to those grief-stricken parents simply and earnestly. There was no distinction then of head-office and foundry. They were all in the presence of death and the big man was helpless to change that situation, and he knew it. All his money and all his pride and all his power could do nothing. He probably put his arm about that suffering father and uttered what few words of consolation he could think to say. When he was being introduced to the strange friends of that family, he displayed no sense of superiority. I'll wager all I have that he made those people feel he was glad and proud to meet them. He was a friend of the family, and friends are friends whether they live in cottages or mansions.

WHY is it some people are liked and others greatly disliked? It is not altogether a question of honesty and fair dealing. Apparently it has nothing to do with respectability, for many respectable people are not popular. It seems to me to be wholly a matter of manners, and manners are usually prompted by the heart.

Analyzing the various people who seem always to annoy me and "get on my nerves" is not difficult. Some of them are boastful. They walk the world with a superior air; they are forever mentioning their possessions; they are always talking of people "who are beneath their notice." In a world so crowded, they would give you the idea that only they and a very few others are really worth while.

There are others who are flagrantly selfish in little things. They are openly bad-mannered. They want all the advantages. They are the elbowers in the crowd; the road hogs on the street; the rushers for first place at the dining table.

Another type I don't like is simply malicious. Persons of this class have bitter tongues and cruel minds. Their jests always carry a sting. They seem to lie in wait for you to spring the one sentence which they know will hurt you most. You can never be comfortable in their presence. Play host to one of these, and your party is dancing on dynamite. Sooner or later one of your guests is going to be insulted or slurred, for the poisoned tongue knows no law of hospitality or friendship or courtesy.

The two-faced man or woman is difficult to endure. This type leaves a trail of broken confidences behind it. It plies you with intimate questions, only to broadcast the information where it will do you the most harm. It is the sneak-thief of social life. It is false to all and true to none, and the only good thing about it is that it can so easily and quickly be detected and so simply guarded against. Unpopularity and isolation are its rewards.

Churlish people are unpopular everywhere. So are people filthy both of person and of speech. Nobody long enjoys the company of the loud and flashy person, or of the morose and crabbed. The flatterer falls on the rocks of insincerity, and the liar and the cheat are soon discarded by society.

The art of making friends lies in knowing how to avoid these dangers. It seems to me that he who would properly equip his boy or girl for life in this world should begin early with the teaching of manners.

Is an ill temper admired by anyone? Not at all. Then put away your silly fits of rage. Do you like the lad who cheats to win? You don't? Then never be a cheat yourself. Do you like to hear slurs and sneers and smart words that sting and burn? No. Then think twice before you utter them. Do you like to be warmly welcomed? Do you like to receive the little attentions which are evidences of thoughtfulness and respect for you? You do. Then bestow them always on others, particularly on those who may not rightfully expect them. This is the road to friendship.

The art of making friends is not difficult. The ways of people we like and love are not difficult to understand. There is nothing mysterious about them. They sigh when they are in trouble and they groan when they are hurt. They suffer disappointment and grief and loss. In every human way they are just like us—and yet they are different. And it is that difference which draws us to them.

There is a man of many friends in Detroit. He is still a young man. He is an outstanding business success; but above and beyond that shines his personal success. His presence radiates good feeling and good will. I have never heard the poorest man envy him his good fortune. The richest in town delight in his friendship. What is his secret? He hasn't any. The friends of his boyhood are his friends today. Drive up to his house in pride and arrogance, seeking to share in his power and glory, and what will you find? Arrogance and Pomp enthroned to greet you?

Not at all. You'll receive a duplicate of the welcome just given to the humbler friends who preceded you. He'll come to the door with a smile and a handshake and a word of delight for your coming. After that he will take you into that spacious living-room and introduce you to the friends of the family. Maybe you will find a friend of his boyhood, who now clerks in your store. At any rate you'd better leave any snobbishness or false pride at home.

I WAS there once when the house was new. An old couple, friends of his mother, who was still living with him, called. Never could royalty have received a warmer welcome. Those two lovely old people were plainly ill at ease. Perhaps in all their lives they had never before entered a rich man's house. They had known their host as a boy and had been friends with him, but he had gone up in the world and they had remained where he left them. No wonder they felt a little uncertain of their welcome.

But not for long. The dear old lady was almost swept off her feet by a hug which that great big boy gave her, and the little old man got a handshake which he'll never forget.

Proudly the young host introduced them to all of us. And then, turning to his two elderly visitors, he said, "Wouldn't you like to see the house?" Would they? They were itching to see it—every inch of it, from cellar to attic.

"Excuse me a few minutes," the boy said to the rest (*Continued on page 141*)

S. S. VAN DINE'S MYSTERY

ILLUSTRATED BY H. M. STOOPS

The BISHOP

JOSEPH COCHRANE ROBIN—"Cock Robin" to his friends—had been found dead with an arrow through his heart. The last man to be seen with him was his rival—in archery and in love—and this man's name was Sperling, German for sparrow.

Such were the strange circumstances of the murder which Markham, District Attorney, was called upon to help solve. He turned instantly to Philo Vance, that eccentric young gentleman of fashion and leisure whose hobby had become the solution of unsolvable mysteries, and together with Van Dine (Vance's secretary) they set out at once for the scene of the crime.

This was the home of Professor Dillard, a dignified old house on Seventy-fifth Street, just off Riverside Drive, from which it was completely shut away by a huge apartment house. The basement of the house had been converted into a club-room, and the passageway between it and the apartment had been joined to the corresponding one leading in from Seventy-sixth Street, to make a practice range for archers. This because the professor's niece, who with Sigurd Arnesson, a mathematician and adopted son, made up the household, was an archery enthusiast.

At the time of the murder no one was at home except Professor Dillard and Pyne, the butler, and they had no light to throw on the mystery. Arnesson had been at the university all the morning; Belle Dillard, the niece, had returned around noon from a morning at tennis; Beedle, the cook, had been out marketing. Robin and Sperling had called to see Belle, and on finding her out had gone down to the basement club-room. Adolph Drukker had come to see Arnesson, and then returned to his home, the house on Seventy-sixth Street whose rear faced the rear of the Dillard house. A chess-player named Pardee, who lived on the opposite side of Seventy-fifth Street, had seen Beedle and Belle, but had noticed no one else coming or leaving.

It was the professor who, from a little balcony at the rear of the house, had discovered Robin's body in the archery range just outside the club-room door. The hunting arrow in Robin's heart had come from the rack in that room.

So matters stood when Heath, the police sergeant on the case, came in with a paper he had found in the professor's mail box. It read:

Joseph Cochrane Robin is dead.
Who killed Cock Robin?
Sperling means sparrow.

And in the lower right-hand corner were the two words, in capitals: "THE BISHOP."

PART II. CHAPTER V

A WOMAN'S SCREAM

(*Saturday, April 2d; 2:30 p. m.*)

VANCE, after glancing at the strange message with its even stranger signature, reached for his monocle with that slow deliberation which I knew indicated a keen suppressed interest. Having adjusted the glass he studied the paper intently. Then he handed it to Arnesson.

"Here's a valuable factor for your equation." His eyes were fixed banteringly on the man. Arnesson regarded the note superciliously, and with a wry grimace laid it on the table.

"I trust the clergy are not involved in this problem. They're notoriously unscientific. One can't attack them with mathematics. 'The Bishop' . . . ," he mused. "I'm unacquainted with any gentlemen of the cloth.— I think I'll rule out this abracadabra when making my calculations."

"If you do, Mr. Arnesson," replied Vance seriously, "your equation, I fear, will fall to pieces. That cryptic epistle strikes me as rather significant. Indeed—if you will pardon a mere lay opinion—I believe it is the most mathematical thing that has appeared thus far in the case. It relieves the situation of all haphazardness or accident. It's the *g*, so to speak—the gravitational constant which will govern all our equations."

Heath had stood looking down on the typewritten paper with solemn disgust.

"Some crank wrote this, Mr. Vance," he declared.

"Undoubtedly a crank, Sergeant," agreed Vance. "But don't overlook the fact that this particular crank must have known many interestin' and intimate details—to wit, that Mr. Robin's middle name was Cochrane; that the gentleman had been killed with a bow and arrow; and that Mr. Sperling was in the vicinity at the time of the Robin's passing. Moreover, this well-informed crank must have had what amounted to foreknowledge regarding the murder; for the note was obviously typed and inserted in the letter-

BAFFLING SERIAL

Drukker heaved his squat body out of his chair and stood glaring down on Vance with menacing fury

Murder Case

box before you and your men arrived on the scene."

"Unless," countered Heath doggedly, "he's one of those bimboes out in the street, who got wise to what had happened and then stuck this paper in the box when the officer's back was turned."

"Having first run home and carefully typewritten his communication—eh, what?" Vance shook his head with a rueful smile. "No, Sergeant, I'm afraid your theory won't do."

"Then what *does* it mean?" Heath demanded truculently.

"I haven't the foggiest idea."

Vance yawned and rose. "Come, Markham, let's while away a few brief moments with this Mr. Drukker whom Beedle abhors."

"Drukker!" exclaimed Arnesson, with considerable surprise. "Where does he fit in?"

"Mr. Drukker," explained Markham, "called here this morning to see you; and it's barely possible he met Robin or Sperling before he returned home." He hesitated. "Would you care to accompany us?"

"No, thanks." Arnesson knocked out his pipe and got up. "I've a pile of class papers to look over.— It might be as well, however, to take Belle along. Lady Mae's a bit peculiar. . . ."

"Lady Mae?"

"My mistake. Forgot you didn't know her. We all call her Lady Mae. Courtesy title. Pleases the poor old soul. I'm referring to Drukker's mother. Odd character." He tapped his forehead significantly. "Bit touched. Oh, perfectly harmless. Bright as a whistle, but monominded, as it were. Thinks the sun rises and sets in Drukker. Mothers him as if he were an infant. Sad situation. . . . Yes, you'd better take Belle along. Lady Mae likes Belle."

"A good suggestion, Mr. Arnesson," said Vance. "Will you ask Miss Dillard if she'll be good enough to accompany us?"

"Oh, certainly." Arnesson gave us an inclusive smile of farewell—a smile which seemed at once patronizing and satirical—and went up-stairs. A few moments later Miss Dillard joined us.

"Sigurd tells me you want to see Adolph. He, of course, won't mind; but poor Lady Mae gets so upset over even the littlest things. . . ."

"We sha'n't upset her, I hope." Vance spoke reassuringly. "But Mr. Drukker was here this morning, d' ye see; and the cook says she thought she heard him speaking to Mr. Robin and Mr. Sperling in the archery-room. He may be able to help us."

"I'm sure he will if he can," the girl answered with emphasis. "But be very careful with Lady Mae, won't you?"

There was a pleading, protective note in her voice, and Vance regarded her curiously.

"Tell us something of Mrs. Drukker—or Lady Mae—before we visit her. Why should we be so careful?"

"SHE'S had such a tragic life," the girl explained. "She was once a great singer—oh, not just a second-rate artist, but a prima donna with a marvelous career before her.* She married a leading critic of Vienna—Otto Drucker†—and four years later Adolph was born. Then one day in the Wiener Prater, when the baby was two years old, she let him fall; and from that moment on her entire life was changed. Adolph's spine was injured, and he became a cripple. Lady Mae was heartbroken. She held herself to blame for his injury, and gave up her career to devote herself to his care. When her husband died a year later she brought Adolph to America, where she had spent some of her girlhood, and bought the house where she now lives. Her whole life has been centered on Adolph, who grew up a hunchback. She has sacrificed everything for him, and cares for him as though he were a baby. . . ." A shadow

***Mae Brenner will still be remembered by Continental music lovers. Her début was made at the unprecedented age of twenty-three as Sulamith in "Die Königin von Saba" at the Imperial Opera House in Vienna; although her greatest success was perhaps her Desdemona in "Otello"—the last rôle she sang before her retirement.**

†The name was, of course, originally spelled Drucker. The change—possibly some vague attempt at Americanization—was made by Mrs. Drukker when she settled in this country.

Original from UNIVERSITY OF IOWA

crossed her face. "Sometimes I think—we all think—that she still imagines he's only a child. She has become—well, morbid about it. But it's the sweet, terrible morbidity of a tremendous mother love—a sort of insanity of tenderness, Uncle calls it. During the past few months she has grown very strange—and peculiar. I've often found her crooning old German lullabies and kindergarten songs, with her arms crossed on her breast, as if—oh, it seems so sacred and so terrible!—as if she were holding a baby. . . . And she has become frightfully jealous of Adolph. She's resentful of all other men. Only last week I took Mr. Sperling to see her—we often drop in to call on her: she seems so lonely and unhappy—and she looked at him almost fiercely, and said: 'Why weren't you a cripple, too?' . . ."

The girl paused and searched our faces.

"Now don't you understand why I asked you to be careful? . . . Lady Mae may think we have come to harm Adolph."

"We sha'n't add unnecessarily to her suffering," Vance assured her sympathetically. Then, as we moved toward the hall, he asked her a question which recalled to my mind his brief intent scrutiny of the Drukker house earlier that afternoon. "Where is Mrs. Drukker's room situated?"

THE girl shot him a startled look, but answered promptly:

"On the west side of the house—its bay window overlooks the archery range."

"Ah!" Vance took out his cigarette case, and carefully selected a *Régie*. "Does she sit much at this window?"

"A great deal. Lady Mae always watches us at archery practice—why, I don't know. I'm sure it pains her to s. us, for Adolph isn't strong enough to shoot. He's tried it several times, but it tired him so he had to give it up."

"She may watch you practicing for the very reason that it does torture her—a kind of self-immolation, y' know. Those situations are very distressing." Vance spoke almost with tenderness—which, to one who did not know his real nature, would have sounded strange. "Perhaps," he added, as we emerged into the archery range through the basement door, "it would be best if we saw Mrs. Drukker first for a moment. It might tend to allay any apprehensions our visit might cause her. Could we reach her room without Mr. Drukker's knowledge?"

"Oh, yes." The girl was pleased at the idea. "We can go in the rear way. Adolph's study, where he does his writing, is at the front of the house."

We found Mrs. Drukker sitting in the great bay window on a sprawling old-fashioned chaise-longue, propped up with pillows. Miss Dillard greeted her filially and, bending over her with tender concern, kissed her forehead.

"Something rather awful has happened at our house this morning, Lady Mae," she said; "and these gentlemen wanted to see you. I offered to bring them over. You don't mind, do you?"

Mrs. Drukker's pale, tragic face had been turned away from the door as we entered, but now she stared at us with fixed horror. She was a tall woman, slender to the point of emaciation; and her hands, which lay slightly flexed on the arms of the chair, were sinewy and wrinkled like the talons of fabulous bird-women. Her face, too, was thin and deeply seamed; but it was not an unattractive face. The eyes were clear and alive, and the nose was straight and dominant. Though she must have been well past sixty, her hair was luxuriant and brown.

For several minutes she neither moved nor spoke. Then her hands closed slowly, and her lips parted.

"What do you want?" she asked in a low resonant voice.

"Mrs. Drukker,"—it was Vance who answered—"as Miss Dillard has told you, a tragedy occurred next door this morning, and since your window is the only one directly overlooking the archery range, we thought that you might have seen something that would aid us in our investigation."

The woman's vigilance relaxed perceptibly, but it was a moment or two before she spoke.

"And what did take place?"

"A Mr. Robin was killed. You knew him perhaps?"

"The archer—Belle's Champion Archer? . . . Yes, I knew him. A strong healthy child who could pull a heavy bow and not get tired. Who killed him?"

"We don't know." Vance, despite his negligent air, was watching her astutely. "But inasmuch as he was killed on the range, within sight of your window, we hoped you might be able to help us."

Mrs. Drukker's eyelids drooped craftily and she clasped her hands with a kind of deliberate satisfaction.

"You are sure he was killed on the range?"

"We found him on the range," Vance returned noncommittally.

"I see. . . . But what can I do to help you?" She lay back relaxed.

"Did you notice anyone on the range this morning?" asked Vance.

"No!" The denial was swift and emphatic. "I saw no one. I haven't looked out on the range all day."

Sperling turned without another word and went out between his two captors

Vance met the woman's gaze steadily, and sighed.

"It's most unfortunate," he murmured. "Had you been looking out of the window this morning, it's wholly possible you might have seen the tragedy. . . . Mr. Robin was killed with a bow and arrow, and there seems to have been no motive whatever for the act."

"You know he was killed with a bow and arrow?" she asked, a tinge of color coming into her ashen cheeks.

"That was the Medical Examiner's report. There was an arrow through his heart when we found him."

"Of course. That seems perfectly natural, doesn't it? . . . An arrow through the Robin's heart!" She spoke with vague aloofness, a distant, fascinated look in her eyes.

There was a strained silence, and Vance moved toward the window.

"Do you mind if I look out?"

With difficulty the woman brought herself back from some distant train of thought.

"Oh, no. It isn't much of a view, though. I can see the trees of Seventy-sixth Street toward the north, and a part of the Dillard yard to the south. But that brick wall opposite is very depressing. Before the apartment house was built I had a beautiful view of the river."

Vance looked for a while down into the archery range.

"Yes," he observed; "if only you had been at the window this morning you might have seen what happened. Your view of the range and the basement door of the Dillards is very clear. . . . Too bad." He glanced at his watch. "Is your son in, Mrs. Drukker?"

"MY SON! My baby! What do you want with him?" Her voice rose pitifully, and her eyes fastened on Vance with venomous hatred.

"Nothing important," he said pacifyingly. "Only, he may have seen someone on the range—"

"He saw no one! He couldn't have seen anyone, for he wasn't here. He went out early this morning, and hasn't returned."

Vance looked with pity at the woman.

"He was away all morning? Do you know where he was?"

"I always know where he is," Mrs. Drukker answered proudly. "He tells me everything."

"And he told you where he was going this morning?" persisted Vance gently.

"Certainly. But I forget for the moment. Let me think. . . ." Her long fingers tapped on the arm of the chair, and her eyes shifted uneasily. "I can't recall. But I'll ask him the moment he returns."

Miss Dillard had stood watching the woman with growing perplexity.

"But, Lady Mae, Adolph was at our house this morning. He came to see Sigurd—"

Mrs Drukker drew herself up.

"Nothing of the kind!" she snapped, eying the girl almost viciously. "Adolph had to go—down-town somewhere. He wasn't near your house—I *know* he wasn't." Her eyes flashed, and she turned a defiant glare on Vance.

There was a strained silence, and Vance moved toward the window

It was an embarrassing moment; but what followed was even more painful.

The door opened softly, and suddenly Mrs. Drukker's arms went out.

"My little boy—my baby!" she cried. "Come here, dear."

But the man at the door did not come forward. He stood blinking his beady little eyes at us, like a person waking in strange surroundings. Adolph Drukker was scarcely five feet tall. He had the typical congested appearance of the hunchback. His legs were spindling, and the size of his bulging, distorted torso seemed exaggerated by his huge, dome-like head. But there was intellectuality in the man's face—a terrific, passionate power which held one's attention. Professor Dillard had called him a mathematical genius; and one could have no doubts as to his erudition.*

"WHAT does all this mean?" he demanded in a high-pitched, tremulous voice, looking toward Miss Dillard. "Are these friends of yours, Belle?"

The girl started to speak, but Vance halted her with a gesture.

"The truth is, Mr. Drukker," he explained somberly, "there has been a tragedy next door. This is Mr. Markham, the District Attorney, and Sergeant Heath of the Police Department; and at our request Miss Dillard brought us here that we might ask your mother whether or not she had noticed anything unusual on the archery range this morning. The tragedy occurred just outside the basement door of the Dillard house."

Drukker thrust his chin forward and squinted.

"A tragedy, eh? What kind of a tragedy?"

"A Mr. Robin was killed—with a bow and arrow."

*He gave me very much the same impression as did General Homer Lee when I visited him at Santa Monica shortly before his death.

Original from UNIVERSITY OF IOWA

The man's face began to twitch.

"Robin killed? *Killed?* . . . What time?"

"Sometime between eleven and twelve probably."

"Between eleven and twelve?" Quickly Drukker's gaze shifted to his mother. He seemed to grow excited, and his huge splay fingers worried the hem of his smoking-jacket. "What did you see?" His eyes glinted as he focused them on the woman.

"What do you mean, son?" The retort was a panic-stricken whisper.

Drukker's face became hard, and the suggestion of a sneer twisted his lips.

"I MEAN that it was about that time when I heard a scream in this room."

"You didn't! No—no!" She caught her breath, and wagged her head jerkily. "You're mistaken, son. I didn't scream this morning."

"Well, someone did." There was a cold relentlessness in the man's tone. Then, after a pause, he added: "The fact is, I came up-stairs after I heard the scream, and listened at the door here. But you were walking about humming 'Eia Popeia,' so I went back to my work."

Mrs. Drukker pressed a handkerchief to her face, and her eyes closed momentarily.

"You were at your work between eleven and twelve?" Her voice now rang with subdued eagerness. "But I called you several times—"

"I heard you. But I didn't answer. I was too busy."

"So that was it." She turned slowly toward the window. "I thought you were out. Didn't you tell me—?"

"I told you I was going to the Dillards'. But Sigurd wasn't there, and I came back a little before eleven."

"I didn't see you come in." The woman's energy was spent, and she lay back listlessly, her eyes on the brick wall opposite. "And when I called and you didn't answer I naturally thought you were still out."

"I left the Dillards' by the street gate, and took a walk in the park." Drukker's voice was irritable. "Then I let myself in by the front door."

"And you say you heard me scream. . . . But why should I scream, son? I've had no pains in my back this morning."

Drukker frowned, and his little eyes moved swiftly from Vance to Markham.

"I heard someone scream—a woman—in this room," he iterated stubbornly. "About half past eleven." Then he sank into a chair and gazed moodily at the floor.

This perplexing verbal intercourse between mother and son had held us all spellbound. Though Vance had stood before an old eighteenth-century print near the door, regarding it with apparent absorption, I knew that no word or inflection had escaped him. Now he swung about and, giving Markham a signal not to interfere, approached Mrs. Drukker.

"We're very sorry, madam, that we've had to trouble you. Forgive us, if you can."

He bowed and turned to Miss Dillard.

"Do you care to pilot us back? Or shall we find our own way down?"

"I'll come with you," the girl said; and going to Mrs. Drukker she put her arm about her. "I'm so sorry, Lady Mae."

As we were passing out into the hall Vance, as if on second thought, paused and looked back at Drukker.

"You'd better come with us, sir," he said, in a casual yet urgent tone. "You knew Mr. Robin, and you may be able to suggest something—"

"Don't go with them, son!" cried Mrs. Drukker. She was sitting upright now, her face contorted with anguish and fear. "Don't go! They're the enemy. They want to hurt you. . . ."

Drukker had risen.

"Why shouldn't I go with them?" he retorted petulantly. "I want to find out about this affair. Maybe—as they say—I can help them." And with a gesture of impatience he joined us.

Drukker

VI

"'I,' SAID THE SPARROW"

(*Saturday, April 2d; 3:00 p. m.*)

WHEN we were again in the Dillard drawing-room and Miss Dillard had left us to rejoin her uncle in the library, Vance, without preliminaries, proceeded to the business in hand.

"I didn't care to worry your mother, Mr. Drukker, by questioning you in front of her, but inasmuch as you called here this morning shortly before Mr. Robin's death, it is necessary—as a mere routine procedure—that we seek whatever information you can give us."

Drukker had seated himself near the fireplace. He now drew in his head cautiously, but made no answer.

"You came here," continued Vance, "about half past nine, I believe, to call on Mr. Arnesson."

"Yes."

"By way of the archery range and the basement door?"

"I always come that way. Why walk round the block?"

"But Mr. Arnesson was out this morning."

Drukker nodded. "At the university."

"And, finding Mr. Arnesson away, you sat for a while in the library with Professor Dillard, I understand, discussing an astronomical expedition to South America."

"The expedition of the Royal Astronomical Society to Sobral to test the Einsteinian deflection," amplified Drukker.

"How long were you in the library?"

"Less than half an hour."

"And then?"

"I went down to the archery-room, and glanced at one of the magazines. There was a chess problem in it—a *Zugszwang* end-game that came up recently between Shapiro and Marshall—and I sat down and worked it out. . . ."

"JUST a moment, Mr. Drukker." A note of suppressed interest came into Vance's voice. "You're interested in chess?"

"To a certain extent. I don't spend much time at it, however. The game is not purely mathematical; and it's insufficiently speculative to appeal to a wholly scientific mind."

"Did you find the Shapiro-Marshall position difficult?"

"Not so difficult as tricky." Drukker was watching Vance shrewdly. "As soon as I discovered that an apparently useless pawn move was the key to the impasse, the solution was simple."

"How long did it take you?"

"Half an hour or so."

"Until about half past ten, shall we say?"

"That would be about right." Drukker settled deeper into his chair, but his covert alertness did not relax.

"Then you must have been in the archery-room when Mr. Robin and Mr. Sperling came here."

The man did not answer at once, and Vance, pretending not to notice his hesitancy, added: "Professor Dillard said they called at the house about ten and, after waiting a while in the drawing-room here, went down to the basement."

"Where's Sperling now, by the way?" Drukker's eyes darted suspiciously from one to the other of us.

"We expect him here any minute," Vance replied. "Sergeant Heath has sent two of his men to fetch him."

The hunchback's eyebrows lifted. "Ah! So Sperling is being forcibly brought back." He pyramided his spatulate fingers and inspected them musingly. Then he slowly lifted his eyes to Vance. "You asked me if I saw Robin and Sperling in the archery-room. Yes; they came down-stairs just as I was going."

Vance leaned back and stretched his legs before him.

"Did you get the impression, Mr. Drukker, that they had—as we euphemistically say—been having words?"

THE man considered this question for several moments.

"Now that you mention it," he said at length, "I do recall that there seemed to be a coolness between them. I wouldn't, however, care to be too categorical on that point. You see, I left the room almost immediately after they entered."

"You went out the basement door, I think you said, and thence through the wall gate into Seventy-fifth Street. Is that correct?"

For a moment Drukker seemed loath to answer; but he replied with an effort at unconcern:

"Quite. I thought I'd take a stroll along the river before going back to work. I went to the Drive, down the bridle path, and turned into the park at Seventy-ninth Street."

The Elephant and the Donkey Take the Air

By GRAHAM McNAMEE

CARTOONS BY HERBERT ROTH

TWO things have been said about prophets: One is that a man is never a prophet in his own country. The other is that a man should never be a prophet about his own century. That means that a man, if he doesn't want to have his prophecy explode right in his face, shouldn't make a prediction about things that are going to happen inside of a hundred years. After that, he and all the people who hear him will be dead and will never know whether he was a wise man or a fool.

In spite of these two admonitions, I am going to try my hand at a little prophesying. And it will be about something you can check up on in a few weeks. I don't know who is going to be elected President—Mr. Hoover or Mr. Smith. But I predict that Mr. Hoover will get more votes than any other Republican candidate in history and Mr. Smith will get more votes than any other Democratic candidate in history. In other words, we are going to see the greatest outpouring of voters the polls have ever known. If this turns out to be true, please remember my prediction and chalk up another credit for radio.

The last national election, when President Coolidge was renamed, was a very uninteresting and one-sided affair. The issues were not at all burning. The result was never in doubt. Yet, in spite of that, four million more people went to the polls on election day than in the preceding election between Harding and Cox, in which partisan feelings were very bitterly aroused. The outstanding explanation was the radio.

Things move so fast in this amazing age that we easily lose our perspective. At Kansas City and Houston I was amused to hear myself referred to frequently as "the veteran radio announcer." And yet, four years ago when I broadcast the two national conventions I didn't own a radio set. I couldn't afford one. My wife, who wanted to hear me during those dramatic days in Madison Square Garden, had to go out and stand on the sidewalk in front of a little radio shop to listen to the story. Veteran! Why, the week the Republican Convention opened in Kansas City marked my fifth anniversary as an announcer! And in that time radio has traveled so far that I am spoken of as a veteran.

I RECALL our feelings before the two great conventions of 1924. The National Broadcasting Company, which now occupies a beautiful building in Fifth Avenue, didn't exist. Our station was known as WEAF and belonged to the Radio Corporation. We occupied two little rooms. The management conceived the idea that it would be a great thing if the national party managers would let us broadcast the two conventions. But would they permit it? We didn't know; and so we waited for weeks before it was settled that the leaders would allow us to put a microphone into the convention halls.

Even after that we were looked upon with a good deal of suspicion. While I was waiting for the Democratic Convention to open I was busy in my little booth scribbling some notes to be used during the lulls. The publicity manager of the convention saw me.

"What's that for?" he asked.

I told him it was some descriptive notes about the convention to be sent out over the air.

"Well, I suppose it's all right; but I want you to understand, young man, that you can't send out any of that stuff until I have had a chance to see every word of it."

Later, when he saw I was quite safe, he withdrew the censorship. That was in 1924. Can you imagine such a thing now? How different it was this time. Not a thing was done at either of the great conventions without reference to the radio. The managers in advance decided that because of the radio audience the sessions must be begun scrupulously on time. At Houston, the keynote speech of Mr. Claude Bowers, instead of being delivered at the usual hour, was put off to the night time to reach the great radio audience. All sorts of little details were arranged for that all-important audience. At Kansas City on the first day, the rap of the chairman's gavel on the table sounded over the radio like someone breaking dishes. When the chairman heard this he promptly had the table covered with a soft piece of wall board, in order that the rap of the gavel would sound right over the air.

Another strange sound seemed to trouble the listeners-in. On the first day a wire came for me. It read: "The Republicans must certainly be meeting in harmony. I hear constant kissing going on." That wasn't kissing. It was the fitful hissing of the Klieg lights.

This will go down in history as the first great radio campaign. Why, both parties for the first time put radio planks in the platforms. At Houston, a delegate went into the convention hall the day before the opening. He saw a carpenter at work. "Do you know anything about the acoustics of this hall?" he asked. "No, sir, "replied the carpenter. "But (*Continued on page 152*)

WILLIAM S. DUTTON *again visits* ROY L.

After a

"The Average Man" and his family sitting on the veranda of their home in Fort Madison, Iowa

NO, THE spotlight hasn't spoiled the Average Man, as typified by Roy L. Gray, of Fort Madison, Iowa.

His feet are still solidly on the ground, and the size of his hat hasn't changed.

He is a little wiser, a little grayer above the ears, and one year older, of course; but he drives the same old dark-blue automobile, which is now four years old instead of three. He still goes to work, afoot, at eight in the morning to the same "one-man" clothing store, which he still sweeps out himself. And on Sunday mornings, while Mrs. Gray and the two youngsters go to church, he still likes to potter around the house in his bedroom slippers.

"Change?" repeated Mr. Gray, and gave a puzzled rub to his chin. "What I can't figure out is why so many folks got the notion I was going to change."

One year ago this month, prior to publication of the November issue of THE AMERICAN MAGAZINE, Roy L. Gray was just "one of a hundred million." No more distinguished was he over his fellows than is one grain of sand over another in a shovelful. He boasted neither fortune nor unusual talent. He never had made any great discovery nor done any great thing. Neither had he ever robbed a bank, nor shot his wife, nor bribed a government official.

Mr. Gray mowed his own grass, stoked his own furnace, and did his best to pay his bills and taxes when due. Being engaged in the men's retail clothing business, occasionally he pressed a pair of trousers for a customer who was in a hurry, or sewed on a missing suspender button. He had no hankering for the limelight, nor for a fashionable address in the Big Town. Least of all did he envision himself as ever being famous, or talked about, or interviewed by reporters from the big city papers. That likelihood seemed as distant as the moon.

THEN Fate, as she does, shuffled her cards!

This magazine announced that, according to census figures, geographical position and climate, Fort Madison with its 11,299 inhabitants in Lee County, Iowa, was *the* Average Town of America, or as near as you could come to it in fact.

Furthermore, that on an average street in Fort Madison, living in an average house at the head of an average family of four, it had discovered in Roy L. Gray the flesh-and-blood personification of *the* Average Man! He was forty-three years old and of average size. He had average education and average intelligence. He drove an average car, earned an average income, conducted an average business, and he thought and behaved

Bewildered, Bedeviled, Besought, and Beset

ONE year ago THE AMERICAN MAGAZINE presented Roy L. Gray, of Fort Madison, Iowa, as *the* average man. Then came the deluge of publicity! Reporters swarmed upon him; approximately 14,000 newspapers with a combined circulation of 100,000,000 carried stories about him. Editorials were written; professors lectured on him and his views. Foreign newspapers took up the trail that led to Fort Madison, and gravely discussed this "average American."

"You Have Heard of the Average Man?—Well, Here He Is!" was the title of the article printed in this magazine, and all the world seemed to take it as a tip to get some further statements from Mr. Gray. For a time he was bewildered, bedeviled, besought, and beset. Then things quieted down; reporters no longer went to him for his opinions on every subject from glands to Locarno. He took up again his old routine as proprietor of a small clothing store, and the Editor of this magazine wrote a note to William S. Dutton, who "discovered" Mr. Gray for us: "I want you to see Gray one year after this storm of publicity hit him. Maybe there is another good story to be had from him!" The result is this fascinating article, which does not depend upon its predecessor; it stands on its own feet, and will surely interest you. THE EDITOR.

GRAY *"The Average Man"*

Year in the Spotlight

in an average way.

Next morning Roy L. Gray was probably the most talked-of man in America, and, like the opening shot in the American Revolution, his name was to be heard around the world!

Thousands of newspapers, from the biggest to the smallest, discussed him for a week—under flaring front-page headlines, in editorials, and in full-page "features" in the Sunday editions. Reporters of the big news associations sought his opinions on world affairs, and sent them broadcast by wire over the nation. Ministers extolled him in sermons, while others condemned him. His voice was carried by radio to listening millions, and he was taken to Chicago, with all expenses paid, to spend three days in "seeing the town."

DRAWN BY DAVID ROBINSON

TOURISTS came to see him and to shake his hand. Advertisers of hair tonics, liver pills and shoe polish begged his endorsement, while a promoter offered him one thousand dollars a week to make a forty-four-weeks tour of the motion-picture theatres of the country. Photographers snapped him shining his shoes and eating breakfast in his shirt sleeves, and the big Sunday newspaper supplements printed all these pictures.

He had done nothing, in the usual sense, to be construed as "news"—and yet even the great London "Times" editorialized at length on him and Czechoslovakians read his name in their morning papers. Cities, such as Denver, picked *their* Average Man, while colleges and high schools picked their Average Students. The historical research department of a famous university, even, was inspired to find, through painstaking investigation, the Average Man of the American Revolution. Many a controversy of state affecting nations has created less stir than did the average Mr. Gray.

And Mr. Gray, with a shrug at it all, is still selling men's suits in his one-man store in Fort Madison, just exactly as he would be doing if none of this had happened. He has been called twenty kinds of fool by some of his friends for not having capitalized his fame, and got rich; but he isn't lamenting over "what might have been." If he is no richer, neither is he any poorer. He feels that the world, on the whole, has treated him well.

"AT ANY rate," he assured me in all earnestness, "it's been worth it for the experience if for nothing else.

"Yes, I probably could have made a lot of money," Mr. Gray went on reflectively. "I could have made money by saying that a hair tonic I had never used has kept me from going bald, and for testifying that one bottle of patent medicine had cured me of an ailment I never had. And I could have made a pretty snug sum by going onto the stage—a promoter in Chicago actually started to draw up a contract for one thousand dollars a week. But there're other things in this world bigger than money."

"What things?" I asked.

"PLENTY of them," he replied. "One of them is the respect of the folks you live with and meet every day on the street. I'd rather have them say that my word is good than to make a million. Then a man has got to live with himself, and he can make himself a mighty uncomfortable bedfellow by doing things that go against his grain. And I've got a wife and two youngsters at home, and I want them to think the best they can of me; I want folks to think well of them.

"It's this way: if some big, responsible manufacturer who makes a product that I use and really believe in had asked me to say what I thought of it, I probably would have done it. I'd have said a good word, for instance, about my automobile: I've driven it for four years and know it. But when it comes to boosting a thing I know nothing about, I'm not interested—don't matter what they offer. Nobody with sense takes any stock in such testimonials anyway.

"This stage stuff, too, is a lot of tommy-rot. The theatre is supposed to be a place of entertainment and not an exhibition gallery. To me, it's just plain foolish to try to drag everybody whose name gets into the papers onto the stage for exhibition. You didn't see Lindbergh falling for such stuff, and he's a real man. In my little way, I'd rather follow Lindbergh.

"Of course," added Mr. Gray, "I did go up to Chicago for a few days; but I did that more for self-protection than for anything else.

"One of the Chicago papers called me by telephone and asked me to come to Chicago. This was (*Continued on page 143*)

The Suppressed STORY of Mrs. Jackson

By CHESTER T. CROWELL

Illustrated by
JOSEPH SIMONT

NOW, if I were a newspaper man," said Aline to the young reporter who spent his weekly day off in her company, "I should write a story about Mrs. Jackson."

"Why?" he asked. "And who is Mrs. Jackson? And what is the story?"

"Mrs. Jackson," Aline replied, "is the most beautiful creature alive."

"An obvious misstatement," her escort objected, "while you stand erect in those pretty little shoes, wearing that blue dress, and the sunshine drapes a halo around your golden hair!"

"Nevertheless, I can prove it," Aline declared. And after glancing at her wrist watch, she added, "In less than one minute."

"Well, now, that is interesting," the reporter commented. "How will you go about it?"

"We will walk across this park," the young lady replied, "and stand in front of the church which you can see through the trees. In less than one minute the people will be coming out. You will point out to me the most beautiful woman you see, and that will be Mrs. Jackson."

"The challenge is accepted," her escort announced, and they reached the far side of the park just as two large double doors swung open.

AFTER three hundred or more persons had walked down the stone steps leading from these doors to the sidewalk Aline heard her companion laugh. "You have picked a very bad judge for your beauty contest," he explained. "Either that, or the wonderful Mrs. Jackson failed to come to church today, because the most beautiful woman I have seen emerge from those doors is the lovely old lady with the burnished silver hair and the peaches-and-cream complexion. She is dressed—Well, notice how she walks."

"Anything peculiar about her walk?" Aline asked.

"Yes. Very graceful. Regal, I should say. Do you see her?"

"Certainly. That is Mrs. Jackson."

"Well, well. I was looking for a Helen of Troy."

"Of course you were," Aline commented, smiling. "But art triumphed after all, and so my point is proved."

"I should say it is," he agreed. "Don't tell me any scandal about Mrs. Jackson because I won't believe it. I prefer to make up my own story about her."

"What would it be?" Aline asked.

"That a beautiful painting is missing from the Metropolitan Museum," the young man promptly replied. "That it is a portrait of the wife of some early Virginia planter-statesman—mystery stuff—soul returns to portrait and walks off with it—Egyptian mystic gives his opinion. And so forth. That's the story as I see it."

The fashionable set had gone wild

"The real Mrs. Jackson," said Aline, "is neither a queen nor an escaped oil painting. She makes a living by doing plain sewing. But her manners are so lovely and she is so beautiful that our young matrons out on The Heights get catty with each other in the competition to employ her."

"Is she an artist with the needle?"

"No. I told you she does plain sewing. They fight over her because it advances one's social prestige to have her in the house. It shows that you recognize the aristocracy. We have no literary lions or wandering dukes in our brave city, so the dear girls whose hubbies are doing well in the automobile business patronize Mrs. Jackson. Her husband was an officer in the Confederate Army."

"He was?" the young man exclaimed.

"That's what they tell me out on The Heights," Aline said. "I don't know just which Jackson he was, though. Looking at her, I'd say he ought to have been the President of the Confederacy."

"Why don't you ask some of them?" he suggested.

about Mrs. Jackson. They had her at their receptions and dinner parties as a sort of assistant to the hostess

"I did," Aline replied. "They don't know. Most of them are more interested in husbands, bridge, and babies than history. Offhand, they aren't sure whether Cæsar's wars or the Civil War came first. Marriage does funny things to some women. Are you going to write a story about Mrs. Jackson?"

"I should say I am," he replied, "just as soon as I find out what the story is."

VENTURING timidly into a private office labeled "Managing Editor," on the following afternoon, an eager young reporter who (now that I think of it) looked curiously like myself at the age of twenty, said, "Colonel Post, I've got a feature story, and I want an order for the photographer to make some pictures."

"Good," Colonel Post remarked. "What's it about?"

"A very beautiful old lady, widow of an officer of the Confederate Army. She lives here and does plain sewing."

Colonel Post's bushy eyebrows moved threateningly as, incidentally, they often did, and very curtly he snapped out a question: "Is her name Jackson?"

"Yes, sir."

"Let her alone."

"But—"

"That's all, young man."

Argument was always impossible when Colonel Post wiggled his eyebrows, so the young reporter mumbled a second "Yes, sir," and departed, wondering.

Colonel Post was very interesting to us youngsters; and amusing, too, at times. He seemed always to be posing. There was, however, some excuse for it, since he bestrode his seventy years with grace, and now rode gallantly into our callow midst from dim decades long since festooned with romance. Even we boys reared in the South spotted him as a professional Southerner, but we didn't dare sneer because he so often lived up to the finest traditions of his self-imposed rôle. Spectacular and peppery he was, but even while one smiled and contemplated asking him where he got his title, there would be a flash of gold.

Later that afternoon an amusing coincidence occurred, and the mystery became even more interesting. Another star-eyed youth on the reportorial staff confronted Colonel Post and said, "I think there's a story in this; but I will tell you about it first. The fashionable set out on The Heights has gone dippy

Digitized by Google
Original from UNIVERSITY OF IOWA

Colonel Post's bushy eyebrows moved threateningly, and very curtly he snapped out a question

about an old lady who sews for them; she is one of the most beautiful creatures I have ever seen; the young matrons out there have her at their receptions and dinner parties as a sort of assistant to the hostess, because her manners are so charming and she, herself, is so beautiful. Any woman lucky enough to employ her advances her social standing."

"Is her name Jackson?" asked Colonel Post curtly.

"Yes, sir."

"Let her alone."

"Yes, sir."

BUT the subject of Mrs. Jackson, beautiful widow of an officer in the Confederate Army, persistently recurred. Scarcely a week passed before another eager-eyed young man entered Colonel Post's private office, and remarked, "I've got a peach of a story for the Sunday dramatic page. There's a kid of a girl out on The Heights who is movie struck, so she had some pictures made and sent them to a producer in California. There is a very beautiful old lady, the last of a distinguished family, who lives out on The Heights, does plain sewing; and so this girl borrowed the old lady to sit with her for one of the photographs. I think she told the producer that the old lady was her mother. Anyway, back came letters and telegrams to engage not the girl but the old lady. I'm using the story—"

"You are not," said Colonel Post. "Why, what is the objection?"

"That, young squirrel, is my business."

"Must I kill the story?"

"You must."

There were now three aggrieved young men, nursing their resentment as they labored over less interesting items, and in due time they pooled their woes.

"I," said the one who looked curiously like myself, "am going to find out about this." And the youngster to whom he spoke remarked, "I'll bet there's a love affair of the vintage of 1860 back of it."

"That," said the third, "is my guess. Just for the fun of it, let's undertake a little research in early American romance. The colonel, according to local folklore, was fond of the ladies, and unless they were blind—" The sentence remained unfinished; but a moment later the speaker said: "Let's do a little sleuthing and meet tomorrow evening at six at Carter's Restaurant."

During the succeeding two weeks they met four or five times, and on the last of these occasions the young man who (now that I think of it) must have been myself said: "I have talked with Mrs. Jackson. She knew Colonel Post, casually, years ago, she said. Her husband and the colonel had business relations and were good friends. I asked her about her husband's war record, but she wouldn't say a word; just dabbed at her eyes with her handkerchief and made me feel like a criminal. She's a very wonderful woman. Not brilliant, just sweet. Scarcely says anything. And all the while you want to touch her hand and tell her how lovely she is. No wonder the women are foolish about her. I asked four or five of them who her husband was, but they don't even know his initials. She has referred to him once or twice as 'general.' That's all they know. She doesn't talk much."

SO THE next young man made his report: "I looked up whole volumes of Civil War Jacksons," he said. "She doesn't fit in with any of the big ones. At least I don't think so. Jackson is not an unusual name. Maybe her husband was a lieutenant and became a general by courtesy after the war. Others have."

And so the third young man made his report: "I've been talking with several men," he said, "who have known the colonel for thirty years or more. They recall enough hectic love affairs to make it rather remarkable that the colonel survives; especially that he survives as a bachelor. I got one clue that I'm still working on: the beautiful Mrs. Jackson, they think, had one son, who went East to college years ago and never came back. They are not sure that this is the same Mrs. Jackson; but Colonel Post, they say, used to send money orders to a young man named Jackson who was in college."

"Ah, ha!" exclaimed two young men in chorus. And then the three of them nearly fell out of their chairs, for Colonel Post was towering above their supper table and speaking. Fortunately, he was speaking cordially. Otherwise, heart failure.

"Good evening, boys," he said.

"Thank heaven," I sighed, "he is smiling. Perhaps, after all, he did not hear."

"When I see three heads so close together," he remarked. "I take it that there is a good story in the telling." The colonel, we judged, was in a mood for fraternizing. It was his custom to unbend occasionally, and wipe out the recollection of curt orders. The three young men looked at each other guiltily. "Don't be afraid of shocking my gray hairs," he persisted. "Let's have the story. Out with it! I haven't laughed out loud today."

"There isn't any," I finally said. "We were embarrassed because we had just been roasting you for killing our feature stories about Mrs. Jackson."

"Well," he drawled with expansive good nature, "many a good feature story has to remain unpublished. I, myself, know one that it seems a pity must go to the grave with me. Fact of the matter is, it shouldn't." He looked at us searchingly, and at least one of the young men gulped.

"I have a plan for saving that story," he continued. "I'm going to write it and seal it. I shall address the envelope to one of you three young men. No gentleman would use it until the principals are dead;

Digitized by Google Original from UNIVERSITY OF IOWA

not because it is disgraceful but because it is embarrassing. I am one of the principals. Now, the next question is which of you gets it. I'm going to summon that blackest waiter over at the far table. If he hasn't got a pair of dice on his person, then my observations of his race, which cover more than half a century, have been in vain. We will borrow his pair of dice, and by using them determine which one of you three young men gets the story. What do you say to that?"

We were delighted. Also, relieved. Beyond question the colonel was in a genial mood, whether he had overheard us or not. We felt sure that he was promising us the story of Mrs. Jackson, and as each lad in turn threw the dice he breathed on them fervently.

I won. That is to say, I won the dice game. Colonel Post never wrote the story. He left us after a pleasant dinner, went to his room at the club, and was found there the following morning, having died peacefully and without pain, while asleep.

I WENT to the lawyer who took charge of Colonel Post's effects. There was just a bare chance, I thought, that he might have written the story. If so, it would be in a sealed envelope addressed to me. Had any such envelope been found? No. But there was another letter; open, no envelope, no address, and the contents were difficult to understand. Could I give the administrator any assistance? Might I know who Mrs. Jackson was, without the aid of initials, first name, or address? Yes; I thought I might.

"I'm very glad to hear that," aid the lawyer. "Here is the letter. Please read it."

My dear Mrs. Jackson [I read from a plain sheet of bond paper], I am sending you herewith the funds of the General Jackson Memorial University. As you know, I objected to receiving these funds; but young Stonewall was bull-headed, and I have them anyway. It is my wish, as I have written him many times, that he should administer this fund. Since he declines, I place the money in your hands in the hope that you will eventually be able to convince him of his duty. With assurances of my high esteem and best wishes, I remain, dear madam, Sincerely yours,

T. H. Post.

"What do you make of it?" asked the lawyer.

"I don't know," I said. "There is no such university and no such person as young Stonewall. No amount is mentioned in this letter. Was there a check attached to it?"

"No. There was eighteen hundred and fifty dollars in currency in the letter. He evidently intended to send it by messenger. Queer sort of proceeding."

"Did he leave a will?" I asked.

"Yes. Everything goes to local charities. He had no surviving near relations. The question with regard to this money, of course, is, whose is it?"

"I am uneasy about this," I said, drawing my chair nearer.

"So am I," said the lawyer. "I knew Colonel Post many years; and, I thought, intimately. But it seems I was mistaken. Could you conduct me to this Mrs. Jackson? I feel an intuition that we had best handle this matter as quietly as possible."

THAT evening we called on Mrs. Jackson. She lived in an old stone house with a wide veranda; not a big house, but the lines were Colonial. Standing alone, I think it would have been regarded as rather a shabby house; but it was surrounded now by many new bungalows flaunting garish paint, and they gave it, by contrast, immense dignity. This old house had been here when what we now called The Heights was pasture land.

Mrs. Jackson received us with stately courtesy, and I remember catching a glimpse of the lawyer as his eyes opened wide. Like everyone who met her, he was not only impressed but subdued. I knew instantly that the interview would be in her hands. And it was.

As soon as we were seated, he explained his mission, showed her the letter, and waited for her to read it.

"It is his money," she said, dismissing the matter with a smile, and folding the letter.

"But this appears to call for explanation," he suggested humbly.

"I don't think so. No one will claim the money. It is his, and this letter is mine, so I shall keep it."

"Are you very sure the money is his?"

"Yes, sir. Positive."

"And you wouldn't like to explain the meaning of this letter?"

"I would prefer not to. The money is his."

The lawyer pondered. No sum was mentioned in the (*Continued on page 167*)

"I'm going to tell you the story and you can furnish your own seals," said Mrs. Jackson

FAIR ELLEN
the Sightless—*and* Happy

By ALBERT PAYSON TERHUNE

SHE was the downiest and goldenest and prettiest and strongest of all that baby collie family—the greatest litter of pups we have been able, thus far, to raise at Sunnybank. There were five of them. She was the only female in the lot. I named her "Sunnybank Fair Ellen;" and I dreamed of a great future for her in the show-ring.

Her sire was my flawless champion Sunnybank Sigurd—the "Treve" of my stories. Her dam was my Sunnybank Alton Andeen, a dog of rare beauty and wealth of show points. Behind the golden baby glittered a long double line of champion ancestors. Do you wonder we hoped grand things for her?

One of the myriad non-killable misstatements about dogs is that pups open their eyes on the ninth day. Not once in five times do the shut lids open then. Far oftener the youngsters do not begin to see until they are anywhere from eleven to fourteen days old.

On the tenth day, Fair Ellen's biggest brother—later to become my Champion Sunnybank Sigurdson—opened his eyes. Next day his fiery brother, Sunnybank Cavalier, followed suit. Sunnybank Explorer and Sunnybank Jamie, on the twelfth day, displayed beady black eyes where puckered lids had been.

The fourteenth day, the fifteenth and the twentieth day, came and went. Fair Ellen was sturdier and cleverer than any of the others. She learned to lap warm milk from a dish while they were still hopelessly puzzled by the mystery of that new form of feeding. But her eyes did not open.

Then, when she was a day or two more than a month old, the lids parted. But no hatpin-head pupils shone forth. Instead, the entire eye was covered by a thick membrane, known as a "haw." That meant I must wait until she should be old enough and strong enough to stand the simple—yet sometimes perilous operation of having the haws removed.

Meanwhile, she was queen of the brood-nest quintet. She romped in clumsy vigor with her four less agile brothers; and she demanded and took the lion's share of the food dish's cargo. She throve mightily; and she began to develop a trick of finding her way around the nest by sense of smell and of hearing.

When the pups were graduated to the big puppy-yard, it was the same. Fair Ellen explored every inch of the yard before the others could muster courage and strength to toddle half way across it. There was no awkwardness now in her step. But there was, daily, more and more of caution in it. This, after she had collided painfully with water dish and feed pan and runway corners and with wire-swathed tree trunks.

I was watching her with ever-increasing interest. I noted that she never collided a second time with the same thing. Always, thereafter, the wisely sightless baby knew enough to come to a halt before she could run into it; or else she made a wide semicircle around it.

Now, this implied not only brain, but a certain reasoning power. And I augured more and more for her future qualities as a house dog and chum. It is by such seemingly trivial traits that I decide which puppies are going to show the true collie cleverness, and which are likely to grow up less brilliant. There was nothing stupid about Sunnybank Fair Ellen.

I noticed something else—her brothers, Sigurdson and Explorer and Cavalier (Jamie somehow had found and swallowed a piece of glass, on one of his rambles around the grounds, outside the puppy yard, and had died) were as rough as young bears in their romps with one another. But, for some occult reason, they were queerly gentle with their eye-veiled little sister.

At last, when Ellen was three months old, I sent for a skilled veterinary to operate on her eyes. More than once, partial haws have been removed carelessly or awkwardly from a collie's eyes; and blindness has followed. I was resolved that this misfortune should not befall the little golden dog I was growing so fond of. So I chose a veterinary who was pre-eminent in his profession. He came and looked Ellen over. Then he said:

"I'll operate. But I warn you there isn't much chance of success. See, she carries her left eye half shut, while her right eye is unnaturally wide-open. Unless I am mistaken, there is no sight in either eye. I believe both of them are filmed."

He removed the membranes skilfully. Then I saw he had been right in his glum forecast. A thick gray film covered each eye. There was no sight behind the film. His tests showed that.

MY BEAUTIFUL little golden collie was stone-blind.

She had always been blind. Always she would be blind. The springtime world around us was vivid with blue and gold, and ablaze with sunlight. But Ellen was living in eternal blackness. Ahead of her stretched a future without a glint of light in it. The thick haws had masked total blindness. From birth, no trace of sight had been in those mismated eyes of hers. To death, there could be no hope for her to see.

There seemed but one thing left for me to do. And, sick at heart, I prepared to do it. I had grown fond of the gallant and gay golden youngster; and I hated to shoot her. Yet—

"I am going to put her out of her misery," I told the Mistress.

"She has no misery to be put out of," answered the Mistress. "She is having a beautiful time in life. She doesn't know anything better. She thinks everyone and everything is like herself. Why should you kill her, while she is so happy? Wait till she finds out she is afflicted. Is there so much happiness in the world that you should kill something that has found it?"

PERHAPS that was maudlin sentimentality. Perhaps it was splendid wisdom. In any case, it was enough to make me take the shells out of my gun, with an odd sense of relief. The Mistress has a habit of being in the right. More and more, during the past twenty-six years or so, I have discovered that.

So Fair Ellen lived on.

Let me digress for a half-minute; to disarm or waive the criticism of any wise utilitarian who may chance to read this. I make no defense for handicapping my Sunnybank collie kennels with an inmate which, at that time, gave not the slightest prospect of being able to repay a penny of the somewhat high cost of her keep.

A blind dog cannot be taken to a dog-show. The American Kennel Club rules sensibly forbid that. A blind dog might well (for all I knew) have blind or otherwise defective offspring. There was every chance of Fair Ellen's remaining an unremunerative drag on my kennels for the rest of her days. I was foolish not to shoot her. I admit that, at the outset. There was no argument against it; except—well, it was springtime, and she was having a right jolly life there in the big puppy yard. And one is a long time dead.

My own observation has been that many a professional dog breeder looks upon his dogs with about the same tender affection that a garbage collector lavishes upon his garbage. At all events, seldom have I seen an aged or crippled or blind or otherwise non-asset dog kept on in such a breeder's kennels. No doubt there are exceptions; many of them. But I have seen few.

I make no apology for letting Fair Ellen live. The less so, because she has led a gorgeously happy little life of her own, for these past six years, and she gives sign of keeping on in much the same way until the end.

I say "life of her own," because, ever since puppyhood, she has lived to herself and by herself (*Continued on page 120*)

Drawn from life by Charles Livingston Bull

SUNNYBANK FAIR ELLEN is one of Mr. Terhune's favorite dogs. She is blind, and has been always, but she has a great time. Ellen knows the location of all permanent objects about her master's grounds, so she romps and runs with considerable freedom. She is a dog of high intelligence, and is one of the most devoted of dog mothers.

DAYS of Drudgery Will Soon be Over

An interview with WALTER S. GIFFORD, head of the biggest industrial corporation in America

Reported by
SHERMAN GWINN

IT WAS nearing four o'clock in the morning. The house, the city, all of the Western world was asleep, but still I twirled the dials of the radio, searching the air.

At midnight the last Eastern station had signed off. An hour later and the Mid-West had said good night. Finally the last faint broadcast of the Pacific Coast had ceased, and from ocean to ocean the dying night was silent, except for the wind and the moan of straining trees!

But a spirit of adventure held me to the dials. It is a part of my work to search for the unusual—and the usual of the night had all passed; the regular programs which everybody hears were done. If any lone broadcaster now took up his microphone, I reasoned, he surely would not be commonplace, the commonplace just doesn't happen at four o'clock A. M.

So I waited. Suddenly the loud speaker came to life. The strains of a march, swift and triumphant, filled the room and Sousa himself seemed to step from a shadowed corner as the bars of his "Stars and Stripes Forever" swelled forth in martial challenge!

What strange station was this? I wondered. What purpose was behind this broadcasting of a march known to every schoolboy, while the whole country slept?

Presently came silence again; and then a crisp, matter-of-fact voice announced out of the night:

"You are listening to Experimental Station 3XN of the Bell Telephone Laboratories, at Whippany, New Jersey. These numbers are by phonograph records. The next will be 'O Sole Mio,' sung by Caruso."

Whereupon the lone program went on, though the hour hand of the clock crept toward five and the blackness of the night faded into gray. Nor would my wonder have been less had I known, that dawn, what I later was to learn: that in Experimental Station 3XN I had stumbled onto one of the outposts of a far-flung army, an army engaged in the greatest industrial warfare of all time!

Come with me to 195 Broadway, New York, to the office of Walter S. Gifford. As president of the American Telephone and Telegraph Company, Mr. Gifford heads the biggest industrial organization in America. This company, with its associated operating companies that comprise the huge Bell System, and with its manufacturing unit and subsidiary and connecting concerns in the United States and Canada, gives employment to 350,000 men and women, and has assets of three and a half billions of dollars. The length of its wires mounts to the stupendous total of 57,000,000 miles. It daily serves more people than any other business organization on earth.

"I BELIEVE the world's work can and will be done with less labor and with more comfort than it is being done today," says Mr. Gifford. "The future, if I am correct, is going to add appreciably to our hours of leisure and our industrial freedom.

"The housewife more and more is going to see her work lightened and shortened by electricity. The farmer is going to find himself with plenty of time on his hands to do other things than run his farm. Machinery will increasingly take the load off men's shoulders in our factories. Every one of us will have more chance to do what he wills, which means greater opportunity, both materially and spiritually."

The Bell Laboratories, together with the experimental radio station at Whippany, are owned by the A. T. and T. Company. It was this fact which led me to Mr. Gifford, and to a major theme that is already ringing its changes in the lives of every one of us.

"The test program to which you listened from 3XN was part of our work in the development of an improved transmitting equipment," said Mr. Gifford. "That in itself is important, enough so to keep skilled engineers up until daybreak. Anything might result from it, because it represents a phase of man's effort to conquer space. But in a larger sense it is but one small sign of a new trend and a new spirit in American industry, which, in time, may remake our world.

"When all the production of industry would little more than feed, clothe, and shelter the population, if one man got richer many others had to get poorer. When power was furnished by men and beasts, almost the only way to increase output was to load more toil and longer days onto the laboring man. When there were no time-saving devices, costs were reduced by lowering wages. And when the people were poor and consumption limited, business prospered by destroying its rivals. The past was the period when one man prospered chiefly at the expense of his neighbor.

"THE present, and particularly the future, are the periods when all men prosper by the utilization of natural forces. Today in America we are building a new civilization, not on the conquest of our fellow men but on the conquest of nature. A new battle line has been drawn with science and organization on the one side and the unknown material forces that dam man's progress on the other. Those engineers working through the wee hours of the night at Whippany were engaged in the new warfare of industry in a spirit totally different from that of the past.

"I don't say that we have wiped out all of the old abuses, but the abuses have become the exceptions. The business which attains preëminence in its field today is the one that contributes new power and greater service to the public, not merely one which supplants a rival in doing only what that rival did. The man who becomes master is he who can perfect the best method.

"The old type (*Continued on page 148*)

QUIT Picking *on* Yourself

By WILLIAM S. SADLER, M. D.

Cartoons by F. G. Cooper

RALPH was next to the youngest in a very gifted and talented family of nine children. Among his older brothers and sisters were the champion debater of the local high school, an athletic brother who had all but broken a half-dozen track records, a sister who was a talented musician, and another sister who was no mean painter. But Ralph didn't seem to have any special gifts. He used to hear his father and mother remark on the fact that he didn't appear to be as talented as the other children, and wonder what he would ever amount to. Naturally, poor overshadowed Ralph grew up with the feeling that he was practically a nit-wit.

Although he finished high school with fairly good grades, he refused to go to college. He was afraid he would flunk and disgrace the family. So he went to work in the business world and developed more and more into a melancholy lad, with repressed emotions. By the time he was twenty he had a first class, A-No. 1 inferiority complex working twenty-four hours of the day.

Ralph became so nervous and despondent that his father brought him to me, saying, "Doctor, there must be something wrong with this boy. He is so unlike his brothers and sisters. He doesn't seem to take an interest in anything, and he is getting worse."

A thorough overhauling of Ralph revealed just one thing—a deep-seated, well-grounded inferiority complex. He felt he was destined to be a failure in life, and that settled it. When he opened up to tell his story, he wept profusely about it. He had often thought of running away from his family to save them from the humiliation of his presence, but he doubted his ability to make a living. His inferiority complex kept him from picking up and striking out for himself, which in his case would have been the making of him. It was impossible to talk him out of his melancholy state.

I had several conversations with his mother, and learned that the only thing for which he had been commended in high school was his essays. Thereupon I conceived the idea that he might have some latent ability as a writer. I thought I would take a chance and try to develop it, so I sent for Ralph and pitched right into him. I asked him to produce a thesis of some sort within thirty days and submit it to me. He did, and for a first attempt it was quite good. After criticizing it and having it revised, I asked him to write a second one, and then a third. The third struck me as being good enough to sell. But Ralph started in at his old tricks. No;

he had no interest in such things; it wasn't any good anyway; it would come back; he couldn't write—thus ran the tenor of his comments. But I insisted that he send his manuscript to a list of magazines.

FIVE times the article was rejected, but the sixth time a check for fifty dollars came. Ralph came over to see me. I never saw such a change in a human being in my life. There was fire in his eyes, his face was lighted with enthusiasm, even the tone of his voice had changed. Clenching his fist, he pounded the desk, and said, "Gee, but it's great to find out you can do something! I have thought of half a dozen other things I want to do. I'm going to sit on top of the world from now on."

Well, that is about all there is to this story. Ralph's promotions have been rapid. He has a position of trust with his firm, and has written two books and scores of magazine articles. He has no desire to give up his connection with the business world to become an author. He knows that he is not a literary world-beater, but his writing serves as an emotional outlet, an avenue of self-expression. It is the club that successfully swatted his inferiority complex, and beat it into a shapeless pulp.

While it may be a bit far-fetched for parents to try to raise every boy with the Presidency of the United States in view, it is better to suggest the improbable, and even the impossible, to our children, rather than speak to them in a disparaging and discouraging way about their future prospects. It is easier to curb an exaggeration of ego in a child than fight an inferiority complex.

We should all be willing to recognize and admit our shortcomings and faults; but when we get into the habit of *picking* on ourselves, finding fault with ourselves over trifles; when we feel on an equality with the worms—there's trouble ahead.

AS a physician, I am constantly meeting hyperconscientious individuals, who, having done their best, always blame themselves for not having done better. I recently asked a middle-aged woman patient what her real trouble was and, after thinking for a moment, she said:

"Well, I guess my difficulty is that I am never satisfied with anything I do. Even when I know I've done my best, I feel I might have done better, and blame myself for my deficiencies."

Now, people who fall into this terrible rut of chronically chiding themselves are never going to amount to anything. Just because they can't write like Shakespeare or play like Kreisler is no reason why they should crawl into their holes and sit bemoaning their fates. I don't believe in smug self-satisfaction, but I do believe in a wise understanding of our limitations.

I have a dear friend who is a bit of a problem to me. He makes life miserable for himself and others by continually apologizing. I never meet him that he does not apologize for something or other. He is always afraid that he has hurt someone's feelings or slighted a friend in some way or other. He cannot get into a good-natured discussion and take sides without apologizing for his opinions, which, he fears, may wound the susceptibilities of someone present. It's getting beyond a joke. He'll soon be apologizing for encumbering the earth.

I've told this man that, in order to cure himself of this distressing habit, he'll have to follow, for a time at least, the advice of the famous man who said, "Never apologize and never explain." It's going to be hard, but having got off on the wrong foot something drastic has to be done. I believe in apologies when apologies are due; but there is no need to explain and apologize every step of the way.

This man's habit of apologizing, which is a reflection of his own keen sensitiveness to slights, imaginary and otherwise,

Digitized by Google
Original from
UNIVERSITY OF IOWA

has completely colored his world. Fearful lest his most insignificant action be misinterpreted, he launches forth into a long explanation, and then apologizes for having to explain.

My friend, in order to be cured of his inferiority complex, has to grow another layer of skin, so that his epidermis won't be pricked by every slight; he must learn that few people go around with the deliberate intent to wound others. He must also learn that continual apologizing is lowering to one's self-respect and esteem. It's a curious thing about this man: although he has an inferiority complex he is, at the same time, the victim of an inflated ego. The fact that he feels everyone is criticizing his conduct or feeling slighted over some little lapse of courtesy on his part shows how important he imagines himself to be in the lives of others. A deflation of his ego will put him on the right road to solving his problem, because just as soon as he realizes everything he does is not so all-fired important to others, he won't feel the need to explain and apologize.

RECENTLY I met a business man who picked on himself so hard that he made himself sick. He worried over minor things in his business dealings. He kept debating with himself as to whether this or that particular transaction was absolutely right and fair. Finally, he reached the point where to make a profit in a business transaction was wrong: he was taking unfair advantage of his fellow men.

This attitude of mind, of course, couldn't continue, if the man was to keep his health and his business. A number of conversations revealed the trouble. He had had his mind stirred up on this subject by a verse in the Bible condemning usury. He began worrying about what usury was. And the more he worried, the more rundown he became.

Finally, he fell a victim to the idea that any reasonable profit was profiteering. When we once got to the bottom of the trouble it was just a question of bringing him back to normalcy again by building up his health and disabusing his mind of the profiteering idea. Eventually he saw things from a common-sense standpoint.

A lot of our troubles could be side-stepped if we would only check ourselves up in reference to common sense. The average viewpoint is usually fairly sane, natural, and normal, and we should always take stock of ourselves when we move very far to either extreme as regards normal reactions of normal men and women to the problems of daily life.

While writing this article, I received a letter from a woman, now almost fifty years of age, in which she tells the story of the gradual development of an inferiority complex. The letter is helpful, as it shows how such a complex develops. She says:

"When a child, if I complained of pain or of feeling tired, my mother would say, 'You're just like your aunt Emma. She always had pain somewhere, and she never amounted to anything.' My parents were always too tired or too irritable to hear of my troubles, so I began to shut up like a clam. I remember what a tremendous impression it made on my young mind when my parents would say, 'It is strange she hasn't any common sense.' And sometimes they would startle me by exclaiming, 'Haven't you any sense at all?' I really believe that this fear of not having the average common sense has been sticking in my mind ever since.

"BUT the climax came when I was fourteen and my father punished me severely for something I did not do. This punishment was very humiliating, and it caused me not only to distrust parental love but it was a great blow to my personality.

"In this state of mind I did not get along well at school, so my parents decided I should go to work. I was too cowed, too afraid to say anything; but I did a lot of thinking. I was put to work in a factory. Up before six o'clock in the morning, and worn out at night, too tired to make any trouble, I guess, when I got home. About this time I got hold of a book that gave me a little religious consolation, or I don't know what would have happened. The people with whom I worked were all older than I, and I was so green that I afforded them a great deal of amusement. This all contributed to the formation of a deep-seated inferiority complex.

"About this time something went wrong with my heart, and I couldn't work regularly; and then, when I would stay home, I can remember hearing them say, 'Well, she can work when she wants to. I don't see where she gets this lazy streak.'

"In a short time I found lighter work at very small wages, and this also contributed to lowering my self-respect. But I sometimes wonder what I might have been if I had only had a reasonable chance.

"I am afraid to trust my own judgment. I don't want to face any responsibility.

"Even when people try to be nice to me, I have such a twisted view of things that I am afraid. I think it is because they are sorry for me, because they pity me. I recall what my

(*Continued on page 117*)

Be Yourself!

By Arthur Guiterman

WHEN out for a walk, while the town was sleeping,
I saw a little Ant on an ant-hill, weeping;
His tears rolled down with a splash and a spatter
Till I sobbed, "Little Ant, what's the mat-mat-matter?"
He moaned as he gestured with his long antennæ,
"I'm just no good, and I'm not worth a penny;
I long to be a Bird, or a great big Mammal,
An Elephant, a Gnu, a Giraffe, or a Camel;
I wish and I would, but there's no use a-tryin',
For I can't be a Buffalo, a Leopard, nor a Lion;
The world is so huge and I am so wee,
And there isn't any place for a mite like me!"

I soothed the little Ant with my courtesy meticulous
And said, "Noble friend, this is utterly ridiculous.
I don't know a lot, yet I know mighty well if Ants
Live as they should they're as worthwhile as Elephants.
We've overmuch of Lionhood and loads of Elephantery;
The need of all the Universe is pure and perfect Antery.
A silver dime is better than a pewtery simoleon,
A true John Brown than a try-to-be Napoleon.
Then be what you can, never mind what you can't;
Mere Lions must be Lions, but You are an Ant!"

The little Ant considered, and he finished up his worrying,
And soon he was hurrying and flurrying and scurrying,
Piling grains of sand while it seemed that he would never rest
Until he'd made the ant-heap high as Mount Everest,
Butting into flowers till his head was all polleny,
Gathering provisions for the whole Ant colony.
And when I came again, the hill was swarming;
The Queen was there, and her generals were forming
The big bull Ants and the tiniest rapscallions
In regiments, brigades, divisions, and battalions
With military bands; for the eager population
Was tendering the Ant a magnificent ovation,
While the bass drum boomed and the bagpipe skirled,
"He's the finest little Ant in the whole wide world!"

I have the most Job on

By E. ALEXANDER

An eruption of Bromo, an active volcano in Eastern Java. The eruptions of Bromo are not serious as a rule

TO SPEND nine or ten months of every year in the Outlands, often along the very Edge of Things, in quest of the unusual, the fantastic, the strange; to view world dramas from the wings; to watch the wheels of history go round; to talk with those who have achieved notoriety, celebrity, or fame; and, through the medium of the printed page, to tell other people what I have heard and seen—that would be considered an interesting job, judged by almost any standards, wouldn't it?

But I am somewhat perplexed when it comes to describing my vocation. Perhaps I would come nearest to it by describing myself as a literary free-lance, a writer of fortune. By this I mean that I write on my own initiative, choosing my own subjects, seeking my material wherever interest or adventure beckons, and disposing of the products of my typewriter wherever I can find the most profitable market. I am in no one's employ.

In quest of material I have covered the habitable globe. I have marched with armies, flown in airplanes and dirigibles, been captured by nomads, camped with cannibals, photographed head-hunters, lived in bombarded cities, witnessed massacres and executions, crossed deserts and ice-fields, penetrated jungles, floated down tropic rivers, and employed every means of transportation from dog teams to elephants. I have "covered" events ranging from international cup races to championship prize-fights, from revolutions to coronations; I have sat at table with emperors, kings, presidents, and sultans. Incidentally, I have been an advertising manager in London, a consul in Syria and Egypt, the leader of a motion-picture expedition in Malaysia, an officer of the American Expeditionary Forces—but these were only interludes.

Let me make it amply clear that for having seen and done the things I have mentioned I deserve not the slightest credit, for they have been part and parcel of my job. They have provided me with my bread and butter.

MY JOURNALISTIC experience was obtained during the two years when I worked as a reporter. The only literary training I ever had was acquired in the well-known College of Experience. Some people take up writing because they feel the literary urge; others because they feel the spur of necessity. I belong in the latter category. Shortly after my marriage, I obtained a position in London as adver-

tising manager of an American typewriter company. We had a little cottage down in Hertfordshire, and everything was running smoothly. Then came a sudden financial depression, our advertising appropriation was abruptly cut off, and almost before I realized what had happened I found myself walking the streets of London, with a month's pay in my pocket, looking for a job.

"Why don't you try writing?" my wife inquired one evening when I came home, tired and disheartened, from my fruitless quest.

"What shall I write about?" I demanded.

"You might try an article on sport," she suggested hopefully. "Or on horses. Those are subjects which are sure to interest every Englishman."

As it happened, I had been familiar with horses, their breeding and training, since my childhood, and, having nothing better to do over the week-end, I pounded out an article and mailed it to the magazine which was, and still is, the recognized authority on English sport and country life. I never dreamed that it would be accepted; but a week later I received a check for ten guineas. Better still, it was accompanied by a note from the editor asking for more articles in the same vein. For some months I turned them out regularly, and they were as regularly accepted and paid for. Then one day the editor asked me to run up to town and see him.

"Look here, young fellah," he began abruptly, "the Duke of Beaufort, who owns this magazine, has taken quite a fancy to your articles. Rather different from the ordinary run of stuff, y'know. His Grace wants you to do a series for us on 'Royal Homes of Sport.' Twenty guineas apiece and your expenses. Are you on?"

Was I? No one ever embraced an opportunity as suddenly as I did that one. A week later, I was off for the Continent. On that trip I visited the sporting estates and breeding establishments of the Czar, the German and Austrian emperors, the kings of Italy and Spain, and the president of France. And there wasn't one of them who didn't make me welcome, for rulers are no different from common folk in their liking for favorable write-ups. Moreover, everyone likes to read about royalty, particularly royalty at play, and the articles made a decided hit.

Meanwhile, I had been gathering material for other articles, which I succeeded in selling to American magazines. In a year I was earning twice as much as I had received from the typewriter company.

WHEN, four and a half years later, I returned to the United States, I found myself a stranger in my own land. But Lady Luck still had a friendly eye on me, for the first editor on whom I called asked if I had anything definite in mind. I had carefully rehearsed that interview, for I realized how much depended on it, and I outlined a series of articles that I had planned. "Sounds good," he said briefly. "Tell the treasurer how much you need for expenses and go to it." And I have been going—to Europe, Asia, Africa, and the islands of the sea—ever since.

Unless a writer is fortunate enough to have an independent income, he can't pick and choose until he has (*Continued on page 171*)

"I did it for

Two I Love

Troona and a collie dog"

A story by

DIXIE WILLSON

ON a farm where a Norwegian named Furmil Peterson lived were sixty or seventy broken orchard trees, the ground under them a muck of rotted fruit.

One Sunday in hot late August, a bare-legged fourteen-year-old boy, with a collie dog, was out on the dusty stretch of Peterson's road, the dog yapping at shadows, catching at blowing leaves, jumping at grasshoppers. The boy had a sack of apples slung across his shoulders, a stick in his hand for the collie to hunt and fetch, and the two of them were poking in a gopher hole when the boy saw Peterson coming. He stood and waited for him.

"Hello, Peterson," he said.

"Le' go that sack!" Peterson shouted, too angry to care that he shouted when he didn't need to shout. "I'll learn ya' to steal!"

He shut his hand like a clamp on the boy's arm, reached for a buggy whip hid in the weeds and curled the lash around those bare thin legs once, twice! Red welts came up like streaks of a raw burn! The collie yelped—caught Peterson's clothes in his teeth. Peterson kicked the dog's belly.

"Leave that dog be," the boy panted. "He ain't done nothin'!"

"Nor he won't," Peterson snarled, and struck the butt of his whip with ugly strength against the dog's neck. A little whine, a convulsive doubling together—and the collie fell into the grass. The boy cried out—wrenched away from Peterson—stumbled to his knees, and caught the yellow body against him.

"You—you Peterson," he choked. His face drained of every drop of color. "I'll pay you—you—Peterson! Some day I'll get everything you've got! I'll—I'll—"

The dog jerked with a crying, piteous breath. The boy hid his face against the quivering ears.

Furmil Peterson took the sack of apples and went up the road to his sod house, where a woman, straight hair, colorless face, was outside washing over a tub.

"Who was you hollerin' at?" she asked.

"Jim Randis," Peterson said. "I broke his dog's back fer 'im!"

A little girl, nine, ten years old, wide child eyes, pale tangled hair, looked out from behind the woman's dress and began to whimper.

"Shut up, Troona," the farmer mumbled.

He dropped the apples on the ground.

"Poi," he called shrilly, "poi—poi!"

A dozen blear-eyed pigs came out of the shed, snorting, snuffling against each other.

SUMMER, winter; winter, summer; year after year, the old men of Scarville would sit around the stove in Hanson's store. In winter the stove would be bronze from heat, little round holes in the doors red with fire; but in summer, when it was only a black drum, rusty with tobacco stains outside, cold trash inside, they would sit there just the same: Pa Polk, his grandchildren coming after pennies all day; old Ansel Dawson, who'd been Justice thirty years; Rec Maforty, who'd run the mill till the creek had gone dry; Sittin' Bull Bruce, still wearing the proud, ragged buckskin of a scout; Tod Buckles, stone deaf, who'd lived alone sixty years in the house his father had died in; Seth Park, only thirty or thirty-five or forty, but idle, shiftless, whittling sticks to pieces.

Summer, winter, they would sit there in Hanson's: Dawson quoting law, old Bruce telling stories, Seth whittling sticks, and always Tod Buckles with his quavering old hand behind his ear—"What say? What say?" Always wistful groping question in his faded eyes, always eager hope that somebody perhaps would answer him.

Each day the old men would know who would be in to trade. Ollie Jensen and the Thorndeckers on a Monday,

Old Man Peddlety and Sophie Trisby's folks on Tuesday, Steve Crumb on Wednesday, Norwegian Peterson and his wife on Thursday, his wife bringing the wooden packs of head cheese—her eyes hopeless, her hands weary. Monday the old men would speculate on Jensen's corn crop, Tuesday on simpleton old Shaver Peddlety tinkering year in and year out on a patent onion puller, Wednesday on Steve Crumb, boring his pasture full of holes for oil. . . .

TEN years. And then one Thursday something happened. Peterson's wife, hitching up the team to come to town, was kicked by a horse.

Bill Hicks was the county coroner. When he came in the store the morning afterward, the old men around the stove quit talking, so they could hear what he would say to Hanson. Tod Buckles looked up to see who had come in. He had been trying since the day before to find out what they were talking about—Jensen and Peddlety and Steve Crumb. Now, when he saw Bill Hicks, he knew it must be that somebody was dead.

"What's happened?" he rasped at Old Man Polk.

But Polk didn't answer. Why should he? Tod Buckles, seventy-nine, half paralyzed, old plush cap, fringe of white, ragged hair, old runover shoes, knotted hands, weak old eyes. Why should anybody answer old Buckles?

Tod got out of his chair like dry old wood bending, and went across the store to Bill, his hitching steps bobbing the little plush balls tied across his cap.

"Who's dead?" he asked—cracked old voice.

"Horse kicked Furm Peterson's wife," Hicks shouted against the cup of Tod's hand.

Todd stared up at Bill.

"Peterson's wife?" he rasped. "Horse killed her? You goin' out there?"

Hicks nodded. Old Tod picked at Bill's sleeve.

"Drive me out, will ya'?" he quavered.

"No," Bill said shortly. "Team's too wild."

"What say?" Tod asked. But Bill didn't answer again.

Old Tod shuffled outdoors to Bill's spring wagon, and when he saw Bill coming to untie the team, he climbed in.

"You can't go, Tod," Bill said. "I'm late."

"Date?" Tod repeated. "Fifteenth, ain't it?"

Crickets shrilled in the dust, a pump handle creaked by the livery stable. It was hot summer noon. A wooden coffin under the seat. Somehow Bill didn't want to shout against a silence like that, so when he drove out of town old Buckles was with him.

At Peterson's farm the sod-house door was open, neighbor men standing around the barn in Sunday clothes, neighbor women in stiff black silk in the kitchen.

In the front room, on the only bed, Furm Peterson's wife lay with a sheaf of flowers in her crossed hands, a pillow of wild roses under her white face.

The chain that binds you to the hours of day, the scorn of men, will break at last. At last, the ones who gave you scathing charity surround you with the awe they pay only to majesty so supreme; it is as far beyond their minds as stars above the dirt!

BILL got out and called one of the men to help lift the coffin. Tod went to the back door.

"Tell Peterson I want to see him," he said to a woman who was stirring soup on the stove.

Peterson came out, sullen, defiant.

"Furm," Tod said, "you've been owin' rent on this here place five years, runnin' six. I've let it go on account a' your wife. Now you can give me eleven hundred dollars, or git out."

"I haven't got it," Peterson said.

A rabbit scuttled out of a box. Peterson kicked a clod after it, sent it scurrying into the weeds.

"I haven't got eleven hundred," he said again, louder.

"All right; git off the place. I'll stay here while you pack up," old Tod said, and started back to Bill's team.

And then a girl came out of the house—yellow hair—cotton dress—her face stark with grief.

"What's the trouble, Pa?" she asked, frightened eyes, voice choked with tears.

"Go back inside," Peterson said, like a man driving cattle.

Tod Buckles saw her there—frail flower on pitiless soil.

"'S'at Peterson's girl?" he asked Bill, who had come back. "'S'at Troona Peterson?"

Bill nodded.

"Goin' on how old?" Tod asked him.

"Nineteen," Bill shouted.

Tod put his hand on Bill's arm.

"She got any folks besides Peterson?"

Bill shook his head. Old Tod shuffled half way back to the house.

"If your girl ain't got no home but this—you c'n stay, Furm," he said.

Hanson's settled down again to Monday, Tuesday, Wednesday; Jensen, Peddlety, Steve Crumb. Old Tod, with his hand cupped around his ear—"What say? What say?" Nobody to answer him. Come winter—come spring—pussy willow and crocus. April—May—fire in the stove gone out. Jensen, Peddlety, Steve Crumb. Weigh and speculate. June, come July. . . .

And then one day a stranger came. A young man strolling up the street, who stopped in Hanson's open door, feet apart, hands in the pockets of light brown city clothes, polished shoes, light vest, soft hat.

July sunshine streaked across the floor. In the back of the store Hanson was packing butter in five-pound crocks. The stranger smiled, lazy eyes, lazy smile, tall, dark, handsome. He took a cigarette out of a silver case, tapped it on the back of his hand.

"Hello, boys," he said, and pushed his hat back and came in.

HANSON looked up from the butter tub, stared over his specs. Pa Polk's grandson crawled under a chair and looked out, like a shaggy little thing in a cage. The store was suddenly so hushed there was no sound at all but the weak cry of a mess of kittens behind the feed sacks.

Then old Tod straightened back in his chair, one hand around his chin whiskers.

"Howdy, Jim Randis," he said.

The tall young stranger laughed out loud, strode across the store and reached for Tod's hard old hand.

"Howdy, Tod Buckles," he shouted in Tod's ear. "How's Jensen's corn crop? Steve struck oil yet?"

"Nope, still borin'," Tod chuckled. "Corn crop no good neither; but kick me if Peddlety didn't make a thousand on that good-for-nothin' onion puller!"

Randis stood by Tod and looked around at the others.

"Hello, Seth. Howdy, Judge! Well, there hasn't been a whisker trimmed in ten years, has there, boys?"

Young Maforty, who worked for Hanson, came

"You—you Peterson," the boy choked. "I'll pay you! . . . Some day I'll get everything you've got!"

Digitized by Google Original from UNIVERSITY OF IOWA

up from the cellar with a slab of salt pork.

"Is this here piece lean enough?" Jim Randis heard him ask somebody, and then, back by the meat counter, Jim saw a slim, yellow-haired, little slip of a thing, wide eyes, cotton dress.

Maforty did up a brown paper package of pork. Randis watched the girl put it in her basket and go out across the square of hard, dry ground to where a team was tied. Something about her was beautiful, nothing to make her so—cheap dress, coarse shoes—but somehow like blue flax, like young willow, she was beautiful, just the same.

"THAT there's Troona Peterson," Tod said.

Jim walked to the back door and stood where he could see her out there, the sun shining on her bare throat, the wind blowing her hair. She got into the wagon, turned the team toward the road, then she looked back at the tall young man standing in the door.

"Howdy, Jim," she said, and smiled at him.

"Well, how long you here for?" Hanson wanted to know.

Jim turned back from the door.

"Don't know, Hans," he laughed. "Don't know how long it'll take me to get what I came for. Maybe a day—maybe a year."

"Stayin' with your gra'maw?" Tod asked.

"Sure thing," Randis told him. "Granny and my old dog Scot have got their bad boy back again."

The minister came in, Reverend Mr. Bascom. The minister had come to Scarville since Randis had gone away—little man, worried hands, meek eyes. For six months he had been trying nervously, desperately, to raise a hundred and fifty dollars to shingle the church.

Tod introduced them. Randis's hand crumpled Mr. Bascom's fingers.

"Greetings, Parson," he smiled. "Stopping in at Scarville on your way to Heaven, are you?"

Randis stayed a week—two weeks—shot billiards with the boys in the pool hall, gave Hanson ten dollars to build a horse trough by the store, sat around with the old men and swapped stories.

But he never came down till one or two o'clock in the afternoon. All morning he would sit in the sun by his granny's door, where an old collie dog would nose over his fingers. On a strip of rag carpet on the ground, Jim would sit, where the dog could stretch against him, lick his fingers, strain closer and closer—eyes pleading with Jim never to go—begging to go with him! Hour after hour, Jim would sit by the old dog that lay year in and out with useless paralyzed legs.

Then about two o'clock every afternoon, the old men in Hanson's would begin watching down-street speculating whether Jim would stop at the pool hall first, or come in to Hanson's first.

Sometimes he'd come in the back way to fool them. Once he wore overalls and a straw hat and specs and stood at Hanson's counter an hour, laughing at the old men while they wondered why he didn't come.

But, no matter how he came or when, it was always Tod Buckles he said howdy to first. Always moved his chair next to Tod's and shouted what was going on up and down Main Street—who was at the post office, who'd come in on the noon train. Then, near supper time, he'd buy groceries for Granny—buy more in a day than anyone else in Scarville bought in a month. He would ask Hanson to send away for figs in spice, imported sardines, fancy squab, and foreign fruit that would come packed in ice! He would take Granny chocolates and roses. He treated her more handsomely than any man in town did his sweetheart! He spent more money than the president of the bank.

So the old men began to speculate where Jim Randis got the money he spent. What'd he done the nine years since he'd gone away. What'd he want in Scarville! What was it he'd come after!

But Jim didn't tell anybody anything.

EVERY Thursday since Peterson's wife had died, Peterson had brought Troona to town with him. One Thursday when he came in the store he left Troona outside.

"Well," Polk was saying, "Jim come after my ax to split wood fer old Rheumatiz Emma, and she give him a quarter, and he give it back, and I said right out, 'Jim, have you got so much money you ain't got no use fer a quarter no more?' But he said he give it back because Emma give him apple pie, so I didn't find nothin' out about his money, after all!"

In the back of the store Peterson was measuring fence wire.

"Furm, that girl a' yourn tryin' to catch Jimmy Randis?" Seth called out.

Peterson looked up with an ugly move of his hand.

"Talk to yourself," he snarled.

ACROSS the street by the post office, Jim Randis had been standing on the sidewalk when Troona had gone in to get the mail, yellow braids around her head, arms slim and brown in the sun.

"Hello, Troona," he had said, when she came out, and he had caught her hand and made her look at him, had asked her a question, and made her answer—had pinned a pink rose on her dress.

Seth had a habit of keeping one eye on the post office while he sat by Hanson's stove.

"Well," he remarked, squinting along the wood box, "I c'n talk to myself and have awful good company; but seein' the two of 'm together out there got me thinkin' it must seem awful good to Troona to talk to a man with a smile on his face."

The big Norwegian turned from Hanson's counter, eyes snarling, and then he saw Troona out there with Jim.

He strode out of the store—fence wire jangling down, Hanson's boy dodging, and stood facing across the street like a block of gnarled wood!

Jim saw a scream of fear in Troona's eyes!

"Stay here!" she said sharply. "Don't come with me! Don't come, *please!*"

And she ran across the road to the wagon, and backed the team in front of the store between Jim and Peterson.

Peterson caught the horses' heads, jerked them into a rear, got up in the wagon and wheeled west to the road out of town.

Jim felt his body growing hot and cold, and hot again! Across his legs he seemed to feel the sting of the lash of a whip, against his feet the quivering body of a collie dog, eyes looking up in an agony of helplessness!

He went over to the store. The old men had left their chairs, were in a tremulous little group behind the window. They gathered around him, pressed back to the stove with Jim among them.

"He might 'a' killed you, Jim!" Tod quavered. "He hates you so he goes crazy at the sight a' you!"

"It's Troona he might 'a' killed," Judge Dawson said. "Jim, fer her own sake, leave her be!"

Jim stood there, looking out across the road where a trail of pink rose petals had blown along the dust.

"So Peterson hates me as much as that," he said, his

voice quiet—soft as a song. "I told Furm Peterson once I'd get everything he had some day, and he knows I mean it. Brutes are cowards. He hates me because he's afraid of me! There's no hate so bitter as a hate that's out of fear!"

That night Jim Randis rented a livery rig and drove to Peterson's farm. As he got in sight of it, Peterson was going across the pasture to slop the hogs. Randis went to the house, and looked in at the open door. A lamp was burning on the table, leavings of food—but no one there.

He went out to the barn, pushed the gate open, and in the flickering light of a lantern there was Troona feeding the horses, a bruise across her face where a hand had struck her.

She looked up startled—drew back against the sagging wall.

"Don't be afraid," Jim said. "Come here. I want to ask you something."

And while Peterson was down across the field, Troona went with Jim Randis to marry him, Jim laughing about what Peterson would say when he found it out!

Troona was timid, afraid, said only the two words the justice asked her. Jim returned the livery rig, and in the white shadows of summer moonlight, he and Troona walked down the Scarville street, past gardens of damp, old-fashioned flowers, wooden (*Continued on page 157*)

The Skyscrapers of NEW YORK Rest on BREUCHAUD'S Genius

By ROSA STRIDER REILLY

THE wind-burned young deputy sheriff of Billings, Montana, was waiting at the depot on a morning of September, 1883.

His boots made a path in the sand as he paced up and down, up and down, in front of the rough shack which served as a railroad station. The mark of the frontier was on his face and in the swing of his wiry frame. But not on his clothes. He was dressed in the best the Territory of Montana could afford.

It was no ordinary train for which he waited. But for the first passenger train ever to run over the Northern Pacific Railroad on a coast-to-coast route. A momentous page in the history of the West was being written on that sunny September morning. And the young deputy sheriff was fully alive to the significance and glamour of the hour.

To add to his excitement, he had been deserted by the two Civil War veterans who had been appointed by the citizens of Billings to form with him a committee of three to welcome one of the distinguished guests expected to arrive on the train. The ex-soldiers could face gun fire, but not a formal reception. However, the young peace officer was not exactly alone. Behind him swarmed every other man, woman, and child of the community in holiday attire.

The deputy again drew out his thick gold repeating watch. And again his eye wandered along the shining rails that stretched away toward the cottonwoods. As an engineer for the Northern Pacific, he had helped to lay those rails. And somewhere around the bend the first Iron Horse was galloping on this road of steel, linking East and West, its hoofbeats drumming the march of American Progress. It made the twenty-five-year-old deputy quicken his step to think of it.

Later in the day, a mammoth celebration was to take place at Bozeman, a few miles away, where a golden spike was to be driven to mark the spot where the rails from the East and the rails from the West met. At each wayside station the celebrities were descending from the train to inspect the frontier towns and to glimpse the wonders of the unknown West.

The young deputy's reflections were interrupted by the hoarse blast of a whistle. Around the bend they came! Not one, but four Iron Horses. Four gleaming locomotives, each drawing ten glistening Pullman cars!

COWBOYS, miners, pretty ladies, bullwhackers, contractors, sturdy children, engineers, worn pioneer women—all surged around the trains, as Ulysses S. Grant, ex-President of the United States, stepped out of the first Pullman car.

A fine soldierly appearing man he was, with gray creeping into his dark brown beard and showing in silvery stripes under his black derby hat. He was followed by the president of the Northern Pacific Railroad, the mayor of Chicago, and other distinguished citizens of America, besides many foreign officials who were interested in the new transportation system.

The deputy sheriff of Billings was somewhat perturbed at the thought of enter-

Digitized by Google

UNIVERSITY OF IOWA

taining General Grant alone. Nevertheless, with the same diplomacy which distinguishes him to this day, he walked up and held out a gracious, capable hand: "General Grant, it is an honor to welcome you to Billings. I am Jules Breuchaud, the deputy sheriff. And I have a carriage here, sir, to show you about the town."

The serious, strong-featured countenance of the ex-President relaxed into a warm smile as he grasped the deputy's hand.

History was still being made in the Billings of that year. The West was being wooed and won. It was still the day of "The Quick or the Dead." The Red Man had not accepted the dominance of the white man. And the work on the plains by Jules Breuchaud and his fellow engineers had to be carried on under the eye of the United States Cavalry carbines.

BILLINGS in those days was a wide-open town. Gin mills and dance halls flourished. The whirr of the rattlesnake had a companion piece in the click of the roulette wheel and the dice box. No trees softened the ugly contours of the monotonous rows of the town's wooden houses. It was a man's town in a man's world.

Finally, after the meager sights of Billings had been shown to the ex-President, and a half-hour before the train was to move along to Bozeman, the deputy sheriff had his driver pull up the white horses at a little wind-scarred burying-ground on a lonely hill. Thirty stubble-grown graves lay there, marked by blistered crosses.

"General," spoke the younger man, as he took off his hat, "this place isn't much for looks, but we here in Billings are mighty proud of it. Because every man resting here,"—and his voice was soft—"died with his boots on, either defending his home from the Indians or helping to build up the West."

It has been nearly fifty years since Jules Breuchaud spoke those words, and yet, more than any other words could, perhaps, they (*Continued on page 126*)

Breuchaud's method of underpinning

If You Ask Me:

Hope is One of Our Grandest Virtues

THERE is one trait belonging to my fellow humans which never has received one fiftieth of the credit it deserves, a trait which gives me a queer thrill of pride in belonging to the human race and in sharing, perhaps to some slight degree, in that glorious trait's possession. Here are a handful of illustrations that will describe the quality I am talking of better than could any clumsily stilted definition of mine:

I am writing this in Miami, Florida. Some time ago, the prospering White City was smitten with hurricane and flood that wiped out of existence thousands of homes and other buildings, destroying great groves of palms, and well-nigh destroying all plant life as well as human habitation. All this on top of the collapse of the real-estate boom.

By the time the tidal wave had subsided, the people had shaken off their daze of horror, and were toiling with unbelievable vigor and eagerness and skill to restore their wrecked city and to repair damages that seemed irreparable.

Two days after the fire which burned most of Chicago into a smoking ruin, a few decades ago, a householder was examining the scattered bricks that so recently had formed part of his snug home. A reporter asked what he was doing. He made reply:

"I'm figuring out how soon these bricks will be cool enough for me to start rebuilding with them."

Oscar Hammerstein was bankrupt. His loved theatre had failed, and it had ruined him. As he stepped forth, penniless, from the playhouse which no longer was his, he halted and stared dully up and down the street. A friend begged him to rise above his lethargy of despair.

"Despair, nothing!" snorted Hammerstein. "I'm trying to pick out a good site for my next theatre."

Have I made you understand what I mean when I say I revere and love this magnificent human trait? The trite name for it, I suppose, is "Hope." Hope, in the very highest and bravest sense of the word. ("Bravest," because there can be no true hope where there is no bravery.)

The Bible cites Faith, Hope, and Charity as three all-desirable virtues. Many a sermon has been preached on Charity and on Faith. Hope seems to be overlooked in such discourses. But don't forget, please, that the Bible itself places Hope on the same gleaming pedestal as it places Faith and Charity. And Hope belongs there! To me, it is the grandest attribute in all the strange mixture which goes to make up our human nature.

EDITH BARNARD DELANO'S *story*

proves again that a home is not

A Good Home

unless it's where the heart is!

Illustrated by
VICTOR C. ANDERSON

A NUMBER of things happened when the Tinker was going to be seven. Some of them he knew about before they happened; others surprised him a good deal. He knew, of course, about cities and railroads and going-to-school, though he had never seen any of them. He had seen plenty of dogs and horses, and cows and chickens, and fields of cotton, and people of all shades of brown, so of course he knew about those, without having to think about them at all.

Aunts and uncles he knew about, although there were kinds he had never actually seen. On the plantation there were several old brown men that everybody called "Uncle;" and there was Aunt Sue, who looked after him, yellow and wrinkled, small and kind, but very determined about lots of silly things like finishing your oatmeal and going to bed and having ears washed in the wrinkles where it could not possibly show.

But there was a picture on Mum's mantelpiece of the other kind of aunts—white ones, his mother's family. Aunt Sue said they were Yankees, which probably accounted for their appearance. He also knew about Christmas, of course, and Fo'th-a-July and birthdays. Mum and Daddy had birthdays too, but he liked his own birthday best.

He remembered his sixth birthday very well. Mum and Daddy gave him presents in the morning, and in the afternoon every little darky on the place came to the little white boy's party at the Big House, and he gave every one of them a big dish of ice cream and a big piece of cake with pink icing. They sat on the porch steps and on the grass and everywhere, while they ate; Mum laughed a good deal, and the children rolled their eyes and giggled. He heard Mum tell Daddy afterward that they were so stiffly starched they would have cracked if they moved much; he wondered what cracked children looked like. But he thought they had a pretty good time; he had a good time himself.

Quite a while after that, he woke up one morning to observe that Aunt Sue had not wrapped up her head. It was the first time he had known that she had gray hair—or any hair at all, for that matter.

"You come le'me get you into yo' clo'es real quick, now," she said. "I got

UNIVERSITY OF IOWA

"I've been hunting all around for Mum," he said. "Where do you s'pose she's hiding, Aunt Sue?"

somethin' to show you." She took him into Mum's sitting-room, and there was a basket that he had never seen before, and in the basket a very small crinkled face with blankets wrapped all around it.

"It's yo' baby sister," Aunt Sue informed him.

He stared for a moment; he had not known about sisters, as they might relate to himself. "Do they always come in baskets?" he asked.

"Ma lord!" said Aunt Sue. "They sleeps in baskets." He stood there looking at the little pink face. "Don't you like it?" Aunt Sue asked. "Ain't you grateful you got a baby sister? You been cravin' for someone to play with."

"I don't believe I care much about this one," he said. "It's a baby one. I think I'll ask Mum to change it."

"Ma lord!" said Aunt Sue again. "Here, you come get yo' breakfuss."

He did not see Mum that day nor the next—nor for several days, in fact. He was told she was feeling po'ly, and that he must tiptoe past her room. Then for a while Aunt Sue took him off every day right after breakfast, and they had a picnic until it was time to go home and go to bed. He got rather tired of picnics; but every minute they were not on a picnic Aunt Sue made him stay right up-stairs with her.

And there was something the matter with her, too; because every now and then she would hold on to her elbows and rock herself backward and forward, and tears would go trinkling down her face the way they did in the song she used to sing to him about Lord Lovel. "The tears come trinkelin' down, down-down, The tea-ers come trinkelin' down." He remembered other words of that song, too, and one day, when Aunt Sue was acting that strange way, without thinking

Digitized by Google
Original from
UNIVERSITY OF IOWA

about them at all he began to sing them:

"And out of her grave there grew a red rose, And out of Lord Lovel's a briar, riar-riar. And out of Lord Lovel's a briar . . ."

"Oh, ma Lord an' ma Redeemer, listen to dat chile a-singin' about graves," said Aunt Sue, and took him off, protesting, on another picnic.

When they got back from that picnic it was almost dark, and Daddy was standing on the walk in front of the house, as if he was afraid to go in. He grabbed the Tinker up in his arms and hugged him until it hurt, and the Tinker squealed with delight and wriggled down. He had not seen much of Daddy, because of all those picnics.

"Hey, you old scout!" he cried, doubling up his fist and whacking his father's leg. "There's a fish in the brook down back of Torm's house. Let's get Mum and go fishing!"

But his father sat down on the front steps and began to cry. He wasn't even ashamed of crying; he didn't run away to hide it, or anything. Just sat there with his head in his hands and cried.

"There!" said Aunt Sue. "Praise the Lord, the tears done come to you at last! You set right there and cry, Marst' Bob. Let de tears wash de grief away."

The Tinker just had to say something. "How did he get grief on his face?" he asked; but Aunt Sue jerked at his hand, and he began to howl. She led him into the house.

THE next morning as he came along the hall he saw that the doors of Mum's bedroom and sitting-room were both open, so he knew she must be all right again. He thought he'd like to talk with her about that baby; but the basket was not there, nor was Mum in either room. It surprised him for a moment; then he remembered that she often went out in the flower garden before breakfast. But she was not there, either.

"I've been hunting all around for Mum," he told Aunt Sue when he answered her call to breakfast. "Where do you s'pose she's hiding, Aunt Sue?"

"Now you listen to me," Aunt Sue said, taking his hand and setting his collar straight. "Yo' mama's done gone away for a little w'ile. She done took yo' baby sister along with her, 'cause the baby couldn't get along without her. Don't you fret about yo' mama."

The Tinker felt queer, inside of him. "Well, I think that's a pretty funny thing for her to do," said he, his face flushing. "What made her go away without me and Daddy? Why didn't she kiss me good-by?"

"If you ain't the askin'est chil'!" Aunt Sue said crossly. "You come along in to yo' breakfuss."

But she did not insist on his eating all his oatmeal, and she even let him go off and play with some of the little colored children. They went to see some new puppies down at Lije's house. And Aunt Sue let him have two helpings of dessert, and did not remind him to stop a-gulpin' down his milk, and eat like a gemman.

After dinner he wandered down to the stable to see a friend. Uncle Enos, who had charge of all the stable boys and the horses and everything, was sitting on a box outside the stable door. Usually, he was very busy; but today he just sat there, as if he was sad. The Tinker found another box and sat down near Uncle Enos; for a while the two kept silence, for that was the sort of friends they were. But presently the Tinker said, casually:

"I just thought I'd come down and see if you happened to know where my mother went to, Unc' Enos. I guess you know about everything there is to know, don't you?"

The old man glanced at him, then looked up at a buzzard that was soaring far above. "Ain't dey done tol' you where she gone to?"

The Tinker shook his head; his insides were feeling queer again.

"Sho now," said Uncle Enos. He was scratching the back of his neck. "Sho now! Look a-here, Marst' Bobbitty, son—ever'body has to go away some time. Ain't nothin' oncommon about goin' away."

"I know," the Tinker agreed. "But there seems to be something kind of funny about my mother's going away. She never did it before. I—I don't think I like it very much."

"No," said Uncle Enos; "ain't none of us like it very much. An' dat's de Lord's trufe!"

So, after all, it was his father who told him. Mum had gone away, very far away. It would be a long time before they saw her again. But he had Daddy, and Daddy had the old Tinker. They would have to get along the best way they could. . . .

He cried himself to sleep in his father's arms. Aunt Sue didn't even come to remind him it was bedtime. When he woke up in the morning, he could not remember having gotten into bed at all; but there he was!

After that, everybody on the plantation was even nicer to him than usual. Uncle Enos let him ride in the training sulky with him, go 'round and 'round the track behind the beautiful big shiny colts that he knew by name. Torm took him fishing whenever he wanted to go. Aunt Sue did not say a word when he came in all dirty.

MUM used to play with him every afternoon; now his father let him invite some of the colored children up to the house to play, and nobody reminded him when he talked just the way they did. His father took him riding with him very often, and told him stories every night.

But what was probably the best of all was the puppy. Of course there were plenty of dogs about the place, setters and houn'-dogs; but they were just anybody's. The puppy was his very own; Lije let him choose any one he wanted, and he took the one with a black spot over its eye, and named it Patch. Daddy laughed when he saw it, and asked if we had come to that; but nobody made him keep it out of the house. Some of the colored children helped him give it a bath, and Uncle Enos found a collar for it.

"Ma lord, I never did s'spect I'd sink so low as to have a dorg a-sleepin' in de same room," Aunt Sue said; but when the Tinker howled to have the puppy sleep on the foot of his bed, Daddy said it couldn't really do him any harm in the end, so Aunt Sue let it stay there. Not that it really did stay there, of course; it had a comforting way of wriggling up and licking the Tinker's face, and then of snuggling down under the covers with him.

So the summer went on toward the time when he was going to be seven, and one day his father got a letter that he read and reread several times. The next day he took the Tinker on his knees and held him close.

"Old Tinker," he said, "do you realize that you're getting to be quite grown up?"

"I reckon I am," the Tinker agreed. "I'm gwine to be seben befo' ve'y long."

Daddy groaned. "Tinker," he asked, "do you really have to talk that way?"

"What a-way?" asked the Tinker.

"That settles it," said Daddy. "Aunt Elizabeth is right. You didn't talk like the darkies when—when—"

DADDY'S head was pressed against the Tinker's hair, and the Tinker understood what was wrong. "When Mum was here," he said softly. "I know. She wouldn't let me."

"I can't let you grow up here without a woman," Daddy told him. "And there's no school here that you could go to. Aunt Elizabeth is right. Mum would have wanted it."

"I know who Aunt Elizabeth is," said the Tinker. "She's the lady up on Mum's mantelpiece. She's a Yankee."

But his father said, "You're half Yankee yourself, old Tinker. It's only fair to give you your chance. It won't be so easy. But we're both men. We can stand it, can't we?"

One day, when he was starting off for a drive with Daddy, Aunt Sue cried. When he looked back at the house, wondering what was the matter with her, she was sitting on the porch steps with her apron over her head, rocking herself forward and back. It was queer.

They drove a very long time, and the Tinker must have taken a nap; because he woke up at the sound of a big, loud toot, and there was a railroad train. It was the first real one he had ever seen, and he and Daddy got on, and Torm and Uncle Enos took their bags into the train and shook hands with him and Daddy, and the train shook, and tooted some more, and jerked, and everything outside the window was moving backward.

"Why, Dad!" the Tinker cried excitedly, shrilly, "Dad, you old scout! We're going away! Look. We're going away!"

People in the car turned around and laughed.

They stayed on the train for ever and ever so long. They even went to bed in the car. It was all very wonderful; but the best thing about it was just that they were going away. Mum had gone away, and they were going away; his father had not mentioned it, so the Tinker knew he meant it to be a grand surprise, and was too polite to give any hint that he suspected; but of course, of course they were going to find Mum.

Finally his father said, "Well, old Tinker, we're almost there!"

And pretty soon they were there. They got off the train and stood on a long platform in the midst of their bags. The Tinker looked up and down, looked everywhere, but Mum was not in sight. A pretty lady in a yellow dress had come rushing up in a shiny car and jumped

Digitized by Google Original from UNIVERSITY OF IOWA

out; now she was running along the platform toward them. She shook hands with Daddy and stooped over the Tinker.

"Why! Who is this?" she asked, laughing. "Who is this great big boy?"

The Tinker held out his hand. "I'm very well, thank you," he said, remembering that Mum told him always to say that. "My name is Robert Henderson, Junior."

He was a good deal surprised when the pretty lady laughed merrily and hugged him—and even kissed him. "Oh, you lamb," she cried; and when she stood up her eyes were full of tears. "Bob—Bob—we'll do our very best by him!"

But Daddy did not answer her; he was stooping over the bags, and trying to get them all into his hands at once.

They all three got into the lady's car. "You sit in front with Auntie Midge," the pretty lady said; and then the Tinker knew. They had not come to the place where Mum was; Auntie Midge was another one of the ladies on Mum's mantel. . . .

They all got out at a big yellow house, and Aunt Elizabeth was there. She had white hair, perfectly white, and the Tinker could scarcely stop looking at it. The grown people had tea and sandwiches and cakes, and the Tinker had a cake; there was a good deal of talk. Most of the talk he didn't bother to listen to; he watched Aunt Elizabeth's white hair, and looked around him at the room. It was more—more—shiny than any room at home. He heard Daddy say:

"Yes, tonight. I'm afraid I could never leave him if I put off the break."

He had heard about putting on brakes; he had never before thought about putting them off. Before he got through thinking about it, Auntie Midge took him to a dining-room and gave him some supper, and then she took him up-stairs to bed. Daddy came and kissed him good-night. He hugged him tight for quite a long while, and said:

"Be good, little son—old Tinker!"

The next day (*Continued on page 179*)

The next thing the Tinker knew, the sun was streaming over him, and Clarence was there with his hands full of hot rolls

Are You Asking *too much of* Life?

If so, you are courting disaster, says DR. S. PARKES CADMAN, the famous preacher to whom thousands of people have come with their hopes and their fears, their triumphs and their defeats

A MAN forty-two years of age, married but separated for fifteen years from his wife and two children, has just left my office. In the course of our extended interview he remarked that life had no further hold on him, and that but for the disgrace his suicide would bring on his family he would "pass out of it" by his own hand.

There was no pretense in the attitude of the man who sat before me, no self-pity, no maudlin justification or long-winded excuse-making. He confessed his habitual wrong-doing with a sincerity and candor which showed me he might well be capable of better things. He had been a public official who was disgraced through drinking and gambling, and whose nearest ones were compelled to place themselves under legal protection from his occasional violence. When his madness was spent, and his exhausted vices forced him to seek the relief of amendment, it was too late for him to return to those whose presence and consolation he now craves. Was there any hope for him, he wondered? Was there a way out of the wreck—a way to rise that he might find, even at this late hour?

Of course I reminded him that none of us can contract out of life for the things we want in another world. We may adjourn its pains and problems, as well as its defeats and victories, to another existence; but its responsibilities, I pointed out, are inescapable in this world or the next.

This man's conduct, he knew, had injured his body, his mind, his business, and his dearest ones; and the sole spark of hope remaining in his manhood's expiring embers was his determination to face the issue. He realized that the bill was now presented for payment, and that he had asked too much of life in the things that common sense and decency should have kept him happily clear of.

The question raised by the case of this unfortunate individual must be met by parents, pastors, and teachers everywhere, for it constitutes a fairly general problem. Certainly it is one that is revealed to me almost every day in the correspondence that comes to my desk. Apropos of this, we must never forget that where the diagnosis is human frailty, the prescription must be human charity. However hurtful the records of social wrecks and outcasts may be, however unorganized they are in themselves or in their surroundings, mere denunciation is absolutely useless, and wise sympathetic counsel is always essential.

Asking too much of life!

In my many years' experience both as a pastor and as a lecturer I have come to see the almost universal tendency to make too exacting demands upon earthly existence. Young people in particular often retard their successful life voyage, and not infrequently wreck what might have been a happy and prosperous career, by making similar exorbitant demands upon life. Then, like the unhappy individual in question, they seek in the aftermath a place for repentance, and quite forlornly do not find it.

Letters I receive daily show that the reckless optimism behind unsafe pleasures or illicit pursuits is usually a radiant morn followed by an overclouded evening. License dominates decency, impulse smashes conventionalities which the history of the world shows cannot be affronted without cost; and the will of the individual is forced into entirely wrong channels. The consequences of all this folly are obvious, and the thrice-told tale of it flows to my desk in an endless stream.

There are those who are "driven to drink," and who have to return ragged and torn in soul and body. There is the sower of wild oats who discovers when it is too late his frailty's inevitable tendency to take root in his backbone; and there is the dweller in dreams who passes his life on a treadmill and gets nowhere.

MARK! I do not disparage youthful imagination. Quite otherwise. Building castles in Spain or an Elysium on the Bowery of New York is wholly commendable, provided the building materials are of the proper qualities. But when these day dreamers propose to outwit straightforward dealing, and get by with insolence rather than integrity, or smartness rather than service, they stifle honorable character and action.

Make your day dreams, therefore, an incentive to right living and aggressive work, and they will pave the path to paradise for you. Center them on iniquitous desires, and they will pave the path to perdition. From first to last, ventures in the imaginative realm have to steer between two extremes, or mischief will ensue. In fact, the most distressing self-revelations I have to hear or read are those due to the abuse of this selfsame faculty of the mind.

The name of these poor souls is legion.

One of them, for example, is a young woman of oversanguine temperament whose letter revels in prospective wealth and everything that wealth can obtain. She cherishes almost pathetic delusions about herself, her accomplishments and her charms, expressing her supposed possession of these attractions in crude terms and with childish simplicity.

ANOTHER of her kind is badly bitten by the movies, and naïvely declares that their patrons are being robbed of her contribution to the screen by fat-witted producers blind to her exceptional gifts.

A boy of eighteen writes me no less than fourteen pages, in an almost illegible scrawl, minutely relating his phenomenal abilities. Born to be a millionaire and a merchant prince, he is consigned to the lot of a grocer's assistant. So he heartily damns his daily task and contends that it deprives him of his rightful opportunities.

The harm which lurks in these uncharted excursions into the unattainable can drift into a mental disease. Many a likable boy or girl, who plays fast and loose with life and flirts with the impossible, wastes shiftless hours watching his or her shadowy double dancing the wildest vagaries. It is a vice almost comparable to the drink habit in its braking power on the wheels of the individual's progress.

Yet there come to me by nearly every mail other letters which invest the dreariest routine with unusual interest and provoke the profoundest pity. Since one has to select out of this mass of correspondence its life documents, I venture to quote from an upstanding miner of twenty-five who has what Coleridge calls "the shaping spirit of the imagination."

Buried seven hours a day in an Illinois coal pit, this healthy specimen of genuine Americanism takes life seriously, and manages to squeeze its vital juice out of his own very restrictions. He has discovered for himself the unfamiliar fact that repression is (*Continued on page 162*)

S. Parkes Cadman

THE MAGNETIC personality and brilliant mind of Doctor Cadman have made him one of the world's best known preachers. Through his sermons from the pulpit, his radio talks, his lectures, and his syndicated newspaper "questions and answers" column, he has become a familiar religious institution. Doctor Cadman is pastor—and has been since 1901—of the Central Congregational Church, in Brooklyn; also he is president of the Federal Council of Churches of Christ in America. One of his greatest aids in his work is a phenomenal memory; he once told a friend that he read an encyclopedia through, and remembered every fact in it that he wished to remember.

William Hoskins

WILLIAM HOSKINS is a consulting, research, and analytical chemist. He has also taken occasional excursions into the manufacturing end of his profession. His discoveries, numbering over one hundred, range from special chalk for billiard cues, to the high-resistance wire used in electric heating appliances. As a hobby, he has kept records of hundreds of false scientific projects—projects which have caused hard-boiled business men to part with their capital and roped in thousands of "suckers."

Almost anybody, he says, may be taken off guard by a clever scientific fake. Mr. Hoskins is president of the Hoskins Process Development Company, of Chicago, and a member of many scientific societies.

Water has never yet been burned, but thousands of investors have been scorched because of the universal desire to get

Something *for* Nothing

WILLIAM HOSKINS, *distinguished chemist, tells in this interview with* NEIL M. CLARK *how scientific fakers have cashed in on the credulity of people who hope for quick riches*

THE scientific fake is a modern innovation that takes advantage of an ancient human trait—credulity. Some years ago a factory was set up in Chicago to make gold. In spite of the fact that the promoters declared they would sell no stock to the public shares were available, and two friends asked my opinion of them as an investment.

"Save your money," I advised; "there isn't a chance that the company will make any gold *for you!*"

But the advice came too late. They had already put in two thousand dollars.

A little later the "manufacturer" slipped out of town with some forty thousand dollars of sucker money.

A scientific fake may be defined as some product or process, supposedly the outcome of scientific research, that actually has no scientific foundation. Not all such fakes are frauds in the sense that the promoters mean to cheat. Honest but misguided promoters probably outnumber the deliberate cheaters. But the question of honesty or dishonesty makes no difference to the individual unlucky enough to buy the products or invest money—he loses, just the same.

For forty years and more, as a practicing chemist, I have come across literally thousands of these fakes. In my scrapbook are the descriptions of marvelous devices for burning water and ashes, for making electricity from sunshine, platinum from dirt; curing diseases in outlandish ways; making rain; locating minerals, oil, water, and buried treasure by "scientific" magic; making engines run with water and little else; taking gold out of the sea; bringing electricity from outer space at no cost; making fantastic uses of radio-activity, liquid air, electrons, and nearly every other modern discovery; and many more. On the whole, the contents form a meaty commentary on the gullibility of human nature.

Almost anybody may be taken off guard by a clever scientific fake. However, there are marks by which a careful man may usually recognize fakes.

Certain schemes as old as the hills keep cropping up in novel scientific guises and people should always be on guard against them. Few ideas, for example, have been tried oftener than the transmutation of

metals; that is, changing one element into another. Usually, some cheap ore or chemical is to be converted into gold or platinum. This is the problem the alchemists used to dabble at—and never solved. Recent discoveries in physics and in chemistry have given to the old idea new life.

The gold scheme in which my two friends invested was an elaborate fraud. The "inventor" leased a vacant factory and set up huge furnaces and vats, claiming that from material costing not more than one hundred and fifty dollars a ton he would produce ore containing gold and silver worth three thousand dollars per ton. Newspaper men and interested friends were allowed to view operations, the direct product of which was a gold ore, so called; some of the ore, when refined, was found to contain a high percentage of real gold.

However, one stage of this inventor's process required absolute secrecy and locked doors. "This," he said, "was for self-protection." The explanation would have sounded better were it not a fact that nine out of ten scientific fakers say the same thing. His actual reason was the need to introduce some real gold into the furnaces, in order that it might be found in the ore, and so entice people into purchasing stock.

SOMETHING vital left unexplained is almost invariably one mark of a fake. Indeed, it is a safe rule that *whenever there is something secret, which nobody but the inventor must know, nobody but the inventor should risk his money.* There are secrets, to be sure, in legitimate business and science. But they are far fewer than is commonly supposed.

Generally it is not so much *what* people are asked to believe, as *how* and *by* whom. This inventor's smart pretense of taking no partners naturally made dozens of people keen to buy shares. Here is another case:

A stranger, whom I will call Jones, settled in a small Connecticut city. Jones did no work, but apparently had plenty of money. He made a few friends, among them the teacher of geology in the local high school.

One day the teacher asked him pointedly about the source of his income.

"You wouldn't believe me if I told you," said Jones.

With evident reluctance, he permitted the following story to be drawn out:

"I am," he said, "a research chemist. By accident, I discovered the formula for a liquid that concentrates gold. I do not have to work for a living, because, whenever I need money I make up a batch of gold."

UNDER different circumstances, the teacher might have been skeptical. But Jones seemed to have become his friend in a perfectly natural way. Furthermore, he himself had literally plagued the man until he revealed the source of his income. Above all, his suspicions, if he had any, were lulled by a demonstration he witnessed.

"Yonder," said Jones, pointing to a row of glass jars in a private room, "you see all there is to it. The secret is the liquid I keep in there."

He dropped a gold coin into a jar and screwed on the cover.

"By tomorrow," he said, "that will concentrate quite a bit of new gold. The more I put in, the more it concentrates."

The two men left the room locked, and were together until they returned the following morning. They found the bottom of the jar covered with gold dust!

Enormously excited, the teacher soon broached a great idea. He was not rich, but had inherited enough to make him comfortably well-off.

"Let me," he said, "draw several thousand dollars at the bank. You take it and make a lot of gold; then we'll divide the proceeds and go to Europe for a high old time!"

Jones at first did not appear to care for the idea, but allowed himself to be persuaded.

"Of course," he said, "making all that gold will take more than one night. We'll have to wait a week."

The teacher did not mind this. He drew the money and (*Continued on page 84*)

Queer Kicks *about the* Movies

People are terribly touchy on a lot of things they see in the pictures, especially on the nationality of villains and the religious affiliations of any parsons who may appear in the play

By MARY B. MULLETT

MOVIE magnates have made fortunes. But if you are inclined to envy them, you can mix a little pity with your envy. For we who go to the movies keep these magnates on a mighty hot griddle of worry and uncertainty.

Twenty millions of us go to the pictures every day, in this country. At the same time, other millions in other countries are watching American films. Naturally, every producer would like to please every one of these millions of spectators. A noble ambition, to be sure; but a perfectly hopeless one.

For example, most movie stories must have a more or less villainous villain. Ten years ago it was as easy to provide a villain for our picture plays as to furnish a cereal for our breakfasts. But those good old days have forever gone beyond recall.

In Western films the villain used to be a Mexican or an Indian. He could be a Japanese, a Chinaman, a Frenchman, a "dago," a Yankee. During the war he just naturally was a German.

But how times have changed! Nowadays, show a villain of any specified nationality—and, presto! there is a loud howl of protest.

It comes not only from people in this country but also from the offended citizens of other countries. Even Governments sit up and take official notice.

CARTOONS BY ROLLIN KIRBY

Red men, black men, yellow men, and almost every variety of white men have declared that the movie villain must not be drawn from *their* ranks.

The army objects to furnishing him and so does the navy. He mustn't be described as a Catholic, a Protestant, a Jew, or even an atheist! Both the capitalists and the workers repudiate him. Yet we have to have a villain in every picture.

Apparently, the only way to avoid hurting anybody's feelings is to make the villain a man without country, religion, or occupation.

Somebody has suggested a synthetic villain: one that would be a little of everything and not much of anything. But probably he wouldn't be much of a villain either.

ANYWAY, this isn't the only subject on which people are touchy. They pounce upon a picture, a scene, or even a single title, which they think shows them in an unfavorable light.

Last November, the Spanish Government took offense at a certain American-made picture. The objection was to several scenes; especially one in which the supposed Governor of Barcelona was de-

Digitized by Google
Original from UNIVERSITY OF IOWA

picted as a drunken profligate, engaged in chasing women around a room.

This slur on Spanish officials was so deeply resented that the Government at Madrid forbade the showing of any films by the company which had produced this picture.

It was only when the American Embassy interceded with the Spanish Dictator, Primo de Rivera, that the ban was lifted. But the Americans were warned that they would be again barred out if they attempted to show another objectionable film.

In this case the protest seems to have been justified; but motion picture producers have received scores of far less reasonable complaints.

The queer thing about these protests is the fact that so many of them are absolutely contradictory; especially in regard to pictures dealing with religion.

You would be surprised to know how many Protestants write to motion-picture producers declaring that they "smell a plot" to denounce their faith and to favor the Catholics.

Curiously enough, however, the very same picture which has caused the Protestants to complain may bring letters from Catholics who assert that the films discriminate against *their* faith in favor of the Protestants!

Ministers of churches, and their members, protest against what they call the "misrepresentation" of the clergy. Yet the same picture which they cite as an offensive example will bring approving comments from other ministers and church members! No wonder the producer is bewildered.

I HAVE already referred to the difficulty of finding a villain who will hurt no one's feelings. But the situation at the other extreme is almost as bad: Nobody wants to be used as the *comic* element in a picture.

We all claim to have a sense of humor, but apparently we object to furnishing the laugh!

A typical example of this sensitiveness was the resentment roused by a certain Irish comedy.

It was no different from hundreds of similar comedies which have been produced on the speaking stage without bringing a single protest. Yet when it was shown on the screen, a society composed of Irish-Americans promptly took official action.

"Our people generally," the society declared, "will not tolerate exhibitions which grossly caricature and insult the Irish race."

In reply, it was patiently explained that picture producers don't want to insult *any* race. They couldn't afford to do it, even if they wanted to. But a picture must have comedy; and the comedy must be taken from life.

Sometimes the Englishman, with his monocle and side-whiskers, furnishes it. Which does not imply that all Englishmen wear monocles and sport Dundrearys. Sometimes the comic element is a Jewish peddler; yet not all Jews sell shoe strings from pushcarts. Sometimes it is the Yankee farmer; yet not all Americans are farmers; not all farmers are Yankees, and not all Yankee farmers are comic.

The Irish think it's all right if there's a funny Jew in a picture. The Jews find an Irish comedy entertaining, but harmless. The English smile at a joke on the Scotch, and the Scotch chuckle when they see an Englishman making himself absurd.

Every group has a sense of humor—as long as the laugh is on somebody else!

WHEN "Uncle Tom's Cabin" was to be filmed, the original story provided the "villain" in the person of Simon Legree, the cruel overseer.

Mrs. Stowe, writing before the Civil War, had made Legree a Southerner; which was then the natural thing to do. But for the producers of the screen version the matter was not so simple.

They were afraid that Southerners might object to Legree, claiming that he was a libel on their slave-owning ancestry. Yet as the film would be an expensive production the company couldn't afford to lose the South as part of the market.

They finally solved the problem by making Legree a Northerner. In the first place, they figured that the North, having won the Civil War, is not so sensitive about the dissensions of that period. Moreover, a Northern "slave-driver" could not be regarded as a Northern type, but as a freak exception.

And here is the amusing detail: At first, they thought of making Legree a native of Rhode Island. Not that they had any grudge against our smallest state! But simply because, since it *is* the smallest, there would be fewer people who might think their toes were being trod on. But evidently someone tipped them off that Rhode Island was small only in the geographic sense.

Finally, however, it was decided not to saddle the slave-driving Simon on any state at all. It seemed safer to have him come simply from the vastness and vagueness of "the North."

Which is just exactly what they did.

Some of the kicks directed against the movie goat seem absurd. And yet, if one takes the kicker's point of view, they are not altogether unreasonable.

Last October, for example, a producer who prided himself on having made a "bomb-proof" photo-play received a protesting letter from a firm which manufactures billiard tables.

"The disreputable pool halls shown in motion pictures," declared the writer of this letter, "are very far-fetched in our day and time. Any such unjust picturization of the billiard game today is naturally resented by billiard fans."

This protest deserved serious consideration; and it received it. But if a film story called for a scene in an old-time pool-room, it was found impossible to eliminate the billiard table, since that was then part of the equipment of such resorts.

Protests have been received from dentists who object to comedy scenes showing a patient writhing in a dental chair. They say it injures their business by suggesting that a visit to the dentist is a terrible ordeal. As to that—well, we all have our own opinion.

A motion picture, entitled "Oh! What a Nurse!" was advertised by a poster showing a burlesque figure wearing a nurse's cap. A vigorous protest was promptly and publicly made by an organization of trained nurses.

A picture which was said to expose magic stirred up the exponents of legerdemain.

"This film," they asserted, "does great harm and injustice to all magicians, both professional and amateur."

ALMOST the same day came another indignant outburst, this from a social welfare agency.

"We must protest," the usual beginning of such complaints, "against untrue scenes, in some motion pictures, presenting social workers as meddlers or heartless tyrants."

That sounded pretty bad; so the producer asked for the titles of the offending films. In reply, only a single picture was named. In that one, so it was alleged, "two hatchet-faced women" were described as "social settlement workers" and as "welfare workers."

At the request of the producer, representatives of eight social service organizations viewed the film which had stirred up this complaint. They thoroughly approved it as "good entertainment," merely recommending that certain words in three subtitles be changed. This was done. "Social workers" and "settlement workers" became "lady slummers" and "settlement slummers." And so the alleged stigma was removed.

While collecting this symposium of complaints, I began to wonder whether there is *anyone* who doesn't carry some sort of chip on his shoulder.

When Tempests Lash *the* Cradle *of the* Deep

By GEORGE W. GRAY

INTO the tumultuous blackness of a North Atlantic gale rasped the imploring radio call, Q R T, S O S. All along the storm-swept coast of Virginia and the Carolinas and far out to sea, radio operators shut off their dynamos and began to turn dials in search of the distressed vessel.

(Q R T, *quiet, everybody stop sending.* S O S, *a ship is in peril.*)

Feebly, the position of the endangered vessel began to come in. It was a schooner, the "Pioneer." Two of her crew had been washed overboard. The sea had smashed her foreboom, carried away her foremast rigging, and opened her seams. She was adrift south of Diamond Shoals.

Diamond Shoals, as every seaman knows, is the outpost of the most dreaded spot on the North American seaboard, Cape Hatteras. The ships that have broken on those shifting sands would rival in numbers the fleet of the Grand Armada, and the lives that have been swallowed up in its foaming waters would man a navy.

A disabled schooner caught in the tricky currents that swirl over and around the bars of Diamond Shoals would be out of luck, even on a fair night. In a gale it was in deadly danger. And this was a howling northeast gale.

Suddenly, another message began to spurt into the storm, a firm, powerful crackle in continental code: "The 'Manning' is proceeding to assist 'Pioneer.'"

You can imagine the sigh of relief that went up from hundreds of anxious listeners. All along the coast and among scores of vessels which picked up the message, a feeling of security uprose. For the "Manning" is as well known in those waters as old Hatteras herself—but with a far different reputation.

The "Manning" is the veteran cutter of the Coast Guard which bases at Norfolk, Virginia, a trim white cruising vessel of 200-foot length, with powerful engines, strong enough to pull ocean liners out of danger, and a stanch hull built to withstand high winds and heavy seas. Her

The U. S. Revenue Cutter "Manning" puts out in the teeth of the storm to the aid of any ship in distress

job is to look for trouble, to nose through fogs and storms for ships in distress, and to dare the very claws and teeth of the sea to rescue those in need.

LAUNCHED in East Boston in 1897, and christened after the Honorable Daniel Manning, who was Secretary of the Treasury under President Cleveland, the "Manning" is known as a "lucky ship." She has tried her luck in many parts of the world.

She has patrolled the ice floes of New England waters, navigated the stormy channels of the Straits of Magellan, battled through squalls off the Chilean coast, braved the fogs and gales of Bering Sea, scraped her bottom on hidden rocks in Prince William Sound, and left her name on the Alaskan map without leaving her hull in its icy waters, braved the Spanish guns at Santiago in 1898, and the German submarines in 1918—and through all this adventurous career her luck has lasted. A lucky ship? She needs to be, for courage and seamanship alone are not enough to match the wiles and treacheries of Hatteras.

Finding the "Pioneer" in that raging gale is itself an example of "Manning" luck. For hours she had to fight every foot of her way through seas that loomed mast-high. Her propeller alternately churned angry water and fanned the shrieking air, as she rolled and swung through the mountainous furrows. To the men on the bridge the whole universe seemed a confusion of two hells—the white foaming hell of infuriated waters and the black booming hell of rushing winds. In the bos'n's expressive phrase, "It was blowing great guns." The gusts exploded overhead like invisible bombs. The radio crackled, searching for the lost ship. And up in the pilot house eyes strained through the purple blackness, trying to sight some light, some shape, some sign from the vast howling immensity.

At last a light glimmered in the southeast. A steamship, laboring through the tempest. Again the radio sizzled its inquiry, but the ether is a tricky medium; sometimes it lets in distant calls at the very moment it smothers the nearby signal. The "Manning" pushed on toward the steamer, her decks awash most of the time, with now and then spray breaking over the bridge.

"Did you see that light!" exclaimed Captain Alger in the pilot house, and all eyes strained forward. "Just off the port side—a dim flash. Seemed a little astern of the steamer."

The navigating officer, on the bridge, was doubtful.

But the skipper knew that he had seen a gleam outside.

"Throw on the searchlight," he ordered, and presently a long arm of light reached out from the "Manning." Like a vast gesture of command it swept the ocean, penetrating the dark, cavernous troughs of the sea, pushing here and there, restless, vibrant, dauntless, in spite of the ceaseless roll of the ship and the thunderous shock that shook her every time the sea hit her.

"There," said the captain, looking through his binoculars. And there, a quarter of a mile behind the steamer, was something. To my eye or yours it would seem only a deeper shadow on the darkness of the waters; but the trained eyes of the mariners identified it at once as a schooner.

NOW the radio began to stutter again, and this time the ether was obliging. The steamer said she was the "Katonia," bound for New York, with the disabled "Pioneer" in tow.

"But your hawser has parted," said the "Manning."

Unknown to those on the steamer, the tow line had broken. The "Pioneer" was adrift, sweeping toward the shoals.

UNIVERSITY OF IOWA

After making sure that the cutter assumed responsibility for the helpless schooner, the steamer proceeded on her way. Then began the difficult task of getting a hawser from the "Manning" to the "Pioneer."

So simple a feat as drawing alongside and tossing a line is unthinkable—the danger of smashing hull against hull is too great. The usual method is to shoot a line with a gun.

But even the most expert marksman is badly handicapped when both he and his target are bobbing up and down with the gigantic seesaw of a whole northeast gale, with decks ceaselessly swinging through an angle of ninety degrees, and awash with tons of water.

"There's more'n one way to turn the trick," said the gunner of the "Manning." "When we'd tried shooting, and lost out three times, we tried buoying."

IN BUOYING, the end of the line was tied to a buoy and thrown into the sea. Then the "Manning," dragging the line astern, swept around the schooner in a wide half-circle, and the tow and the drift of the current combined carried the line to the "Pioneer." Picking it up out of the sea was back-breaking work. Again and again the "Pioneer's" grapnels took hold, only to lose it. Finally, the line held and was caught by strong hands. Then the schooner men began to pull it aboard, dragging in two hundred and fifty feet of line to bring the eight-inch hawser that was to link the "Pioneer" to her rescuer.

During all these hours of struggle, wind and sea and current had not been idle for a single second. When at last the hawser was fast, the schooner lay only ten miles off Hatteras, and the shoals were scarce a mile away.

Slowly the "Manning" began her long haul from the danger zone. The powerful machinery throbbed confidence and strength, the cutter pushed her way northward into the face of the wind, the hawser tightened, obediently the dripping schooner followed behind. And then, a blessed peace took possession of the remnant of her crew. Tired sailormen, who had had no rest for days, while they fought shrieking death every hour of the time, turned in for rest. Port was assured.

The "Manning" can make fifteen knots an hour under favorable conditions—in her youth she was known to make eighteen; but it took more than a day to tow this maimed seabird the one hundred and seven miles to the safety of Lynnhaven Roads. There, the "Pioneer," streaked with salt, was left to rest a bit before the tugs came for her. The "Manning" proceeded on to her own berth in Norfolk Harbor. She had her coating of salt too, a reminder of the closeness of her struggle with the sea.

I have reported this "assistance"—as it is called officially—in detail; not because it is exceptional but because it is typical. The "Manning's" life is made up of such incidents. Indeed, they are part of the routine of any Coast Guard cutter; but, because of her longer service, the log of the "Manning" is more crowded with rescues than that of most ships. This March gale is only one of hundreds of gales which the "Manning" has pushed into, to save life and property; and the "Pioneer" is but one of hundreds of vessels that the veteran cutter has brought safely into harbor after a bitter tussle with the sea.

NOT every tussle is so fortunate. There was the case of the "Virginia," a Cuban schooner which left Havana on November 27th, 1919, with a cargo of molasses for New York. Off Jupiter Light, on the Florida coast, a storm hit her, and for the next fortnight she fought her way up the coast in a succession of gales, to meet her hardest blow off the tip of old Hatteras. Her sails were torn to shreds, and she was reported in a helpless condition when the "Manning" got first word and set out to the rescue.

"It was eight-thirty at night when we unmoored and stood to sea," said Captain William J. Wheeler, who was in command that winter. "At nine o'clock next morning we arrived at the estimated position of the schooner. Nothing was in sight, and we immediately began a systematic search, broadcasting inquiries by radio every few minutes.

"This kept up al' that day and through the night and next morning, and it was three o'clock in the afternoon before we got direct word of the wreck. Then we spoke the steamship 'Chicomico,' which reported by radio that she had the 'Virginia' in tow. She said the schooner's sails were blown away; but the hull was all right, and she (*Continued on page 186*)

How I Lost Money Trying to Get Rich

A hard-headed business man tells frankly of his financial follies when he set out to beat the game and make money in side lines he knew nothing about, and in schemes which promised quick returns

RIDING down to the office one day last year I came across this item in the morning paper:

$128,000 All N. G.
Courthouse Employee Leaves Prize Collection of Worthless Stocks

Charles F. Jones, for more than thirty years a clerk at the county courthouse, boasted to his fellow employees that he would die a millionaire. The examination of his papers yesterday showed that he did not leave enough to bury him, and a collection is being taken up by his associates to provide a simple funeral.

The assortment of worthless securities which was found among his effects was said to be the prize exhibit of all time. More than 106 different stocks were represented, in amounts varying from $100 to $2,000. The extraordinary thing was that out of 106 chances Mr. Jones did not pick a single winner. The whole collection of green and gold certificates with a face value of $128,000 was not worth fifty cents in the market.

A drab incident, one of the thousand bits of pathos that float through every week's papers. You can picture the hard-working little clerk in his shabby bedroom. It is Saturday night. He has received his week's wage of, let us say, $30. He has paid six dollars for the next week's rent and set aside fifteen dollars for food.

He lives near the office in order to save car fare. His clothes are shabby, and he shines his own shoes. A very bitter existence, you will say, but it has its reward.

With shining eyes he unlocks a drawer in his desk and pulls out his treasures. Lovingly he fingers the hundred shares of the oil stock that will be paying him a hundred dollars a month—when oil is struck! And the fake mining stocks. And the stock in the company that will manufacture an appliance to be screwed onto every automobile.

He has cash in the drawer as well as certificates. He adds fifteen dollars to the roll and counts it lovingly; more than a hundred dollars, enough for another investment. With a happy smile he turns to his mail and tears open one long envelope after another: nice big letters from every city; friendly letters from men of importance who have heard about him as an investor and who are willing to take him in along with them on the ground floor.

Shall we pity him? Perhaps he would have scorned our pity. Possibly the hours that he spent in imagination as a millionaire—scattering the dividends from his mines and wells and real estate—were happier than any hours of realization could have been. No one of us can know the whole secret of another's heart. . . . Still, the picture of the poor little fellow haunted me.

I CLIPPED out the brief story, and when I reached my desk I had my secretary copy it and send it around the office. I attached a memorandum saying that this man's experience ought to interest those who were saving money, and that if any of our people desired to talk with me about their investments I should be glad to have them come to my office.

Two people came. One was our vice president in charge of production. He had heard that a certain company was about to declare a stock dividend, and he asked me to call up one of the directors and verify the rumor. The other was a stenographer who is helping support her mother out of her $33 a week and managing, heaven knows how, to build up a savings account besides.

Two folks out of more than two hundred thought enough of the old man's judgment to consult him. I was surprised and a little hurt, though I know now that I ought not to have been. Few people are willing to talk freely about their investments. And hardly anyone is so inexperienced or so unsuccessful that he does not cling to the belief that heaven has given him a special gift for picking winners in the stock market. It sometimes seems as though each generation learns only by repeating the mistakes of its predecessors. Here am I, the president of a company, knowing perfectly well that I could save my young people a lot of loss and pain if they would come to me frankly and let me help them. Yet they will not—any more than I would listen to the advice of older men when I was making my financial mistakes. Yet the advice which I could give is not cheap advice. I have paid for it at a cost of many thousands of dollars.

IN a private corner of my safe I keep a little locked box, my chamber of horrors. It holds the records of my folly—the children of greed, offspring of the too-eager desire to beat the game, to get rich overnight. Not a single certificate in it is any good, and yet I am supposed to be a hard-headed business man. Perhaps, even though my own young people will not listen to me, there may be others who will. Perhaps it will be worth while to open the box and tell frankly the story of some of these sad investments.

My first stock investment was in a company making a marvelous new slot machine that was to go into railroad stations and public parks and sell everything a traveler might need, from a pocket comb to a change of underwear. The device was ingenious, but not half so clever as the statistics which had been assembled around it. These pointed out how many million people needed their hair combed every day and how, if only one per cent of these patronized us, the revenue would run into hundreds of thousands of dollars. And so on and so on. Of course the railroads and the parks would not allow the machines to be installed, and of course the few that were set up never did any business, and I lost (*Continued on page 105*)

Remember:

All That Glitters Isn't Gilt-Edged

"MONEY is hard to get," says the author of this article. "Don't fool yourself that people just stumble on it, or that the rich man isn't, in most instances, a smart man.

"It takes an awful lot of money, patience, and good management to start a new enterprise and make it successful.

"Don't be misled by glittering new things—only one in a thousand succeeds.

"The established enterprises in a rich and fast-growing country are bound to appreciate in value.

"Hitch your financial wagon to some of these brightest stars and then forget that you have done so."

As the TWIG is Bent

The story of a father who was willing to give more than his life for his son

By OCTAVUS ROY COHEN

Illustrated by
GEORGE BREHM

THE lean, ascetic face of Jim Hanvey's visitor was marked with deep lines of worry. It was a fine, intelligent face, the face of a gentleman and a man of culture.

Roger Steele was blessed with a figure tall and lithe and graceful. His shoulders were broad and his waist slender. He had the body of an athlete, and only the stern face and the iron-gray hair above it gave a hint of middle age.

He walked to the window, where he stood silent, his form silhouetted against the deep red glow of late afternoon. His body was bent slightly at the waist. Hands were clasped behind his back and his lips were set in a grim straight line. Once he raised his eyes and scrutinized the enormous figure which wallowed in the easy chair.

Jim Hanvey was everything that Roger Steele was not. He was a man of gigantic proportions whose figure lacked any hint of symmetry. His head was over-large and supported by a column of chins. Ready-made clothes hung loosely on the huge figure, and his round, moon-like face seemed hopelessly to lack any reflection of intelligence.

Yet the bond between these men was based upon mutual respect. Each paid wholesome and unreserved tribute to the other. Jim knew that Roger Steele was the outstanding gentleman crook of America. Steele understood that Hanvey was preëminently the foremost detective in the country. One was immaculate, the other slovenly; one was dynamic, the other lethargic. A queer pair: hunter and hunted—sincerely fond of each other.

Knowing Hanvey less well, Roger Steele might have been annoyed. Hanvey appeared to be asleep. His colorless eyes were half closed. Fat fingers fumbled with a golden toothpick which dangled from a huge watch chain. Hanvey neither spoke nor moved. It was only when Steele left the window and seated himself on the edge of a chair that the detective produced from his breast pocket a thin black cigar. He lighted this with scrupulous care and puffed luxuriously. Steele winced as the vile odor of bad tobacco assailed his nostrils. But he did not make the usual caustic comment.

Instead, he leaned forward and bored Hanvey with his keen gray eyes.

"Jim," he said, "I'm in trouble."

Hanvey blinked with exasperating slowness.

"Gosh! I'm sorry to hear that, Roger."

"I have come to you for help."

"You know I'll be glad . . . provided it ain't the police."

"It's not about myself, Jim. I give you my word on that. I've had too much on my mind to run foul of the law recently." Steele lighted a cigarette. "Mind if I start at the beginning, Jim?"

"That's usually an awful good place to commence, Roger. Shoot!"

Obviously, Steele did not find the task simple. Usually at ease, his manner now was constrained. He bit his lip—then spoke swiftly:

"You've known me a long time, Jim. You know what I've been and what I am. No need to rehash. I've swindled and cheated and lied and stolen . . . always like a gentleman. I've made a living playing with marked cards for high stakes. I've engineered fraudulent promotions. I've been rotten all the way through. I—"

"Aw! Say, Roger. You ain't got any right pannin' yourself that-away. You're a fine feller . . . with a sort of twist."

"That's it," interrupted Steele harshly. "A twist! The appearance and education of a gentleman and the psychological complex of a dirty thief. I've always had that, Jim, ever since I was a kid. I can thank my brain for keeping out of jail. I'm not holding anything back. I want you to understand at the outset that I haven't a redeeming trait."

"You're a good friend, Roger. I know that myself."

THE long, slender fingers of the other man were clenched.

"Once in my life, Jim Hanvey, I was straight. That was long before you knew me. It was then that I went through the only clean, decent phase of my life."

He drew a long breath and hesitated a moment, as though abashed by his own emotion. Hanvey had not moved; once again it seemed as though he were slumbering.

"There was a girl, Jim." Hanvey detected a slight break in the man's voice. "We went through the university together. She was—well, anyway, I was in love with her: so much in love that I forgot all the crooked instincts which had been eating my soul. We married the day after graduation. We were . . . we were very happy."

The voice stopped. Hanvey toyed with the golden toothpick, silently waiting for his friend to continue.

"I took a job. Twenty-five dollars a week. We lived on the money. A two-room apartment. No friends—we were sufficient unto each other. It was hard sledding, but worth it. Eighteen months after our marriage . . . my son was born." Steele's face twisted. "She died!"

The detective looked away. It was not pleasant to watch the suffering of a strong man.

"RIGHT after that, Jim, I took my first crooked step. Nothing mattered then, it seemed, and all my instinct was toward the rose path. Besides, there was the boy to consider. . . .

"I needed money for him. The love I had borne my wife was transferred to Ted. All of that love, plus the love which a father has for his first-born. He had a trained nurse, and then, as he grew older, there were private schools. By that time I was successful . . . as you have known me. I don't want you to think that I'm claiming I went wrong for the boy's sake. I did it because it was in me; that's all.

"But I saw my problem developing. I knew that Ted must never know the truth about me. He was a fine boy, Jim, even as a youngster. But I knew his heritage, and I was afraid of it. When he was out of school, I made myself his buddy. We played around together. I tried to instill in him every idea of honor and decency which I had discarded. I wanted my son to be straight and clean. But, most of all I wished to revere, in him, the memory of the only woman I ever loved—to keep alive the only thoroughly decent thing in my life. Do you understand, Jim?"

The detective nodded heavily. "Yes, Roger, I understand."

"Ted always thought of me as a man of leisure. I taught him to believe that I possessed modestly ample means. I gave him everything he could wish for, within reason. I was careful not to spoil him. I didn't allow him to become accustomed to luxuries, because I was afraid that the craving for them might injure him in later years. As he grew older, I became more and more haunted by the ghastly fear that he would learn about me. You can see what that would have meant. . . . I guess you can't understand the love I have for the lad, Jim. You're not a father . . ."

"I can imagine things, can't I, Roger?"

"I believe you can. Anyway, I stayed

Digitized by Google
Original from
UNIVERSITY OF IOWA

with the boy as much as I could; it was man and man, not exactly father and son. I taught him to look up to me. It wasn't always easy to face the honest, trusting look in his eyes."

STEELE'S face was grim. "For once in my life, Jim Hanvey, I'm talking sentiment. You're the first man who has heard anything like this from me, and I hope you'll be the last. It's been bottled up inside—and I had to let loose.

"To continue: Ted and I went hunting in the winter when he was on vacation from college. In the summer we went into the Rockies, or sometimes to Europe. Then, when he graduated, I had a plain talk with him. I explained that he must provide for himself. You see, Jim, I didn't want him to think that life was easy. I wanted him to appreciate money. So I was delighted when he took a job in a broker's office in New York. They started him off at fifty dollars a week. For two years, Jim, I have been a very proud man. And then—just a week ago—the blow fell!"

His voice stopped. Abruptly. Hanvey's bulbous head moved slowly from side to side.

"What blow, Roger?"

The lean, handsome face of the professional was raised.

"Jim," he said hoarsely, "my boy has gone crooked!"

Jim's hands dropped limply into his lap. He wanted to express his deep sympathy, but all he could say was, "Gosh!"

"He's gone crooked, Jim. How far, I don't know. But he's on the road—and I didn't discover it until too late. That's why I've come to you." Steele rose nervously. "You've got to help me, Jim. You've got to keep my boy straight. It isn't too late. It is only by a miracle, Jim, that I'm not in prison now for murder. That was the impulse I had when I heard who Ted had gotten in with."

"Who?" inquired the detective.

"Rip Hanlon and Barney Lane."

Hanvey inbreathed audibly. No further explanation was needed. He knew Hanlon and Lane: keen, unscrupulous crooks who hated Roger Steele and were, in turn, hated by him. If they had their hands on Steele's son—Jim pursed his lips sympathetically.

"They hooked him, eh?"

"Yes. When I heard it, I started packing. I was going to New York and kill them both. Then I saw that I'd simply be making a fool of myself. Nothing would be accomplished. It isn't that I care for myself, you know that, Jim. I'd give my life for that boy. But the important thing is to keep him straight."

"H'm! Not so nice, Roger. Of course you know I'll help. But Rip Hanlon and Barney Lane are the fair-haired boys when it comes to bein' slick. If they've hooked the kid, you can lay your bottom dollar that they've hog-tied him and are in the clear themselves. They're hitting at you, of course."

"Yes," said Roger Steele dully. "But that isn't the important thing. I can forget my feud with them. The thing that's driving me crazy, Jim, is this: Ted has a heritage of rottenness. He gets it from me. I've tried to educate it out of him . . . but it's there. He has brain. He has a softness of manner I never had. And he has courage. He would make a successful crook, Jim; that's the horrible thought."

"I understand. About Rip—What's his racket?"

"FAKE stock." Steele was speaking crisply. "You know a large proportion of our emeralds come from South America. Colombia. Lots of money has been made by investors in emerald mines. Good enough. Ted organized a company, Tropical Emerald. He is president, and there are two dummy incorporators—stenographers in the office. They own a tract of worthless land in Colombia. They've issued glorious prospectuses with pictures of the mines and all that sort of stuff. It's full of figures about how much money has been made from Colombian emerald mines. Trouble is, they have no mines and no emeralds.

"But the stock-selling is a cinch. There's romance in it, and the prospect of quick and enormous riches. The stock is going to be listed on a wildcat, outlaw exchange, one of those fungus exchanges which exist by duping the ignorant investor. They're going to put it on the market at a dollar a share and manipulate it up. Then, when the crash comes—Ted's holding the bag all by himself. It'll be jail for him. And after that—"

"Sure. . . . But about Rip and Barney?"

"THEY'RE out of the picture. Their names don't appear. Not even on the books of the company."

"And Ted fell for that?"

"No," snapped Roger Steele. "He didn't. He knew it was crooked. That's what frightens me. Jim, I'm desperate. The boy has got to be scared out of this. He's got to be given a shock that will do what my education and training have

Hanvey blinked slowly. "I won't even try appealing to the decent side of you fellows," he murmured, "because rats haven't got any decent side."

Digitized by Google Original from UNIVERSITY OF IOWA

never been able to accomplish. If he gets caught and goes to jail, it will be horrible. If he makes money on this thing and goes scot-free, it will be even worse. Can't you see what I'm up against? And can't you understand that I've got to have your help? If I talked to those men, I'd kill them. Or they—they'd tell Ted the truth about me."

He turned away and pretended to busy himself with a cigarette. But Jim understood. He hoisted himself to his feet and waddled alongside his friend. One fat hand was dropped affectionately on a shoulder which had bent under this blow.

"I don't know what I'll be able to do, Roger. Those two babies are slick, awful slick. But tonight you and me are gonna hop the rattler and beat it for New York. And I'm gonna bust a suspender tryin' to straighten the lad out."

Steele did not speak. He merely wrapped powerful fingers around Jim's flabby wrist and gave a pressure which made the detective wince.

TWO days later they were in New York. Roger telephoned his son at the office of Tropical Emerald, Incorporated. Jim stood close beside him and sounded a warning:

"Play dumb, Roger. Don't give the lad a hint."

The father nodded. Then his voice softened, grew gentle as a woman's, as he spoke to his son. Would the lad join them at dinner in the hotel that night? Yes. . . . At eight o'clock.

They were in the lobby when the boy arrived. Hanvey had spoken briefly to the father: "Let him do what talking is done about this stuff, Roger. Of course you'll ask him what he's doing; but don't be too interested. You savvy?"

"Yes."

Hanvey recognized the lad when he was half a lobby away. He knew that this was Steele's son, and he knew in a flash why Roger Steele worshiped him.

The boy was tall as his father and as broad. He had his father's clear-cut features and his level, gray eyes; but he had a softness, a gentleness, which his father had never possessed. Father and son placed their hands on each other's shoulders.

"Dad!"

"Son!"

Then Steele turned. "This is a friend of mine, son. Mr. Hanvey, this is Ted."

Socially trained, Ted did not betray the shock occasioned by Hanvey's grotesque appearance. Jim felt his hand gripped in a strong pressure, and discovered that he couldn't help liking the lad. His first thought was that Ted was dangerously attractive. Too attractive for his own good. They talked generally, and it was Roger Steele who shifted the subject to the boy's new business. Jim applauded his coolness. He would have sworn that Roger knew nothing—and feared nothing.

"What's this new job of yours, son? It sounds terribly impressive."

Jim saw the lad flush, but his answer was ready:

"Some friends of mine discovered a big deposit of emeralds in Colombia, Dad. They bought the land and we organized a company to exploit it. I think we're going to make a lot of money."

Roger Steele looked away. The boy was so frank, so naïve—Steele was horribly afraid that already Ted had advanced far along the wrong path. The boy talked more of his prospects. He spoke with sincerity and enthusiasm, just as he would have spoken to a would-be buyer of stock in Tropical Emerald. Of course he presumed that his father knew nothing about such things, and would never suspect; and Jim's sympathies went out to the older man.

After dinner it was easier, and later they went to a musical show, and it was nearly midnight before they separated. Back in the hotel Roger Steele turned a haggard face toward his ponderous friend.

"You see, Jim, the lad has it in him. He could sell stock to anyone. That is the curse of it: he'll either land in jail or be successful in this enterprise. I hardly know which would be worse."

The following morning Hanvey did a little investigating. He located Rip Hanlon and Barney Lane in an apartment hotel in the Eighties.

They were a chubby, cheerful pair of criminals. One would have taken them to be successful business men and avid members of luncheon clubs—nice, respectable family men with never a thought in the world beyond their offices and the verandas of their homes.

As Hanvey entered the apartment, their eyes met for the fraction of an instant. It was a searching, warning glance. Then they turned beaming faces upon their visitor, as though he was the one person in the world whom they were most delighted to welcome.

"If it isn't my old friend, Jim Hanvey! Well, well, well! Have a seat, Jim, and make yourself comfortable. No—we won't smoke one of your rotten cigars; but you can if you wish." They bustled about, quizzing him about himself. He grinned, settled himself in a chair, lighted a black cigar, and stretched.

"How's everything, boys?"

"Fine, Jim. I might almost say, great!"

"And Tropical Emerald?"

Again that lightning flash of warning from Rip to Barney.

"What's that, Jim?"

"How's Tropical Emerald getting along?"

Rip Hanlon scratched his partly bald head. "What is Tropical Emerald, Jim?"

Hanvey chuckled. "Same cagy birds, ain't you? You wouldn't admit anything even if you knew I knew it, would you?"

"Aw now, Jim. That ain't fair. You know good and well we wouldn't think of concealing anything from you. We're a pair of respectable, honest men."

"YOU'RE lucky," drawled Jim, "that you're not both dead men right now."

Barney Lane frowned. "How's that, Jim?"

"Because Roger Steele first thought of killing you. Ain't you boys got any better sense than to stir up that sort of hornet's nest? When Steele gets going, he's poison—and you know it."

The cherubic expressions had fled from the faces of the two men. They were grim and hard.

"We don't like Steele, Jim. More than that: we're not scared of him."

"You better be. You've touched him in a mighty vulnerable spot."

"The kid?" They had thrown pretense aside. They saw that Jim knew facts. 'Listen here, Jim, that youngster is a natural wonder. It's just our good luck that he's on the right side of the fence."

"And the fact that you hate his dad didn't have anything to do with it?"

Rip Hanlon stepped directly in front of the detective. His eyes narrowed to pin points.

"There's no use lying to you, Jim. It did! Now—what about it?"

Hanvey's voice was still drawly. He spoke with perfect good nature.

"You boys couldn't have managed to think of a lower-down, rottener, meaner, filthier trick, could you?"

Barney's face flushed; Rip turned purple. His fists clenched.

"Now, listen here, Hanvey—"

"I'll listen to nothing more right now from you two worms." Hanvey had not moved, his voice had not been raised, but it contained a dangerous note. "I don't often get mad, but I'm mad now. I'm plumb sore! You two ain't fitten to be crooks. You belong down in the gutter. Just 'cause you hate the old man, and ain't got the guts to hit straight at him, you set out to ruin the boy's life!"

"Aw! Quit shooting off your mouth. I'm sick and tired of it." Barney Lane leaned closer to the detective. "Suppose you take a look at the records of Tropical Emerald before you start yelling. Our names don't figure in it. Nothing but Ted Steele and a couple of dummies. And if you try to make any trouble we'll tell the kid about his old man."

"And get killed for your trouble."

"A fat lot we're afraid of Steele! He makes me sick—posing around as a gentleman."

HANVEY blinked slowly. "I won't even try appealing to the decent side of you fellows," he murmured, "because rats haven't got any decent side. I'm just asking you: What are you going to make out of this?"

"We square accounts with Roger Steele, in the first place. We've always sworn we would. And, in the second, if you must know, we aren't planning to slough his kid. He's all right, and maybe we'll make him a high-class crook some day. We've got things fixed so he'll come through this all right. Of course if things should go wrong—he'll be the goat."

"In other words, you fellows are safe, and he'll either be in jail, or a successful criminal. Is that it?"

"Precisely. And no better than his high-hat father!"

Jim shuddered. "I never knew there could be nothin' as low as you two fellers," he commented.

"Well, what of it? We're laying our cards on the table. And, no matter how slick you are, there ain't a thing you can do about it. We ain't going to budge. Look over our books if you want. We're in the clear. The minute the kid sells one share of stock, he's in so deep he'll never get out. Everything's set. The stock will go on sale to the public in the next few days. And let me say one more thing, Hanvey—you're a fat nuisance, and we don't want to be bothered with you any more. We know what we're doing and we intend to see it through. We don't want you butting in."

"No-o. I reckon not. I'll hand you

Feeling very ill at ease, Ted seated himself and stared first at Hanvey and then at his father

boys this much—you've kept yourself nicely in the clear. But I'll say this for your information: I don't like either of you."

Rip Hanlon gave a short, harsh laugh.

"Scare a guy like Steele with that sort of hooey," he invited. "We're no amateurs!"

Hanvey rose and swayed toward the door. There he turned.

"I'm going back to my hotel, boys. After sittin' here with you fellers I feel like I need a bath."

The door closed behind him, shutting out their sarcastic farewells.

JIM HANVEY was angry. More than that: he was worried. He was of a deeply sentimental nature and the immediate prospect horrified him.

He was fond of Roger Steele and he liked Steele's son. A fine, upstanding lad who had inherited a cloven hoof. He understood Rip Hanlon and Barney Lane too well. They were not planning to double-cross Ted Steele into jail. Not a bit of it. They expected Tropical Emerald to be a success. But things were framed so that if there should happen to be an explosion, Ted would be the sole victim.

Roger Steele was in the hotel room when Hanvey arrived. He seemed to have aged in the brief span of Hanvey's absence. He turned hopefully toward the detective, and winced as the prodigious head waggled negatively.

"Nothing stirring, Roger. They're hard-boiled as a pair of twenty-minute eggs."

Steele bit his lip, but kept himself under excellent control.

"Give me the layout, Jim."

Hanvey spoke deliberately, selecting his words with care so as to cause the father the least misery. When he was finished Steele looked up:

"They've got Ted bound and gagged, haven't they?"

"Yes."

"And of course he knew the thing wasn't on the level."

Jim flushed. "I believe so, Roger."

"Of course he did. That's what scares me. He's got the wrong stuff in him. He inherits it from me—and it's up to me to save him." He hesitated a moment "The question is—how?"

"Uh-huh. . . . Of course—no violence"

"No. Not now, at any rate. It would be easy, but it wouldn't do any good."

Roger Steele rose and paced the room. Hanvey watched him sympathetically. At length he turned and his eyes sought those of his detective friend.

"We're thinking the same thing, aren't we, Jim?"

"I reckon so, Roger."

"There's nothing else to do?"

"I wish I thought there was. . . ." Jim hesitated. "The kid is crazy about you."

"I think so. And you never can know how I feel toward him. He's wife and son and—and everything—rolled into one. That's why I've got to buck it through. But it isn't going to be easy, Jim. God knows it isn't."

THERE was nothing Hanvey could say. He felt as though he were talking to a man who was planning to commit suicide. About Roger Steele there was that air of inescapable disaster. He had reached the end of his rope. The hopes and ambitions of a lifetime were to be crushed; the most wonderful thing in his life was to be smashed.

Jim Hanvey knew what Steele meant. The great criminal was going to tell the truth to his son.

Steele walked to the telephone and called the office of Tropical Emerald. He winced with pain as the bright, cheery voice of his idolized son came back to him through the receiver.

"I've got to see you right away, Ted. Down here at the hotel. It's mighty important."

"But, Dad—"

"Come right away, won't you, son? You know I wouldn't insist if it was anything which could wait."

He turned away from the 'phone. He was pitifully old. "He's coming now, Jim. I wonder if you'd mind sitting through this with me?"

HANVEY crossed the room to his friend and held out his hand.

"On one condition, Roger."

"What is that?"

"No violence. To those other fellers—or yourself."

Steele hesitated, then nodded.

"All right; you have my word."

Then they fell silent. Jim was reminded of a grim experience out of his past when he had remained all night in the cell of a man who was to die the next morning. Except that this was worse than a death sentence to Roger Steele.

The lad arrived at the hotel. He breezed into the room and smiled greetings to them both. Then he frowned.

"What's this?" he inquired lightly. "Looks as though I'd stepped into a funeral."

Steele did not look up.

"Sit down, son."

The lad was disturbed and deeply impressed. Feeling very ill at ease, he seated himself and stared first at Hanvey and then at his father. Roger Steele's voice came slowly. His words were clear and close-clipped; his tone colorless.

"I want you to listen until I finish, Ted. No interruptions, please, because this is going to be hard enough anyway."

He drew a long breath.

"Son, you're in trouble. You don't know it, but I do. I know all about Tropical Emerald . . . and, what's worse, I know that you know. You know it's crooked. You (*Continued on page 177*)

Alligator Tales

ONE day in March Charles Livingston Bull and I were paddling in a small punt up Coming Tee Lagoon. Spring was somewhat late in the Carolina plantation country. The cypresses around the edges of the lagoon were putting on their feathery foliage, the sweet gums were a brilliant green, golden jessamine glimmered on the margins of the swamps. We were looking for water-turkeys, yellow-crowned night herons, and any other interesting forms of wild life that might show themselves. Suddenly Bull, who was in the bow of the punt, called my attention to a movement in the water close to the right-hand shore, perhaps a quarter of a mile ahead of us. Evidently some large animal was putting out from the bank, and we knew at once what the animal was—a big alligator.

We wanted to get a good look at it, but the situation required strategy. We paddled on slowly for some minutes, then headed the punt toward the shore some three hundred yards from the point where we had seen the movement in the water. As the boat's bow touched the bank, Bull stepped out in the shadow of the cypresses. I was about to follow him, when, happening to turn my head, I saw an astonishing spectacle.

Through a floating field of lily pads and other aquatic plants, a hundred yards or so away on the surface of the lagoon, a large alligator was rushing straight toward us. He was coming about as fast as a hungry alligator can travel, which is pretty fast. As he charged through the lily pads, tossing them aside, his great black head and five or six feet of his jagged back showing above the surface, he was a sight to make any man open his eyes.

The punt had now drifted some yards out from the shore, and for a moment or two I wished that I was on the bank with Bull. I had no weapon, and I realized in a flash that this black dragon of the waters was amply big enough to smash the little boat with a blow of his powerful tail and crunch my bones with his massive tusk-studded jaws.

THE thought passed as quickly as it came —after all, I had enjoyed a fairly long acquaintance with gators—and I sat perfectly still in the punt, watching the monster come on. He was not a gator of the largest size, but the nearer he got to me the bigger he looked. His nine or ten feet of armored, plated body appeared to me not less than eighteen, and his grotesque black head with raised periscope eyes and nostrils seemed as huge as the head of a hippopotamus.

Through the floating lily pads and into the open water nearer at hand the dragon surged onward at full speed, still heading straight for me and evidently determined to have my blood. As has happened so often in history, it was a woman who rang the curtain down upon the drama.

Our wives had been following us up the lagoon in another punt. They had dropped far behind, but now they were near enough to see what was happening; and seeing this gator charging me in the punt, and thinking that I was unaware of his approach, my wife began to shout somewhat excited warnings to me. I shook my head to quiet her, and the gator, spotting the movement instantly, sank like a submerging submarine beneath the waters.

This was an interesting little adventure because it illustrated in an unusually dramatic way a phase of alligator life that is little known. I was never in the slightest danger, of course. Alligators do not attack human beings unless brought to

bay or unless they are cut off from some nearby body of water which they are trying to reach.

This alligator had not the slightest suspicion that he was charging a man. Lying far out in the lagoon, with only his eyes and nostrils showing, he saw the punt against the bank and detected some movement in it perhaps as Bull stepped ashore. Undoubtedly he believed that this unfamiliar object at the waterside was a woods-ranging hog, and, being in all likelihood very hungry after his long winter fast, he charged the punt recklessly without stopping to investigate.

Probably many an adventurous youngster has felt from time to time that much of the romance of country life disappeared when all the large wild animals that preyed on the farmer's live stock were killed off. It must have been thrilling to be a farmer in those times when any night might bring a raid on the hogs or cattle by a panther or a big black bear.

That is one reason why the alligator is to me a creature of extraordinary interest. It brings a savor of the early wilderness and the early wilderness days. It is the only wild animal left in the eastern half of the United States, with the exception of an occasional black bear, which still carries on in true wilderness style the war that the wilderness used to wage against the flocks and herds of civilized man.

THAT it does this is not generally known, for the reason that only in certain parts of its range are the conditions such as to make the alligator a formidable enemy to live stock. Even here in the old plantation country of coastal South Carolina, where the conditions are almost perfect for the alligator, its depredations are not sufficient to warrant its extermination in the region as a whole. But there are certain parts of the plantation country—the Low Country, as it is called in contradistinction to the rolling country of the interior—where the gator is an enemy to be reckoned with. Thus he is, to my mind, though most farmers and planters probably will not agree with me, a precious link with those glamorous and adventurous early days when the pioneer's trusty rifle was the only thing that protected his live stock from the wild denizens of the untamed forests.

One summer day, on a plantation that I visit frequently, a hog came slowly out of a thicket into a large level pasture. The hog had been black, but now it was mainly red—red with its own blood. The skin and flesh of one flank had been slashed and ripped and almost torn off the animal.

A road ran through the pasture, and a negro, riding a small, wiry marsh pony, happened to be passing. He pulled out of the road to look at the hog; then, digging his heels into the ribs of his little horse, he galloped up the road toward the plantation house.

Some time elapsed; then another rider appeared from the direction of the house, a white man, the master of the plantation. He had his shotgun with him—it happened that his rifle was unavailable at the moment; and it happened, too, that his supply of buckshot shells was exhausted, so that he had to rely on cartridges loaded with number eights. Nevertheless, he dismounted and made his way into the thicket whence the wounded hog had emerged. In this thicket was a small pool of fresh water where the plantation stock often drank; and near the margin of this pool, behind a convenient bush, the planter sat down and waited patiently.

The water was as smooth as glass; there was nothing to show that beneath its surface lurked black, armored death. After a while he heard the

Digitized by Google
Original from
UNIVERSITY OF IOWA

grunting of hogs coming down to the water, and presently, as the sounds grew louder, he saw two rounded knobs appear upon the still surface of the pool.

It was a matter of moments then. A pig came out of the bushes and began to root in the muck at the water's edge, and the two knobs moved slowly forward, so slowly as scarcely to make a ripple on the glassy surface. Suddenly, when those two knobs were no more than a few yards from the rooting pig, they were transformed into a long, hideous head. In another instant the fatal rush would have been launched; but at that moment the shotgun roared, and at that close range the charge of number eights tore a gaping wound. It required several additional shots to finish the marauder, which measured nine feet nine inches from nose to tail tip.

The presence of this nine-footer in a small and isolated pool within sight of a plantation house illustrates another interesting phase of alligator life. Evidently, this gator had come overland, either from a creek about half a mile distant or from one of several lagoons, the nearest of which was probably a mile away. He had made this pool his ambush because the plantation animals were in the habit of drinking there, and in this way he was able to pick up some easy meals. As a matter of fact, alligators occasionally make considerable journeys overland, and not infrequently gators of fairly large size are found in bodies of water of ridiculously inadequate dimensions.

The average American thinks of the alligator as a Florida animal, and is much surprised to learn that it exists elsewhere—perhaps more abundantly today—than in Florida, where its numbers have been greatly reduced. In the Carolina plantation country it abounds. Here is a beautiful and romantic region of many rivers and creeks, of many placid lagoons, of many cypress-bordered backwaters or "reserves" of the old rice-planting days; and in most of these the alligator is at home. A few weeks ago Charles Bull and I spent a morning in a leafy ambush beside a little fresh-water lagoon within half an hour's ride of a large plantation house, and there was scarcely a minute when we could not see at least six large alligators, sometimes as many as ten, in the small area of weedy water in front of us.

THERE is all the difference in the world between a captive alligator in a tank and a big bull dragon of the waters in his native wild. Something incredibly fantastic, something monstrously uncouth and outlandish invests such a scene as that which we saw from our place beside the lagoon.

Dense woods surrounded the little lake, and, except a few bird songs, the only sound was the low moaning of the Atlantic billows, hardly more than quarter of a mile away. In the still waters in front of us, eying us warily—for we had not gained our hiding place unobserved—the long, black, armored masters of the lagoon lurked, grim and forbidding, waiting and watching with the long patience of their race, patience that is well-nigh inexhaustible.

Some of them lay just beneath the surface, only their nostrils and the two black knobs which were their eyes being visible. Through those eyes, raised a little above the level of the broad, flattened head, they could keep watch without exposing an inch of body to a possible rifle shot, much as a submerged submarine views the surrounding sea by means of a periscope.

Others, at a greater distance, lay at the surface with all the upper part of the head and five or six feet of the plated, spiny back plainly visible.

In that wild and solitary place, with the weedy water around them and the jungle-like woods for background, these huge saurians seemed worthy descendants of the mighty dinosaurs of the Jurassic inland seas.

YET even more strange and more grotesque was an apparition that now and again fixed our attention upon a certain spot on the surface of the lagoon, directly in front of us and not more than twenty yards away.

At that spot, at more or less regular intervals, the black water stirred uneasily and a huge rounded muzzle appeared above the surface, rising higher and higher very slowly. Little by little it emerged, growing larger and larger, taking on a more definite shape and yet appearing each instant more chimerically shapeless—until at last we saw nearly the whole head of a great alligator, covered with green and yellow water-weeds resembling long wet hair, thrust above the water, and tilted upward as though the creature were gazing at the sky or the treetops above the shores of the lagoon.

Not only the head but the whole broad, blunt muzzle with its protruding tusks, the whole wicked chin and much of the scaly throat were exposed; and sometimes when it thus rose slowly from the depths, this fearful dragon-countenance was turned toward us, so that we could see its appalling breadth and thickness, while at other times we viewed it in profile, and could measure its length with our eyes.

As again and again the huge uplifted head rose slowly, to remain exposed for some minutes and then sink out of sight, the spectacle puzzled us more and more. Alligators do not rise in this fashion with uptilted muzzle, but come up with the head parallel with the plane of the water, so that the periscope eyes appear first above the surface. At last the mystery was solved:

Near that monstrous upthrust countenance another great alligator head appeared, not tilted upward like the first but resting flat in the water and pointing away from the other head. It rose higher until part of the creature's back was visible; and we saw then that the first gator was lying with its lower throat resting upon the submerged body of the other, and that this was why, when the second gator rose at intervals close to the surface, the head of its companion appeared above the water in that grotesque uptilted attitude.

A simple enough explanation, as most woods explanations are; but I have seen no more fantastic sight in the woods than that uplifted dragon face, with its green and yellow water-weed hair, rising mysteriously from the depths and staring at the sky.

IT IS only in certain parts of the plantation country where the conditions are exceptionally favorable to the saurian marauders that the alligators are able to make serious inroads on the planters' live stock. The lagoon mentioned just now, where Bull and I were studying gators, is situated in the woods on a long, narrow island with the sea on one side of it and open marshes on the other. A friend of mine, last summer, attempted to raise hogs on this island, but found that the gators got nearly all the young pigs. On

The journey to the water is sometimes a perilous one for the baby gators

Digitized by Google Original from UNIVERSITY OF IOWA

Again and again the huge uplifted head rose slowly, to remain exposed for some minutes and then sink out of sight

another plantation, some thirty miles inland, a negro whom I knew waxed eloquent on the subject of alligators, the last time I talked with him, his eloquence being due to the fact that the reptilian raiders had taken seven of his half-grown hogs in rapid succession, deliberately stalking them in the open rice fields bordering the creek near his house.

Of course, it is only occasionally that an alligator is able to enjoy pork. As a rule, his diet consists of fish and frogs with now and then a water fowl or a marsh rabbit. If there is one thing that he loves better than pork, it is dog. In this region a number of dogs are taken by gators every year; and this, even more than his occasional inroads on the planters' woods-ranging hogs, is responsible for the incessant warfare waged against the gator. Except in winter, when the saurians have retired to their secret dens, they are a serious menace to the lean, long-eared hounds of the deer-hunting packs, which sometimes, in the excitement of the chase, follow the deer into waters teeming with unseen dangers.

There are many instances of such tragedies, though in most cases they are not witnessed by human eyes. A dog is missing at the end of the hunt. Nobody knows positively what became of him, yet any hunter can easily reconstruct the scenes. The great black saurian lying like a log among the lily pads, listening with a grim glint in his cold, inscrutable, vertically slitted eyes to the approaching music of the pack; a buck plunging into the river or lagoon, followed a few moments later by a hound or perhaps several hounds; a long armored submarine gliding swiftly through the water, only its periscope eyes showing above the surface; a scream of agony, a bloody swirl, then silence as the monster sinks with its prey.

Apparently the deer is seldom, if ever, attacked. Fawns are taken from time to time, but I know of no instance in which a full-grown deer has met death in a gator's jaws. A dog, once seized, has almost no chance of escape, yet I know of one case in which a large and powerful hound, pulled under by an alligator in a deep, broad river, freed himself in some miraculous way from his terrible assailant and reached the shore not much the worse for his experience.

IN DEEP water, the gator's huge jaws, studded with long, stout teeth, are his primary weapons of offense. Approaching his quarry just below the surface with only his eyes visible, or else rising suddenly from the depths, his attack is all the more paralyzing because of its utter unexpectedness. In shallow water or when stalking a victim at the water's edge, he relies largely upon his extraordinarily powerful tail.

His skill with this weapon is amazing. The entire body is bent like a bow almost in the twinkling of an eye, and the long plated tail, compressed or flattened at the sides, sweeps the victim within reach of the waiting jaws. An acquaintance of mine, casting with a net for shrimp in a creek where gators were not known to be common, was accompanied by his dog, a large white setter. The dog was on the bank close to the water's edge when a gator suddenly hurled him into the water with a sudden blow of the tail, and in another moment carried him beneath the surface.

A negro rabbit hunter witnessed an equally dramatic episode. He was out hunting with his dog, which was following a trail near the edge of a thicket in a large open pasture. Suddenly the negro saw a big gator rear himself out of the weeds, and, with a lightning-like blow of his tail sweep the dog into his open jaws. The man was so astonished that he stood gaping, and the alligator got safely into a deep pool just within the thicket's edge with his prey.

I had, last July, an interesting demonstration of the alligator's inordinate fondness for dog meat. I had just built a camp, a small three-room cottage, on the bank of a salt-water creek. (*Continued on page 99*)

The

By

"Though He slay me,
yet will I trust in Him"

ILLUSTRATED
BY
F. C. CROOKS

HE WAS a frail, somber-eyed fellow in his early thirties. He had sparse black hair, a high forehead, a square-shaped face. His shoulders were narrow and his hands ungainly. At times he walked with the trace of a limp. Fallen arches caused this lameness.

Joe Coates, who opened the first store in Grapeville when enough settlers had come into the Southern California desert to assure him of a livelihood, often watched the reticent stranger trudging along the town's one blistering street, and remarked on his likeness to Edgar Allan Poe.

Joe said so to old "Mandamus" Flagg one noontime—a lawyer from Iowa who had trouble with his hearing. Mandamus didn't catch the merchant's remark. He got the idea that Poe was the newcomer's bona fide name. Thereafter, when they met Mandamus greeted him: "Howdy, Mr. Poe!" and no one corrected him. Correcting Mandamus simply wasn't done. Certainly the anemic young grape-grower himself was not of a type to show personal resentment—concerning a nickname or anything else.

The stranger's real name was Mortimer Nobel.

This silent, reticent fellow whom no one understood, a flavor of tragedy always about him, arrived in Grapeville on a hot day in June. He had come from Virginia, the townspeople learned. An uncle had left him fifty acres of land, taken from a tourist in exchange for a debt. California real estate, fifty acres of it, had the aspect of a competency back East in Dixie. The boom around Los Angeles was beginning to be talked of; travelers from the Coast flashed profits made in deals. With eight dollars and a few odd coppers in his pocket, he trudged to his holdings on the south edge of town. A flat, sandy waste interspersed with mesquite, greasewood, bunchgrass, and rocks was the hapless termination of that long, expensive journey.

"What do you grow on such land as this?" he inquired of two men who came past in a buckboard.

"Whiskers, kids, an' trouble!" laughed the driver in reply. "That is, providin' you build a house an' live here."

The new proprietor of this dried-river-bottom waste had been clad in a dark broadcloth suit, a cape like an Inverness, a soft, shapeless hat—on a burning June noontime when natives stayed indoors. Sweat streaked his face and dust grayed his shoes. On the exposed end of a nearby culvert, a satchel had been set, one of those quaint green carpet bags which might have been salvaged from an Old Dominion attic.

"Seemed fer a minute he wuz goin' t' cry," Sam Bishop said later, reporting to Coates. "Them big, dark woman's eyes o' his looked as though I'd hit him. I see he didn't kid, so I sort o' helped him out.

"'Bout all that land's good fer,' says I, 'is *grapes*. Once a year, in th' rainy season, th' water frum th' Canyon flows over this flat. Leaves enough moisture t' keep th' vines watered—providin' you're lucky an' don't git too much. Most everybuddy up an' down this valley is goin' in fer grapes. In another ten years they'll be th' main crop.'

"'An' what do you grow 'em frum—seed?' says he.

"'No,' says I, pityin' him, 'seed takes too long. You hev t' buy shoots—young plants—from up North. They's a firm t' LaVerne thet sells 'em at wholesale. Cost quite a lot t' lay this flat t' grapes. Lumber, too, has t' be brought—t' be *trucked*—frum Los Angeles. It's some'at expensive, gettin' settled down here.'

"'Do you know any place where I could get work?' wuz the next thing he asks me. 'I've got t' live somehow. I could clear this tract Sundays.'

"'You got a whale of a chore ahead o' you,' thinks I, 'clearin' this tract while you try t' hold a job.' But I didn't let him know. Struck me his health warn't so good t' commence with. 'Got any folks?' says I, t' be neighborly.

"'No, I'm all alone,' he answers me, wistful-like. 'Do you know any family who'd trust me fer board?'"

THE BISHOPS took him in, buxom Ma Bishop being touched by his eyes. They lived across the flat and were going in for walnuts.

And there at the Bishops he first met the Clay girl.

Amelia, her name was. The Bishops called her Amy. But she was a tall, droopy female—a native of Missouri "So darn thin she cud make a dress out o' six feet o' garden hose," Sam described her, "an' still need a lot took up in th' back." Like many other settlers in that dry, burning climate, she had come to the Coast to mend her frail health.

Sam introduced them in the cluttered rear yard. "Here's a new hand," he announced to the servant. Then, turning to Nobel, "Th' hired girl, stranger. She works here fer her board."

Nobel's dark eyes took in the girl's figure. Her arms were like flails. She had no breasts or hips. But she did possess something which made Nobel stare. She had the most beautiful tresses ever seen on a woman—a riot of sunshine that reflected in her face. Glorious hair. Happy hair. The man stood entranced.

Sam hadn't meant to humiliate her. Yet vaguely he had done so. A dull crimson flush crept up from her neck. Only a hired girl. She worked there for her board! Nobel perceived it, and bowed to her deeply. No man had ever bowed to Amy Clay in such a serious manner—not with such charming old-fashioned grace.

"I'm . . . awful glad to meet you," she stammered. "It gets sort o' lonesome here at times . . . in the evenin'."

Man Who Believed in God

WILLIAM DUDLEY PELLEY

He seemed a frenzied figure from the heart of the storm as he mounted the steps and turned the crush back

"I trust I can make it less so," he assured her.

And their romance began.

The first inkling the valley had of it, Amy Clay was over in the river bed, after sundown and on Sundays, "helpin' Edgar Allan Poe git hisself a stake."

Where she ever got the strength to chop mesquite roots was something that Grapeville never determined. "She even helps him gather stones—big ones!" Joe Sadler exclaimed some six weeks later. "I seen her pilin' some I could scarcely lift myself."

"A lean horse for a long race," quoted Mandamus Flagg. "I'll bet that skinny Clay girl can outwork, outlive, and outlove any three fat uns in Escondido County."

"Outlove 'em!" cried Sadler.

"She's so all-fired thin I don't believe she ever had a man look at her twice in her life. Here comes along this sad-appearin' feller with only half a shirt to his back, an' she falls for him like a ton o' brick—"

"*Rock!*" corrected Sadler. "Count o' lumber bein' so scarce, an' niggerheads on their flat so plentiful, they're gonna build 'em a whole house o' rock. If that beanpole ain't toted a couple o' ton, she ain't toted a pound."

"FUNNY 'bout some females," said Mandamus. "Ain't never happier than when workin' their fingers to the bone for some fool man."

"I was over t' the Bishops' t' other night when the two of 'em come in. Fairly staggerin' with weariness, they was. The woman's skirts were tore an' her fingers showed bloodstains. Poe had went t' the barns t' see t' some chores, an' ol' Ma Bishop started jawin'—fer her doin' work that belonged t' a man. She straightened her back an' looked Ma in th' eye. 'It's the first time in my life I've had a goal t' work fer that counted,' says she. 'Mort loves me an' I love Mort. What does *work* matter? I'm so happy it hurts!' An' she was, too—if th' looks of her hair was anything t' judge by."

"Her what?" exclaimed Mandamus, not certain that he heard right.

"Hair! Mort—as she calls him—tol' Sam a few nights back thet he fell in love with her on account of her hair. 'My life has been enriched by three exquisitely beautiful things,' says he, in that solemn way o' his: 'religion—Miss Clay's disposition—an' th' joy I take in her wonderful tresses.' Called 'em that. 'Tresses.' I swear he's a queer un. But then no woman with her curves in all their right places 'd think o' fallin' in love with such as him, anyhow."

The whole valley caught the pathos and heroism of it—a lonely man and a heart-starved woman toiling together out under

Digitized by Google

the blazing sky to clear a spot of wilderness, cultivate it, make it yield its increase, support a new home.

The work was inhuman But Amy Clay welcomed it. In fact, the Missouri girl, helping the first man who had ever loved her to lay the basis for future affluence, appeared to thrive on it. She put on no weight, but her lean body hardened.

Nobel was entering his thirties when he first came to Grapeville. Amy married him on her twenty-eighth birthday. And her disposition continued the despair and envy of every much-married male from San Jacinto to Tia Juana.

What sort of disposition she possessed —what type of helpmeet Mort Nobel had really acquired in the Bishop's hired girl—was disclosed at the end of their first autumn of matrimony, with the advent of the rainy season, which in Southern California sets in with December.

Their flat at last cleared, planted with vines just commencing to get a roothold—vines procured by the hard-working pair on credit—their house erected and occupied, though furnished with little more than some chairs and a table, a stove and a bed—when the rains descended on the Southland.

Epochal rains they were, that year. Such rainfall seems to appear in cycles, five or six years apart. There came a midnight when the waters rose higher and higher as they gathered on the flat. Culverts washed out. Bridges were undermined. The flood down the valley became a small deluge.

AND in howling, rain-lashed dark, a man and a woman, hatless, in sodden clothing, stood on a little promontory with a lantern. Around and below them the savage dun-colored waters ripped out and wrecked their labors of a year. Wiped them out in a night. Costly vines were torn up and washed down the desert in a tangle of débris. About half past two in the morning, the south wall of their house buckled. Twenty minutes later the rest of the structure collapsed. Dank clammy dawn showed a sweep of water-gored wilderness—as it had been a twelvemonth before, except that in place of the mesquite and greasewood there were thousands of stones left nude by the current-sweep.

"Well, Amy," the man said at last, "it looks . . . as if . . . we were right back . . . to where we started from."

"Yes," she laughed thoughtfully, "it certainly does."

Mort turned at that laugh in her voice. A queer time to laugh. Yet it had heroism in it—a laugh of defiance in the face of disaster—the mirth of dauntless courage—the grim humor of a soul that refuses to accept calamity as sent by Providence, but sees in catastrophe some failure of human perspicacity, some lesson to be learned to build better the next time, the resolute galvanism that is the essence of achievement, that in generations past has wrought wild America from an Indian-infested waste to the earth's greatest nation.

"Amy . . . what . . . are we going . . . to do?"

"Do? Start in and build all over, of course. Build better the next time. Put in a concrete retaining wall along the head of the flat, to run all this water on the other side of the road. What else is there to do? We're certainly not going to admit one little flood can whip us!"

Nobel looked at his wife in cold morning mist. It should have bedraggled her, that mist. Especially her hair. But her hair had not lost its beautiful wave, a happy sort of wave, even as her eyes had lost none of their joy.

HOG PARKIN came to Grapeville in a battered car that was much like his person. "Hog" was a nickname, and yet it was not. The man had been christened Henry Oleson Gideon Parkin. Considering the combination of initials, his parents got credit for a rare sense of humor. Not to mention intuition.

He was a thick-set, beefy-faced fellow with a weirdly-shaped head and soft, puffy hands. His half-naked skull had a dent in one corner, the result of a fracture sustained in young manhood. He had lifeless gray eyes and the mouth of a fish. He greeted people by giving their hands a brief moist pressure and letting them drop as quickly as possible.

The "haybaler" which he ran insolently on the Nobel front lawn was rakish of top and blowzy of body. Its windshield was cracked and its chassis was oil-starved. The only thing not dilapidated about it was its current year's license plate.

Midway of the lawn, approaching a new and larger stone house, Parkin stopped. He pushed a cloth cap toward the back of his head, smudged off cigar ash which had fallen down his vest and assayed Three-Mile Flat with complacent grimace.

An angular, work-hardened, middle-aged woman—a woman with a stunning head of hair who was singing to herself as she clipped veranda vines in the joy of possession—paused at sight of him.

"Mort!" she called softly through the door screen. "That man who was stalking up and down the road by the culvert yesterday has stopped out front, with his car on our lawn. I think he's coming in."

H. O. G. Parkin appraised the stone residence, its solid construction, its deep cool veranda. He looked across fecund acres of ripening, blood-red grapevines. He did not miss the expensive water-pumping system, the concrete work to the north, the masses of flowers, the modest roadster run into a shed.

Mortimer Nobel appeared at the door.

"Fine place you got here," Hog Parkin greeted him.

"We think so," answered Mort. He said it modestly, not without curiosity. He came through the door.

"Whatta you consider it worth?"

The dark, gentle eyes of the owner seemed to smile. A proud sort of smile. "My friend, no amount of money could purchase this property."

"Who said anything about buyin' it? I arst you what it's worth."

Mort Nobel sat down with a flush of resentment. And yet he motioned his caller to a chair. Parkin took it anyway, and chewed his dead cigar.

"My wife and I have put in a lot of hard work here, sir. The land I had left me. It's what we've done to it since that matters."

"How long you been here?"

"This will be our fifth year. It took us two years to construct this house. The first one we built was washed down by a flood. Only last year we got our first real crop—made any real money that got us out of debt. We put in a cistern and all that cement work—"

"Yeah, I can see it."

"I tell you, I've found God down here in this desert, sir. Found it in my wife—the way she's stood by me. Found it in my neighbors—the way they gave me a hand when we found ourselves homeless. Found it in the vines—"

"I never did go much on this God-dope m'self." The stranger crossed his legs and laced his fat fingers across his round stomach. "Been plenty able t' take care o' m'self, I have. So you think th' place is valuable? Well, I arst you—how much?"

"Might I ask your reasons for wanting to know?"

"You got a deed t' your property, I s'pose?"

"A deed? Of course I've got a deed."

"Ever had it recorded?"

The owner nodded, puzzled. "Certainly —the first week I came here."

"Ever had a surveyor show you your lines?"

"N-n-no . . you see . . . it was all raw desert—stones and sand and greasewood. Nobody paid much attention to lines. It was like free land—in the days of the Old West—"

"Yeah? Well, Mr. Squatter"—and the stranger seemed to stiffen as though for a conflict—"natcherly I'm sorry fer what I got t' tell you; but when you Easterners come out here an' take up land—raw desert—any sort o' land—th' first thing t' do is make sure o' your lines."

"What . . . do you . . . mean?"

"I mean, th' land you really inherited is six mile down the flat. *I own this tract and everything that's on it!*"

For an instant Mort Nobel appeared as one stricken.

"YOU own—what?"

"I bought it fer money, ten years ago. Been North in th' lumber business. Come down last week t' see t' my property —th' increase in its value; and you cud knocked me fer a goal when I found it set t' vines an' a swell house built on it." And Parkin glanced about with obvious approval.

"You must be mistaken!"

"I thought so m'self. But I went t' Escondido an' looked up m' lines. You'd doubtless decided this piece was yourn on account o' th' culvert. Well, they's another culvert precisely like it, six mile farther south. *That's* yourn. This tract b'longs t' me. Find God in that!" And Parkin laughed nervously.

Silence followed, tragic, dramatic. Amy Nobel appeared. Husband and wife exchanged stupefied glances.

"You can prove this?" stammered Nobel at last.

"You bet I can prove it."

"Surely you won't hold us to such an error—if you're right," cried the woman in panic. "If we really own a similar tract six miles down the desert—and we transfer you title—exchange—"

"You'd hardly arsk me t' swap fifty acres o' first-rate vines, with a house an' everything, fer a patch o' gravel an' greasewood an' stones?"

"But *we* own the vines! *We* own the house! We got them by working—cruelly hard—" The wife seemed to choke. She

Digitized by Google Original from UNIVERSITY OF IOWA

"Here's a new hand," Sam announced to the servant. Then, turning to Nobel, "Th' hired girl, stranger. She works here fer her board"

bit back her tears. It was the first time since he had married her that Mortimer Nobel had ever seen tears in the eyes of his partner. At least *that* kind of tears.

"Seems they's a lot about California law you ain't aware of. In this state, whatever's *on* a piece o' land is part of it. Law don't make no diff'rence between real estate an' buildin's."

"You mean," asked Mort hoarsely, "you *are* going to hold us to it? *You're going to take it away?*"

"Oh, I don't aim t' chuck you off this afternoon. Natcherly, you got t' have a little time—t' sort o' look 'round an' find a place t' move. All o' thirty days I'm willin' t' give you—on th' understandin' that you don't do no damage."

"Damage!" cried Amy. Her eyes sought the lawn, the flowers, the labyrinth of vines—the low-lying, wealth-producing vines—that stretched toward the south. "As if we would!"

Mort Nobel rallied: "Maybe we have made a mistake. But there's some way out, and I'm certain we'll find it. Assuming I find your claim correct, sir, how much'll you take for the original tract—as it was before improvements?"

Parkin showed relief. Here was only a chicken-hearted sap with a beanpole of a wife, who talked about God and—buying the property.

"Well now, there's a question: Lumber business ain't so spry as it might be. An' with grapes fetchin' so much on account o' prohibition, I got a yen t' have m' own vineyard."

"You mean (*Continued on page 111*)

Jesse Crawford plays the world's largest movie organ, although he never took a lesson in his life

From Country Crossroads *to the* Crossroads *of the* World

WHERE busy Forty-third Street cuts across gay Broadway there stands a vast moving-picture theatre. Here before the high-piled magnificence of the largest orchestral pipe organ in the world sits a country boy. His name is Jesse Crawford and, although he is thirty-three years old, nobody could ever take him for anything else but what he is—a good-looking, round-faced country boy.

The remarkable thing about this man who achieved unusual success in his early twenties is that he never has had an organ lesson in his life. He is absolutely self-trained; yet the yearly salary he earns is larger than that of many a big corporation president.

Jesse Crawford was born in Woodland, California, and his parents died when he was very young. Because he had no friends and no relatives to care for him, the good nuns at the orphanage of Our Lady of Lourdes undertook to rear the boy. One of the Sisters gave Jesse piano lessons twice a week; but nobody had time to train the boy's musical tastes.

Despite this handicap, before many years had gone by the Sister realized that there was little more she could teach the lad; for, while he had not her technique, he had something which she never did and never would have—feeling, deep, poignant feeling.

Soon the day came when the boy could no longer remain in the orphanage. He must earn his living and make way for younger and more helpless lads. And Jesse had no trade.

Down in Baltimore, Maryland, about that time, another orphan without a trade, Babe Ruth, was going out into the world. And just as the Babe chose baseball because it was what he liked best, so Jesse Crawford decided to make his way by playing the piano, because it was the thing he loved the most.

But it wasn't easy. Jesse had had no more training than any other little boy or girl who carries a music roll down Main Street. From town to town he wandered; but none of the picture theatres would engage him because he looked so young. He even tried the movie "store shows," too, without success. In those days, a man who hadn't sufficient capital to start a film theatre would often set up a projection machine in a small store, hire chairs from the village undertaker, and so start a little enterprise without laying out more than two or three hundred dollars.

Almost the entire length of California Jesse Crawford wandered, and nobody offered him a job. And then, after traveling many months and many hundreds of miles on foot, the boy crossed over the border into the state of Washington. Finally, in South Park, just outside of Spokane, a theatre owner offered him the position of piano player—at five dollars a week!

The youngster found playing the piano for pictures and playing for the convent Sister were two different things. When a film of a storm was thrown on the screen you needed rumbling music, and Jesse had none. He had plenty of pathetic melodies for the death scenes, but nothing rollicking for the comedians, nor lilting for young love. When the villain crept in, ready to harm the heroine, the boy couldn't remember any strains with that peculiar staccato quality which is necessary to express tenseness, expectancy, menace. So Jesse began to improvise.

Three years it took him before he conquered the piano from a film standpoint, before he could make those ivory keys tell stories of love, hunger, joy, fear, war, flood, despair, and death. Three years it took him to teach himself to drag out of that battered old square piano every musical expression of feeling.

By this time Jesse was earning twenty-five dollars a week; but he had a hunger in him which the piano could never satisfy. Each Sunday when he went to church the music of the organ transported him strangely. You could do such wonderful things with an organ. Press one little white tab and it sounded like a harp. Another turned it into a 'cello. A whole symphony could be played on an organ—if you only knew the mastery of it.

But dreaming didn't help the boy any, he realized, so he hunted around, trying to find a picture house where there was such an instrument.

At last he found a theatre in the heart of Spokane that contained a fair organ, and he applied there for the position of organist. The only reason the inexperi-

Digitized by Google
Original from
UNIVERSITY OF IOWA

enced Jesse got the job was because the theatre was doing badly and expenses had to be cut. He was willing to work for ten dollars a week. That was fifteen less than he was earning, but he was glad of the opportunity it provided.

To this day he is not sure how he got through the first performance. Outside of knowing that you played the bass with your feet and the treble with your hands, he understood nothing. What to do with the three keyboards instead of one was a problem. Before the matinée started, the boy had a half-hour to find out. Somehow he figured out the foot pedals, and managed to join up a simple bass octave with the treble tones.

He finished the afternoon without being fired.

For two years Jesse Crawford forgot the world. He lived only for that organ. And how he struggled with it! He had no teacher, not even a book of instruction. He just pulled out stop after stop, stepped on strange pedals, and tried one musical combination after another. At the end of two years, however, he had mastered the instrument, and he was ready for new fields to conquer.

Because his playing was exceptional, other theatres heard of him. From smaller houses he progressed to larger ones. Finally, after five years had passed, he was known as one of the best organists on the Pacific Coast. When a famous theatre was opened in Los Angeles, Jesse was summoned to the organ console at a weekly salary as large as he earned the whole first year in his South Park position.

Twelve months later, the young man was invited to Chicago, where he became organist at first one and then another well-known movie house. His technique and his compensation increased with each move. It was inevitable that he should reach America's musical center, New York. And one day, about two years ago, he was called to the crossroads of the world—to preside over the organ in that theatre building which stands aloft like a thoughtful giant, brooding over crowded Broadway.

In Chicago Jesse Crawford met the girl who is his wife. She was at that time an organist in a large film theatre. She was born in a little town—just as her husband was—and both of them have fought their separate ways to the crossroads of the world by their own efforts.

ROSA STRIDER REILLY

A Woman Big Game Hunter Who Used to Fear Mice

PHOTOGRAPH BY D. JAY CULVER

Mrs. James L. Clark, who hunts big game, and then reconstructs the animals so they seem alive

MRS. JAMES L. CLARK, wife of the assistant director of the American Museum of Natural History, is one of the few women in the world to engage in the art of taxidermy as a business. She is also an authority on the "raw products" of her "factory," for she and her husband have hunted big game together from the pine forests of North America to the heart of the African jungle. On a recent trip to the Cassiar Mountains in Alaska, Mrs. Clark killed a monster grizzly bear. And yet ten years ago—she says so herself—this young woman was actually afraid of a small mouse!

Being afraid of mice is far more significant in the story of her success than being able to look a grizzly serenely in the eye, Mrs. Clark thinks. For it was a mouse that really began her combined career of hunter and taxidermist—work, by the way, which requires great courage, hardihood, artistic ability, and much technical skill.

As a typical business woman with little time or money to satisfy her wish to be an artist, Mrs. Clark was unable to collect adventure stories first-hand. That, of course, was before she became Mrs. Clark. She had never been to the woods; but she was fond of travel books and longed to paint pictures which would express her love of action and color. All the lions she had ever seen, however, grew in safe steel cages or were used as rugs.

A glimpse of a dead mouse was enough to make her mount the nearest chair.

Then she married Mr. Clark, a sculptor of wild life and an enthusiastic hunter of big game. With so many elephant, rhinoceros and lion notches on his gun, Mr. Clark was very much amused at the idea of anyone being afraid of mice. He enjoyed telling his wife the most hair-raising tales of adventure he could remember.

One evening, when they were deep in a story of the African jungle, a mouse stole out of its hole in the living-room and the Clark cat chased it under the furniture, and right under Mrs. Clark's feet. She was far too interested in the tale of the jungle to notice anything smaller than an elephant. "And now," said Mr. Clark, quietly, having watched the whole performance out of the corner of his eye, "you can go to Africa with me. I'll make a hunter of you yet!"

That first hunting trip was a revelation to Mrs. Clark. She learned, first of all, that to know a thing well is to lose all fear of it. She learned to love wild animals and to study them in their natural settings. In a short time, too, she was a crack shot with any sort of firearm; and she learned to enjoy the thrill of the hunt and the freedom of the out-of-doors. Her enthusiasm for it all was so great that when she returned to the United States, it was to study taxidermy and take over the management of the Clark studios, one of the largest and best equipped organizations of its kind in the country.

She has twenty skilled men working under her direction now. The animals are sent to her by sportsmen from all over the world—the trophies of many famous expeditions. The Clark studios hold as varied a collection of beasts as Noah's Ark ever did—bison, gorillas, boars, hyenas, deer, zebras, dik-diks, lions, tapirs, hippopotami.

"Taxidermy has progressed almost unbelievably in the past twenty years," says Mrs. Clark. "The old method was to reconstruct the animal with wooden 'bones,' and to stuff the skin with straw and cotton padding.

"The modern method is much more scientific. A taxidermist usually accompanies every expedition, and it is his job to put the skins into condition for traveling.

"If a life-size model is to be made, the bones are very carefully saved after the

Digitized by Google Original from UNIVERSITY OF IOWA

animal is skinned, while the entire pelt is rubbed with a preservative. Then skin, bones, and horns are shipped to us in a state we call 'in the green.' Mr. Clark makes a sculptured model of every animal, and it is used constantly in the work thereafter.

"Our first step is to tan the skin and measure it carefully. A burlap and papier-mâché manikin is made next, using Mr. Clark's model so that the proportions will be absolutely perfect. A great deal of skill is required in stretching the skin over the manikin; and setting the eyes and teeth in place is another precise and delicate job.

"It is in these smaller touches that real artistry shows, in getting the exact expression that gives them that spark of life. Then comes the waxing and tinting, the brushing and glossing. Each piece undergoes a very rigid inspection before it is passed along to the next department. The object in all the work is to make a lifelike, vital-looking creation."

Elephants are not received very often in Mrs. Clark's mail, of course, but the other day along came a big shipment of elephants' *feet* to be transformed into umbrella stands and waste-paper baskets.

ESTHER MELBOURNE KNOX

A White Rag is Their Distress Signal for This Doctor

IF YOU were riding over a country road and saw a white rag tied to a gate in front of a farmhouse, you would probably pay little or no attention to it.

Down in the lower part of Currituck County, North Carolina, these white rags tied to gates in front of houses have a meaning. They are distress signals, and are looked for with as much vigilance as a forest ranger looks for telltale signs of smoke. Only here it is a country doctor who looks for them.

He is William T. Griggs, one of the few remaining old-time country doctors. Doctor Griggs was born at Point Harbor, North Carolina, in 1868. In those days schools were not so plentiful as they now are, and it was in a little one-room school, open only three months in each year, that he learned to read and write. By hard work during the summer months, however, he managed to earn enough to pay his way through a private school and prepare himself for college.

Doctor Griggs entered the University of Virginia to study medicine. Working his way through the institution, he was graduated in 1896. He practiced one year in Charlottesville, Virginia, and then decided that he was needed in his own state. He went back to North Carolina, where he opened an office at Poplar Branch, near his old home. He has been there thirty-one years. Now, at an age when most people retire from active service, William T. Griggs is working harder than ever.

For years, Dr. William T. Griggs, of Poplar Branch, North Carolina, has been averaging four hours' sleep daily. His numerous patients are the reason

"Is it a fact that you get only four hours' sleep each night?" I asked.

He studied for a moment and then said, "I'll average about that, I reckon. I remember a period of five weeks, during an epidemic, when I could not get any regular rest—hardly had time to take off my clothes, and sometimes I dozed while going in my buggy from home to home."

Before automobiles came into use, Doctor Griggs kept eight driving horses and two drivers. "I kept my drivers so busy I had to keep raising their pay to hold them. Now that I use an automobile, it isn't so hard on me.

"It's quite different now from what it was when I first started practicing. Then, the roads were nothing more than trails. We had no automobiles and no telephones in this section. I had hard going to reach my patients. I remember, soon after I began practicing here, I was called to visit a lady seventy years old who was suffering from peritonitis. There was no way to get her to a hospital and I was up against it.

"An old doctor who had retired was living near me, so I sent for him. He came and looked my patient over. Then he said, 'William, if she isn't carried to a hospital she's going to die; but there's no way to get her to one. If you operate she's going to die anyway.' With his help, however, I performed the operation and my patient got well and lived to be eighty-five. That was one of my first cases and one that I am proudest of."

The doctor has a thirty-mile strip of beach in his territory. On this beach live members of the Coast Guard with their families, gun-club guides, and fishermen. The only way to reach this region is by boat, across a treacherous body of water from three to six miles wide.

"A few years ago, a guide at the gun club had his arm shot to pieces," said Doctor Griggs. "The sound was frozen, and we were having a terrible snowstorm. In some places the ice would hold a person up, and in some places it wouldn't. It took three men and a boat to get me over there. We shoved the boat through the ice until it was cut through and started leaking; then we got it on the ice and managed to get across. I amputated the arm and saved my patient; but I didn't get home until the following day. When I did arrive, I was wearing two storm coats and a lady's neckpiece. You see, my patients take the best of care of me."

When questioned concerning the rags on the gate posts along the highway, Doctor Griggs smiled.

"That's a system of grapevine telegraph," he said, "that my patients picked up from their mountain kin-folks. You see, a great many of them do not have telephones; but they know I travel that road both day and night, every day in the year. So if there is anyone sick in any of these homes which do not have telephones, they hang a white rag on the gate post in the day and a lantern at night. I always look for them, and I haven't missed one yet."

William Boular, of Atchison, Kansas, never lets the fact that he is legless keep him from going duck-hunting

He's Deaf, Dumb, and Legless *but the* Hardest Worker in His Town

FIFTY-SIX years ago William Boular was born in Atchison, Kansas. Shortly afterward, scarlet fever left him permanently deaf, and dumb as well. To say that his parents were in humble circumstances would not be accurate. They were poor, desperately poor. And then, when William Boular was eight years old, he was run over by a switch engine, which crushed both legs.

My father was a surgeon in Atchison. He died when I was five years old, but I have often heard my mother tell the story of little William Boular's accident. Father came home and related the pitiful case of a deaf and dumb child with both legs injured so badly that amputation was necessary. One leg was crushed below the knee, the other above; but, in order that the boy might walk if he survived, both legs had to be amputated above the knee.

Each time Father went out to dress the wounds he would have a different citizen with him, and he always took care to ask a man who was well-to-do. He started a nest egg with a gold piece, which the lad kept under his pillow wrapped in a bandanna handkerchief. Father would ask William to show the visitor what he had under his pillow, with the result that more gold pieces were added, until he had enough to send him to a school where he could learn the deaf and dumb language.

I first remember Boular when I was a very small boy. Crowds gathered on the street to watch him lay paving bricks. These bricks were laid by piece-work, and Boular was the champion bricklayer of the Missouri Valley. He did not have to stoop or kneel. He could lay bricks with such rapidity that his pay envelope usually contained twice as much as his closest competitor's. It took a whole corps of darkies to wheel them to him fast enough. Crowds gathered to watch him working on the street, and they marveled, for he always smiled when he worked.

From the time he was o'd enough to secure any sort of job at manual labor, he was the support of his mother. Rain or shine, warm or cold, he was always on the job. Unable to walk the distance necessary to go from his home to his work, he secured a pony and a two-wheeled cart. In this rig he has been for years a familiar sight on the streets of Atchison.

Later, I worked in the office of the Thayer Foundry Company, and the thought occurred to Will Thayer that Boular could be taught to mold and make the rougher type of castings, such as sash weights. We discussed the matter, and Boular was sent for. He was enthusiastic, as he always was about everything. Sash-weight molding is also piece-work, and it was no time at all before Boular's envelope again contained more money than those of the men working by his side on the foundry floor.

He was always the first man to arrive in the morning. His patience, industry, and cheerfulness were an inspiration to all with whom he came in contact.

Whether he was making sash weights against time or wrestling with someone while waiting for the iron, he had a smile for everyone. He married a widow with a family, and while he has no children of his own he raised her little family. He bought and paid for his own home, and his credit was always good.

And, marvel of marvels, this man, deaf and dumb and without legs, shot wild ducks, and rabbits, and quail. Many a time I've met him up the river duck-hunting. Because of his handicap, he did much of his shooting from a boat, and on Sundays and holidays he brought back as many ducks and quail as any other man.

The great Missouri River bars near Atchison often, through a change of the current, abutted the mainland. Out on these bars Boular would sometimes go with his two-wheeled cart and pony. He had a strap that fastened across the stumps of his legs to keep the lunging of the vehicle or a sudden jump of the horse from throwing him backward. He had a pair of rabbit dogs that would also flush quail, and with this outfit he scoured the sand bars near town for all he was worth.

Last winter, a careless automobile driver smashed into Boular, threw him from his cart and broke his hip. Surely fate has been unkind; but in the hospital Boular smiled and assured everybody that his hip would get all right and he'd soon be back at work. The superintendent of the Atchison hospital, the doctors, and the nurses were unanimous in the contention that he was the most cheerful patient they had ever encountered.

Atchison is the home of Ed Howe. His son, Gene Howe, runs Ed's old paper, the Atchison "Globe." In an item telling of Boular's misfortune, the paper stated that it intended to help Boular with his hospital bills and other expenses. One thousand dollars was subscribed almost immediately by the citizens of the town.

Boular did not ask for charity; he didn't want charity. But again, as was the case in his early childhood, it was thrust upon him. A chance to work is all that Boular asks of life, and the knowledge of this has made him well liked wherever he is known.

I was in Atchison in January. At that time he was out of the hospital. I drove out to his little home at the edge of town to see him. Since I left Atchison, his wife had died, and he had an old gray-haired lady keeping house for him. When he saw me, his smile was good for the soul, and he gripped my hand like a steel vise. With childlike enthusiasm, he showed me that he had good motion in his hip, and that in a few weeks more he would be able to walk—and work.

When there exists a man on this earth with the determination and the spirit of William Boular, it makes you wonder, as you drop a coin into the professional beggar's hat, why there are not more like him.

R. P. HOLLAND

Her Passengers Never Miss Their Trains

IF YOU were to ask any homekeeper in Maplewood, New Jersey, what kept her domestic machinery running smoothly, she would answer, without even stopping to think, "Why, Mrs. Sculthorpe, of course!" For Mrs. Sculthorpe has been the town "handy-man" for the past six years. She is owner and operator of the Maplewood Taxi Company—a fleet of nine automobiles.

When Charlotte Sculthorpe had been married seven years, she and her husband faced a future that held a bank account dwindled to seventy-five dollars, a family of three—and no income. Edward Sculthorpe had been six months recovering from a severe attack of pneumonia and he was still too ill to work. Mrs. Sculthorpe couldn't paint or sew or give music lessons well enough to earn a living for the family, but she did have one asset: she could handle a car better than most women. It was rather an expensive asset, when she had no income and, more important than that, no car! But a working knowledge of suburban emergencies, combined with her talent for driving, gave Mrs. Sculthorpe an idea.

Mrs. Charlotte Sculthorpe, of Maplewood, New Jersey, is one of the town's busiest taxi-drivers

She drew the seventy-five dollars out of the bank and bought a second-hand Ford chassis from the town garage. She persuaded the garage man to "throw in" a battered taxi body that was cluttering up his storage space and, much amused, he helped her get a hackman's license, as well.

The next Sunday evening found Charlotte Sculthorpe, with her heart in her throat, at the railroad station, all ready for "business."

"All I could think of was that maybe nobody would ride in my car because I was a woman. The car was pretty awful too, although I had shined it up all I could. A train pulled into the station, and a passenger helped an old lady down and looked anxiously around the parking space. Mine was the only car there and, battered though it was, I'm sure it looked much braver than I felt.

"From their expressions I knew the passengers didn't put much stock in me as a taxi driver, but they got in. I was so afraid of jarring my first customers that I went two blocks out of my way—and at a snail's pace, too—because I remembered a few 'thank-you-marms' in the road."

From then on Mrs. Sculthorpe's day began at six A. M., when she drove the early commuters to catch the 6:31. It still ends at 2 A. M., after she has taken home the passengers from the last train at night. Her biggest business is meeting the trains, and she makes it a rule to see that her customers never miss them.

"One winter," she said, "when the roads from one section of town to the station were blocked with cars stuck in the snow, I got all my regular people to their trains by going clear around to the next village, and to the station that way.

"I take several loads of children to school every morning. They know my 'honk' at their front doors is as regular as the school bell. It has always been my custom to stand at the door of the schoolhouse and make sure they all go in, too.

"Another lady who is tied down at home always telephones me her grocery order because she says she can't depend on the store to send the right things. So I pick them out for her and drive them right up to her kitchen door myself.

"I have even collected delayed refreshments from the caterer's in answer to a hostess's frantic telephone call. And a request like this is all in the day's work too: 'My aunt Mary expects me to meet her at the 2:58; but I can't make it. Will you meet her for me? She's little, and will probably be wearing her new blue hat.'

"The queerest passenger I ever had was a dead dog. A lady telephoned me in great distress that her dog had died in the night, and she didn't want the children to see him. Would I please come for him as soon as they got off to school? So I drove the poor old thing in state to a cemetery for pets several miles out of town.

"Nearly every evening some mother will call up and say, 'My daughter has gone to the theatre with some girls and won't get in until the twelve-fifteen. I told her she could go if she would ride home from the station in your taxi. You'll surely be there yourself, won't you?'

"And I always am." E. M. WRIGHT

SOUP

and the woman who tried

ONCE UPON a time—and it may have been yesterday—there was a woman who said to herself: "I wonder whether I am wise, after all, never to have tried these condensed soups you can buy at the store."

This woman always had insisted on making her soups at home. She and her family are so very fond of good soup. She would not think of serving any but the best soup. She prided herself on the deliciousness of the soups she made. She is a wonderful housekeeper—a wife and mother who always provides the most delightful and healthful meals. It was only natural for her to hesitate about buying soups made outside the home, for she *took it for granted* that they could not be as good as her own.

BUT THEN she tried. She noticed that her most careful friends always served Campbell's Soups. So she decided to "see for herself". And now she realizes how much useless bother and expense she gave herself in making soups in her kitchen. For in Campbell's Soups she discovered just the delicious quality and flavor she demanded.

Adding an equal quantity of water. Bringing to a boil. Simmering a few minutes. Then the soup is all ready for your table—savory, tempting and delightful. The strictly high quality of Campbell's Soups has given them such tremendous popularity. But the ease and convenience of their service is not overlooked by the housewives of America.

Campbell's Soups—there are twenty-one, all listed on the label—offer you a variety in selection that is most welcome. Your grocer has, or will get for you, any of these soups you select. 12 cents a can.

I'm Rollicking Rollo, the Flash,
To race me, it surely is rash,
For I and my steed
Are lightning for speed
When Campbell's thrill me for the dash!

FLAVOR to tempt you - BULK for health!

Millions find it the best ally against constipation

Millions avoid constipation, pleasantly, naturally, because they eat this delicious health cereal once a day. Post's Bran Flakes is a bulk food. It provides bran in its most appetizing form. It tastes so good you look forward to it every morning. It is so effective that it has become the most popular bran food in the world. Try it and see how good it is. Eat it every day for two weeks and see how much better you feel. Ready to eat, right from the package, with milk or cream, with fruits or in muffins or bread.

POST'S BRAN MUFFINS

- ¾ cup sifted Swans Down Cake Flour
- 1½ teaspoons baking powder
- ½ teaspoon salt
- 1½ cups Post's Bran Flakes
- 2 eggs, well beaten
- 3 tablespoons sugar
- ⅔ cup milk
- 2 tablespoons butter or other shortening, melted

Sift flour once, add baking powder and salt and sift three times. Add Post's Bran Flakes. Combine eggs and sugar. Add flour mixture alternately with milk, beating well after each addition. Add butter and beat well. Pour batter into greased muffin pans, filling each about two-thirds full. Bake in hot oven (425°F.) 25 minutes. Makes 9 to 12 muffins.

"NOW YOU'LL LIKE BRAN"

eat POST'S BRAN FLAKES

WITH OTHER PARTS OF WHEAT

Ordinary cases of constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

The Bishop Murder Case

(*Continued from page 14*)

habitual suspicion of all statements made to the police, put the next question.

"Did you meet anyone you knew?"

Drukker turned angrily, but Vance quickly stepped into the breach.

"It really doesn't matter, Sergeant. If it's necess'ry later on to ascertain that point, we can take the matter up again." Then to Drukker: "You returned from your walk a little before eleven, I think you said, and entered your house by the front door."

"That's right."

"You saw nothing, by the by, that was in the least extr'ordin'ry when you were here this morning?"

"I saw nothing except what I've told you."

"And you're quite sure you heard your mother scream at about half past eleven?"

VANCE did not move as he asked this question; but a slightly different note had crept into his voice, and it acted on Drukker in a startling manner. He heaved his squat body out of his chair, and stood glaring down on Vance with menacing fury. His eyes flashed, and his lips worked convulsively. His hands, dangling before him, flexed and unflexed like those of a man in a paroxysm.

"What are you driving at?" he demanded, his voice a shrill falsetto. "I tell you I heard her scream. I don't care whether she admits it or not. Moreover, I heard her walking in her room. *She was in her room*, understand, *and I was in my room*, between eleven and twelve. And you can't prove anything different. Furthermore, I'm not going to be cross-examined by you or anyone else as to what I was doing or where I was. It's none of your business—do you hear me? . . ."

So insensate was his wrath that I expected any minute to see him hurl himself on Vance. Heath had risen and stepped forward, sensing the potential danger of the man. Vance, however, did not move. He continued to smoke languidly, and when the other's fury had been spent, he said quietly and without a trace of emotion:

"There's nothing more we have to ask you, Mr. Drukker. And really, y' know, there's no need to work yourself up. It merely occurred to me that your mother's scream might help to establish the exact time of the murder."

"What could her scream have to do with the time of Robin's death? Didn't she tell you she saw nothing?" Drukker appeared exhausted, and leaned heavily against the table.

At this moment Professor Dillard appeared in the archway. Behind him stood Arnesson.

"What seems to be the matter?" the professor asked. "I heard the noise here, and came down." He regarded Drukker coldly. "Hasn't Belle been through enough today, without your frightening her this way?"

Vance had risen, but before he could speak Arnesson came forward and shook his finger in mock reprimand at Drukker.

"You really should learn control, Adolph. You take life with such abominable seriousness. You've worked in interstellar spacial magnitudes long enough to have some sense of proportion. Why attach so much importance to this pinpoint of life on earth?"

Drukker was breathing stertorously.

"These swine—" he began.

"Oh, my dear Adolph!" Arnesson cut him short. "The entire human race are swine. Why particularize? . . . Come along. I'll see you home." And he took Drukker's arm and led him downstairs.

"We're very sorry we disturbed you, sir," Markham apologized to Professor Dillard. "The man flew off the handle for some unknown reason. These investigations are not the pleasantest things in the world; but we hope to be through before long."

"Well, make it as brief as you can, Markham. And do try to spare Belle as much as possible.— Let me see you before you go."

When Professor Dillard had returned up-stairs, Markham took a turn up and down the room, his brows knit, his hands clasped behind him.

"What do you make of Drukker?" he asked, halting before Vance.

"Decidedly not a pleasant character. Diseased physically and mentally. A congenital liar. But canny—oh, deuced canny. An abnormal brain—you often find it in cripples of his type. Sometimes it runs to real constructive genius, as with Steinmetz; but too often it takes to abstruse speculation along impractical lines, as with Drukker. Still, our little verbal give-and-take has not been without fruit. He's hiding something that he'd like to tell but doesn't dare."

"That's possible, of course," returned Markham doubtfully. "He's touchy on the subject of that hour between eleven and noon. And he was watching you all the time like a cat."

"A weasel," Vance corrected him. "Yes, I was aware of his flatterin' scrutiny."

"Anyway, I can't see that he's helped us very much."

"No," agreed Vance. "We're not exactly forrader. But we're at least getting some luggage aboard. Our excitable mathematical wizard has opened up some very interestin' lines of speculation. And Mrs. Drukker is fairly teemin' with possibilities. If we knew what both of 'em together know we might find the key to this business."

HEATH had been sullen for the past hour, and had looked on at the proceedings with bored disdain. But now he drew himself up combatively.

"I'm here to tell you, Mr. Markham, that we're wasting our time. Sperling's the boy we want, and when my men bring him in and put him through a little sweating, we'll have enough material for an indictment. He was in love with the Dillard girl and was jealous of Robin—not only on account of the girl, but because Robin could shoot those red sticks straighter than he could. He had a scrap with Robin in this here room—the professor heard 'em at it; and he was down-stairs with Robin, according to the evidence, a few minutes before the murder. . . ."

"And," added Vance ironically, "his name means 'sparrow.' *Quod erat demonstrandum*. No, Sergeant; it's much too easy. It works out like a game of Canfield with the cards stacked; whereas this thing was planned much too carefully for suspicion to fall directly on the guilty person."

"I CAN'T see any careful planning about it," persisted Heath. "This Sperling gets sore, picks up a bow, grabs an arrow off of the wall, follows Robin outside, shoots him through the heart, and beats it."

Vance sighed.

"You're far too forthright for this wicked world, Sergeant. If only things happened with such naïve dispatch, life would be very simple—and depressin'. But such was not the *modus operandi* of the Robin's murder. First, no archer could shoot at a moving human target and strike just between the ribs over the vital spot of the heart. Secondly, there's that fracture of Robin's skull. He may have acquired it in falling, but it's not likely. Thirdly, his hat was at his feet, where it wouldn't have been if he had fallen naturally. Fourthly, the nock on the arrow is so bruised that I doubt if it would hold a string. Fifthly, Robin was facing the arrow, and during the drawing and aiming of the bow he would have had time to call out and cover himself. Sixthly . . ."

Vance paused in the act of lighting a cigarette.

"*By Jove*, Sergeant! I've overlooked something. A man stabbed in the heart has a pretty big external hemorrhage, especially when the end of the weapon is larger than the shaft and there's no adequate plug for the hole. I say! It's quite possible that you'll find some blood spots on the floor of the archery-room—somewhere near the door most likely."

Heath hesitated, but only momentarily. Experience had long since taught him that Vance's suggestions were not to be treated cavalierly; and with a good-natured grunt he got up and disappeared toward the rear of the house.

"I think, Vance, I begin to see what you mean," observed Markham, with a troubled look. "But if Robin's apparent death with a bow and arrow was merely an *ex-post-facto* stage-setting, then we're confronted by something almost too diabolical to contemplate."

"It was the work of a maniac," declared Vance, with unwonted sobriety. "Oh, not the conventional maniac who imagines he's Napoleon, but a madman with a brain so colossal that he has carried sanity to a, humanly speaking, *reductio ad absurdum*—to a point, that is, where humor itself becomes a formula in four dimensions."

Markham smoked vigorously, lost in speculation.

Digitized by Google

Original from UNIVERSITY OF IOWA

"I hope Heath doesn't find anything," he said at length.

"Why—in Heaven's name?" returned Vance. "If there's no material evidence that Robin met his end in the archery-room, it'll only make the problem more difficult legally."

But the material evidence was forthcoming. The Sergeant returned a few minutes later, crestfallen but excited.

"Damn it, Mr. Vance!" he blurted. "You had the dope all right." He made no attempt to keep the admiration out of his look. "There isn't any actual blood on the floor; but there's a dark place on the cement where somebody's scrubbed it with a wet rag today sometime. It ain't dry yet; and the place is right near the door, where you said. And what makes it more suspicious is that one of those rugs has been pulled over it.— But that don't let Sperling out altogether," he added. "He mighta shot Robin indoors."

"And then cleaned up the blood, wiped off the bow and arrow, and placed the body and the bow on the range, before making his departure? . . . Why? . . . Archery, to begin with, isn't an indoor sport, Sergeant. And Sperling knows too much about it to attempt murder with a bow and arrow. A hit such as the one that ended Robin's uneventful career would have been a pure fluke. Teucer himself couldn't have achieved it with any degree of certainty—and, according to Homer, Teucer was the champion archer of the Greeks."

AS HE spoke Pardee passed down the hall on his way out. He had nearly reached the front door when Vance rose suddenly and went to the archway.

"Oh, I say, Mr. Pardee. Just a moment, please."

The man turned with an air of gracious compliance.

"There is one other question we'd like to ask you," said Vance. "You mentioned seeing Mr. Sperling and Beedle leave here this morning by the wall gate. Are you sure you saw no one else use the gate?"

"Quite sure. That is, I don't recall anyone else."

"I was thinking particularly of Mr. Drukker."

"Oh, Drukker?" Pardee shook his head with mild emphasis. "No, I would have remembered him. But you realize a dozen people might have entered and left this house without my noticing them."

"Quite—quite," Vance murmured indifferently. "How good a chess-player, by the by, is Mr. Drukker?"

Pardee showed a flicker of surprise.

"He's not a player in the practical sense at all," he explained with careful precision. "He's an excellent analyst, however, and understands the theory of the game amazingly well. But he's had little practice at actual over-the-board play."

When Pardee had gone Heath cocked a triumphant eye at Vance.

"I notice, sir," he remarked good-naturedly, "that I'm not the only one who'd like to check the hunchback's alibi."

"Ah, but there's a difference between checking an alibi, and demanding that the person himself prove it."

At this moment the front door was thrown open. There were heavy footsteps in the hall, and three men appeared in the archway. Two were obviously detectives, and between them stood a tall, clean-cut youth of about thirty.

"We got him, Sergeant," announced one of the detectives, with a grin of vicious satisfaction. "He beat it straight home from here, and was packing up when we walked in on him."

SPERLING'S eyes swept the room with angry apprehension. Heath had planted himself before the man, and stood looking him up and down triumphantly.

"Well, young fella, you thought you'd get away, did you?" The Sergeant's cigar bobbed up and down between his lips as he spoke.

The color mounted to Sperling's cheeks, and he set his mouth stubbornly.

"So! You've got nothing to say?" Heath went on, squaring his jaw ferociously. "You're one of these silent lads, are you? Well, we'll make you talk." He turned to Markham. "How about it, sir? Shall I take him to Headquarters?"

"Perhaps Mr. Sperling will not object to answering a few questions here," said Markham quietly.

Sperling studied the District Attorney a moment; then his gaze moved to Vance, who nodded to him encouragingly.

"Answer questions about what?" he asked, with an obvious effort at self-control. "I was preparing to go away for the week-end when these ruffians forced their way into my room; and I was brought here without a word of explanation or even an opportunity to communicate with my family. Now you talk of taking me to Police Headquarters." He gave Heath a defiant glare. "All right, take me to Police Headquarters!"

"What time did you leave here this morning, Mr. Sperling?" Vance's tone was soft and ingratiating, and his manner reassuring.

"About a quarter past eleven," the man answered. "In time to catch the eleven-forty Scarsdale train from Grand Central."

"And Mr. Robin?"

"I don't know what time Robin went. He said he was going to wait for Belle—Miss Dillard. I left him in the archery-room."

"You saw Mr. Drukker?"

"For a minute—yes. He was in the archery-room when Robin and I went down-stairs; but he left immediately."

"Through the wall gate? Or did he walk down the range?"

"I don't remember—in fact, I didn't notice. . . . Say, look here: what's all this about anyway?"

"Mr. Robin was killed this morning," said Vance, "—at some time near eleven o'clock."

Sperling's eyes seemed to start from his head.

"Robin killed? My God! . . . Who—who killed him?" The man's lips were dry, and he wetted them with his tongue.

"We don't know yet," Vance answered. "He was shot through the heart with an arrow."

This news left Sperling stunned. His eyes traveled vaguely from side to side, and he fumbled in his pocket for a cigarette.

Heath stepped nearer to him, and thrust out his chin.

"Maybe *you* can tell us who killed him —*with a bow and arrow!*"

"Why—why do you—think I know?" Sperling managed to stammer.

"Well," returned the Sergeant relentlessly, "you were jealous of Robin, weren't you? You had a hot argument with him about the girl, right in this room, didn't you? And you were alone with him just before he was croaked, weren't you? And you're a pretty good shot with the bow and arrow, aren't you? —That's why I think that maybe you know something." He narrowed his eyes and drew his upper lip over his teeth. "Say! Come clean. Nobody else but you coulda done it. You had a fight with him over the girl, and you were the last person seen with him—*only a few minutes before he was killed.* And who else woulda shot him with a bow and arrow except a champeen archer—huh? . . . Make it easy for yourself, and spill the story. We've got you."

A STRANGE light had gathered in Sperling's eyes, and his body became rigid.

"Tell me,"—he spoke in a strained, unnatural voice—"did you find the bow?"

"Sure we found it." Heath laughed unpleasantly. "Right where you left it—in the alley."

"What kind of a bow was it?" Sperling's gaze had not moved from some distant point.

"What kind of a bow?" repeated Heath. "A regular bow—"

Vance, who had been watching the youth closely, interrupted:

"I think I understand the question, Sergeant.—It was a woman's bow, Mr. Sperling. About five-feet-six, and rather light—under thirty pounds, I should say."

Sperling drew a slow deep breath, like a man steeling himself for some bitter resolution. Then his lips parted in a faint, grim smile.

"What's the use?" he asked listlessly. "I thought I'd have time to get away. . . . Yes, I killed him."

Heath grunted with satisfaction, and his belligerent manner at once disappeared.

"You got more sense than I thought you had," he said, in an almost paternal tone, nodding in a businesslike manner to the two detectives. "Take him along, boys. Use my buggy—it's outside. And lock him up without booking him. I'll prefer the charge when I get to the office."

"Come along, bo," ordered one of the detectives, turning toward the hall.

But Sperling did not at once obey. Instead he looked appealingly at Vance.

"Could I—might I—?" he began.

Vance shook his head.

"No, Mr. Sperling. It would be best if you didn't see Miss Dillard. No use of harrowin' her feelings just now. . . . Cheerio."

The man turned without another word and went out between his captors.

VII

VANCE REACHES A CONCLUSION

(*Saturday, April 2d; 3:30 p. m.*)

WHEN we were again alone in the drawing-room Vance rose and, stretching himself, went to the window. The scene that had just been enacted, with its startling climax, had left us all somewhat dazed. Our minds were

Accept 10 Days' Proof

Let us prove that the claims millions of men make for this unique shaving cream are justified

GENTLEMEN:

Pullman car arguments never have yet proved a point.

That's why we make no claims for Palmolive Shaving Cream other than the fact that millions of men, once wedded to rival preparations, have shifted to this new creation.

Hence — it is worth a trial. So we send 10-day tubes for that purpose. Will you accept one as a courtesy to us?

65 years of soap study stand behind Palmolive Shaving Cream. 129 formulas were developed and discarded before we found the right one. All our experience as the makers of Palmolive Soap, the world's leading toilet soap, is embodied in this creation.

5 new factors

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Just send coupon

Your present method may suit you well. But still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m. central time—over station WEAF and 32 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you. Clip the coupon now.

busy, I think, with the same idea; and when Vance spoke it was as if he were voicing our thoughts.

"We're back in the nursery, it seems. . . .

"'I,' said the Sparrow,
'With my bow and arrow,
I killed Cock Robin.' . . .

I say, Markham; this is getting a bit thick."

He came slowly back to the center-table and crushed out his cigarette. From the corner of his eye he looked at Heath.

"Why so pensive, Sergeant? You should be singing roundelays and doing a joyous tarantella. Has not your villain confessed to the dark deed? Does it not fill you with gladness to know that the culprit will soon be languishin' in an oubliette?"

"To tell you the truth, Mr. Vance," Heath admitted sullenly, "I'm not satisfied. That confession came too easy, and —well, I've seen a lot of guys come across; but this one somehow didn't act like he was guilty. And that's a fact, sir."

"At any rate," submitted Markham hopefully, "his preposterous confession will damp the newspapers' curiosity and give us a free field to push our investigation. This case is going to make an ungodly noise; but as long as the reporters think the guilty person is jailed, they won't be bothering us for news of 'developments'."

"I'm not saying he ain't guilty," asserted Heath pugnaciously, obviously arguing against his own convictions. "We certainly had the goods on him, and he mighta realized it and spilled the works, thinking it would go easier with him at the trial. Maybe he's not so dumb, after all."

"It won't do, Sergeant," said Vance. "The lad's mental workin's were deucedly simple. He knew Robin was waiting to see Miss Dillard, and he also knew she'd non-suited him, so to speak, last night. Sperling evidently didn't have a high opinion of Robin; and when he heard of the gentleman's death at the hands of someone who wielded a short, light bow, he jumped to the conclusion that Robin had overstepped the bounds of propriety in his wooing, and received a righteous shaft through the heart. There was then nothing for our noble, mid-Victorian sparrow to do but slap his own manly bosom and proclaim: '*Ecce homo!*' . . . It's most distressin'."

"Well, anyhow," grumbled Heath, "I'm not going to turn him loose. If Mr. Markham don't want to prosecute, that's up to him."

MARKHAM looked at the Sergeant tolerantly. He realized the strain the man was under, and it was in keeping with his bigness of nature that he took no offense at the other's words.

"Perhaps, however, Sergeant," he said kindly, "you'll not object to continuing the investigation with me, even if I don't decide to prosecute Sperling."

Heath was at once contrite. He got up briskly and, going to Markham, held out his hand.

"You know it, sir!"

Markham took the offered hand, and rose with a gracious smile.

"I'll leave things with you, then, for the time being. I've some work to do at the office, and I told Swacker to wait for me."* He moved dispiritedly toward the hall. "I'll explain the situation to Miss Dillard and the professor before I go.—Anything special in mind, Sergeant?"

"Well, sir, I think I'll take a good look for that rag that was used to wipe up the floor down-stairs. And while I'm at it I'll go over the archery-room with a fine-tooth comb. Also, I'll put the screws to the cook and the butler again—especially the cook. She musta been mighty close at hand when the dirty work was going on. . . . Then the regular routine stuff—inquiries in the neighborhood and that sorta thing."

"Let me know the results. I'll be at the Stuyvesant Club later today and tomorrow afternoon."

VANCE had joined Markham in the archway.

"I say, old man," he remarked, as we went toward the stairs; "don't minimize the importance of that cryptic note left in the mailbox. I've a strong psychic suspicion that it may be the key to the nursery. You'd better ask Professor Dillard and his niece if 'Bishop' has any provocative significance for them. That diocesan signature has a meaning."

"I'm not so sure," returned Markham dubiously. "It appears utterly meaningless to me. But I'll follow your suggestion."

Neither the professor nor Miss Dillard, however, could recall any personal association with the word *Bishop;* and the professor was inclined to agree with Markham that the note was without any significant bearing on the case.

"It strikes me," he said, "as a piece of juvenile melodrama. It isn't likely that the person who killed Robin would adopt a vague pseudonym and write notes about his crime. I'm not acquainted with criminals, but such conduct doesn't impress me as logical."

"But the crime itself was illogical," ventured Vance pleasantly.

"One can't speak of a thing being illogical, sir," returned the professor tartly, "when one is ignorant of the very premises of a syllogism."

"Exactly." Vance's tone was studiously courteous. "Therefore, the note itself may not be without logic."

Markham tactfully changed the subject.

"What I came particularly to tell you, Professor, is that Mr. Sperling called a short time ago and, when informed of Mr. Robin's death, confessed to having done it himself. . . ."

"Raymond confessed!" gasped Miss Dillard.

Markham looked at the girl sympathetically.

"To be quite frank, I didn't believe Mr. Sperling. Some mistaken idea of chivalry undoubtedly led him to admit the crime."

"'Chivalry'?" she repeated, leaning forward tensely. "What exactly do you mean by that, Mr. Markham?"

It was Vance who answered:

"The bow that was found on the range was a woman's bow."

"Oh!" The girl covered her face with her hands, and her body shook with sobs.

Professor Dillard regarded her helplessly; and his impotency took the form of irritation.

"What flummery is this, Markham?" he demanded. "Any archer can shoot with a woman's bow. . . . That unutterably young idiot! Why should he make Belle miserable by his preposterous confession? . . . Markham, my friend, do what you can for the boy."

Markham gave his assurances, and we rose to go.

"By the by, Professor Dillard," said Vance, pausing at the door, "I trust you won't misunderstand me, but there's a bare possibility that it was someone with access to this house who indulged in the practical joke of typing that note. Is there, by any chance, a typewriter on the premises?"

It was patent that the professor resented Vance's question, but he answered civilly enough.

"No,—nor has there ever been one to my knowledge. I threw my own machine away ten years ago when I left the university. An agency does whatever typing I need."

"And Mr. Arnesson?"

"He never uses a typewriter."

As we descended the stairs we met Arnesson returning from Drukker's.

"I've placated our local Leipnitz," he announced, with an exaggerated sigh. "Poor old Adolph! The world is too much with him. When he's wallowing in the relativist formulas of Lorentz and Einstein he's serene. But when he's dragged down to actuality he disintegrates."

"IT MAY interest you to know," said Vance casually, "that Sperling has just confessed to the murder."

"Ha!" Arnesson chuckled. "Quite in keeping. 'I,' said the Sparrow. . . . Very neat. Still, I don't know how it'll work out mathematically."

"And, since we agreed to keep you posted," continued Vance, "it may help your calculations to know that we have reason to believe that Robin was killed in the archery-room and placed on the range afterward."

"Glad to know it." Arnesson became momentarily serious. "Yes, that may affect my problem." He walked with us to the front door. "If there's any way I can be of service to you, call on me."

Vance had paused to light a cigarette; but I knew, by the languid look in his eyes, that he was making a decision. Slowly he turned to Arnesson.

"Do you know if Mr. Drukker or Mr. Pardee has a typewriter?"

Arnesson gave a slight start, and his eyes twinkled shrewdly.

"Aha! That Bishop note. . . . I see. Merely a matter of being thorough. Quite right." He nodded with satisfaction. "Yes; both have typewriters. Drukker types incessantly—thinks to the keyboard, so he says. And Pardee's chess correspondence is as voluminous as a movie hero's. Types it all himself, too."

"Would it be any great trouble to you," asked Vance, "to secure a specimen of the typing of each machine, and also a sample of the paper these two gentlemen use?"

"None whatever." Arnesson appeared delighted with the commission. "Have them for you this afternoon. Where'll you be?"

"Mr. Markham will be at the Stuy-

*Saturday was a "half day" at the District Attorney's office. Swacker was Markham's secretary.

Whitman's Fruits and Nuts . . . a hospitable Hallowe'en greeting

Fruits and nuts—of course. Tradition decrees it. And what more delightful than the famous package of Whitman's Fruits and Nuts?

Delicious chocolate surrounding luscious fruits and selected nuts! What a wonderful greeting for those Hallowe'en guests who are sure to drop in.

How these crisp days awaken the candy hunger. Have candy . . . Whitman's . . . the Fruits and Nuts package ready.

It proves both your thoughtfulness and your good taste to take "her" Whitman's.

Whitman's Fruits and Nuts package is doubly welcomed for the thought it carries—and for itself.

There is a selected Whitman agency near you. And every Whitman agency gets each Whitman package directly—quickly—*fresh* from us.

vesant Club. You might 'phone him there, and he can arrange—"

"Why bother to arrange anything? I'll bring my findings to Mr. Markham personally. Only too glad. Fascinating game, being a sleuth."

VANCE and I returned home in the District Attorney's car, and Markham continued to the office. At seven o'clock that night the three of us met at the Stuyvesant Club for dinner; and at half past eight we were sitting in Markham's favorite corner of the lounge-room smoking and having our coffee.

During the meal no mention of the case had been made. The late editions of the afternoon papers had carried brief accounts of Robin's death. Heath had evidently succeeded in curbing the reporters' curiosity and clipping the wings of their imagination. The District Attorney's office being closed, the newspaper men were unable to bombard Markham with questions, and so the late press was inadequately supplied with information. The Sergeant had guarded the Dillard house well, for the reporters had not succeeded in reaching any member of the household.

Markham had picked up a late "Sun" on his way from the dining-room, and glanced through it carefully as he sipped his coffee.

"This is the first faint echo," he commented ruefully. "I shudder to think what the morning papers will contain."

"There's nothing to do but bear it," smiled Vance unfeelingly. "The moment some bright journalistic lad awakes to the robin-sparrow-arrow combination the city editors will go mad with joy, and every front page in the country will look like a Mother-Goose hoarding."

Markham lapsed into despondency. Finally he struck the arm of his chair angrily with his fist.

"Confound it, Vance! I won't let you inflame my imagination with this idiocy about nursery rhymes." Then he added, with the ferocity of uncertainty: "It's sheer coincidence, I tell you. There simply couldn't be anything in it."

Vance sighed. "Convince yourself against your will; you're of the same opinion still—to paraphrase Butler." He reached into his pocket and took out a sheet of paper. "Putting all juvenilia to one side *pro tempore*, here's an edifyin' chronology I drew up before dinner. . . . Edifyin'? Well, it might be if we knew how to interpret it."

MARKHAM studied the paper for several minutes. What Vance had written down was this:

9:00 A. M. Arnesson left house to go to university library.
9:15 A. M. Belle Dillard left house for the tennis courts.
9:30 A. M. Drukker called at house to see Arnesson.
9:50 A. M. Drukker went down-stairs to archery-room.
10:00 A. M. Robin and Sperling called at house and remained in drawing-room for half an hour.
10:30 A. M. Robin and Sperling went down to archery-room.
10:32 A. M. Drukker says he went out for a walk, by the wall gate.
10:35 A. M. Beedle went marketing.
10:55 A. M. Drukker says he returned to his own house.
11:15 A. M. Sperling went away by wall gate.
11:30 A. M. Drukker says he heard a scream in his mother's room.
11:35 A. M. Professor Dillard went on balcony of Arnesson's room.
11:40 A. M. Professor Dillard saw Robin's body in archery range.
11:45 A. M. Professor Dillard telephoned to District Attorney's office.
12:25 P. M. Belle Dillard returned from tennis.
12:30 P. M. Police arrived at Dillard house.
12:35 P. M. Beedle returned from market.
2:00 P. M. Arnesson returned from university.

Ergo: Robin was killed at some time between 11:15 (when Sperling departed) and 11:40 (when Professor Dillard discovered body).

The only other persons known to have been in the house during this time were Pyne and Professor Dillard.

The disposition of all other persons connected in any way with the murder was as follows (according to statements and evidence now in hand):

1. Arnesson was at the university library between 9 A. M. and 2 P. M.
2. Belle Dillard was at the tennis courts between 9:15 A. M. and 12:25 P. M.
3. Drukker was walking in the park between 10:32 A. M. and 10:55 A. M.; and was in his study from 10:55 A. M. on.
4. Pardee was in his house the entire morning.
5. Mrs. Drukker was in her room the entire morning.
6. Beedle was marketing between 10:35 A. M. and 12:35 P. M.
7. Sperling was on his way to the Grand Central Station between 11:15 A. M. and 11:40 A. M., at which hour he took a train for Scarsdale.

Conclusion: Unless at least one of these seven alibis is shaken, the whole weight of suspicion, and indeed the actual culpability, must rest upon either Pyne or Professor Dillard.

When Markham finished reading the paper, he made a gesture of exasperation.

"Your entire implication is preposterous," he said irritably; "and your conclusion is a *non-sequitur*. The chronology helps set the time of Robin's death, but your assumption that one of the persons we've seen today is necessarily guilty is arrant nonsense. You completely ignore the possibility that any outsider could have committed the crime. There were three ways of reaching the range and the archery-room without entering the house—the wall gate on Seventy-fifth Street, the other wall gate on Seventy-sixth Street, and the alleyway between the two apartment houses, leading to Riverside Drive."

"Oh, it's highly probable that one of these three entrances was used," returned Vance. "But don't overlook the fact that the most secluded, and therefore the most likely, of these three means of entry—to wit, the alleyway—is guarded by a locked door to which no one would be apt to have a key except some member of the Dillard household. I can't picture a murderer walking into the range from either of the street gates: he would be taking too many chances of being seen."

Vance leaned forward seriously.

"And, Markham, there are other reasons why we may eliminate strangers or casual prowlers. The person who sent Robin to his Maker must have been privy to the exact state of affairs in the Dillard house this morning between a quarter past eleven and twenty minutes to twelve. He knew that Pyne and the old professor were alone there. He knew that Belle Dillard was not roaming about the premises. He knew that Beedle was away and could neither hear him nor surprise him. He knew that Robin—his victim—was there, and that Sperling had departed. Moreover, he knew something of the lie of the land—the situation of the archery-room, for instance; for it's only too plain that Robin was killed in that room. No one who wasn't familiar with all these details would have dared enter the grounds and stage a spectacular murder. I tell you, Markham, it was someone very close to the Dillard ménage—someone who was able to find out just what conditions obtained in that household this morning."

"What about that scream of Mrs. Drukker's?"

"Ah, what about it, indeed? Mrs. Drukker's window may have been a factor that the murderer overlooked. Or perhaps he knew about it and decided to take that one chance of being seen. On the other hand, we don't know whether the lady screamed or not. She says No; Drukker says Yes. They both have an ulterior motive for what they poured into our trustin' ears. Drukker may have told of the scream by way of proving he was at home between eleven and twelve; and Mrs. Drukker may have denied it for fear he wasn't home. But it doesn't matter. The point I'm trying to make is that only an intimate of the Dillard house could have done this devilish business."

"We have too few facts to warrant that conclusion," asserted Markham. "Chance may have played a part—"

"Oh, I say, old man! Chance may work out to a few permutations, but not to twenty.—And there is that note left in the mail-box. The murderer even knew Robin's middle name."

"Assuming, of course, that the murderer wrote the note."

"Do you prefer to assume that some balmy joker found out about the crime through telepathy or crystal-gazing, hied to a typewriter, composed a dithyramb, returned hot-footed to the house, and, for no good reason, took the terrific risk of being seen putting the paper in the mail-box?"

BEFORE Markham could answer Heath entered the lounge-room and hurried to our corner. That he was worried and uneasy was obvious. With scarcely a word of greeting he handed a typewritten envelope to Markham.

"That was received by the 'World' in the late afternoon mail. Quinan, the police reporter of the 'World,' brought it to me a little while ago; and he says that the 'Times' and the 'Herald' also got copies of it. The letters were stamped at one o'clock today, so they were probably posted between eleven and twelve. What's more, Mr. Markham, they were mailed in the neighborhood of the Dillard house, for they went through Post Office Station 'N' on West Sixty-ninth Street."

Markham withdrew the enclosure from the envelope. Suddenly his eyes opened wide, and the muscles about his mouth tightened. Without looking up he handed the letter to Vance. It consisted of a single sheet of typewriting paper, and the words printed on it were identical to those of the note left in the Dillard mail-box.

CHRYSLER PLYMOUTH

Plymouth Coupe, $685

Dollar Value Above All Others In Its Field

When you compare the new Plymouth in dollar value with the few other cars in the lowest-priced field, you know at once the reason for its overwhelming acceptance.

You are surprised by the extra roominess in its full-sized bodies, ample for all adult passengers.

You are astounded by the difference in style and smartness—slender-profile, chromium-plated radiator, bowl-type headlamps, "air-wing" fenders, arched-window silhouette, richness of upholstery and interior appointments.

You marvel at the Plymouth's speed, power, pick-up, smoothness from the "Silver-Dome" high-compression engine, using any gasoline; and the safety of internal-expanding hydraulic 4-wheel brakes, sure in any weather.

With these and many other obvious advantages it is not surprising that the millions who count the cost of motoring, have instantly recognized the new Plymouth as the greatest dollar-for-dollar value in the lowest-priced field.

$675 AND UPWARDS

Roadster (*with rumble seat*)	$675
Coupe	685
Touring	695
2-Door Sedan	700
DeLuxe Coupe (*with rumble seat*)	735
4-Door Sedan	735

All prices f. o. b. Detroit. Plymouth dealers are in a position to extend the convenience of time payments.

Indeed, the communication was an exact duplicate of the other:—"Joseph Cochrane Robin is dead. Who Killed Cock Robin? Sperling means sparrow.—THE BISHOP."

Vance scarcely glanced at the paper.

"Quite in keeping, don't y' know," he said indifferently. "The Bishop was afraid the public might miss the point of his joke; so he explained it to the press."

"Joke, did you say, Mr. Vance?" asked Heath bitterly. "It ain't the kind of joke I'm used to. This case gets crazier—"

"Exactly, Sergeant. A crazy joke."

A uniformed boy stepped up to the District Attorney and, bending over his shoulder discreetly, whispered something.

"Bring him here right away," ordered Markham. Then to us: "It's Arnesson. He'll probably have those specimens of typing." A shadow had settled on his face; and he glanced again at the note Heath had brought him. "Vance," he said in a low voice, "I'm beginning to believe that this case may turn out to be as terrible as you think. I wonder if the typing will correspond. . . ."

But when the note was compared with the specimens Arnesson brought, no similarity whatever could be discerned. Not only were the typing and the ink different from those of either Pardee's or Drukker's machine, but the paper did not match any one of the samples that Arnesson had secured.

VIII

ACT TWO

(*Monday, April 11th; 11:30 a. m.*)

THERE is no need to recall here the nation-wide sensation caused by Robin's murder. Everyone remembers how that startling tragedy was featured in the country's press. It was referred to by various designations. Some newspapers called it the Cock Robin murder. Others, more alliterative but less accurate,* termed it the Mother Goose murder. But the signature of the typewritten notes appealed strongly to the journalistic sense of mystery; and in time the killing of Robin came to be known as the Bishop murder case. Its strange and fearful combination of horror and nursery jargon inflamed the public's imagination; and the sinister and insane implications of its details affected the entire country like some grotesque nightmare whose atmosphere could not be shaken off.

During the week following the discovery of Robin's body the detectives of the Homicide Bureau, as well as the detectives connected with the District Attorney's office, were busy night and day pushing their inquiries. The receipt of the duplicate Bishop notes by the leading New York morning papers had dissipated whatever ideas Heath may have held as to Sperling's guilt; and though he refused to put his official imprimatur on the young man's innocence, he threw himself, with his usual gusto and pertinacity, into the task of finding another and more plausible culprit. The investigation which he organized and superintended was as complete as had been that of the Greene murder case. No avenue which held the meagerest hope of results was overlooked; and the report he drew up would have given joy even to those meticulous criminologists of the University of Lausanne.

On the afternoon of the day of the murder he and his men had searched for the cloth that had been used to wipe up the blood in the archery-room; but no trace of it was found. Also, a thorough examination of the Dillard basement was made in the hope of finding other clews; but although Heath had put the task in the hands of experts, the result was negative. The only point brought to light was that the fiber rug near the door had recently been moved so as to cover the cleansed spot on the cement floor. This fact, however, merely substantiated the Sergeant's earlier observation.

THE post-mortem report of Doctor Doremus lent color to the now officially accepted theory that Robin had been killed in the archery-room and then placed on the range. The autopsy showed that the blow on the back of his skull had been a particularly violent one and had been made with a heavy rounded instrument, resulting in a depressed fracture quite different from the fissured fracture caused by striking a flat surface. A search was instituted for the weapon with which the blow had been dealt; but no likely instrument was turned up.

Though Beedle and Pyne were questioned by Heath several times, nothing new was learned from them. Pyne insisted that he had been up-stairs the entire morning in Arnesson's room, except for a few brief absences to the linen-closet and the front door, and clung tenaciously to his denial that he had touched either the body or the bow when sent by Professor Dillard to find Sperling. The Sergeant, however, was not entirely satisfied with the man's testimony.

"That bleary-eyed old cormorant has got something up his sleeve," he told Markham disgustedly. "But it would take the rubber hose and the water cure to make him spill it."

A canvass of all the houses in Seventy-fifth Street between West End Avenue and Riverside Drive was made, in the hope of finding a tenant who had noticed someone entering or emerging from the Dillard wall gate during the forenoon. But nothing was gained by this tedious campaign. Pardee, it seemed, was the only resident within view of the Dillard house who had observed anyone in the neighborhood that morning. In fact, after several days of arduous inquiries along this line the Sergeant realized that he would have to proceed without any outside or fortuitous assistance.

The various alibis of the seven persons whom Vance had tabulated in his notation for Markham, were gone into as thoroughly as circumstances would permit. It was obviously impossible to check them completely, for, in the main, they were based solely on the statements of the individuals involved. Moreover, the investigation had to be made with the utmost care lest suspicion be aroused. The results of these inquiries were as follows:

1. Arnesson had been seen in the university library by various people, including an assistant librarian and two students. But the time covered by their evidence was neither consecutive nor specific as to the hour.

2. Belle Dillard had played several sets of tennis at the public courts at 119th Street and Riverside Drive, but because there had been more than four in her party she had twice relinquished her place to a friend; and none of the players could state positively that she had remained at the courts during these periods.

3. The time that Drukker departed from the archery-room was definitely determined by Sperling; but no one could be found who had seen him thereafter. He admitted he had met no one he knew in the park, but insisted he had stopped for a few minutes to play with some strange children.

4. Pardee had been alone in his study. His old cook and his Japanese valet had been in the rear of the house, and had not seen him until lunch time. His alibi therefore was purely a negative one.

5. Mrs. Drukker's word had to be accepted as to her whereabouts that morning, for no one had seen her between ten o'clock, when Drukker went to call on Arnesson, and one o'clock, when the cook brought up her luncheon.

6. Beedle's alibi was checked with fairly satisfactory completeness. Pardee had seen her leave the house at 10:35; and she was remembered by several of the hucksters at the Jefferson Market between eleven and twelve.

7. The fact that Sperling had taken the 11:40 train to Scarsdale was verified; therefore he would have had to leave the Dillard house at the time he stated—namely: 11:15. The determination of this point, however, was merely a matter of routine, for he had been practically eliminated from the case. But if, as Heath explained, it had been found that he had not taken the 11:40 train, he would have again become an important possibility.

Pursuing his investigations along more general lines, the Sergeant went into the histories and associations of the various persons involved. The task was not a difficult one. All were well-known, and information concerning them was readily accessible; but not one item was unearthed that could be regarded as even remotely throwing any light on Robin's murder. Nothing transpired to give so much as a hint to the motive for the crime; and after a week's intensive inquiry and speculation the case was still cloaked in seemingly impenetrable mystery.

SPERLING had not been released. The *prima facie* evidence against him, combined with his absurd confession, made impossible such a step on the part of the authorities. Markham, however, had held an unofficial conference with the attorneys whom Sperling's father had engaged to handle the case, and some sort of a "gentleman's agreement" had, I imagine, been reached; for although the State made no move to apply for an indictment (despite the fact that the Grand Jury was sitting at the time), the defense lawyers did not institute *habeas corpus* proceedings. All the indications pointed to the supposition that both Markham and Sperling's attorneys were waiting for the real culprit to be apprehended.

Markham had had several interviews with the members of the Dillard household, in a persistent effort to bring out some trivial point that might lead to a fruitful line of inquiry; and Pardee had been summoned to the District Attorney's office to make an affidavit as to what he had observed from his window on the morning of the tragedy. Mrs. Drukker had been interrogated again; but not only

*The old anonymous nursery rhyme, "The Death and Burial of Cock Robin," is not, as is commonly supposed, one of the original "Mother Goose Melodies," although it has often been included in modern editions of that famous work.

7 results from Mobiloil Quality

Here are 7 improvements which automobile owners have noticed on changing to Gargoyle Mobiloil.

1 **Maximum power.** Mobiloil *body* is so carefully fitted to every type of engine that none of the compression is lost or power wasted.

2 **Minimum carbon deposit.** Mobiloil is refined from quality crudes and is clean-burning. A minimum of carbon is left in the combustion chambers.

3 **Longer life for your car.** Mobiloil's lubricating quality and richness cushions each of the moving parts against excessive wear. That means lower repair bills.

4 **Lower gasoline consumption.** Mobiloil seals the pistons more by its superior viscous properties than by sheer heaviness of body. Therefore "heavy oil" drag on the pistons is avoided, power loss lessened and excessive gasoline consumption overcome.

5 **Lower oil consumption.** Mobiloil, correctly fitted to your engine, does not work excessively past pistons to be consumed in combustion chambers.

6 **Fewer repairs.** Mobiloil feeds evenly and constantly to all the points of friction, thereby protecting you against burned bearings or scored pistons.

7 **Lower operating cost per mile.** Through meeting *all* of the lubricating requirements of your engine, the use of Mobiloil results in lower operating costs.

182 automobile manufacturers approve the Mobiloil recommendations for their cars. You are always sure with

Beard Tough... Skin Tender? *Forget it, Men!*

Whiskers come off quick and smooth when beards are softened small-bubble way. No razor-pull, sting, or smart. Read how this new-type lather takes razor-pull out of shaving. See our no-cost offer in coupon below.

"Yas . . . Boss! Small bubbles sure get whiskers off quick. That's what most of my gentlemen ask for."

DOES the above headline surprise you? Are you one of those men who believe that shaving, at best, must always be uncomfortable . . . that razor-pull, sting and smart can never be completely done away with?

If so, you'll find lots of good news in this advertisement. It's the story of a new, quick way to get your whiskers off. A way that's faster . . . cleaner . . . smoother than any you've ever known before.

You'll discover the difference the minute you try it. You'll see it in your mirror. Instantly your face feels serene and comfortable . . . delightfully fresh and clean.

How it works

No other shaving cream is like Colgate's. No other can offer you such unique results.

It is, we believe, the ultimate attainment in the science of beard-softening.

Colgate lather is designed to absorb more water . . . to scientifically drench your beard with moisture at the base, where the razor work is done.

It's a "small-bubble" lather. For small bubbles hold more water. They carry it closer to the base of your beard.

Ordinary Lather
Photomicrograph of lather of an ordinary shaving cream surrounding single hair. Large dark spots are air—white areas are water. Note how the large bubbles hold air instead of water against the beard.

Colgate Lather
Photomicrograph prepared under identical conditions shows fine, closely knit texture of Colgate's Rapid Shave Cream lather. Note how the small bubbles hold water instead of air close against the beard.

That's the principle, men. Now here's what it does for you:

1. The soap in the lather breaks up the oil film that surrounds each tiny hair . . . floats it quickly away.

2. Then billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd close around each whisker . . . soaking it soft with water.

Instantly your beard gets moist and pliable . . . limp and lifeless . . . scientifically softened right down to the base . . . ready for the razor.

Thus your whiskers come off clean and smooth. We will gladly send a seven-day trial tube. Also a sample of "After Shave," our new-type lotion.

Colgate & Co., Dept. 501-K FREE OFFER MEN!
595 Fifth Ave., New York
Please send me FREE sample of Colgate's Rapid Shave Cream. Also sample of Colgate's After Shave.

did she emphatically deny having looked out of her window that morning, but she scoffed at the idea that she had screamed.

Drukker, when requestioned, modified somewhat his former testimony. He explained that he might have been mistaken as to the source of the scream, and suggested that it could have come from the street or from one of the court windows of the apartment house. In fact, he said, it was highly unlikely that his mother had uttered the scream, for when he went to her door a moment later she was humming an old German nursery song from Humperdinck's "Hänsel and Gretel." Markham, convinced that nothing further was to be learned from either him or Mrs. Drukker, finally concentrated on the Dillard house itself.

ARNESSON attended the informal conferences held in Markham's office; but for all his voluble and cynical observations, he appeared to be as much at sea as the rest of us. Vance chaffed him good-naturedly about the mathematical formula that was to solve the case, but Arnesson insisted that a formula could not be worked out until all the factors of the theorem were available. He appeared to regard the entire affair as a kind of Juvenalian lark; and Markham on several occasions gave vent to his exasperation. He reproached Vance for having made Arnesson an unofficial confrère in the investigation, but Vance defended himself on the ground that sooner or later Arnesson would supply some piece of seemingly irrelevant information that could be used as an advantageous *point de départ.*

"His crimino-mathematical theory is of course rubbish," said Vance. "Psychology—not abstract science—will eventually reduce this conundrum to its elements. But we need material to go on, and Arnesson knows the inwardness of the Dillard home better than we can ever know it. He knows the Drukkers, and he knows Pardee; and it goes without saying that a man who has had the academic honors heaped on him that he has, possesses an unusually keen mind. As long as he gives his thought and attention to the case, there's the chance that he'll hit upon something of vital importance."

"You may be right," grumbled Markham. "But the man's derisive attitude gets on my nerves."

"Be more catholic," urged Vance. "Consider his ironies in relation to his scientific speculations. What could be more natural than that a man who projects his mind constantly into the vast interplanet'ry reaches, and deals with light-years and infinities and hyperphysical dimensions, should sniff derisively at the infinitesimals of this life? . . . Stout fella, Arnesson. Not homey and comfortable perhaps, but dashed interestin'."

Vance himself had taken the case with unwonted seriousness. His translations had been definitely put aside. He became moody and waspish—a sure sign that his mind was busy with an absorbing problem. After dinner each night he went into his library and read for hours—not the classic and esthetic volumes on which he generally spent his time, but such books as Bernard Hart's "The Psychology of Insanity," Freud's "Der Witz und seine Beziehung zum Unbewussten," Coriat's "Abnormal Psychology" and "Repressed

Speak Up!

ALMOST every other person you meet today is grumbling about something connected with government and almost every other man or woman you meet neglected to vote on last Presidential Election Day.

Often you hear them say, "What's the use of voting? My vote won't change the result." Many of the men and women who should have cast their ballots in 1924 must have talked like that, for only 52 percent of them voted.

America has faced many crises. She has made laws, amended laws, abolished laws. She has kept step with changing world conditions. But many old problems remain unsolved. New ones will arise. Your government will be as sound and wise as you and other Americans make it. You have great responsibility and great power. It is your duty to exercise that power. And the way to exercise it is through your vote. Do not neglect it.

By failing to vote, you offer encouragement to the political plunderer and other unscrupulous persons who are eager to profit by the opportunity you give them. Only by voting can the majority of Americans holding like opinions dictate their wishes and save themselves from the danger of being governed by a minority holding opposite opinions.

Your next President will not be a despot or a dictator. He will not make or unmake laws, but he has great power and influence and will go into office bound to use them to bring about the kind of government wanted by those who elected him.

Once in four years you are called upon to vote for a President and thereby help to solve great problems.

Let no private affairs prevent you from doing your duty to your country on Election Day.

Be a good citizen. Go to the polls on November 6th and vote.

In 1920, 54,053,000 citizens of the United States were eligible to vote. Only 26,674,171 voted—approximately 49 percent. In 1924, out of a total of 56,215,000 men and women who should have voted, only 29,091,417 did—about 52 percent.

Most good Americans are willing to abide by the will of the majority. The trouble is that many of us are not sure that the will of the majority is being expressed.

When about one-half of the voters neglect their duty the country is governed not by a majority of the people—but merely by a majority of the minority.

In 1928 America needs every possible vote so that the will of the real majority may be known. No one else can speak for you on Election Day. Speak for yourself. Vote.

HALEY FISKE, *President.*

Wonder working plans *that lift a load from mothers' shoulders*

"Instead of the old 'discipline' many mothers are finding ways to use the child's own interests to guide him to the thing he should do," says Margaret Gray Blanton, who with Dr. Smiley Blanton, Professor of Child Study at Vassar College, has written "Child Guidance."

Bubbling over with mischief! How children chafe against restraint! Perplexed mothers are getting wonderful help from the new, sane ways of handling these little human dynamos.

There's the question of the right sort of breakfast, for instance. Mothers read about the nation-wide school tests that prove how the best records are made by children who start out with a *hot, cooked* cereal. They know that in 70,000 school rooms this sign hangs on the wall:

"Every boy and girl needs a hot *cereal breakfast"*

So, because they're utterly convinced, themselves, about its value, mothers sometimes urge too hard! "Now, eat your cereal. It's so good for you."

And red-blooded, normal boys very often reply, "Aw, I don't like Cream of Wheat!"—or oatmeal—or whatever cereal it is. These same boys would scorn a football, given them for health!

But when the *hot, cooked* cereal habit becomes a fascinating game—that's another story! That's why this splendid plan—a children's club—has been approved by psychologists. No more coaxing at the breakfast table. Given a reason they can see, children fairly hustle to do the thing you want.

This jolly plan is called the H. C. B. Club. Children first eat their Cream of Wheat because it's part of the game. But soon they're scraping their bowls because they've got the habit.

FREE—*this plan that gets results at breakfast*

This fascinating H. C. B. Club plan arouses children's enthusiasm for a *hot, cooked* cereal breakfast and makes them want to eat it regularly. Badges and a secret for members, gold stars and colored wall charts! All material free, sent direct to your children with a sample box of Cream of Wheat. They'll work it out for themselves. 90,000 mothers are finding it such an easy way to be sure their children get the *hot, cooked* cereal they need so much. Send the coupon in today.

For 32 years the choice of child specialists

Specialists in child health have for years recommended Cream of Wheat as an ideal *hot, cooked* cereal.

1. It is abundantly rich in the physical and mental energy growing children need. It is all real food.
2. With every harsh part of the grain removed, Cream of Wheat is amazingly quick and simple to digest.
3. Its creamy goodness is easily varied by adding raisins, dates or prunes while cooking.

Safeguard your boys and girls by giving them, regularly, Cream of Wheat for breakfast.

Emotions," Lippo's "Komik und Humor," Daniel A. Huebsch's "The Murder Complex," Janet's "Les Obsessions et la Psychasthènie," Donath's "Über Arithmomanie," Riklin's "Wish Fulfillment and Fairy Tales," Leppman's "Die forensische Bedeutung der Zwangsvorstellungen," Kuno Fischer's "Über den Witz," Erich Wulffen "Kriminalpsychologie," Hollenden's "The Insanity of Genius" and Groos's "Die Spiele des Menschen."

He spent hours going over the police reports. He called twice at the Dillards, and on one occasion visited Mrs. Drukker in company with Belle Dillard. He had a long discussion one night with Drukker and Arnesson on de Sitter's conception of physical space as a Lobatchewskian pseudosphere, his object being, I surmised, to acquaint himself with Drukker's mentality. He read Drukker's book, "World Lines in Multidimensional Continua;" and spent nearly an entire day studying Janowski's and Tarrasch's analyses of the Pardee gambit.

On Sunday—eight days after the murder of Robin—he said to me:

"*Eheu*, Van! This problem is unbelievably subtle. No ordin'ry investigation will ever probe it. It lies in a strange territ'ry of the brain; and its superficial childishness is its most terrible and bafflin' aspect. Nor is the perpetrator going to be content with a single coup. Cock Robin's death serves no definitive end. The perverted imagination that concocted this beastly crime is insatiable; and unless we can expose the abnormal psychological mechanism back of it there will be more grim jokes to contend with. . . ."

THE very next morning his prognostication was verified. We went to Markham's office at eleven o'clock to hear Heath's report and to discuss further lines of action. Though nine days had passed since Robin had been found murdered, no progress had been made in the case, and the newspapers had grown bitter in their criticisms of the police and the District Attorney's office. It was therefore with considerable depression that Markham greeted us that Monday morning. Heath had not yet arrived; but when he came a few minutes later it was obvious that he, too, was discouraged.

"We run up against a brick wall, sir, every way we turn," he repined, when he had outlined the results of his men's activities. "There ain't a sign of a motive, and outside of Sperling there's nobody on the landscape that we can hang anything on. I'm coming to the conclusion that it was some stick-up man who ambled into the archery-room that morning and messed things up."

"'Stick-up' men, Sergeant," countered Vance, "are deuced unimaginative, and they're without a sense of humor; whereas the johnny who sent Robin on the long, long trail had both imagination and humor. He wasn't content merely to kill Robin: he had to turn the act into an insane joke. Then, lest the public wouldn't see the point, he wrote explanat'ry letters to the press.—Does that sound like the procedure of an itinerant thug?"

Heath smoked unhappily for several minutes and at length turned a gaze of exasperated dismay upon Markham.

"There's no sense in anything that's

clean... clean... clean...

. . . that is what your dentifrice should do . . . what Colgate's *does*

If a dentifrice really *cleans*, it need not do anything else . . . medicines, strong antiseptics and harsh abrasives are all unnecessary. Leading dental and medical authorities advise that a dentifrice should be non-medicated and made to *clean*. The bubbling, sparkling foam of Colgate's is a dental cleanser unsurpassed. It leaves your teeth white . . . your mouth refreshed. It does its work thoroughly. And *safely*—safely for a lifetime of use.

Colgate's cleans this dependable way

Colgate's contains the most effective of all cleansing agents—in a special, pure, mild form . . . combined with calcium carbonate and aromatic oils.

As you brush Colgate's upon your teeth, the cleansing agent forms a bubbling, sparkling foam. This cleansing foam penetrates between the teeth, reaches inaccessible surfaces, purifies and stimulates the gums... the entire mouth.

And carried by this searching, foaming wave, the fine calcium carbonate powder helps to clean away mucin and food deposits... polishes tooth enamel to shining smoothness . . . destroys acids in the crevices at the gum margins, sweetens all the mouth surfaces. The mildly antiseptic aromatic oils add refreshing action to the thorough cleansing.

Constant research and continuous testing of all new theories have failed to show a way to make a more effective dental cleanser than Colgate's!

The coupon brings trial tube, free

The brightening effect of Colgate's upon your teeth will delight you. Even a short test proves that cleaning is the main thing . . . that when a dentifrice really cleans, medicines, strong antiseptics and harsh abrasives are unnecessary.

We have a trial tube of Colgate's for you. Fill out and return the coupon and it will be mailed promptly. We will send also a copy of an interesting new booklet on care of the mouth.

Colgate & Company, Dept 201-K, 595 Fifth Ave., N.Y.

Gentlemen: Please send me the booklet, "How to Keep Teeth and Mouth Healthy," and a trial tube of Colgate's Ribbon Dental Cream.

IN DETROIT MEN WEAR
BOSTONIANS
SHOES FOR MEN

IN Detroit, where motor makers gather, men who create modern style and appreciate it, too, wear Bostonians. Smart as next year's cars. As carefully made as their pistons. Bostonians' price? Surprisingly moderate—*$7 to $10 for most styles.*

BOSTONIANS
Shoes for Men

In Detroit you'll find Bostonians at Schmidt & Shroder, 1127 Farmer St. and at Bostonians Shoe Stores, 124 Michigan Ave. or Barlum Tower Bldg.

Color harmony, the new note in dress, is fully explained in our new Style Booklet, A-3, showing the new Fall Bostonians. Would you like a copy?

breaking round this town lately," he complained. "Just this morning a guy named Sprigg was shot in Riverside Park, up near Eighty-fourth Street. Money in his pocket—nothing taken. Just shot. Young fella—student at Columbia. Lived with his parents; no enemies. Went out to take his usual walk before going to class. Found dead half an hour later by a bricklayer." The Sergeant chewed viciously on his cigar. "Now we got that homicide to worry about; and there's nothing—absolutely nothing—to go on."

"Still, Sergeant," said Vance consolingly, "shooting a man is an ordin'ry event. There are numerous commonplace reasons for that sort of crime. It's the scenic and dramatic appurtenances of Robin's murder that play havoc with all our processes of deduction. If only it wasn't a nursery affair—"

SUDDENLY he stopped speaking, and his eyelids drooped slightly. Leaning forward he very deliberately crushed out his cigarette.

"Did you say, Sergeant, that this chap's name was Sprigg?"

Heath nodded gloomily.

"And I say,"—despite Vance's effort, there was a note of eagerness in his tone—"what was his first name?"

Heath gave Vance a look of puzzled surprise; but he drew forth his battered notebook and riffled the pages.

"John Sprigg," he answered. "John E. Sprigg."

Vance took out another cigarette, and lighted it with great care.

"And tell me: was he shot with a .32?"

"Huh?" Heath's eyes rounded, and his chin shot forward. "Yes, a .32. . . ."

"And was he shot through the top of his head?"

The Sergeant sprang to his feet, and stared at Vance with ludicrous bewilderment. Slowly his head moved up and down.

"That's right.—But how in—"

Vance held up a silencing hand. It was, however, the look on his face, rather than his gesture, that cut short the query.

"Oh, my precious aunt!" He rose like a man in a daze and gazed fixedly before him. Had I not known him so well I would have sworn he was frightened. Then going to the tall window behind Markham's desk he stood looking down on the gray stone walls of the Tombs.

"I can't credit it," he murmured. "It's too ghastly. . . . But of course it's so! . . ."

Markham's impatient voice sounded: "What's all this mumbling about, Vance? Don't be so confounded mysterious! How did you happen to know Sprigg was shot through the crown with a .32? And what's the point, anyway?"

Vance turned and met Markham's eyes.

"Don't you see?" he asked softly. "It's the second act of this devilish parody! . . . Have you forgotten your 'Mother Goose'?" And in a hushed voice that brought a sense of unutterable horror into that dingy old office he recited:

"There was a little man,
And he had a little gun,
And his bullets were made of lead, lead, lead;
He shot Johnny Sprig
Through the middle of his wig,
And knocked it right off of his head, head, head.'"

The new Franklin AIRMAN LIMITED sets the STYLE and sets the PACE

ACHIEVING faster and infinitely more comfortable road travel—the new Airman Limited has gained undisputed leadership in the field of fine American motor cars. Luxurious fast travel—as here presented—creates a wholly new vogue in modern transportation.

Two dramatic demonstrations conclusively prove Franklin the *world's fastest road car.* A flash from Los Angeles to New York and return in 6½ days, which shattered the previous record by more than 10½ hours! A streak up famous Lookout Mountain, Tenn., and return, 46% steeper than the Pike's Peak grade, averaging 40.8 miles per hour for the distance and beating the previous titleholder by 4.6 miles per hour! For sustained high speed and hill-climbing, air-cooling is supreme.

This astonishing performance is made immeasurably more enjoyable by the luxury and beauty of the Airman Limited interiors. Here are absolutely new and elegant designs in upholstery, fabrics and appointments. Complete comfort features—arm rest, pillow, foot cushions, carriage robe. Original and delightful colorings. The whole effect is interesting, different, epoch-making.

Today the new Airman Limited is the standard of comparison. You must see and drive it to get the full meaning of the modern spirit in style and performance. FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

New! MENNEN lather

faster on pick-up and beard-softening

Menthol-iced, too!

The famous Mennen Shaving Cream, dermutized for instantaneous beard-softening. Blended a new way to give an even quicker, richer lather. Menthol-iced to cool your face with its tingling touch.

In this new lather dermutation is faster, more complete. It softens the beard so quickly, you'll be amazed to find what life there's in the old blade yet. Dermutation wilts the beard so the razor cuts the hairs off square without yanking or pulling. It relaxes and smooths the skin so there's no flaying or nicking or scraping the face. No free caustic to burn or smart. Lathers in any water. Soothes and conditions the skin.

Your shave is only as good as your lather

MENNEN

the *dermutized* shave

Try Mennen Menthol-iced at our expense

To prove to your satisfaction what extra speed, what comfort there is in this new Mennen Shaving Cream we are now offering:

A full-size tin of Mennen Talcum for Men, and a big, free tube of the new Mennen Shaving Cream "Menthol-iced" — both for the price of the talcum alone. Get this special package — today. 25c at your dealer.

Something for Nothing

(*Continued from page 43*)

handed it over, and waited eagerly for his dream of sudden wealth to come true. Of course it never did. Long before the week was up, Jones and the cash had disappeared, and were never seen again.

The jars, when examined, proved to contain a simple liquid, mostly water, with no gold-making power whatever. Each jar had a clever double cover. When screwed on tight, the lower cover tipped slightly, enough to allow the gold dust, placed on it in advance, to sift into the liquid in a fine stream, eventually settling on the bottom. That's all there was to this gold-making secret!

Schemes for making precious metals or gems are always without number. The idea is fascinating to scientists as well as near-scientists. In my early days I nearly sent an innocent family to kingdom come, as the result of an ambitious attempt to make rubies. Small diamonds have been made, though at prohibitive cost. Science does not declare the transmutation of metals impossible; indeed, new theories of the atom and the constitution of matter indicate that it may be easy—when we learn more than we know now.

It is commonly known that there is gold in sea water, and scores of schemes have been devised in the hope of extracting it at a profit; but none has yet been successful. The amount of gold is so small—about four cents' worth to the ton—that it is really hardly worth bothering about. But people continue to invest in gold-from-sea-water schemes.

PROBABLY the most pretentious effort to exploit the extraction of gold from sea water was a company with a plant in Maine, where high tides were said to be especially favorable to the process; it was reported that consignments of gold left the plant regularly.

This organization was the brain child of a minister out of a job. He had no scientific training, but he was a persuasive talker. The shares had a wide sale. When the ex-preacher cashed in and left the country—under an assumed name!—he is said to have carried off close to half a million dollars in immediately negotiable securities: *not* those of his own company! Shareholders were left to hold an empty bag.

Fake ore-refining schemes are in a class by themselves. There are literally scores of them, and they have separated many a good dollar from its owner. The inventors usually propose some machine, electrochemical process, heat process, or other means that they declare gets more metal out of the ore, or gets it more cheaply, than other refining methods. They picture the opportunity to use mines that others have been unable to operate profitably. I have even had to investigate refining schemes which were said to recover *more gold than there was in the ore!*

But nobody could be a firmer optimist than I. Confidently I believe that the past and the present of science, brilliant as they are, represent only the beginning.

This is an inspiring thought. Alongside it must be put another thought, no less

Now only $5 to telephone half way Across the Continent

An Advertisement for Bell Long Distance Telephone Service

NEXT to how much may be accomplished by long distance telephone calls, and the speed with which they are now being put through, the most surprising thing about them is: How little the calls cost.

Picture a man in Smith Center, Kansas, geographical center of the United States. Under the new station to station day rates he can now "travel" to the Atlantic or the Pacific coasts and return for $5. From Chicago one can go to New York and back for $3.25. To Los Angeles and return for $6.25. To Dallas and return for $3.25. All the way to London and back for $48.

Every long distance call is a round-trip journey. In a long distance call a man not only speaks what is in his mind but gets the answer. From his office in any city, a man whose time is valuable can speed from one concern and market to another, regardless of distance, in a few minutes and at small expense.

A Nashville lumber company relies on long distance calls for collecting slow accounts.

A Portland, Oregon, fruit company figures its sales overhead, where the telephone is used, at 2%. Where personal solicitation only is used, 7%.

A Chicago miller, by a telephone call to Philadelphia, costing $3.10, sold 60 carloads of flour for more than $100,000.

Why not let Long Distance help your business? What distant places could you profitably reach, by telephone now? . . . *Number, please?*

Her hair is oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair is dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and no drying alcohol). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use Packer's Tar Soap

. . . the soap that made pine tar famous for shampooing. Pine Tar is antiseptic, healing, with properties valuable in the treatment of dandruff. Packer's Tar Soap is endorsed by dermatologists for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need the care of a dermatologist—a doctor who is a skin specialist. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon below is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

City_____ State_____

inspiring in its way: *in science there are no miracles*. We learn one thing, then the next. Progress is a growth, a building. Great ideas come; but the way is prepared, they are foreshadowed. Examine recent achievements. If they seem miraculous, closer examination shows that each advance was achieved by arduous study, preparation, experiment, failure, discouragement, persistence, final victory; in short, by hard work. It always has been that way, and I believe it always will be.

SO MANY, however, do not comprehend that scientific progress is like this. In my collection I have a typical letter. An inventor wants money, saying that his work is at a standstill because of "a weakened constitution and an embarrassed financial condition, with the visible goal plainly ahead." He has set himself the task of revolutionizing ocean transportation. His efforts, inspired by the sinking of the "Titanic," have resulted marvelously: these are a few of the things he claims:

> I have invented a steamer which has no resemblance whatever to the present types, and whose main characteristics are as follows:
>
> First, although the waves be most terrific and gigantic, they can neither rock nor upset the boat;
>
> Second, the propelling system is unlike all present systems;
>
> Third, it attains twice the speed of any existing vessel;
>
> Fourth, though traveling at the greatest speed with danger ahead, it can come to an immediate standstill or swerve aside;
>
> Fifth, al hough possessing the largest possible dimensions, it can turn around on the spot without the preliminary method of moving forward or backing up.
>
> In other words, this newly invented steamer will be made to travel the roughest waters with such speed and safety that no one has ever dreamed of.

This poor chap does not understand even the elementary laws of physics. Enthusiasm, like other things, needs solid ground to stand on!

To make even slight improvements requires pain and persistence. Once the president of a street-car company asked me to devise a scheme for preventing the misuse of transfers. After weeks of work, I thought I had the solution: the conductor, upon issuing a transfer, was to stamp it; but nothing was to appear immediately—by means of retarding agents, I arranged that the printed word "Void" should become visible in about an hour.

"Splendid!" said the president, when I explained it to him.

I was getting ready to spend my fee!

"By the way," he added, "what will happen if a woman sticks the transfer in her glove?"

Here was a rough test of use that I had not taken into account, and it upset my calculations. The heat of the body affected the chemicals, and the word became visible, not in an hour but in about two minutes!

Many fakes, not intentionally fraudulent, are like this; that is, they lack the final tests and studies that might make them workable, or prove them impractical.

An advertisement before me asks people to buy stock in a concern which proposes to build an engine that "does away with transmission gears, poppet valves, clutch, carburetor, and gives *four times the power*

Defies Dirt!

ORDINARY paint is helpless against the soiling dust that filters indoors everywhere today. White turns a permanent grey—tints lose their beauty. But Barreled Sunlight literally defies this menace. It gives walls and woodwork a surface so satin-smooth that dirt cannot become embedded—a surface that washes like tile.

Unsurpassed in sheer beauty. A richly lustrous enamel finish with a "depth" peculiar to itself.

Flows freely from the brush, spreads evenly, and has remarkable opacity or "hiding power."

Guaranteed to remain white longest.

In Gloss, Semi-Gloss and Flat. Cans and drums. For priming, use Barreled Sunlight Undercoat.

Easy to tint any shade. Ask your dealer about the new Barreled Sunlight Tinting Colors in handy tubes.

Also ask about the new exterior painting product—Outside Barreled Sunlight.

U. S. Gutta Percha Paint Co., 33-G Dudley Street Providence, R. I. Branches: New York—Chicago—San Francisco. Distributors in principal cities. Over 7000 retail dealers.

Ordinary Flat Finish White Paint

The Microscope Shows Why Barreled Sunlight Is So Easy to Keep Clean

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

Barreled Sunlight Gloss Finish

U. S. GUTTA PERCHA PAINT CO.

for the same size and weight of any similar engine." The italics are mine. Anybody who devised a practicable method for increasing the power obtainable from a gasolene engine by only as much as five per cent, could sell his idea to any one of half a dozen corporations for enough to keep him in comfort a long time!

There is a fallacious argument used frequently in the literature of fakes. If an inventor was laughed at in his early days, and later made millions, it may be a most inspiring circumstance; but decidedly it is not proof that another inventor will do the same. Nevertheless, scores of promoters argue as if it were precisely that. A case in point is a "public letter" addressed to prospective investors in a ten-million-dollar company being organized to promote a new type of engine—one of the "changed-lever" type. The inventor's name is altered, but otherwise this quotation stands as written:

> A comparison of Henry Ford and "the wonderful inventor," E. F. Hedrick, as seen by a successful and conservative business man!
>
> Ford was a plain working man; so was Hedrick. Ford saw the rich driving cars, and conceived the plan of making one to meet the needs of common people. Both for service and pleasure. Hedrick went him one better; he conceived the plan of cutting the gas bill in half through levers. They laughed at Ford; they laughed at Hedrick. They called Ford's car "Ford's Folly." They called Hedrick's invention "Perpetual Motion." Ford had to beg people to buy his stock; so did Hedrick. . . . Ford was a Michigan man, Hedrick a Montana man, and Hedrick's invention is as much bigger than Ford's as Montana is bigger than Michigan. . . . They say Ford's stock is worth eighty thousand dollars per share. Will not Hedrick's stock be more some day?

As argument, this is fairly good fiction!

NEW and, it is hoped, cheap fuels, whether for power, heat, or light, are the basis of many valueless inventions. I had to do with the curious case of Carlo Mario, self-styled Count de Foras, who came to Chicago with the announced intention of putting the Standard Oil Company out of business. His method of doing so was to burn water!

Mario gave such convincing demonstrations with old-fashioned kerosene lamps that he induced a conservative banker to invest eight thousand dollars toward starting a company. The banker was on the point of investing much more, but took the precaution of asking me to investigate first.

At the demonstration for my benefit, Mario permitted me to bring my own lamp, and allowed me to fill it with water from the tap. He then put in a wick which, he said, had been soaked in a certain chemical that made the burning of water possible. Touching a match to it, a brilliant light was given off. After burning for some time, there was a perceptible lowering of the water level. It really looked as if the lamp were burning water.

However, upon entering the room, I had made a guess as to how the "Count" was getting his effects; any chemist would have known, from the odor. The outcome proved the guess correct.

He did not really burn water, but during the changing of the wick, managed to slip in a small quantity of an expensive chemical, amyl acetate, familiar to most people as the component that gives banana oil its

"I wish I'd seen The Hoover first!"

WHO are the women who are saying, "I wish I had seen The Hoover first?" Invariably, so Hoover representatives tell us, they are those who have purchased ordinary vacuum cleaners from the first salesman who appeared. Without investigation. Without comparison.

Later, such women see The Hoover in action on their own rugs. They discover the difference between "Positive Agitation" and ordinary *vacuum* cleaning. Their regret is unmistakable.

There is really a lesson to be learned from these housewives. It is: *Don't buy any cleaner without first seeing what The Hoover will do.*

The Hoover deserves this consideration. It is the leader in its field—and always has been. Product of the oldest and largest manufacturer. Used in more homes than any other. Approved by the largest and most representative retailers. Endorsed by the leading rug and carpet manufacturers.

But more important still, it is the only electric cleaner which embodies "Positive Agitation," the revolutionary cleaning principle which enables The Hoover to remove easily and quickly from rugs and carpets more *dirt per minute* than any other cleaner.

You can readily see what a great difference in home cleanliness this Hoover super-cleaning means, when you consider that about 90% of the dirt in the home is lodged in the floor coverings.

Don't be one of the women who say, "I wish I had seen The Hoover first." *See* The Hoover first. Any Hoover dealer will gladly bring a Hoover to your home for a demonstration any time you say. Telephone him.

Cash prices: Model 700 Hoover, $75. Model 543, $59.50. Dusting tools, $12.50. Model 972, $135; Dusting tools, $15. Floor polishing attachment, adaptable to models built in the last 5 years, $7.50. Easy payments if desired. Only $6.25 down. Hoover dealers will make you an allowance on your old machine.

TUNE IN

On the Air—Every Thursday, 8:30 Eastern Standard Time, The Hoover Sentinels, through the N. B. C. Red Net-work. Tune in!

"I was just too late . . . pitiful his pain!"

"My four-year-old son turned over a pan of boiling hot soup. The scalding liquid drenched the tender little face. I remembered Unguentine—applied it freely. The agony was eased quickly. My doctor said I couldn't have done a better thing. No scars were left at all."

FIRE has hurt all of us. To some it has already brought disaster. For others tragedy still waits . . . And minor burns—painful little scalds—these come almost as a matter of course to every family.

Physicians say: "Be ready. Even the slightest burn may become infected." Terrible suffering, lifelong scars may be the penalty! You can be prepared. KeepUnguentine always at hand.

Unguentine is the dressing used for burns in hospitals from coast to coast. Spread it liberally on all burns. Pain is banished. Germs are excluded—quick, normal healing starts at once. *And almost invariably no scar is left.*

Use Unguentine on cuts, scratches and bruises, too. In severe cases, apply on gauze and bandage lightly. At your druggist's, 50c. The Norwich Pharmacal Company, Norwich, N. Y. Canada—193 Spadina Ave., Toronto.

Unguentine

LEFT

"I carelessly lifted the lid from the washboiler. A cloud of steam shot out. My arm was terribly scalded. I applied Unguentine at once. Relief was almost instantaneous. The burn healed quickly—*without the least scar.*"

peculiar bouquet. Amyl acetate is lighter than water, and has about the same angle of refraction to light, so that it floated and was invisible in the lamp; besides, it burns brilliantly. The exhaustion of the water in Mario's lamp was due to the fact that a certain amount was sucked up by the wick and vaporized in the flame. *It did not burn!*

I had a hard time convincing the banker of these facts; he badly wanted to believe the "Count." He did not know a great deal about chemistry and was not certain I did. But he understood human nature fairly well, and was convinced the scheme was a fraud when Carlo Mario disappeared with what remained of the financial harvest he had been able to gather.

HUNDREDS of people, too, have worked on schemes to get some fuel for automobiles cheaper than gasolene. One man in public demonstrations used a "light green liquid chemical." Another claimed that, by adding an ounce of sulphuric acid to a gallon of water, he got more mileage than with the best gasolene.

Dozens of schemes have been proposed for getting more heat and power out of coal, counting for success on the fact that the average coal user finds his coal bill a burden. Of one such scheme, a liquid to be sprayed on the coal before burning, the promoters said:

"We absolutely guarantee a 25 per cent saving on your coal bill."

A ridiculous promise; with no responsible organization to back it up. The liquid proved to be salty water utterly worthless for the purpose intended.

It seems to be a curious trait in human nature that schemes proposed by ignorant men, or those without special knowledge, are believed more readily than the hard facts of a scientist who has studied the same problem for years. Perhaps it is because the uninformed leap obstacles without knowing they are there, and arrive suddenly at a result, unsound, but pleasing to everybody.

The solar furnace, by that name or some other, is another favorite power idea. The sun sends off illimitable quantities of light, heat, and energy. Why not catch and harness some of it direct? It is a teasing conception. Sometime it may be done effectively and economically. Science can only say that it has not *yet* been done at reasonable cost.

But ill-advised inventions keep coming. One outfit, to be installed on house roofs, was described in the promoter's circular as follows:

> Attached to the water hydrant it works automatically, and carries steam down through pipes to the kitchen, where it is attached to a steam cooker, cooking a dozen different kinds of food at the same time without fire, fuel, or expense, and furnishing boiling water for the bath, the laundry, and all other purposes without any expense for fuel, without any attention whatever, except starting it in the morning.

Another device employed sunshine to generate electricity. The inventor organized a five-million-dollar company, on the factual claim that one "sun electric generator" four feet square on the roof of his work-shop, generated enough electricity to light several tungsten lamps.

This claim is not beyond belief. But the rest was a dream. To housewives he said:

Wouldn't it be delightful to just reach out

The ancient university of Paris, which has made Dr. Rosenthal Laureate of the Academy of Medicine

Dr. Georges Rosenthal

Laureate of the Institute, and of the Academy of Medicine, and of the Academy of the Moral Sciences, Paris. Doctor of the schools of the City of Paris. Doctor of the Anti-Tuberculosis Dispensaries of the Social Hygiene Department, Paris. Assistant at the Pasteur Institute. Laureate of the Municipal Welfare Work of the City of Paris. Chevalier of the Legion of Honor

Yeast keeps the body cells young

says Dr. Georges Rosenthal, *noted French specialist*

"Yeast acts as the watchful policeman of the alimentary canal. It reduces the poisons which, penetrating into the blood stream, make the body cells grow old and wear out more quickly. Yeast is one of the best agents of intestinal purification. The continued use of yeast, by cleansing the organs, protects human health."

Dr Georges Rosenthal.

FAMOUS alike in Europe and America for his remarkable studies of the blood, Dr. Georges Rosenthal speaks with acknowledged authority.

This distinguished scientist and physician confirms the discovery made by thousands of Americans that eating fresh yeast prevents sluggish, poisoned intestines and—in his own words—"protects human health" from all the ills that follow.

"Yeast feeds on and absorbs the wastes," he says. "It deprives the disease microbes, which are always ready to develop in our bodies, of their nourishment. That is how yeast acts as the watchful policeman of the intestinal tract. At the same time it stops poisonous decay and thereby helps to a great degree the normal working of the intestine."

Where the trouble starts... where yeast works

From throat to colon is one continuous tube. Here is where 90% of your ailments start, doctors say. Fleischmann's Yeast, a food as fresh as any garden vegetable, keeps this entire tract *clean*, active, healthy; prevents poisoning; promotes health, youth

Dr. Rosenthal's words reveal the importance of a healthy and *active* colon, shown below.

Keep Young with Yeast

Clogged intestines are easily restored to normal activity when you eat fresh yeast which Dr. Rosenthal has shown to be so effective.

Half the doctors reporting in a recent survey in the United States said they prescribed yeast.

Eat three cakes of Fleischmann's Yeast *regularly—daily*—one cake before each meal, or between meals. To get full benefit from yeast you must eat it regularly and over a sufficient period of time. Cheeks will bloom, skin will clear; that tired feeling vanishes; happiness and success seem easy. All grocers and many leading cafeterias, lunch counters and soda fountains have Fleischmann's Yeast. Start eating it today.

Write for latest booklet on Yeast in the diet — free. Health Research Dept. J-58, The Fleischmann Company, 701 Washington St., New York, N. Y.

FLEISCHMANN'S YEAST *for* HEALTH

Method by which one Sundstrand salesman demonstrates its simplicity. With ten minutes' practice you can do the same.

Only one hand . . .

Simple ten-key keyboard . . . easily remembered . . . makes it the quickest machine for business calculations

THE ten numeral keys of the Sundstrand are arranged in the most natural position for quick development of the touch system. In ten minutes the most inexperienced operator has memorized their location. You can cover all ten keys with one hand. No complicated series of banks and columns. No danger of errors due to incorrect column selection. You strike the keys in the order that you would write down the figures with a pencil, and the machine automatically places them in the right columns.

The machine operation is all controlled by one hand—the other hand is always free to follow the work.

You do not have to take your eyes from books or papers from which you are taking the figures. Hence you can do the work with a Sundstrand far quicker than with any other machine.

What you can do with the Sundstrand is astonishing . . . positively uncanny. It not only adds, subtracts directly and multiplies faster than you ever believed it could be done . . . but it literally carries *in its head* the most involved calculations. You can figure debits and credits in the same operation and at the end get the total of the difference between the two. The Sundstrand Credit Balance Feature enables you to subtract credits in excess of debits and get the answer—directly.

You can buy a Sundstrand for as little as $100. Let us send you our illustrated booklet describing completely the Sundstrand line of adding, figuring and bookkeeping machines and cash registers. Use the coupon.

from your cozy bed and prepare breakfast just by the touch of a button, while you are arranging your toilet?

Touch another button and your dishes are being washed, the nasty pots and pans being scoured.

Another button begins the wash; an electric iron makes ironing cool and interesting.

You may sweep your carpets, clean your windows and ceilings and the woodwork, drive your sewing machine, wash your floors, sharpen your tools, grind your coffee, make your bread, your ice, chop your meats, play your piano, drive your fans, all with the aid of a Sun Electric Generator.

"This offer," declared the inventor, "is an extraordinary chance for money-making."

It was—for him. He was not arrested for using the mails to defraud until he had sold nearly a million dollars' worth of stock!

A MOST curious power scheme was the electric aërial "ladder" invented by a man who had visions of tapping an unfailing free fountain of electricity. Nearly two hundred years ago, Benjamin Franklin flew a kite during a thundershower, and drew electricity from the clouds on a silken thread. Others have found that, by flying a kite high enough in clear weather, it is possible to create a faint current, due to the difference in potential between the upper and lower ends of the kite string. This man may have been misled by these facts. At any rate, he conceived a curious notion.

"Beyond the earth's atmosphere," he argued, "lies an 'ocean of electricity' filling all space." It was this supposed ocean that he aimed to tap.

Human nature being what it is, it is not strange that he secured backers and the money to go ahead with a scheme in which the following were high spots: The summit of Pike's Peak was chosen for the experiment. From here he proposed firing a bomb with a wire attached, straight up. A timing device was to explode the bomb at the moment when, normally, it would begin falling back to earth. This explosion, theoretically, was to release a second bomb and project it still higher. There were to be third, fourth, fifth, and subsequent bombs until, as the inventor estimated, the last one would carry the end of the wire so high that the centrifugal force of the earth in rotation would *keep it up!* He believed the upper end of the wire would then be in the supposed ocean of electricity, in which case a current would flow down, and he could get all the power he wanted, for nothing.

Eventually, his company went into the hands of a receiver. And when the receiver asked to be discharged, a year or so later, he reported that the sole remaining asset was an application for a patent, which had not been granted!

Turning from power schemes, there is a host of scientific fakes, falling in no particular class, that reappear regularly in one guise or another. An old favorite is rain-making. The idea of controlling rainfall is a heritage from primitive ancestors. Nearly all savages of semi-arid regions had "medicine men," dances, and other means of propitiating the "rain gods." The idea still flourishes, nowadays usually under a "scientific" guise.

Scientists do not call rain-making impossible. They do say emphatically that

THE CHRYSANTHEMUM DISPLAY in a recent Philadelphia flower exhibit charmed thousands by its beauty. No less charming is the smile of Miss Laurna Wilkins, kept bright and gleaming through daily use of Pepsodent.

DAZZLING WHITE TEETH and health go hand in hand. Thus Cadet Stephen J. De Voe, Jr., considers the daily use of Pepsodent as important as his calisthenics.

Finding the Sparkle in Your Smile

Dentists tell you why keeping smiles gleaming white also wards off tooth and gum disorders

ORDINARY brushing can never give the gleaming white teeth you envy nor the healthy teeth and gums you long for. Only an effective film-removing dentifrice can do that, for it is film that keeps both from you.

Run your tongue across your teeth and you can feel that film; a slippery, viscous coating.

Film, present-day dental opinion has proved, is the source of "off-color" teeth and many of the common tooth and gum disorders.

Film clings to teeth, gets into crevices and stays. It is a fertile breeding place for germs by the millions.

Film is the basis of tartar. And tartar with germs is a prevalent cause of pyorrhea. It fosters, too, the quick-acting acids of decay.

Now on dental advice thousands are turning to the special film-removing dentifrice called Pepsodent. A tooth paste different in formula, theory and effect from any other known. Pepsodent, compounded for the specific purpose of removing film, first curdles film, then removes it in complete safety to the enamel.

Pepsodent, by unique properties, goes further and acts to firm the gums. It multiplies the alkalinity of saliva, thus neutralizes the acids of decay. It brightens teeth and whitens them as no way has ever done before.

Dentists, in 58 nations, urge you to cleanse teeth this way. Its twice daily use is the utmost known in home care.

Get a large tube at your druggist's, or write to address below for *free* ten days' supply. You will marvel at results.

The Pepsodent Co., 1104 S. Wabash Ave., Chicago, Ill., U. S. A.; 191 George St., *Toronto 2*, Ont., Can.; 42 Southwark Bridge Rd., *London*, S. E. 1, Eng.; (Australia), Ltd., 72 Wentworth Ave., *Sydney*, N. S. W.

Heinz Cream of Tomato Soup! What gives it that cheery red color? Juicy tomatoes. That tempting savor? Spices. And that smooth richness? Can it be cream? Yes, cream, rich cream. Tomatoes and spices and cream. What a wonderful combination for flavor! What a wonderful soup for dinner!

A friend of ours was once visiting in the country. Happening into the kitchen she found the cook busily making tomato soup for dinner.

The tomatoes had been picked half an hour before in the garden. But what interested our friend most was the big cupful of rich, heavy cream the cook poured in.

"It's the cream that really *makes the soup,*" she explained . . .

Of course it's the cream. That's why Heinz is not just Tomato Soup but *Cream* of Tomato Soup—with the cream already in it. *Rich cream,* plenty of it.

The tomatoes are ripened on the vines—plump, red and juicy—and used fresh. Our spices—we send our own buyers round the world to select the best.

But flavor comes chiefly from knowing how. Experience is the final ingredient. And it is our 59 years of experience in making good things to eat that has made the Heinz name mean Flavor • *H. J. HEINZ COMPANY, PITTSBURGH, PA.*

HEINZ
Cream of Tomato
SOUP
contains rich cream

as yet no method has been successfully demonstrated.

The subject received an airing during the World War, when some people conceived that incessant firing caused the rains which made our troops miserable in France. That there was any connection has not been proved, and seems unlikely.

The question is of deep interest, however, not only to farmers who watch crops dying for want of a shower, but also to aviators. Low-lying cloud banks, fog banks especially, are among the greatest flying dangers. Is it possible to dissipate these by causing the moisture to condense and fall as rain?

Experimenters in airplanes have tried discharging electrified sand over clouded areas, in the effort to accomplish this; but these experiments, though the most elaborate ever tried, were not conclusive. The fact is, nobody knows how to make it rain.

Yet a few years ago, when the Middle West was suffering from a severe drought, a great railroad actually employed a rainmaker, so called, who agreed under contract to make it rain within ten days at specified points: he was to get one thousand dollars every time he succeeded, nothing when he failed. It was a good gamble for him. The chances were excellent that it would rain inside of ten days in at least *some* of the places where he demonstrated. When he failed, as he mostly did, he always had a ready alibi:

"My machine went back on me!"

He carried this mysterious machine in a special car, behind locked doors, and nobody was permitted to see it.

A CURIOUS fraud, giving an insight into human credulity, was the so-called electric sugar converter, which was supposed to refine coarse brown sugar into the finest granulated. Would-be investors were not admitted into the room where the "conversion"—a secret process—took place; but were entertained down-stairs in a room whose central feature was a spout in the ceiling.

The "inventor" retired to the upper room, whereupon those below heard the roar and rumble of what appeared to be a gigantic piece of machinery. Soon a thin stream of the finest granulated sugar began pouring down the spout. On this evidence of good faith, and this alone, the "inventor" secured three quarters of a million dollars from people eager to share in fabulous profits.

The scheme was exposed. In the upstairs room there was no machinery—nothing but several steel barrels, and cases of granulated sugar. A "demonstration" was the inventor rolling the barrels about the floor, and pouring fine granulated sugar down the spout with a scoop!

Every scientific discovery of consequence is likely to be followed by schemes and inventions of no merit, for which money is sought. When liquid air was new, for instance, a promoter undertook to sell stock in a company which was to reveal "the mystery of liquid air as the foundation of an immense business, to become in all probability the most profitable in the world."

Another scheme growing out of the discovery of radio-activity is the radium water jug, so called, which sells at fabulous prices. The theory is that the inside is

Wild Turkeys Browned and Golden

and venison and purple grapes

for these *we offer thanks*

FROST came with the nights. The corn stalks withered and the hills were fire and scarlet. Partridge drummed and a fox barked behind the ridge. The stockade gates were shut. Out of New Hampshire rose the Harvest Moon.

"For these we offer thanks." A voice in the wilderness raised in thanksgiving . . . spreads and becomes the voice of a continent. A settlement grows and becomes a nation. Each year the nation offers thanks for the harvest. Each year the harvest is richer . . . in happiness . . . in material prosperity . . . in the joy of living.

* * * *

A great part of the harvest of America today is the harvest of industry. Endless research and experiment, a divine curiosity, the open mind, these have brought new products and a new and better way of living. And part of the march of progress, contributing to a safer, happier life, is Frigidaire, the automatic refrigerator . . . now providing priceless health protection in over 500,000 successful installations.

But Frigidaire has not been satisfied with this achievement. And now, after 16 years of constant experiment, twelve years of practical experience, comes the New Frigidaire . . . beautiful, powerful, incredibly quiet . . . an entirely new conception of automatic refrigeration.

The New Frigidaire has reserves of power for *every* emergency. Its cabinets are built to harmonize in line and color with the modern kitchen. It is incredibly quiet in operation. And in the development of these features tests of wide scope were carried on at great expense and authorities in dozens of different fields were consulted.

The New Frigidaire safeguards health. It prevents food spoilage. It freezes ice. It saves time and work and money. It provides safe, dependable, care-free refrigeration . . . under all conditions.

* * * *

Wild turkeys, browned and golden and venison and purple grapes. For this material evidence of a successful harvest the Pilgrims offered thanks. The harvest of 1928 is nearly in. And already in thousands of homes the New Frigidaire has begun its work . . . quietly, surely protecting the health of the family . . . contributing to a safer, happier life.

❖ ❖

They've Licked the Enemy—
COLD—as you can with
AUTOMATIC
Motor Protection

THE enemy, cold, has been a problem of years with the car manufacturer. It is no longer a problem. They have found a way to beat it. A way that works against cold as surely as cold works against your motor. This way leaves nothing to memory—nothing to guesswork—for methods that do, they say, are little better than none at all. *Automatic motor protection,* they have concluded, is the only way to be always sure your motor is out of danger.

Illustrating the Studebaker equipped with Pines Automatic Winterfront

Motor Protection Must be Automatic

These makers have made their choice on years of experience. You, too, must choose Automatic Motor Protection, if you hope to avoid the damage of cold.

You get the warning signal in coughing, spitting noises and delayed starting. You reach for the "choke"—and instantly a flood of raw gasoline hits ice-cold metal. Oil is washed away from glass-like surfaces. Metal grinds against metal at a terrific speed, producing friction no motor can stand. Excessive dilution follows, fouled spark plugs, extreme carbonization, corrosion and rapid cylinder wear. This is the damage you pay for in the spring. *Damage that can now be totally avoided.*

Pines Winterfront stops the damage of cold

Pines Automatic Winterfront completely covers the radiator and remains closed until the motor is warm enough to operate without damage to vital parts. The shutters then begin to open, *automatically,* allowing the entrance of exactly enough cool air to maintain a scientifically correct temperature.

When you park your car, Winterfront closes completely while your motor is still hot. You cannot walk away and forget it. There is no chance for dangerous neglect.

With a Winterfront on your car, you "warm-up" in seconds. The "choke" habit disappears. Your motor starts quicker and easier with less battery strain. Your car is warm inside—your motor runs with summer smoothness and flexibility.

Winterfront is easily installed

Your dealer will equip your car with a Pines Automatic Winterfront in a few minutes. Moderately priced, it will pay for itself many times over—and will give you years of service. Thermostats are guaranteed. Accept no substitute. Pines Winterfront is the only *automatic* radiator shutter on the market. Pines Winterfront Company, 404 No. Sacramento Blvd., Chicago, Ill.

252

PINES WINTERFRONT—*It's Automatic*

painted with a radio-active substance, which "charges" the water with healing properties. You drink the water, and, lo! something happens inside you.

If the water become sufficiently radio-active to produce physiological effects, then it should be used under the direction of a competent physician. If it does *not,* obviously it is a dangerous thing to use, for it gives a feeling of false security when perhaps a first-class physician should be called in at once.

Then there is the divining rod, which is among the oldest of scientific fakes. In an official publication, the United States Geological Survey finds it necessary to advise people against spending money for the services of any "water-witch, or for the use or purchase of any machine or instrument devised for locating underground water or minerals."

CREDULITY, to conclude, seems to me about the strangest of human traits. More than once I have said I believed I could make a complicated-looking apparatus that did not mean a thing, and garner a modest fortune by telling people that it was a new electro-magnetic-electronic-atomic-hydro-synthetic process for getting confusalem (which neither I nor anybody else ever heard of!) from the moon. Credulity is partly the result of ignorance, partly of laziness. Common sense and a certain amount of healthy skepticism are the best protection against scientific fakes.

These are the chief rules my experience suggests, for recognizing such fakes *before* spending your money, instead of after:

1. Cultivate a questioning attitude. Think things through. Do not believe everything said by every fast talker.
2. Distrust on principle any sudden invention that claims to "revolutionize" something.
3. If in doubt as to the soundness of a scheme involving expert knowledge, do not be ashamed if you are no expert—*consult one!* Obtain, and follow, the unbiased advice of competent chemists, engineers, physicists, or others qualified to distinguish between the possible and impossible, the probable and improbable.
4. Never put a penny into a scheme that hinges on a secret which the inventor is unwilling to disclose.
5. Do not be misled by the argument: "Think how rich you'd be if you had been one of Henry Ford's early partners. Here is an opportunity just as big." That does not mean a thing.
6. *Always demand proof.*

If by doing these things you miss one good chance to make money, you will doubtless escape a hundred ways of losing it!

THE ROCKEFELLERS, father and son, have maintained for fifty years one of the most remarkable paternal and filial relationships that history records. It is a great story, and one that this magazine is proud to pass on to you next month in M. K. Wisehart's interview with John D. Rockefeller, Jr. You will know these famous philanthropists better after reading that interview, in which the younger man tells you of "The Three Big Things I Learned from My Father."

DODGE BROTHERS
NEW VICTORY SIX

FINER PERFORMANCE
With Still Greater Comfort, Luxury and Roominess

Beautiful new bodies—roomier and more comfortable—now add fresh distinction to Dodge Brothers finer Victory Six.

They are longer, higher and wider (more leg-room, head-room and seat-comfort), and their lines accentuate the rakish beauty that first won admiration for the Victory Six.

Lower center of gravity and unique body mounting combine to produce marvelous riding ease. Body and chassis are the same width and joined together without the customary sills—yet the body is easily demountable when necessary. Body overhang is eliminated, and with it many needless pounds and parts.

In step with these striking improvements, the brilliant performance of the Victory Six becomes more satisfying than ever. Victory pick-up, power and smoothness are advanced to new heights.

Accept this cordial invitation to inspect the nine smart new Victory body styles, and to put the car through its paces on the road.

PRICES—*Touring Car, $995; Roadster, $995; Coupe, $1045; 4-Door Sedan, $1095; DeLuxe Sedan, $1170; DeLuxe 4-Passenger Coupe, $1170; Sport Roadster, $1245; Sport Touring Car, $1245; Sport Sedan, $1295; f. o. b. Detroit.*

ALSO DODGE BROTHERS STANDARD SIX

The superb flexibility and smoothness—the remarkable ease of handling—that have distinguished Dodge Brothers Standard Six from the beginning are noticeably improved in these finer models. PRICES: *Coupe, $875; 4-Door Sedan, $895; Cabriolet, $945; De Luxe Sedan, $970; f. o. b. Detroit.*

Health is something to be thankful for
-safeguard it always

THE best thing about the goodies that come out of a General Electric Refrigerator is that they're always healthfully fresh. This quiet, automatic refrigerator maintains the scientifically correct temperature that checks the growth of bacteria.

For this perfect refrigeration, food must be kept at a temperature *below* 50 degrees—always. Kitchens are almost as warm in winter as they are in summer. That's why correct refrigeration is a vital year-round necessity.

The General Electric Refrigerator, perfected after fifteen years of development by the Research Laboratories of General Electric, is "years ahead" in design. All the mechanism is up on top, sealed in an air-tight steel casing. It is so completely automatic that you never even have to oil it! And it is particularly easy-to-keep-clean.

General Electric Refrigerators are guaranteed for perfect refrigeration—quiet, automatic and economical. If you would like further details, just drop us a card for a new Booklet A-11.

Alligator Tales

(*Continued from page 57*)

We were spending a week or two there and I had my two English setters with me. Because the creek was salt—in fact, the open Atlantic lay directly in front scarcely more than a quarter of a mile distant across the level marshes—the thought of alligators had not entered my head, and one of the dogs, a great water-lover, had been in and out of the creek repeatedly.

One afternoon I was sitting on the bank of the creek fishing within a stone's throw of the house, when I saw an alligator come swimming around a bend of the stream. The two dogs were lying on the bank near me, so I knew that Pete, the water-lover, was in no immediate danger, and I watched the gator curiously as it came on, its head and four or five feet of its back showing above the surface. Thirty yards from the spot where I was sitting the saurian ranged up against the opposite bank and lay there motionless. Just at this moment a negro boy approached, bringing me some bait, and the two dogs began barking at him.

Instantly the gator shifted its position, and in another instant it started at full speed across the creek straight for us.

Plainly, the dogs' voices excited it powerfully so that it appeared almost oblivious of danger; and finally, after I had taken the dogs into the house, the saurian came to rest against the sloping bank in front of the house, not more than fifty feet from the piazza, and lay there, grimly waiting. I rather enjoy having gators in my front yard—they add a certain touch of wildness to the scenery—but in this case it was the gator's life or Pete's, since the dog could not be kept out of the water, and his next swim would undoubtedly be his last.

Opinions vary as to the maximum size attainable by the alligator in a state of nature before the multitude of hunters and the development of the modern rifle made it difficult for any saurian to live out its allotted span. Perhaps the most interesting evidence bearing on the subject is that of William Bartram, the botanist, who traveled through the Carolinas, Georgia, and Florida in 1773. Bartram declares that he saw alligators twenty feet long, and heard of others measuring twenty-two or twenty-three feet.

THE largest alligator of which I have any certain knowledge measured a few inches more than fourteen feet. It was killed on Buckfield Plantation, about sixty miles from Charleston, by my friend Arthur T. Wayne, the well known ornithologist, and Mr. Eugene E. Gregorie, a planter. I have heard also of a sixteen-footer killed some twenty years ago; but cannot vouch for this measurement. Twelve-footers are rare, but probably not so rare as most naturalists who have had only limited experience in alligator country believe; and a twelve-foot gator is at least twice as impressive as an eight-footer, because, with every inch of length gained, the animal increases surprisingly in bulk.

Bartram gives a thrilling narrative of how he was attacked by large numbers of alligators of much greater size than any to be found today. Some seventy years later

ALL THAT IS BEAUTIFUL SHALL ABIDE FOREVER

Arlington Memorial Amphitheatre at the Tomb of the Unknown Soldier, one of the World's most beautiful soldier-shrines and the largest of all cemetery monuments. Built of Vermont Marble.

AMERICA'S ETERNAL FLAME

PACING . . . pacing, day by day, a soldier keeps the nation's ceaseless vigil. He represents the eternal flame of American Manhood, ever-youthful, ever-renewed, here at the shrine dedicated to the memory of all our battle-heroes.

Moment by moment the footbeats of the guard, like the pulse of the living nation, will measure off centuries beside the Tomb of the Unknown Soldier and this great Memorial Amphitheatre. Both were built of Vermont Marble.

After long research by Government experts, Vermont Marble was selected because of its inspiring beauty and its tested ability to endure for unmeasured time . . . America's noblest Memory Stone! Let it also bear the record of *your* family name.

Vermont Marble Company
Dept. A-11
Proctor, Vermont
World's Largest Quarriers of Marble

Vermont Marble memorials and the services of our Department of Design are available in every community through local Master Craftsmen in Marble. *Write for this free booklet.* It classifies all memorials under 12 basic types, thereby simplifying the problem of selection.

Your watch deserves it!

The new Lady Wadsworth Band—one of many styles for women. Links expand to slip over the hand, contract to fit the wrist. Wadsworth Quality Gold Filled, $5 to $8.25.

THAT wrist watch of yours—how carefully you chose it! For materials, workmanship, style.

Surely it deserves a band that completes its beauty and usefulness—a Wadsworth Watch Band.

Made in white or green gold filled, or in solid gold, it matches the watch itself. Like a fine watch, too, its beauty is lasting, its style up to the minute!

Clean, bright, sanitary. Safe and economical—no danger of losing your watch, no replacements. And Wadsworth Bands are so constructed that when properly adjusted by your jeweler, they assure utmost comfort on the wrist.

The Wadsworth mark you'll find stamped inside is the same which for more than thirty-five years has been a recognized assurance of style, quality, and fine workmanship in watch cases.

Your jeweler has the Wadsworth Bands pictured here, and many other models in both flexible and link designs. He can fit one in a moment to any modern wrist watch. Ask him to show you a style which will exactly harmonize with the watch you're now wearing!

THE WADSWORTH WATCH CASE COMPANY
Dayton, Kentucky, Opposite Cincinnati, Ohio
Case makers for the leading watch movements

The Olympian Band, for men. Expands to slip over the hand, readily adjusted, secured by a snap lock. 14-kt. solid gold: plain, $28; decorated, $30. Gold filled: plain, $7.50; decorated, $8.50. Many other distinctive designs for men

Wadsworth

WORKERS IN PRECIOUS METALS

Sir Charles Lyell, the famous English geologist, visited South Carolina and Georgia and wrote as follows: "When I first read Bartram's account of alligators more than twenty feet long, and how they attacked his boat and bellowed like bulls and made a sound like distant thunder, I suspected him of exaggeration; but all my inquiries here and in Louisiana convinced me that he may be depended upon."

Whatever may have been true in Bartram's day, alligators do not now attack men. Of course, a big alligator, trying to get back into his watery refuge, will charge any man that gets in his way; but, once in his own element, he will sink out of sight immediately, and either remain completely hidden or else reveal nothing except his periscope eyes and nostrils as long as the man remains in the vicinity.

It would probably be perfectly safe to go swimming in waters abounding with alligators; yet it is perhaps as well to remember that in the water a man may not be quickly recognizable as a man. Undoubtedly, if the saurian tried to do so, any alligator of respectable size could pull even the strongest swimmer under without the slightest difficulty, while the tusk-studded jaws of a big bull could crush the bones of a human leg or arm as easily as a man crushes a match stick with his teeth. The fact remains, however, that there is no record in modern times of an alligator of our American species attacking a human swimmer in this region or in any other, so far as I am aware.

THE alligator in his native environment is, in some respects, a difficult animal to study. Nobody knows much about what he does when he sinks out of sight beneath the waters. A great deal of what is popularly told about him is not true.

It is not necessary, as most people suppose, to shoot him in the eye in order to kill him. His leathery armor was doubtless an effectual safeguard against the Indians' arrows, but it cannot stop a modern rifle bullet. Yet he is very tenacious of life, and, unless hit in some vital spot, he will probably recover. A badly hit gator nearly always sinks, but some twelve or fifteen hours later the carcass will rise to the surface, to float belly-upward, the short, thick legs and hand-like claws extended grotesquely toward the sky.

It is a mistake to take a big gator that you have just "killed" into the boat with you. No matter how dead he may seem to be, it is possible that he will shortly come to life, and he can make things exceedingly uncomfortable for you at close quarters. It is a mistake, too, to suppose that when you have severed the head of an alligator with an ax, you can take what liberties you choose with him. A friend of mine once placed his booted foot against the jaw of a gator whose brain had been pierced with a rifle bullet more than an hour before and whose head had been cut off. Instantly, the jaws of the severed head came together with a resounding snap, causing my friend to forget temporarily that he was the son of a distinguished Presbyterian divine.

It is not true that it takes an alligator a hundred years to attain a length of ten feet. On the contrary, a ten-foot alligator may be actually less than ten years old. Nor is it true that all American saurians are alligators and all foreign saurians

18,000 ticks an hour

Every second an Illinois Watch ticks five times—18,000 ticks an hour. And the loss or gain of just one tick out of each 18,000 would mean a variation in accuracy of more than 33 seconds a week.

Illinois Watches have brought the almost magic touch of accuracy to a point unsurpassed in watchmaking. It is significant of their perfection in design and construction that the famous Illinois Bunn Special railroad watches, for instance, are made to run 60 hours and more from one winding—an Illinois achievement never yet successfully duplicated, providing not only an important feature of safety, but also a vital factor in increased accuracy.

It is that kind of devotion to the ideals of fine watchmaking which has become an Illinois tradition. It is that kind of craftsmanship which endows every Illinois watch with added value for the price you pay.

See them at your jeweler's. Your taste will recognize their beauty and charm. Then ask the jeweler how good they are. He knows watches. And he knows that for more than 50 years Illinois Watches have been made with all the care worthy of such a fine art.

The Miami. The happy combination of warm red and black hard enamel inlaid in its 14k white gold-filled case, makes this model a favorite. Doubly so because of the time-keeping qualities of its fine Illinois 17-jeweled movement. $55.

The Marquis-Strap. One of the most popular strap models made, because of its unusually attractive 14k gold-filled case, curved to the arc of the wrist, and its fine 17-jeweled movement of very high quality. $50.

The A. Lincoln. Very thin, beautiful in design and performance alike, it is truly a watch worthy of its name. In 14k green or white solid gold case, fitted with exceptionally accurate 19-jeweled adjusted, motor-barrel movement. $100.

The Illini. An unusually beautiful watch, unequaled in quality of workmanship, with exceptionally fine 21-jeweled adjusted, motor-barrel movement. It is the highest grade thin model made by Illinois and is furnished in 14k solid gold case at $160, and in 18k solid gold case at $200.

The Marquis-Autocrat. Cushion Model. A thin model watch of great popularity because of its unusual beauty and dependability as a timepiece. Its fine 17-jeweled adjusted movement, motor-barrel equipped, is fitted in 14k gold-filled case, plain or engraved oxidized. $55.

Pipe Smoker Learns His Lesson

Somehow or other we never appreciate the things we have—until we are without them.

Consider your watch, for example. You take its services for granted—until it must be left for repairs—and then how you do miss it!

So it is with your favorite pipe and tobacco—especially the latter. Sometimes you think that something else will do. But go away on a trip without it, as Mr. Kelly did, and you are miserable. What happened to him is ably told in his letter:

New York
March 13, 1928

Larus & Bro. Co.,
Richmond, Va.
Gentlemen:

I have been a user of Edgeworth Smoking Tobacco for the past twenty-five years.

Two years ago I had a rather amusing experience. I took my trusty briar along on a trip abroad, intending to revel in the delights of the famous mixtures in London. I confess that I did not carry along with me any of the little blue tins of Edgeworth. But the joke was on me. I went back to Edgeworth, only this time I had to pay 45c for a 15c tin of Edgeworth!

Incidentally, on a trip through England and later through Ireland, I was surprised to find the wide distribution and ready sale of Edgeworth in Great Britain. A frequent and familiar sign in Dublin, Cork and other cities in Ireland was a white streamer announcing a new shipment of Edgeworth. To make such a conquest in the home of smoking tobacco must be very gratifying to your house.

Sincerely,
J. B. Kelly

Let us send you free samples of Edgeworth, this tobacco which has made men look for it throughout the world. Try Edgeworth in your pipe and see if *you* like it enough to want to buy more wherever you may be.

Put your name and address on a slip of paper with a request for the free Edgeworth samples, and mail it to Larus & Brother Company, 3 So. 21st Street, Richmond, Va.

If you *do* like this tobacco, you can be sure you'll keep on liking it, because its quality is always the same, no matter where or when you buy it.

When you want to buy Edgeworth you will find Edgeworth Ready-Rubbed and Edgeworth Plug Slice on sale everywhere in small packages which can be conveniently carried in the pocket, and in various other sizes up to the handsome one-pound humidor.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 254.1 meters. Frequency 1180 kilocycles

crocodiles. Our alligator has a close but much smaller relative in China, and there is a species of crocodile in lower Florida.

The books say that our American alligator is far on the road to extinction. This is one instance in which we need not believe the books. The alligator is going to be with us for many a year to come, though it is high time laws were passed to control the commercial hide-hunters who periodically reduce the number of large specimens, thus taking away from our rivers and lagoons one of the most interesting spectacles that they afford.

One day last fall my wife and I drove about sixty miles from our home in Charleston to pick up a New York editor who is a friend of mine. A young alligator about two feet long trundled across the road in front of us, and, thinking that my editor-friend might be interested in him, I jumped out, caught the youngster and put him in the back of the car, the rear seat of which was unoccupied. My wife, sitting beside me on the front seat, had her hands folded in her lap under a rug laid across her knees. Presently she felt something cold nuzzling her hand and, lifting the blanket, she discovered the youthful saurian climbing into her lap.

This was a degree of familiarity not wholly agreeable, since even a young alligator can bite hard when the spirit moves him; so, after we had picked up our editor at the appointed rendezvous and were on our way back to Charleston with him, we released our baby saurian in a small marshy pond beside the road. Somehow or other I have thought of him often since. He was a pretty little fellow, all shining black and bright yellow, and all he wanted when he climbed into my wife's lap under the rug was to get warm. What became of him, I wonder, in the new hunting ground, miles from his babyhood home?

He had already passed the most dangerous period of his infancy. Probably about two years had elapsed since he, with his brothers and sisters, who may have numbered thirty or forty, first saw the light of day. Whether he ever knew or even saw his mother is problematical.

THE female alligator goes to considerable trouble in making her nest, scooping out a shallow depression in the earth, where she deposits her eggs and then pulls dead leaves and trash over them until she has made a mound about two feet high and four or five feet wide. She does not sit upon the nest, but leaves the sun to perform the work of incubation; and opinions differ as to whether she is commonly present to welcome the youngsters when they make their way out of the nest toward the nearest water.

They are only eight or nine inches long at the time of hatching, and though their journey to the water is generally a short one, it is sometimes perilous. Foxes, raccoons, 'possums, and birds of prey are dangerous enemies; and when the lagoon or river has been reached, other dangers await the young adventurers there. Chief among these, perhaps, are the larger members of their own race. Alligators appear to be decidedly cannibalistic, and, though opinion is not unanimous upon the subject, it seems likely that the parents of a brood—the father, at any rate—are more inclined to dine upon their young than to defend them after they have reached their watery home.

Probably only a small proportion of the baby saurians that are hatched live long enough to attain the two-foot length of the precocious youngster that climbed into my wife's lap; but, once they have attained that length, the chances are that comparatively plain sailing lies ahead of them until they have reached a size likely to attract the attention of man, the most formidable of all their foes.

That time comes much more quickly than is generally supposed. The common idea that an alligator grows very slowly is an error. Experiments have proved that a gator grows on the average considerably more than an inch a month until a length of something like twelve feet has been attained, when the rate of growth becomes much slower. This, however, while applicable to regions of perpetual summer where growth continues uninterruptedly, may not be true in cooler districts where the gator goes into seclusion and practically hibernates during the winter months.

IT IS due largely to its habit of denning up during the winter season that the alligator owes its present abundance in the Carolina plantation country. In Florida, where it is active the year round, it has been decimated. Here it lies safe from man in its secret dens during most of the cooler portion of the winter when the hunters are abroad in the woods, and it does not emerge again until March, when the hunting season is over. Spring is a dangerous season for the gators, the more so because they appear to be exceptionally hungry then after their long fast and are, perhaps, less cautious than usual. But soon the hot weather comes, the season that the gator loves best; and in the heat of summer few men, even the professional hide hunters, are inclined to spend much time in the steaming swamps or on the inland rivers and lagoons.

So I think that the two-foot gatorling that climbed into my wife's lap that day last fall (I am using him as a sort of epitome of his race) is probably alive and flourishing today, and that he has a very good chance to enjoy life for a considerable time to come. For my part, I wish him well. I like alligators. I like to see them and to hear them; the bellowing of a big bull dragon, by the way, is one of the most impressive sounds of the American woods, an eloquent reminder of those colorful early days when a man could scarcely sleep near one of the great swamps because of the unearthly chorus of the wild beasts.

And the bigger the gator is, the better I like him. He adds something of mystery, something of prehistoric strangeness to the lovely moss-tapestried lagoons and the slow, winding rivers of the plantation country. He is not beautiful; but he is fascinatingly interesting, the largest and most formidable (except to man) of the surviving wild killers of our Eastern woods, practically the only wild animal left in the eastern part of the continent that can bring back the thrill of pioneer times by raiding the farmer's herds. Surely it is by no means a lamentable thing in these over-civilized days that, here in one of the oldest parts of America, that touch of the unspoiled and shaggily romantic wilderness still survives.

Face Brick Design 105
from "The Home of Beauty"

TO GIVE lasting satisfaction, the home of your dreams must have beauty of color as well as of design. Face Brick's mellow tones bring distinctive beauty and retain their first charm through the years. The innumerable colorings and textures satisfy the most diverse tastes. And no matter what the architectural style, you can find Face Brick appropriate for it. Moreover, the Face Brick house is the most economical to own. First cost is near that of houses less enduring and less beautiful; upkeep and insurance are very low; and Face Brick holds its value best. Before you build, buy or remodel, send for the books listed opposite. The coupon is for your convenience.

"The Story of Brick"—Modern homes beautifully illustrated. Chapters on Planning for Beauty, Financing, Costs, Economy in Building and kindred subjects. Sent free on request.

"Face Brick Bungalow and Small House Plans" embrace 128 designs of homes, unusual and distinctive in design, convenient in floor plan and economical to build. Four booklets showing 3 to 4-room, 5-room, 6-room and 7 to 8-room houses. Each 25 cents. Entire set $1.00.

"The Home of Beauty" contains 50 two-story, six-room houses, submitted by architects in a nation-wide competition. Sent for 50 cents.

"A New House for the Old." Modernize the old house by veneering it with beautiful Face Brick. This free booklet shows what can be done and tells how.

How I Lost Money Trying to Get Rich

(*Continued from page 49*)

all of my investment of sixty dollars.

My next hundred dollars I took to the president of the local bank, who solemnly put it into the preferred stock of a fairly new but well-managed company. Being unseasoned, its preferred was selling at 96. When some years later it sold up to 104, I took my profit and thought I had done very well. In a sense I had, but it is worth noting as we go along that if I had put the hundred into the common stock of the same company and left it there through the years I should have at least a thousand dollars today.

In my college vacations I sold books from house to house. It was tough work. But I had to do work that would net at least $250 or I couldn't go back to school. So I rang doorbells and sold books. Hard as the work was, I look back on it as being more valuable than any course in college.

My classmates thought I was very fortunate in my start in business. A rich man who visited college in my senior year took a fancy to me and employed me as his private secretary. Instead of beginning life in the shipping-room or behind a counter or down in a foundry, I began with a white-collar job and a salary that enabled me to live like a gentleman.

LOOKING back on it now, I realize that I had struck it altogether too soft, for the time came when the clouds of panic spread over the business horizon. My rich employer was extended in a hundred different directions and could not weather the gale. When the panic passed I was not only out of a job I had wasted nearly five years of my life in a position that taught me almost nothing. I could answer the telephone and dictate letters and read the financial page of a newspaper, but my classmates who had started at the bottom were beginning to poke their heads up from the cellars. Their hands were horny with the calluses that come from licking a job, and in their eyes was the self-confidence of men who have paid for what they know.

Consider me, then, at twenty-seven, penniless, with little training, and, to cap the climax, engaged to be married. To my credit let me say that I proceeded promptly to make the one best investment of my whole life. I borrowed two hundred and fifty dollars and was married at once.

If young people were ever to ask my advice about their love affairs, as they seldom do, my answer would be: "The time to get married is when you are in love. Don't let the establishment of your home wait upon your financial prospects. Marry, and *make* your prospects improve." Maybe this is rash advice, but it certainly worked for me. After a week-end honeymoon, I began in the shipping-room of a factory, and how I did go to it!

I HAD gone a little way up the ladder and had accumulated about three thousand dollars when I made my first effort to get rich quick. The three thousand had come hard. My wife and I concluded that at the rate we were going we should be seventy years old before we were independent. The thought induced a mood of semi-depression, and that made me ripe for the picking when I encountered some shrewd acquaintances from Minneapolis. They were full of the wonders of the Canadian Northwest. Canada was the "last frontier," they said, the only spot on the civilized globe where virgin land could still be had cheap. They recited statistics to prove that land at ten dollars an acre would pay for itself with a single good wheat crop and thereafter bring in dividends of a hundred per cent a year.

It was music to my yearning heart. Three thousand dollars at six per cent is $180. Three thousand dollars at one hundred per cent would be $3,000, enough to keep us safe forever. Surely the golden goal was worth the chance. I felt lucky to have met these new friends, whom I knew to be honest and reasonably successful in their own lines of business.

We selected good land, hired a manager who told us that he knew his business, gave him modern farm machinery, and started him off with our blessing and high hope. The agreement was that only twenty-five per cent of our stock was to be called at once. I, therefore, subscribed for $10,000 worth, and made an initial payment of $2,500. The first year was spent in breaking our prairie acres—much slower work and more expensive than we had figured. Only about a quarter of our acreage was ready by planting time, and an early frost prevented part of the crop from maturing. Accordingly, we had a second assessment which took the remainder of my original stake and an additional $500 that I had managed to save. The next year we were sure would bring it all back!

LET us hurry over the harrowing details. Every year we started with good prospects, and every year something happened. Once it was *rust*, which until then had never been known in that section of the country; once it was hail. Our manager grew discouraged and resigned; so did his successor. Ultimately, we liquidated the whole proposition at about ten cents on the dollar, and my first few thousands were gone.

Meanwhile, my income had increased, and having been burned once I decided to be very conservative. I put my surplus into good bonds and preferred stocks. The total was small, but it made a nest egg which I kept in my wife's name. She has it still. It was not long, however, until I succumbed again to the lure of quick riches. This time it was an invention.

Many things about the invention were true and sound. It *did* work; that is, in the laboratory. The patent was all right. All in all, it looked very good to me, and I thought I had learned enough about business procedure to be sure that I was investigating very carefully.

We organized an experimental company, and we built a larger model, which worked also. Then came the question of whether we should sell out to one of the big companies, several of which were interested, or attempt to make license agreements with all of them; or take over a small plant

WHIRL AWAY

"and with *this* suit, Sir, wear *this* watch-chain"

STYLE dictators will hardly ever go *that* far! But look to this: a watch-chain *is* an important item in your dress. The success of any suit may be influenced by the accessories with which you complement it. And a watch-chain is a very noticeable accessory.

For that reason, a Simmons Chain always proves a sound purchase. The chains are recent, authoritative, and very good to look at. There is an abundant variety of link-designs, suited to every taste. Prices come within the moderate range of $4 to $15. Two new chains are illustrated: No. 30033 (above), a green gold-filled Waldemar; and No. 30045 (below), a green and white gold-filled Waldemar—both at $9. Both are made in our own factory, under our own patented process. Both will add a touch that *does* help your appearance. R. F. Simmons Co., Attleboro, Mass.

SIMMONS
TRADE MARK
CHAINS
The swivel says it's a Simmons

and, by producing a superior product ourselves, force the big companies to pay us a higher royalty.

About the time we got ready to sell out for millions along came another young scientist with an even better process. Instantly our bag of tricks became worthless, and I wound up this second venture with some green stock certificates and nothing else.

AT ABOUT this time I made the acquaintance of a Wall Street broker whose speculations on his own account had been notably successful. At his suggestion I opened an account with his office, to which he offered his "personal attention." For five years I traded in the market with some degree of regularity, and there was hardly a day that he did not call me up. During this period I know positively that his own fortune increased more than a million dollars. My account during the same period showed a net increase of about $18,000. "Very good," you will say, and you may add: "Show me how to make $18,000 in five years without work and I shall be very happy." But the picture takes on a different color when I tell you that at various times I was risking more than $150,000, and that the total amount of my winnings was hardly more than I should have made had I left the money at compound interest in the savings banks.

There were days of happiness, to be sure, when I made thousands. But oh! the day when I lost $11,000 in an hour!

Perhaps you imagine that my broker did not try as hard to make money for me as he did for himself. He did, but the seemingly impossible occurred again and again: he would make money in a stock, and I would lose in the same stock? Why? Because when he was acting for himself, with his own money, he had a confidence that he did not feel with mine. His touch was sure, and his nerve was cool. If the stock dipped ten points, he knew he had margin enough to carry through. But my lesser stake worried him, as did also my troubled advice on bad days. The result was that he often sold me out at the wrong time; and in the end, as I say, after five years of studying the market in the evenings and figuring on the edge of my newspaper on the way down-town in the mornings, I was only a little ahead.

Let me lump together the next two operations. They were similar in character, though separated by a period of years. The first was a beauty preparation on which we had to make a quick killing, having only a fair amount of capital. When the killing was delayed, when more capital was needed, when we got busy with our own affairs and realized that this outside interest was costing us a lot of time, we grew discouraged and sold out. The net result was another loss.

My last get-rich-quick venture was in the chain-store field. With a good location in a suburb where several of us had our homes, we were on the ground before any of the big chains arrived, and everything looked rosy. Our manager was smart, too smart. When we discovered his peculations we were too heartsick to go on. We accepted the offer which one of the big chains made us, pocketed our loss, and retired. And I, having reached at last the age of discretion, also retired

GRUEN MODE du BIJOU WATCHES

Diamond Set

Offered now by Your Gruen Jeweler

Thirty-two diamonds in all, completely encrusting the bezel, but it is the baguette diamond at either end of the dial, in design 330 *above, that holds the key to character.* $475

Bold color contrast enters into design 304 *with* 4 *large cabochon green onyx, of unusual cut, now dominating, now playing a subordinate role when* 14 *diamonds flash their fires.* $325

This emblem is displayed only by jewelers of high business character, qualified members of the Gruen Guild

In design 329 *the true modern touch lies here in the parallel arrangement and new setting of the diamonds, so simple, hence so effective! The modest repetition of this motif in the smart mesh band, making watch and bracelet one unit, is in reality a brilliant inspiration.* 32 *diamonds in all.* $375

It is primarily in the treatment of watch and flexible bracelet as a single ornament that the Mode du Bijou *finds its expression in this distinguished timepiece, design* 328. 18 *diamonds.* $285

LA MODE *du bijou—mais la vraie!* Now expressed in a new series of diamond-set watches by Gruen.

In Paris, on Fifth Avenue, in the very centers where all our notions of design are being literally remade, these watches were conceived. The Gruen Guild Workshops in Europe and America have united to produce them.

So authentically *modern*, so brilliantly in keeping with the newest vogue in jeweled decoration, from which they get their name, the Gruen *Mode du Bijou* Watches are well worth a special trip just to see.

And you can see them today, if you like! There is a Gruen jeweler near you who can show you the actual watches pictured here—a jeweler you know as one of the very best in your community.

Three more examples are here pictured from the great variety your Gruen jeweler can please you with. For Gruen diamond-set watches range in price from $10,000 *to* $60. *These, reading from left to right, are priced at* $125, $160 *and* $275, *designs* 161, 160 *and* 262 *respectively*

His reputation, together with the Gruen name, is a splendid assurance that the watch cases and the diamonds with which they are set are of unquestioned value. That the cases are sturdily fashioned to give ample protection to the fine Gruen movement within.

And don't forget to ask him for the valuable Gruen *Mode du Bijou* book which tells you many things that every prospective purchaser of a diamond watch ought to know. Or write direct to

Stop Groping for Words !

IF your words flow easily, if you NEVER have trouble expressing yourself, people see immediately that your thoughts run along smoothly and that you have a sparkling, active mind.

But if you hesitate and stammer, and grope for words, if you say "er" or "what-do-you-call-it" or "you know what I mean" instead of using exactly the right word to express your meaning—you tell every one that your mind is asleep. You publish the fact that your education has been sadly neglected. Your limited vocabulary shows clearly that you are dull and uninteresting.

Stop Making Mistakes

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce or misspell a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

New Invention Makes Mastering English Easy

For many years Mr. Cody, one of our greatest authorities on English, studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Send for Free Book on English

To achieve your ambitions it is essential that you use good English as instinctively as you tie your shoes. Business today demands men and women who use correct, concise, forceful language. Society demands education, breeding, culture, demonstrated by the use of correct, interesting and convincing language.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you cannot instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 911 Searle Building, Rochester, N. Y.

permanently from the attempt to get rich quick.

What had my various speculations cost me?

In the first place, in a period of fifteen years (from twenty-seven to forty-two), I lost $30,000 in cash. This is the savings of a lifetime to many families. It is a loss that is substantial to anyone, and I cannot think about it without a certain shame. But my income was mounting rapidly in those years, and the losses were spread out so that they did not crimp me. Nevertheless, $30,000 is a large sum of money, even when you say it fast.

But it wasn't $30,000 alone that I lost; it was $30,000 multiplied by what that amount might have earned in all those years. Figured even at regular interest rates, it becomes a much larger sum. For example, if, instead of flying to far-off Canada to purchase my land, I had bought a couple of lots in the young suburb where I lived, every dollar would have become twenty dollars in those ten years. If, instead of trying to make money out of the oil business, about which I knew *nothing*, I had invested in the stock of our own company, which I knew *all* about, every dollar would have become fifteen dollars.

THE loss of money was a less serious matter than the loss of time. I shudder when I think of the thousands of hours of worried thought and effort that went into these ill-fated enterprises, the nights of fruitless discussion, and the unhappy calls on the telephone during the business day. Not until a near catastrophe happened to me did I realize this fully.

There came a day when the directors of our company were to pick a new vice president. I was next in line, and everybody supposed that the job would come to me as a matter of course. Instead, a man was brought in from the outside and put over my head. It was a crushing blow, and when I sought the reason for it, the chairman of the board answered frankly.

"We know that you have outside interests," he said. "You are a smart man, and we should like to have you with us permanently, but how can we be sure that we shall? How can we tell but that one of these ventures of yours will make you a lot of money and take you away? Or, if it doesn't make a lot of money, how do we know that the worry of it won't destroy your efficiency, which is already impaired?

I fought a hard battle with myself that night, for my first impulse was to resign. I conquered it. The new vice president whom the directors had brought in proved to be a false alarm and was out again in eight months. By that time I had removed from their minds all doubt as to my stability. But it was a close call.

So I keep in the little private box in my office these red and green and blue certificates that represent so many hours of hope and worry and disappointment. My skeletons of dead dreams; my tickets in the false lottery of easy wealth. And with them I keep a little tabulation which I revise from time to time. It shows the increase in the market value of ten common stocks in each of ten great American industries. One is a railroad, one a public utility, one a steel company, one a food company. If the $30,000 which I wasted over a period of fifteen years had been distributed among these ten stocks, or even concentrated in the stock of my own company, it would be a very substantial fortune today. Luckily, my mistakes and disappointments came comparatively early in life so that there were still enough years in which to make amends.

IF I were to start over again, I should insist on getting into business at the very bottom. No kind man could ever tempt me with the favor of a nice job half way up. I should want to fight my way, not for the exercise or the joy of fighting, but for the self-confidence that comes with a working knowledge of every job in the place. The demand for men who have had that sort of training will always outrun the supply.

Having achieved a position where I could save, I should invest in my own company and in the common stocks of the country's leading industries. While these stocks have their ups and downs, they tend to appreciate in value over a period of years. They yield one an income and, since these strong concerns seldom pay out more than half their earnings in dividends, they automatically save something for the investor besides.

I should avoid side lines like the plague. Side lines use up an enormous amount of time and energy, which must be subtracted from one's main business; and even when they succeed, which is seldom, they usually make money less rapidly than the old established businesses.

Finally, I have come to hold a certain conviction or superstition, or whatever you choose to call it. It is this: that the way to become comfortably well off is not to think too much about it. Money seems to have a perverse habit of evading those who chase it too hard, and of snuggling up to folks who are partially unmindful of it. In the years when I did the most worrying and scheming about financial gains, I made the least progress. In the years when I concentrated my energies on my job and made sound investments and forgot them, I was surprised, when Christmas rolled around, to see the total of my net gain.

I HOPE my sons will be so crazy about their work that they will almost forget about money. If they do that they will become comfortably fixed. But if they start out in life with the definite purpose of getting rich, they had better lay in a good stock of life insurance first.

I am going to talk to the boys along these lines. Perhaps I shall make more of an impression on them than I have been able to make on the young people in my office. One can never be sure. Youth is headstrong and quite confident that we old folks are eaten up by conservatism and fears. But I intend to make a continuous drive on the boys. Each Christmas from now on they are going to find in their stockings some nice green and gold certificates, with a letter from their dad telling them how he came to be stuck with these glittering bits of waste paper. Even that may not save them from foolish mistakes, but at least it will show them what nice art work the printers and lithographers can do for those who have the foolish idea that there is a quick and easy way to get rich.

ROOFS

Of Everlasting Asbestos

THROUGHOUT the world in the legends and proverbs of all languages, roof means home. And usually the quality of the roof tells the passerby at a glance the quality of the home.

Across the land are millions of acres of roofs. Some of these roofs are destined to flame into roaring torches, destroying the houses beneath them, and scattering firebrands over the roofs of neighboring homes. Others will crumble away, rot or become hopelessly warped within a few short years.

But those roofs which are of Johns-Manville Rigid Asbestos Shingles will never burn, will never rot, warp, nor wear out. They will come unharmed through years of weather, and outlast the houses on which they are laid. They will outwit depreciation.

Houses roofed with Johns-Manville Asbestos Shingles stand out from the commonplace, mark the good taste and sound judgment of the owners. The warm, harmonious colors and substantial appearance of these shingles give houses a beauty and distinction impossible with short-lived materials.

It is Easy to Have Exactly the Right Roof

As you plan your new home or arrange to re-roof your present one, turn to the pages of our free booklet, "How to Select the Roof for Your Home." See how easy it is to choose color combinations which put the final touch of distinction on your house, which give you a roof virtually made to order for you. The poorest sort of economy is a cheap roof. Why buy certain trouble, the certainty of future expense, when you can end roofing cost for all time by using permanent, fireproof Johns-Manville Asbestos Shingles?

The Name is Important

When you order your shingles, be sure you get Johns-Manville Asbestos Shingles. They are moulded from asbestos fibre and cement pressed into sturdy, rigid shingles that defy flaming brands and driving snow with equal ease and certainty. The Johns-Manville Asbestos Shingle is the result of fifty years of experience—a record of achievement which has won for us the title, "Master of Asbestos."

Any lumber yard or building supply dealer can supply the Johns-Manville Asbestos Shingles you want for your home. Insist on them and on the Johns-Manville Certificate. This shows that your roof has been registered at our office, assuring you satisfaction.

Johns-Manville Asbestos products include Asbestocel—an insulation for heater pipes; Asbestos Brake Lining for motor cars; besides hundreds of other insulations, packings and power specialties which are used by virtually every industry in America.

The Man Who Believed in God

(*Continued from page 61*)

you won't consider . . . either sale . . . or exchange?"

"No; not t' put too fine a point on it—no! This house was built on my land, out o' *my* stones, is perzactly th' type I've allus thought I'd like. With a little private still I cud enjoy life real well, here on m' property. O' course, I'd never cease t' be grateful fer th' way you improved it—"

"You—you—*thief!*" the wife cried—deadly, low-voiced. But her husband's hand restrained her.

"No, he's not, Amy. He's doubtless within his rights."

"His legal rights, maybe. But we've got higher rights—possession—the hard work we've done—the happiness we've found here."

"Of course, my dear man," declared Mortimer, "you understand I don't purpose to vacate, to relinquish one iota of my interest in this tract, till a court says I must."

"What's that? What say? Y' mean you're goin' t' fight me?—fight me at th' law?"

"I'm perfectly willing to reimburse you for what the land was worth as desert, although I'll have to borrow to do it. But I doubt if any jury—especially of men who know what it means to clear land in this sun—will order me to vacate, with no compensation."

"I s'pose," sneered Parkin, "you count on God influencin' that jury—what? Well, if I lose in county court, I'll take this t' th' State Supreme Court. What do you know about that?" He arose, jerked down his cap, and prepared to depart. He didn't like the look in Amy Nobel's eye. Her courage was having a testing that made H. O. G. Parkin decide he'd better not try to do too much business with this pair the first day. "I don't mind tellin' you, however, that up North I got *my* frien's, as much as you've got yourn."

He got down the steps and started toward his car. "I was goin' t' be decent t' you," he called from the walk, "an' give you a reasonable time t' git out. But if I've got t' face a court fight t' possess land I been ten years payin' taxes on, I sha'n't lose no time. I'll git a court order of ejectment against you—fer trespass!"

GRAPEVILLE soon learned of H. O. G. Parkin. He drove back to town, secured a room at the Santa Padre Inn, and did much talking in lobby and street.

"I don't mind tellin' you thet you're courtin' calamity, stranger," Joe Coates advised him, as Parkin loitered in the Coates Department Store during a ten-day delay while Judge Baldmann was absent in Denver. "Mort Nobel's just what his name implies—a square man. He's made a lot o' friends in this valley. They won't take it kindly to see the chap robbed."

"Who's robbin' him? I object t' that word *robbed*. I'm after nothin' that ain't strictly mine. If they'd been any robbin', he'd done it frum me—or he's tryin' t' do it by stickin' t' possession. An' his frien's can go lump it. I'm within my rights, I tell you, an' I'm goin' t' have my land."

"So!—his friends can go lump it? We'll see about that. You're not the first undesirable settler that ever came to Grapeville—came here, and left when he found he wasn't wanted."

Judge Baldmann returned from the East. Parkin's attorney, a flat-footed little man from somewhere up North named Markyros, argued for the writ.

It was granted.

An injunction was further taken out, restraining Nobel from disposing of his maturing crop, or committing any act of vandalism against vines or buildings till a decision in equity had been handed down, establishing the amount of Mort's compensation. Mandamus Flagg took the case for Nobel.

"We ain't lost yet, Poe," he consoled. "Fact remains that technically you did trespass on his property, whether honestly or not. Real tussle comes when we get to county court. You and your wife move up to the hotel. Sentiment's runnin' pretty high over this thing. Lots o' local folks realize they could easily 'a' made a similar mistake."

"I'm not depending on the sentiment among my neighbors," Nobel responded, "although I take it kindly."

"No? What are you dependin' on—me? My legal reputation?" and the lawyer laughed pleasantly, half believing it was so.

"If I didn't believe in an equitable God at the head o' this universe, who'd stand by folks in a jam like this, I might as well bundle up my religion and bury it off in the desert, so to speak. Amy and I have talked it over. We won't lose that property. I feel it in my *soul*."

MOREOVER, he did. That was the queer part.

They tidied the sunny stone house, locked it, drove into town with scarcely a backward look, steadfastly believing their exile only temporary—though six thousand dollars' worth of grapes were ripening on that flat.

Hog Parkin moved in the very next morning.

"It's a heap o' responsibility t' place on th' Almighty," Sam Bishop declared when he next saw Joe Coates.

"What is?" snapped the merchant.

"Makin' Him part-defendant 'gainst lawyers frum Los Angeles—as Mort seems content t' leave things. I'd place a whole lot more stock in what th' neighbors is talkin' o' doin', in case Parkin wins. Seen his wife since they moved t' th' hotel?"

"Yeah, she was in here yesterday. What of it?"

"Funny how she keeps her cheery disposition. Dunno but what I'd believe in God m'self if I had a wife like her. Man couldn't help it."

"Yeah, Mort Nobel don't realize how strong the men-folks are for his woman—on account of her disposition. This case ain't ended yet."

There was something bestially Bacchanalian about Parkin's behavior when he got on that property. Grapeville people never saw the inside of Amy's neat

If you are about to buy DIAMONDS it will pay you to WRITE FOR THIS

FREE CATALOG

This book is beautifully illustrated. Tells how to judge, select and buy diamonds. Tells how they mine, cut and market diamonds. This book, showing weights, sizes, prices and qualities, $20.00 to $20,000.00, is considered an authority.

Thousands of customers in all parts of the world

BUY DIAMONDS DIRECT

from Jason Weiler & Sons, Boston, Mass.
Leading Diamond Importers. *Save 20 to 40%*

For over 50 years the house of **Jason Weiler & Sons, of Boston,** has been one of the leading diamond importing concerns in America selling direct by mail to customers and dealers alike all over the world at savings of from 20 to 40%. **Here are several diamond offers—direct to you by mail**—which clearly demonstrate our position to name prices on diamonds that should interest every present or prospective diamond purchaser.

Ladies' Diamond Ring $150.00

18K Solid White Gold Ring in exquisitely pierced 4 square-prong design mounted with full cut blue white Diamond and 6 smaller Diamonds set in the new step-side effect. Money refunded if this ring can be duplicated elsewhere for less than $200.00. Our price direct to you.. **$150.00**

"A blotchy skin doesn't register with your customers or your firm. Pinaud's Lilac has blemishes absolutely stopped," declares Elbert I. Baker of the Warren-Nash Motor Corporation

"You look better—you feel better with this skin bracer"

declare 3 crack salesmen of NASH MOTOR CARS

MEN whose appearance is of prime importance—leading salesmen of great corporations—depend upon Pinaud's Lilac to keep them looking fit.

They declare this famous skin bracer has the same toning effect on the muscles of the face that exercise has on the whole body.

It rouses circulation; checks pouches and wrinkles; keeps the skin young looking.

Pinaud's Lilac is a famous antiseptic, too. It sterilizes razor scrapes and nicks—absolutely prevents after-shaving infections and blemishes.

Shake some into the hand and slap it over your face. Instantly your skin feels toned—invigorated! You will enjoy its fresh lilac odor.

You can get Pinaud's Lilac at any drug or department store.

FREE: *good-sized sample bottle of this* famous skin bracer—Write today to Pinaud, Inc., Dept. M-3, 220 East 21st St., New York. In Canada, 560 King West, Toronto

"From the instant Pinaud's Lilac hits your face your skin feels better," says Joseph Keating, a star salesman of the Warren-Nash Motor Corporation

Look for Pinaud's signature on every bottle

"Pinaud's Lilac guards your skin against after-shaving infections," says O. C. Trask, one of the best salesmen of the Warren-Nash Motor Corporation

PINAUD'S LILAC

Copr. 1928, Pinaud, Inc. THE FAMOUS SKIN BRACER

house after his occupancy, though intuition told them much of what was happening. But out among the vines the man became a gourmand.

He had a queer, disgusting trick of putting a ripe grape between his teeth and bursting it with a sharp plopping noise, permitting the juice to run down his chin. His shirt front was constantly smeared with red stain. Frequently he appeared in town for provisions in naked feet—feet dyed with more grape juice, where he delighted to walk amid the vine rows with their long tentacle-like feelers, and crush heavy blobs of mauve deliciousness between huge splayed toes. And he took to bullying Mort Nobel.

"'Twon't be long now," he taunted his antagonist anent the contested title. "Had a bootlegger offer me as high as eight cents a pound fer th' crop this year, an' no questions arst. They tell me you'd never sell t' bootleggers. Well, all th' more reasons why I should own that grape patch."

"The crop should be gathered, of course," Mort returned quietly. He knew that if he won Parkin must give an accounting to the court. And if he lost, it was none of his business.

ON THE eighth of December, about four-thirty in the afternoon, a jury composed of nondescript laborers and tradespeople—adroitly selected by legal chicanery in which Nobel would have no part—brought in its verdict.

It rained that day. Murky California winter had set in and shed its drizzle down canyons and valley. Amy Nobel had not gone to court. She waited at the inn for Mort to 'phone her the jury's decision. When six o'clock arrived with no word from her husband, she got into a raincoat. She sought the office of the Grapeville evening paper.

The moment the editor recognized her, she saw from his expression that the worst must have happened.

"Well," she said crisply, "let's have it!"

"Unless Mr. Nobel's got the dough to carry this case to the Supreme Court, you're licked," responded Editor Scroosby. "The land—and everything on it—has been awarded to Parkin. But the jury's allowed you the value of the crop. Of course you can't use it without accepting this verdict."

Amy sat down in the chair by the stove.

"It's tough, Mrs. Nobel!"

"Oh, fiddlesticks!"

Duncan Scroosby studied her. She sat very straight in the chair, warming wet feet on the stove's iron base. That wavy riot of her hair, which no California rainy season could uncurl, framed strong, well-turned features. Her eyes—which he had always thought blue—were gray, he perceived. She still lacked curves in such places as the feminine contingents usually carry curves. But about that figure was the same irrepressible resolution which had carried her from her Ozark Mountains half across a continent.

It came to Dunc Scroosby in those moments that Amy Nobel was *a beautiful woman*—beautiful in a fine, high, indomitable, pioneering essence of sterling character which refused to accept defeat even in the face of catastrophe.

"What'll you do, Mrs. Nobel?" asked the editor.

All those glorious days live on . . .

in snapshots that were a joy to take

"TODAY we can look back and see each other just as we used to be. Ralph claims that he knew we were meant for each other from the moment we met. 'It's right there in those snapshots,' he'll say. 'Can't you see from the way I looked at you that it was all over with me?'

"It's funny the way things work out. Never before that had I used my Kodak so much . . . was it intuition that made me turn to it the one time when it meant most?"

After all . . . there is only one perfect memory, the Kodak's. Years afterward, it shows you a face or a scene with all the expression, the detail, the light and shadow, just as they were when you saw them in the finder.

Perhaps you understand this perfectly. Perhaps your intentions have been the soundest, but actually you did not take as many snapshots as you meant to. The reason is probably that too frequently you did not take your Kodak with you. To overcome this, always keep it loaded and put it in a place where you cannot help but see it every time you are going out.

As for not owning a Kodak . . . really, there's no excuse for it. Every day of your life, probably, you pass stores that sell them. The cost is whatever you want to pay. There's a genuine Eastman camera, the Brownie, as low as $2, and Kodaks from $5 up.

And every Eastman camera makes excellent snapshots. Particularly the Modern Kodaks. Many have lenses so fast that you don't have to wait for sunshine. Rain or shine, Winter or Summer, indoors or out, everyone can take good pictures with these marvelous new Kodaks.

Kodak Film in the familiar yellow box is dependably uniform. It has speed and wide latitude. Which simply means that it reduces the danger of under- and over-exposure. It gets the picture. Expert photo finishers are ready in every community to develop and print your films quickly and skilfully. So begin—or continue—taking the pictures that will mean so much to you later on.

EASTMAN KODAK CO., Dept. 141, Rochester, N. Y.

"Do? The only thing there is to do. If we've lost, we've lost. We've no money to carry it to another court. As soon as the rainy season stops, we'll go down on the land we really own *and start all over, the third time!*" She tossed her head proudly and arose from her chair. "The third time never fails—accordin' to the proverb."

"You . . . really . . . mean . . . that?"

"Do I look as though I'm jokin'? The only time when you're really down and out is when you enjoy bein' down and out. What we've built twice we can build again."

She was gone up the street without fret or whimper.

HOG PARKIN'S car had at last given out. He came down by train from the northern county seat. According to a later issue of Scroosby's paper, he went at once to his "home" on the flat. Mort Nobel reached town in the middle of the evening. Washed-out roads had delayed his little flivver. He entered a hamlet that was queerly deserted. . . .

"Where have *you* been?" cried a maid at the inn. "You better hurry up—if you want to see the fun."

"What fun?"

"There's a lot o' folks 'round here don't take so much stock as you do, Mr. Nobel, in leavin' things to God. All through supper hour they been collectin' around Coates's store. 'Round eight o'clock they left—a whole swarm of 'em—without raincoats or umbrellas. They took the road down the valley toward the Flat."

"What are they going to do?"

"Tar and feather Parkin, that's what they'll do. Run him out o' town—or mebbe somethin' worse!"

"Great heavens! They mustn't do that. Where's Amy?"

"Sam Bishop picked her up in his buckboard. Sam's at the head of it—Sam, Joe Coates, and Dunc Scroosby. Hog Parkin ain't wanted. They mean he should know it."

The streets were running water. Supper-time drizzle had swollen to a downpour. Mort Nobel slopped knee-deep in muck, returning to his flivver. He started it with difficulty and headed down the valley.

Into the vast void of wind-swept dark, Mort Nobel piloted a storm-racked contraption. Rain, rain, oceans of rain! The driver was drenched from his head to his boots. Across the wide spaces the Pacific gale howled, bending eucalyptus trees, thrashing through windbreaks, snapping loosed curtains on the little roadster.

Yet Nobel kept going, on and on and on, slowed at times by washouts, feeling his way through growing freshets, mounting cement culverts where one-day rivers roared beneath. The first sign Mort had of community violence was a riot of twisted lights bobbing and streaming across ragged night.

A weird, wild, semi-barbaric scene greeted him when he lurched to the driveway. The crowd carried oil torches supplied by Joe Coates—remnants from a long-defunct political campaign. The soggy lawn was a sea of faces. Up toward the steps was a concentrated snarl—milling, bumbling, cursing townsmen.

"Wait! *Wait, I say!*" came a voice from behind them.

Fighting his way, Mort shoved through the crowd.

He seemed a frenzied figure from the heart of the storm as he mounted the steps and turned the crush back.

"Neighbors!—Friends!—it's me—Mort Nobel. Listen, I'm telling you! Stop this at once!"

They had called Parkin out. He had come, unsuspecting. Sam Bishop had seized him. Now Sam Bishop, stupefied, relaxed his harsh clutch on the near-victim's collar.

"We're doin' this fer you, Mort Nobel."

"And I don't want it done. Listen! *Please* listen!"

The crowd surged and pushed. Dunc Scroosby reported next day that never in the history of the valley had such a mob collected. He wondered where they came from. Yet somehow they quieted. The rain still beat down. The torches hissed constantly. Amy reached her husband.

"Mort!" she cried—that low-throated, gritty voice of hers. "Joe Coates has discovered that this moral vagabond hasn't got chick, child, nor heir. If they run him from this valley, we get our home back. Don't you understand, Mort Nobel? *We get this place back!*"

"But we don't want it back—by violence, Amy. Two wrongs never made a right. Even if he hasn't anyone to press his claim for him, it would never be our property till we came by it honestly."

"We did come by it honestly. What about our work?"

"The title would always be clouded—"

"Listen to your wife, you fool!" bellowed Joe Coates. "If we put this man out of the way, you can live here till doomsday and never be bothered. You could have lived here *forever*, if he hadn't showed up."

It was quieter now—except for the wind. All over the lawn the rioters tried to hear what was said on the steps. Mort glanced about on that press of tense faces.

"My friends," he started to say, "I'm grateful. But it isn't my way to meet force with force—"

"Aw, thunder!"

"Rats!"

"We want Hog Parkin!"

"Let us at him! We'll show him, the robber!"

"MY FRIENDS—you've *got* to listen. Perhaps you think I'm soft. But either we practice on week days what we profess on Sundays, or we're all a lot of hypocrites. Either we're Christians—"

"But, Mort—"

"There aren't any 'buts' about it. If a court of law, peaceably, has decided I should suffer from my error—that the land is Mr. Parkin's and I have no right here—Amy and I will accept it, and vacate. We still have our acreage somewhere down the road. We'll make a fresh start as soon as the rainy season ends."

"You'll *what?*" cried Joe Coates.

"Start all over. Begin again at the beginning. Build all over—on our own land—honestly. Now, please go home, all of you. If Mr. Parkin finds any satisfaction in dwelling in this house we've built for him—well, it's his good fortune—"

"Do you still believe in God?" tittered a voice down on the left. The night was being spoiled for most of those present.

"The person who asked that isn't a grape-grower," was Mort's solemn answer. "He never planted a vineyard."

The wind blew afresh. It drowned out Mort's voice. The group pulled away from the steps. Some mischief-makers consulted together.

"We oughtn't t' go back without givin' that fat cuss a roughin' up—just t' save our faces," was the verdict. And they looked about for Parkin.

But Parkin had vanished.

"He slipped around the corner of the house a few seconds ago!" piped a girl in a mackinaw. That storm-sodden herd had its quota of women-folk.

"After him, everybody! Come with them torches!"

"My friends! *My friends!*" Mort Nobel begged futilely.

THEY did not find Hog Parkin. He made a successful escape in the dark.

The rain seemed to thin, and eventually to stop. By twos and threes and fours the crowd stole away, disintegrated, though the culverts still roared with their mounting loads of water.

At length, only a sheepish-faced Sam Bishop, Joe Coates, and the newspaper editor beheld Amy Nobel face her man in the murk. She drew a deep breath.

"Mort Nobel!" she exclaimed, "you're wet to the skin!" And slipping from her raincoat, she put it around him. Dunc Scroosby claimed later she pecked a kiss on his forehead as she did it.

"Huh," growled Sam Bishop, "it's enough t' make any sort o' man go in fer religion. I'd like t' see Ma Bishop peel a wrap off fer *me*."

"It must be she loves him," the merchant said wryly.

Apparently she did love him. For when the sun broke through, later in the week, and the waters went down, Sam Bishop located the two of them six miles down the valley, confronting an expanse of greasewood and mesquite. Mort had an adze. Amy piled brush.

"Mort! Amy!" cried the neighbor from the buckboard. "You don't have t' start all over. Ain't a thing in th' world t' keep you frum comin' back—livin' t' your house as long as you please. Th' vineyard—or God—has attended t' *that!*"

"God?" repeated Nobel. He wiped his wet forehead.

"Jump in this buckboard. Come along quick!"

They arrived at the property that meant six years of toil. A small group of neighbors had gathered in the rear. Puzzled, they approached. Then their faces went white.

Something was entangled in the vines. Horribly entangled. The water was receding. As it receded, a *thing* came to view . . . Parkin!

Bolting from the mob to hide among the vines, they seemed to have reached for him—greedily, mercilessly. Down they had dragged him, to his death in yellow roil.

But, not satisfied with drowning him, they appeared to have strangled him. Like the myriad arms of a devilfish, they had reached out, encircled him, gripped him, wrapped him—squeezed the life from his bulk with their tentacles of vengeance.

It took a half-hour to cut the body free.

PLAY BILLIARDS FOR HEALTHFUL RECREATION

Will it or Won't it drop?

Unexpectedly, Victory Looms! The last and deciding ball teeters at the edge of the pocket. Will it go in? If it does, the younger generation wins. Any way it goes, everybody has had a great time.

FORGET your cares and worries with billiards—greatest of all games. It's surprising how the recreation, laughter and good cheer afforded by billiards rejuvenates you! How it gives you new interest, mental relaxation. And with its twisting, walking, stretching, it affords all the sane, healthful exercise anybody needs.

It's the sport doctors and experts recommend. For instance, the Life Extension Institute, noted health authorities, say: "Billiards is an excellent indoor form of exercise."

But billiards fascinates everyone. It's enjoyable to all. Entertaining from the very start, and its interest never wanes.

And billiards is a most inexpensive game that can be played in the club-like atmosphere of the modern billiard room, recreation center or at home.

Brunswick home tables range in price from $8.95 up. Each model, irrespective of price, is staunchly made, accurately angled, and completely equipped with balls, cues, etc.

The lower-priced models are sold at leading stores everywhere.

The more expensive tables can be bought on the deferred payment plan (only a modest initial payment required) from the Brunswick branches, located in all principal cities.

A Low-Priced Billiard Table for the Youngsters

The Junior Playmate is a table for juvenile use which meets the exacting Brunswick standards of construction. It must not be confused with ordinary toy tables. You will instantly identify it by its rich mahogany finish and the Brunswick trademark on the rail. Sturdily built, portable, with folding legs and complete playing equipment, it is available in three sizes at $8.95, $18.50 and $49.75 at leading stores everywhere.

Prices slightly higher west of Denver and in Canada

Mail the coupon below for complete information, sizes, prices and illustrations of Brunswick tables. There is no obligation implied.

VALSPAR FOR BEAUTY

indoors and outdoors

You now have the choice of 4 Hour Valspar, or Regular Valspar, or Valspar Lacquer.

4 Hour Valspar is especially designed to give the maximum service and beauty on floors and all *indoor* surfaces with the added advantage of drying quickly—in two to four hours.

Regular Valspar is the supreme finish for *outdoor* surfaces. Its resistance to sun, rain, snow and ice makes Regular Valspar's sturdy beauty well-nigh invulnerable.

Valspar Brushing Lacquer is used for purposes of decoration where exceptional speed of drying is essential. Valspar Lacquer dries in about twenty minutes ready for use.

All three Valspar products offer you the colors which are most in demand today, in addition to the "Clear" (transparent) Varnish or Lacquer.

All three Valspar products are waterproof, heat-proof and wear-proof. Any product which bears the name Valspar will stand the famous Valspar boiling water test. This is your assurance of long-lived beauty and protection.

For Indoor Use

4 Hour VALSPAR
CLEAR AND IN COLORS

The new *4 Hour* Valspar offers you genuine Valspar protection in the first successful speed-varnish. This remarkable quick-drying *interior* varnish reduces drying-time to 4 hours or less. Now you can Valspar furniture, floors, woodwork, etc.,—either Clear or with beautiful colors, in the morning and use them in the afternoon. For quick results which last—use *4 Hour* Valspar!

VALSPAR BRUSHING LACQUER
Dries in Minutes!

For Outdoor Use

VALENTINE'S **VALSPAR**
The Varnish That Won't Turn White
CLEAR AND IN COLORS

The *Regular* Valspar—which during the past 20 years, has made the Valspar name famous—remains the perfect varnish for *outdoor* use. Valspar your boat, your automobile—anything and everything which must face the elements, for that staunch beauty which survives not only use, but *abuse.* Neither blistering sun, sleet, ocean spray—or even live steam—can mar or damage any surface protected by Valspar!

Colors used in above illustrations

- Floor is being painted with *4 Hour Valspar*—Tudor Brown
- Chair with *4 Hour Valspar*—Holland Blue
- Hanging Book Shelf with *Valspar Brushing Lacquer*—Palm Green
- Porch Chair—Regular *Valspar*—Vermilion
- Yacht and Porch Floor—Regular *Valspar* Clear
- Automobile—Regular *Valspar Enamel*—Mixed Colors

The famous Valspar boiling water test

This Coupon is Worth 20 to 60 cents

VALENTINE & COMPANY, 388 Fourth Avenue, New York, N.Y.

I enclose dealer's name and stamps—20c for each 40c sample can of colors specified at right. (Not over three samples of Valspar, Clear or in Colors, supplied per person at this special price.) Print full mail address plainly.

Quit Picking on Yourself

(*Continued from page 27*)

mother once said to me: 'Oh, they don't want you, they just asked you because you hung around, and they had to get rid of you.'

"I notice every little seeming slight. I am very sensitive, and exceedingly self-conscious.

"It is hard for me to receive a favor and feel that it is given in friendship, or that I in any way deserve it. I always feel that everybody is looking down on me.

"I shun intimate social contacts because of the feeling that, just as soon as people get acquainted with me, they will discover my weaknesses and limitations, and then they will have nothing to do with me.

"I am afraid to think. I was afraid to express myself when young because I would be charged with foolishness, and now my brain will hardly work. I have had to get along with poor positions because I was afraid to take a better position even when it was offered to me."

Others who read this may, in varying degrees, see themselves; how they have been handicapped throughout a longer or shorter life by these fears of inferiority. It is a fact that if we constantly pick on our children when they are young, they will later on develop the habit of picking on themselves. And once that habit is formed—well, it's good-by to happiness and self-realization until the unfortunate owner of the complex gets rid of it.

IF YOU feel that you are drifting into the formation of an inferiority complex, break away, if it is humanly possible, from your surroundings, and strike out for yourself somewhere else. If it's your family that is a paralyzing influence, leave it. This sounds like harsh advice, but it is much better to take the step in the beginning, before your inferiority complex gets in its deadly work, than wait until your strength has been sapped.

An offshoot of this inferiority feeling is indecision. Thousands upon thousands of good people suffer from it. They work very well as a cog in a machine; but the moment they have to take a stand or make a decision for themselves they are scared to death.

I have a patient who is too conscientious over his decisions. He is afraid he will decide things wrongly. He worries all day over trifles. If he goes to buy a suit or a hat, he has to go back two or three times.

"The best thing you can do," I said to him, "is to flip a coin when you want to decide some minor affair." He took my advice. Now, when some trifle comes up, it is "Heads I do and tails I don't." He is getting over the idea that every little thing in life is important.

I know a woman at the present time who for more than a dozen years has refused to take the responsibility for the most trivial decisions. She has to consult a neighbor, or her minister, call on the doctor, or ring up her husband, before she can decide anything. As near as I can find out, her parents failed to teach her how to bear responsibility when she was young. Her mother was always right by her. She tells me that she was never even permitted to wash the dishes entirely alone, or cook anything on her own responsibility. Parents make a great mistake in not very early teaching children to bear responsibility, make decisions, take the initiative, and to go through with things alone.

NOW, there is only one way to cure indecision, and that is to make decisions. Sounds obvious, but most truth is. If you have a tendency toward indecision, go and deliberately put yourself where you will have to decide things. Don't talk and hedge—act. You'll make wrong decisions occasionally. But don't let a few mistakes faze you. Decide, and act.

We are constantly meeting folks who are worried almost to death over some physical peculiarity—their noses are too big, or there is something wrong with their eyes, or their eyebrows; maybe their chins aren't just right, their Adam's apple works like an elevator, or their hair begins to fall out.

We must remember that we are not to blame for the physiques we have, except as we fail to take care of them and make the best of what our ancestors wished on us. The world is full of all kinds of people, and, generally speaking, we are no more defective or deficient than the average run of folks.

Then we have another group of people who are constantly picking on themselves spiritually, morally. They think they are not so good as other folks. Of course they probably would resent it if anyone else made the comment; but they seem to get a great deal of consolation out of condemning themselves. I don't doubt this glorified pseudo-humility gives them a great deal of satisfaction. But it's bad business.

If you belong to this group, keep your eyes on the great patterns and ideals, and quit picking on yourself. Develop a religion that is based on "looking unto Jesus, the author and finisher of our faith."

Another group of people who go through life, stepping softly and fearfully, are those who feel inferior through lack of education. Just because they are not high-school or college graduates they are afraid to express an opinion. The time has come when you should realize that by reading and studying you can possess yourself of all the facts that any high-school or college graduate has, and that by mingling with the world and gaining *practical experience* you get something which none of them have, unless they obtain it after their school days.

If your town has a public library, you have an education right there on its shelves as far as book knowledge is concerned; but, remember, real education, real culture, consists in the development of the character, as an outgrowth of mingling and associating with your fellow men.

Not long ago I had a patient who told me he felt very small and insignificant among his friends because they were constantly talking about geology. I gave him a list of three or four books, and told him

A gift he will cherish

Find-ex and Key Kaddy in beautiful sets of matched leather, $7, in a handsome gift box. FIND-EX alone, $5. Key Kaddy, $2.

AMITY

FIND-EX

THE new Amity *FIND-EX* is more than just a pocketbook.

It provides a remarkably convenient way of carrying automobile licenses, cards, photos, tickets and memoranda, in clean, removable envelopes that instantly slide into view by means of a self-indexing pocket.

A firm, red divider separates the new, small-sized bills soon to be issued from the present large currency.

FIND-EX is made in six beautiful leathers, plain, hand tooled or with laced edges. You can buy it alone in an attractive gift box or in matched sets of *FIND-EX* and Key Kaddy.

Other Amity gifts include wallets, bill-folds, Key Kaddies, cigarette cases, and ladies' hand-bags. You will find them at leather-goods dealers, drug stores, department stores, stationers, men's clothiers and jewelers.

Send for interesting "Book of Amity" No. 22, showing *FIND-EX* and other Amity products. Amity Leather Products Co., West Bend, Wisconsin.

This patented divider in the bill-fold compartment of Find-ex will keep the new small-sized currency separate from the larger bills.

if stamped

When they cut the pay roll

—will you be hunting for another job?

It usually comes like a bolt from the blue—

You are called into the manager's office—he looks troubled, worried—reluctantly he explains that business isn't holding up, he has more men than he needs. *And what can he do?*

Suddenly it dawns on you that you're being politely told you're *through!*

You're cut off—and you've got to start selling your ability in competition with thousands of other men in the same fix!

Make Sure of Your Future Now through Practical Home-Study Training

WHAT assurance is yours that when the "axe" falls, it will not hit you?

What assurance is yours that if you are suddenly thrown out of employment—through no fault of yours—you can always get back in, at an attractive salary?

Thousands of men—in every large city in America—are face to face with that problem now.

Upon some the "axe" has already fallen. They are trying as best they can to sell their services, yet they find themselves faced with the fact that the market is flooded with men who can offer just as much as they.

Men Who Are Never Fired —Steadily Promoted

For thousands of others, however, the "axe" has not the slightest terror. Regardless of how drastically their employers chop the pay roll, they know they will steadily advance—either with the companies they now are serving or with others which need precisely what they have to offer.

For how can it be otherwise?

Suppose, for example, you could point to some twenty-seven suggestions you had already made to your company, representing savings from $20 to $75 daily—as did J. R. Hollingsworth, in charge of a shift of men at one of the big factories in Akron . . .

Or suppose, as a trained salesman, you could increase the sales in your territory 50 per cent—as did I. A. Gould, district manager for Michigan for the Smith Agricultural Chemical Company, Columbus, Ohio.

Or suppose that the balance sheet of your employer showed that—through your knowledge, as accountant, of the various factors that determine the success of a business enterprise—you had turned a loss into a profit—as did E. W. Neir, manager of the Hotel Rowe, Grand Rapids.

Or suppose you could demonstrate specialized ability in Personnel Management, say, or Business Correspondence, or any one of a dozen other attractive fields of business where good men are always in demand and where proved ability quickly finds its reward in increased responsibility and increased pay.

How could any business man who was blessed with sense be persuaded to part with your services—*when very clearly those services were showing him a handsome profit!*

Are you one of those men who wake up to their needs only when unemployment stares them in the face?

Can you afford to side-step so important a matter any longer—when at home, without losing an hour from work or a dollar of pay, you can *make your position sure, can steadily equip yourself for greater earning power?*

The Secret of Success —Preparedness

On the coupon indicate the training that most clearly meets your need—fill in your name, address and present position, and place the coupon in the mail.

It will bring you—free—an attractive book clearly outlining the opportunities in the business field of your choice, together with a free copy of "Ten Years' Promotion in One," the book that has started thousands of men on the shorter path to a bigger income.

Do you mean what you say when you say that you want to get ahead?

Prove it by what you do with this coupon—NOW!

LaSalle Extension University

THE WORLD'S LARGEST BUSINESS TRAINING INSTITUTION

Find Yourself Through LaSalle

LA SALLE EXTENSION UNIVERSITY, Dept.1133-R CHICAGO

I would welcome an outline of the LaSalle training plan, together with a copy of "Ten Years' Promotion in One," all without obligation.

- ☐ Business Management: Managerial, Sales and Executive positions.
- ☐ Higher Accountancy
- ☐ Expert Bookkeeping
- ☐ C. P. A. Coaching
- ☐ Modern Salesmanship

Name ..... Present Position ..... Address .....

I would give him ninety days to get posted on the subject. At the end of that time my friend was ready to talk to any college professor on geology. He can pick up a stone any time, and tell you its origin, history, and destiny. Inferiority complex! He's forgotten he ever had one.

Quit bemoaning the knowledge you have lost by not going to school, because you can easily make up for that by study. There is no excuse for having an inferiority complex regarding education and intellectual attainments. If you are lacking in anything, get busy and acquire it.

That's the method by which we brought a backward, bashful, reticent woman out of her shell. Her personality was absolutely stunted. By getting her to read periodicals on current events, and digesting the newspapers daily, we have put her in a position where she can discuss intelligently the things that are going on in the world today. We taught her to initiate conversations, and discreetly to direct topics along the lines she feels competent to discuss. She is emerging from her shell in a wonderful fashion.

ONE of the most pathetic cases of inferiority complexes that I've run across is that of a grown lad whose mother, a widow, kept him so tied to her apron strings that he's a regular "sissy." One day when he did make his escape and went out to play ball, the boys all laughed and shouted, "Oh, look at him! Henry throws just like a girl." He never tried to play ball again.

Poor Henry—he never had a childhood, from a boy's standpoint. Fortunately, his mother has begun to see the light and has consented that Henry leave her for a year or two. We are going to pack him off to a camp first, so as to get him acclimated to a vigorous outdoor life; then we'll send him to school, where, we hope, his schoolmates will finish the work of severing the apron strings.

Parents make a great mistake in oversheltering and over-protecting their children. Give them a chance to think, to act, to decide; encourage it, indeed force it. Don't let your children grow up as mollycoddles.

One of the first things a person with a tendency to an inferiority complex should learn is to be a *good loser*. You know we can't always be on top of the heap, and it is a wonderful help in overcoming this tendency to pick on yourself, to get accustomed to the idea that you are going to lose occasionally. This is why I like to see young people play games, go into athletics, and join debating groups at school.

Moreover, we shall have less to pick on ourselves about if we treat most of the passing events in life as relatively trivial. Don't, when you have done your best, indulge in useless and unfair criticism of yourself. Condemnation of this sort is weakening both physically and morally.

One of the best codes of living I know was prescribed by Edward Everett Hale:

> To look up and not down,
> To look forward and not back,
> To look out and not in, and
> To lend a hand.

This prescription, closely followed, will cure any case of inferiority complex, no matter of how long standing.

Four Speeds Forward

[Two High Speeds Standard Gear Shift]

Driving with four speeds forward, you have *two* high speeds instead of one. The gear shift is standard—you start in second, advance to third, and then to fourth. First is a reserve speed, instantly available, but seldom used. Four speeds forward give a new thrill to motoring—which we invite you to enjoy.

Fair Ellen, the Sightless—and Happy

(*Continued from page 22*)

nine tenths of the time. Sometimes, of course, she is with the other dogs or with us humans of Sunnybank. But, for the most part, she is alone. Alone, not lonely; for she has a score of odd interests and pursuits and games which she shares with none of her fellows. I will tell you more about these, in a few minutes, if I may.

Having doomed the blind puppy to live, I felt responsible for her future. I set to work trying to teach her to navigate the huge unseen world lying outside the wire meshes of the puppy yard. I looked forward to a tediously long and hard task. It was absurdly easy.

I began by going on short walks with her around the grounds, trying to familiarize her with the lay of the land. Just at first she bumped into countless obstacles, before I could come between her and them. But I noticed—as earlier, in the puppy yard—that never did she collide with the same obstacle a second time. She had an uncanny memory for locations and for the spots where she had suffered collision.

Having traversed any ground once, she remembered where were the trees and rocks and other things into which her furry head had banged on her first experience with them.

THERE are dogs, a few of them, that need to be told a thing only once, in order to remember it forever. Such a dog was our great old Sunnybank Lad. Such a dog was his dashing gold-red son, Wolf. Such a dog was my chum, Bobby. Such a dog, from another angle, is Sunnybank Fair Ellen. But it was experience, and not mere human precepts, which taught Ellen.

In a very few weeks she had learned the layout of our forty acres of land; on what portions of it she might romp or gallop with no danger of collision; and where she must needs pick her way slowly and with infinite caution.

I remember the first day when she and I came to the foot of the lawn at the lake's edge. She sniffed the imperceptible (to me) odor of the water. Then, step by step she made her way down into it. The average collie does not care much for swimming. But Ellen did not hesitate as she moved farther and farther out along the gently sloping bed of the lake.

Presently, she was swimming; and swimming calmly and well; straight out. For perhaps two hundred feet she swam; seeming to realize there was no obstruction anywhere in front of her. Then she hesitated, lifting her head high and in evident confusion. I could guess why. In the water, of course, there was no way of scenting her direction, nor of guessing whither she might be going. Thus, by her over-developed sense of hearing, she was trying to learn her whereabouts.

I called her by name. At the sound, she wheeled about and swam in an absolutely straight line toward me; unerringly conning her direction by that single quietly-spoken word. As her exploring feet touched the gravel and she started to walk in shore, her toes came in contact with a somewhat sharp underwater rock. She swerved and walked around it.

Nor, from that day, has she touched this rock in wading ashore or in launching herself for a swim. Again and again I have taken her down to the lake at that point. Always she has moved to one side of the sharp rock.

NEXT, I took her—first alone and then with the rest of the dogs—on increasingly long tramps through the forests back of Sunnybank; and among the mountains. This was strange territory to Ellen; and I made it as easy as I could for her by picking trails instead of direct cross-country walks.

I slowed my pace, to enable her to keep up with me in the funny exploratory gait she had taught herself, a choppy wolf-trot; the head a little to one side and with the forelegs thrown far forward so as to give warning of any obstacle. (At even the light touch of some weed in her line of advance she halts at once, to avert collision.) Soon she mastered and vastly enjoyed the art of making her way through woodland and up and down hill at my heels, guided by scent and the sound of my step.

When the other dogs went along, their scent and multiple tread made it easier for her to keep the trail or to go through light undergrowth.

On one of these tramps I entered Sunnybank by way of a patch of oak woods whose ingress was a high gate. I unlocked and opened this gate, calling the twelve or fourteen collies through with me. They trooped into the woodland, and I shut and locked the gate behind us.

Two or three hours later, one of the men came to me at feeding time to tell me Fair Ellen was nowhere to be found. On a hunch, I went to the patch of woods and on to the gate of the fence which forms the northernmost boundary of Sunnybank, the gate I had locked behind the dogs and myself.

There, close against the gate, on its far side, stood Fair Ellen, head and tail adroop; the picture of patient misery.

Evidently, she had stopped to investigate some sound or scent while we were tramping; and thus had fallen behind the pack. I had not noticed her absence from the bunch of collies which romped through the gateway with me. She had followed easily enough, until she had reached the locked gate.

There, deserted and unable to proceed farther, she had come to a standstill. Instead of retracing her steps, and thus crossing the furlong-distance highroad (and possibly coming to grief under a motor's careless or pitiless wheels) or otherwise trying to find her way out of the quandary, she had stood there for nearly three hours unhappy, lonesome, but with sense enough to know it was the only safe or sane thing for her to do.

I opened the gate for her and she frisked up to me in half-delirious delight. To me there was something rather touching in the helpless little blind dog's long vigil there in the woods. I have taken care that such a thing should never happen again.

Of all the Sunnybank dogs, Fair Ellen is the only one not taught from puppyhood to obey implicitly and on the jump. One cannot discipline a blind dog. At least, *I* can't. No, she has never been taught to obey nor to do anything else. It is enough for us, here, that she is happy. Thus, she has gone wholly uneducated by us.

In spite of that, she has educated herself along her own queer lines, and to a very marked degree. For one thing, she obeys by instinct; unenforced by human scoldings or punishment or insistence. These she has not known and never shall know. She comes, immediately, at call. That is all I have asked of her, and I have not insisted on that.

But, by reason of her wonderful memory, she comes to me in a roundabout fashion; and with seemingly unnecessary detours. There is reason for these detours. I have told you her avoidance of any object with which she has collided. A workman, perhaps, has left a wheelbarrow standing somewhere in the space between the house and the stables. Ellen has run up against it; to her pain and chagrin. (She is morbidly and increasingly sensitive about such collisions; and she moves her blind head from side to side, as though to find out if anyone is laughing at her mishap—which nobody yet has had the remotest impulse to do.) The next time she is trotting along that particular spot where the wheelbarrow was left, she detours widely, to miss it. She does not know it has been removed, and she is taking no chances.

Suppose she is near the upper kennel yards; and I call her to her own kennel down by the stables: she will set out in a curving approach; detouring where once she ran into a box of groceries left near the kitchen door; detouring again to avoid the aforesaid non-present wheelbarrow; and yet again, perhaps, as she passes alongside the woodpile, where once a displaced fallen log cost her a bad bump.

A STRANGER seeing her would be at a loss to guess the cause of her erratic course. But—laugh at this, if you want to—there are far fewer farm utensils, and the like left carelessly out of place here than there used to be.

This because everyone at Sunnybank hates to see the blind dog smash against something in her path; and to note the ensuing cringe and that piteous sightless look to every side to learn if the accident has been seen and laughed at.

When things are in their rightful place, she knows by experience how to steer clear of them. It is up to us humans to see none of these are left in her way. The result is an added neatness or, rather, orderliness—out of consideration for Ellen.

When Ellen was barely a year old, her first puppies were born. The vet had examined her eyes, again, carefully; and he gave professional opinion that her blindness would not be transmittable. It was not.

TO MAKE DELICIOUS COCOA QUICKLY

The best and easiest way to make Baker's Cocoa is to mix 4 tablespoons of cocoa with 2 to 4 tablespoons of sugar and a dash of salt in a saucepan. Add to it 1 cup of cold water and stir it over the direct heat until it is smooth; boil two minutes. Then add 3 cups of milk, and heat. Beat well, using rotary egg beater and serve at once. This makes 4 cups.

The "good night" drink for city dwellers *who want the peaceful sleep of the out-of-doors*

Do you ever lie awake at night, tossing in bed, listening to the measured ticking of the clock, praying for the sweet release of sleep?

Civilization sets a rapid pace. Peaceful sleep is necessary to our health and welfare. Anything that disturbs it is a menace.

There is a growing revolt against drinking beverages at night that are known to interfere with sleep. Men and women are realizing the folly of a habit that exposes them to all the tortures of insomnia.

Thousands are turning to Baker's Cocoa as their evening drink. Made according to the wholesome recipe above, with its generous supply of milk, it is a delicious food beverage. It gives nourishment for the long fast of the night, its warmth tends to soothe the nerves and encourage restful sleep.

If the beverage you have been drinking at night causes wakefulness, try Baker's Cocoa. It is so easy to make and its creamy, chocolate flavor will appeal to all the family. No need now to prepare a special drink for the children. Baker's Cocoa has the endorsement of experts on child feeding. A cup of it contains the kind of nourishment that children need in order to attain Optimal Health, the new physical ideal of childhood.

Judges of Quality and Flavor Agree that Baker's Stands Supreme

Made from the world's choicest cocoa beans, with the strictest regard for purity and flavor, Baker's Cocoa has set the standard ever since 1780. Its nutritive value is well beyond government specifications. A recent vote reveals that 82% of domestic science teachers, 78% of professional nurses, 79% of home demonstration agents prefer Baker's for its pre-eminent quality and excellence. One steaming, fragrant cup will convince you of Baker's matchless quality and flavor.

UNIVERSITY OF IOWA

The pups were born five days before we expected them. I came home from a dog show, to find her in the broodnest, surrounded by ten husky and lively newborn babies. One of the men had been staying with her until the rest of us should return from the show. I saw at once that there was stark need for somebody to sit up with Ellen and her youngsters, all night.

Not only was she densely ignorant as to handling the new situation, but the night was bitter cold; and she was in wild excitement. Her nerves were on edge. Every sound made her leap barking to her feet, at risk of trampling the helpless puppies, and at a certainty of exposing them to the icy weather. Warmth and dryness are the two chief needs of any newborn animal. Unless I was prepared to lose the whole promising litter, someone must spend the night in the broodnest.

My men were tired. Though they volunteered to take turns at the all-night vigil, I preferred to handle the job myself. So, with a box to sit on and a flashlight for occasional use, and with a soft blanket to cover the young mother and her brood, I went down to the broodnest shed.

Sunnybank Gray Dawn followed me. I shut the door on him as Ellen leaped up in defensive wrath at sound of his step. The big dog stood (*stood*, not sat or lay) just outside the shed door, all night long, on guard and waiting for me to come out. In the morning he was stiff with cold and inaction, and his mighty silver coat was white with hoarfrost.

During that long and wakefully chilly night, Fair Ellen and I grew to be even better acquainted with each other than before. I found that my voice could quiet her; so I talked much, in a low and droning tone; bringing her name into my meaningless discourse at every few words.

But words were not enough. At any sound from outside, Ellen would try to spring up. Thus always it was necessary to be ready with a firmly gentle hand to hold her down in the reclining position wherein I had settled her; and to see that the vainly clawing feet did not hit against any of the ten puppies. The blanket, too, must be readjusted every little while to make certain it still covered the group without smothering any of them. It was not a wholly pleasant night, either for Ellen or for myself. The pups were comfortable.

AT FIRST Ellen seemed to have no idea what or whose the ten squeaking and squirming rat-size babies were. She sniffed doubtfully at them; and she was strongly inclined to resent their familiarity in nuzzling and snuggling so insistently against her furry underbody. Again and again I had to lift back into place one and another of the pups which her indignant nose shoved far away from the warmth and nourishment it craved.

After perhaps four or five hours of this, Ellen began bit by bit to understand. The mother-instinct was waking in her. Tentatively at first, then with loving zest, her pink tongue licked the squirmy infants from head to foot. As an experiment, at last I moved a puppy some inches away from her. Crooning softly, Ellen nuzzled the baby back against her side.

Later, one of the kennel dogs barked. Ellen started to leap up; careless of where her flying feet might land. But, before my restraining hand could touch her, she cuddled down among her brood again, laughably cautious lest she crush one of the unseen ten.

Then I knew my work was done. Instinct was coming to life; fast and powerfully. Ellen had solved her new and tenfold problem.

I stayed there, in the broodnest, until my superintendent came at sunrise to take my place. But, for the final hour or two I had nothing to do; though much to watch. Ellen's belated care and pride for her babies was pretty to see. She brooded over them worriedly; crooning and licking and nuzzling; she who herself was scarcely more than a puppy. But she was a born mother in tenderness and in maternal wisdom.

HITHERTO, she had been one of the gentlest of dogs. But while her puppies remained in the broodnest, she constituted herself a guardian demon. Every other animal and nearly every human was on the suspected list, as having possible murderous designs on her ten youngsters.

She would dash forth, raveningly, at any dog that strayed within fifty feet of the nest. No non-accredited human could set foot in the shed with any hope of escaping attack. The traditional "Tigress Defending her Whelps" was as a cooing dove compared with the furious little blind dog. Her very blindness seemed to give her an added dread of danger to her babies.

When the pudgy and strong puppies were six weeks old, and wholly weaned, we transferred them from the broodnest to the biggest puppy yard. Ellen had grown philosophical about their eating from food dishes and about strangers coming to look at them. True, she still flew in ire at any dog which came close to the shed but, apart from that, she had relaxed her early vigilance.

But when the pups moved into the big yard, away from her, she fell victim to another maternal hallucination. She was convinced that the ten were in peril of starving to death. Wherefore, she scoured the grounds daily for food for them. She robbed other kennel houses and yards. She even nosed her way into the forbidden territory of the kitchen in quest of food.

She would seize anything and everything remotely edible, and scurry off with it to the puppy yard. There, unseeingly, she would strive to shove the gift in between the close wire meshes of the fence. Failing, she would lay it against the wire in evident hope that the pups might be able to drag it inside.

One day I found no fewer than eighteen big bones, in varying stages of undesirableness—some coated with earth and presumably buried long ago by forgetful collies—all propped against the lowest wire panel of the yard fence. Ranged beside them were several crusts and a whole stolen loaf of fresh bread. Ellen had worked hard, that day; and she had collected much.

Remember, please, that she had found and gathered and arranged this unsavory collection of food without the aid of sight.

The puppies at that time were eating five big meals a day, and were as fat as butter-balls. Thus, they eyed with only the mildest academic interest their mother's assortment of food gifts. But this lack of appreciation did not deter Ellen. For more than a month she continued her daily hard labor of finding and carrying to them the various bones and other provender that she could amass.

(Yet they say the ancestral foraging instinct for their young is extinct in domesticated dog-mothers! Why, it exists even in male dogs! Gray Dawn at one time decided that a litter of overfed baby collies in that same puppy yard were starving; and he spent days in bringing them unwanted food.)

It was nearly a year before Ellen would cease from her habit of dashing in angry warning at any dog which chanced to be nosing around the broodnest door; though the pups she had reared there were now grown dogs and some of them were among the collies she still insisted on driving away from her olden nest.

Guests at Sunnybank have noted an amusing trait among our collies in their behavior to Ellen. They are given to rough romping with one another. But when Ellen romps with them, there is a sharply noticeable change in their roughness. One and all, they show a marked gentleness toward her; not only in their play but at other times. I don't explain this. But it is true. I cannot vouch that they understand she is different from themselves and that she is not able to play as boisterously. But I can give no other reason for their instant change of attitude whenever she comes into any of their games.

It is the same when—as of late years occasionally happens—some mishap will stir Ellen to a momentary gust of temper. She will charge at the dog whose unintended jostling caused the flurry of vexation; and will attack him or her fiercely. The other dog does not fight back; but stands patiently waiting for the brief assault to end. Yet the dogs show no such meek resignation when a non-blind comrade challenges one of them to battle.

I bought a handsome and large female collie two years ago. She and the rest of our dogs got on very comfortably together. When we had had her for perhaps two months, she incurred Ellen's anger in some way. The blind dog charged the newcomer. The latter, though surprised by the attack, fought back right gamely.

In less than two seconds, three of our other female collies had flung themselves upon the new dog; bearing her to the ground and mauling her savagely. They had taken Ellen's battle upon themselves; rushing to the rescue of their blind friend.

I HAVE spoken of Ellen's unerring sureness in following the direction of my voice when she swims. Never have I seen or known of any other animal with so marvelous a sense of direction.

For example: several of our pigeons will fly homeward to their cote, and their course will bring them into earshot of Fair Ellen. Immediately, barking in excitement at the game, she gives chase. Sometimes for a hundred yards or more she can follow directly beneath them,

Ingersoll

RADIOLITES

Tell Time in the Dark

Yankee Radiolite $2.25
The "Old Reliable". Sturdy and dependable, with many good looks features. Plain dial model, $1.50.

Wrist Radiolite $4.00
A wrist watch made to keep its dependability and good looks under conditions of hard service. Millions in use. Plain dial model, $3.50.

Alarm Clocks, too
Ingersoll alarm clocks have the Ingersoll qualities of sturdiness, dependability and good looks. The TYPE-R Jr., as illustrated, is a dainty bedroom clock, and now comes in jade green and rose pink moiré finish as well as nickel. The TYPE-T in plain dial at $1.50, comes in four charming colors to harmonize with kitchen color schemes.

TYPE-R Jr. Radiolite $4.50
Plain dial . . . $3.25
TYPE-T Radiolite . $2.25
Plain dial . . . $1.50

changing her own course, instantly, when they wheel or when their flight shifts. Always, she remains precisely below them. The soft winnowing of their wings—often too faint for human ears to catch it—is her guide.

Here in the hill-and-lake region of northern New Jersy, thunderstorms are frequent. Some of the collies do not like these storms. Some pay no heed at all to them. Ellen loves them. They fill her with a gay exaltation. She barks in clangorous delight at every peal of thunder.

Among the hills, it is impossible for the human ear to locate at once the direction of a scarce-heard distant mutter of thunder; or for us to guess, by the sound, from what point of the compass the far-off storm is approaching. But Ellen is never at a loss about this. At the first growling whisper of the miles-away thunder, she gallops toward it in a straight line; barking and wildly wagging her tail.

One day last summer, I was out with some of the dogs, not far from the stables, when a sudden tropical downpour of rain sluiced us. I ran for the nearest shed; the collies with me. From its shelter I looked back to see Fair Ellen standing bewilderedly out on the lawn. The swirl and heavy beat of the rain had puzzled her. She was trying to get her bearings. I whistled to her. Immediately she trotted toward me (detouring once, en route, at a spot where, a week earlier, she had run against a guest's motor car), as if glad for a directing sound to guide her.

When she was still fifty feet from me she swung abruptly to the right and broke into a mad gallop, barking at the top of her lungs. At least three seconds later, from the direction in which she was rushing came a deafening explosion of thunder. There had been no preliminary rumble. It was one of those cannon-like thunder-reports which sometimes are part of a tropic storm. Yet, three seconds before it came to my ears, Ellen either heard or foretold it; and charged toward it.

HER sense of hearing is so acute that she can hear me slip my hand into the side pocket of my shooting coat, where lie several animal crackers. To me the gesture is inaudible. She can hear it from a distance of ten or twelve feet.

I carry such titbits in my side pocket as a rule, for the dogs. They have learned from puppyhood to associate the motion of my hand toward my pocket as an invitation. Thus, in the show ring, the same pocketward motion of mine brings them to the alert "attention" called for by dog-show judges in examining collies. When I am out walking with the Sunnybank dogs, that gesture brings them around me, in eager expectancy.

I noticed, long ago, that Ellen joined this anticipatory circle. I supposed it was because she heard the other dogs coming around me; and that she knew from experience what to expect. But one day I tried it when no dog but Ellen was with me. She hurried up to me and stood waiting eagerly for food. When I delayed in producing it, she put her forepaws on my hip and nosed at the pocket. (Charles Livingston Bull, who drew the portrait of Ellen that accompanies this article, noted several times that she could hear, from a distance of ten to twenty feet, the moving of his soft pencil across the drawing board.)

She has evolved queer little elfin games to play; all by herself—pathetically futile little games, perhaps; but self-taught. All her education is self-taught and she has learned much. One self-invented game of hers is neither pathetic nor elfin; but it is based on a shrewd knowledge of fellow-collie nature:

Ellen has the free run of the whole place whenever the lodge gates are closed. When the other dogs are lying in their shaded kennel yards after their day's three-hour run, Ellen sometimes decides merrily to inflict upon them the blackest affront known to colliedom. Therefore, she gallops along the outside of each yard, at top speed, close to the wires, barking a blithe invitation to the dogs to join her. Now, for a free dog to gallop thus, just outside an imprisoned dog's yard is not only a reminder of the latter's inability to get out but is also a right unsportsmanly taunt.

IT IS a signal for every dog, thus insulted, to burst into furious barking and to try to break out of his erstwhile contentful yard. The result is a hideous wholesale cacophony of barks and yells; which delights Ellen almost as much as does a thunderstorm. Day after day she does this, for a half-hour at a time, until a shout from me stops the horrible game.

I have had several good cash offers for Fair Ellen from professional breeders. For her pups are of splendidly high quality; and not one of them has inherited her blindness. But I have refused them all. Here she shall stay, at Sunnybank, until life no longer continues to amuse and interest her as keenly as always it has.

But the day seems far off; despite a certain troubled sensitiveness which has assailed her recently at long intervals, and which sends her moping back to her kennel when she chances to collide with any obstructions or when another of the dogs jostles her accidentally. For the most part she is joyously happy.

I think perhaps I could have achieved wonderful things with Ellen, had I made any effort to train her. For she learns with lightning speed; and her queer brain is ever busy. I might have trained her into a Blind Prodigy. But I am well content to have left her as she is. And, in a way, she has been an example both to the humans and to the dogs of Sunnybank; ridiculous as that may sound to you.

After all, isn't it better to be happy than to be talented? Perhaps not. But that is the choice in life that I made for Sunnybank Fair Ellen.

PROFESSOR WILLIAM LYON PHELPS, of Yale University, gave Edgar A. Guest a recipe for happiness. Mr. Guest studied it, followed it to the letter, and the results were so beneficial that he thought it worth while to incorporate them in an article, "No One Can Steal my Happiness Away from Me." Next month we pass on to you Professor Phelps's recipe for happiness embellished with Mr. Guest's philosophy.

You'll never tolerate your old mattress once you know the comforts of

Spring-Air

TRADE MARK REGISTERED

Spring-Air is a flexible mattress of lasting beauty, consitsing of a light pad and separate all-steel cushions in sanitary ticking covers. An 8-year-old child can carry it upstairs.

A new thrill awaits you—the thrill that comes from experiencing an entirely new sensation in sleep comfort. A mattress has finally been perfected that makes you sleep completely relaxed. It takes the form of your body, supporting you with an airy buoyancy, cushioning you with a downy softness. Never will you know the luxury of such comfort until you have actually experienced it.

This new mattress is called "Spring-Air". So interesting is its construction, so far advanced are its features, that a booklet, "Sleeping Relaxed" has been specially written to give all the details. Send for it—today, before you sleep another night on your old mattress.

Spring-Air is so light in weight, so easy to handle that to carry it upstairs or down is merely child's play! So flexible that you can roll it up under your arm! So sanitary that you can remove the covers as easily as you do a pillow slip! So durable that it is guaranteed for 20 years—five times the useful life of an ordinary good mattress.

Think of the superior comfort this mattress gives—and then consider that you can buy Spring-Air direct—for less than the price of a common mattress.

Spring-Air asks only for a trial—the same kind of a trial that in two years has led over 600 of the leading hotels and hospitals to enthusiastically laud its many benefits. Not a penny do we want you to pay until you have slept for ten nights on the mattress praised by America's foremost sleep critics—the mattress about which Mr. Augustus Nulle, Managing Director of New York's Waldorf-Astoria, voluntarily writes:

"After using Spring-Air on my own bed for a number of months, I am glad to say that I consider it more than is claimed for it."

Because Spring-Air is the most costly of mattresses to manufacture, leading stores have had to sell it for upwards of $60.00. Now you can buy it direct just like the hotels and hospitals do for $38.50 ($41.50 west of Denver)—a saving of more than $20.00. Even an ordinary mattress costs more. No longer is Spring-Air luxury reserved for the wealthy few—now everyone can enjoy its marvelous comfort.

To deny yourself the comfort and convenience of Spring-Air is to miss the joy and benefit of relaxed sleep. If only you could awake from the sleep that washes away sallowness, keeps the sparkle in your eyes, puts the spring in your step, gives you the poise that is true charm—you'd never, never tolerate your old mattress for another night. Let the free booklet "Sleeping Relaxed" give you all the facts. Mail the coupon now.

Charm A Gift of

Keep it: Spring Air

KARR COMPANY
HOLLAND · MICHIGAN · U·S·A

A Statement by the Inventor

Spring-Air is the outgrowth of my lifelong specializing in the improvement of cushions and bedding. Over forty-five years of experimental labor preceded its perfection. More than thirty patents have been granted to me in the course of its development. Now that my life's ambition is achieved I am happy in the thought that millions will eventually know the joy and benefit of relaxed sleep—*Francis Karr*

MAIL THIS

KARR COMPANY, HOLLAND, MICHIGAN

Gentlemen: It ought to be worth a great deal to me to discover how I can always enjoy the correct sleep diet. So please send me your booklet, "Sleeping Relaxed"—without obligation, of course.

Have You Got . . .

New Blade Fallacy?

It's almost an epidemic, this idea that a new blade must be good because it is *new*. Millions of men are missing their best chance for really good shaves because they believe that a new blade is ready for shaving when they unwrap it.

A new blade that left the factory in A1 condition is liable not to reach you with a perfect shaving edge. The fine ground edge of a highly tempered blade seldom stays put for long. That's why a new blade should be stropped and why stropping makes such a difference.

This is interesting

Fine razors have edges of tiny invisible teeth. Temperature changes, jolts and handling get these teeth out of alignment. That's why a blade pulls. Stropping smoothes them into line and restores a keen cutting edge.

A few turns on Twinplex puts an edge on a NEW blade that is a marvel for smooth shaving. And it's so easy to strop with Twinplex. No fussing—no reversing blade. Just slip blade in and turn—strops both edges at once and reverses blade at every turn, just as a barber does. You can't fail.

30 seconds a day will keep one blade marvelously keen, for weeks of the smoothest shaves you've ever known. Shaving is also easier and quicker with Twinplex, for a keen blade is a quick, safe shaver. Twinplex soon pays for itself.

You will be proud to own the new Twinplex Aristocrat at $4.00 or Deluxe at $5.00. Either will be a classy and serviceable Christmas present for your particular friends. Other attractive models at $2.50 and $3.50 at your dealers.

Send for the DULL HOUSE and FREE NEW blade stropped

Clever little Dull House solves the problem of disposing of old blades safely. Send 10c for it and we will also send you FREE one brand NEW blade stropped on Twinplex, just to show you what real shaving is. Name your razor.

FOR SMOOTHER, QUICKER SHAVES

The Skyscrapers of New York Rest on Breuchaud's Genius

(*Continued from page 35*)

indicate the true character of the man today. He is every inch a fighter, and his hard-won victories have always had more than a personal significance.

Indeed, the chances are that somewhere the trail of Jules Breuchaud crosses your trail. He has built subways to carry you swiftly and safely under the unimaginable weight of cities. He has financed the Ford Instrument Company, which helps keep the United States Navy abreast of other fleets in controlling gun-fire on battleships and airplanes. Through his system of plant cultures, he has vastly improved certain food supplies. By the construction of dams and aqueducts he has brought water to millions. He has made it possible for cities to dispose profitably of their waste material through the Decarie Incinerating System, which he imported from Italy. He has entertained and informed thousands with his newspaper, the "Richmond Times-Dispatch."

"Most people count themselves fortunate if they have one important achievement to their credit. Jules Breuchaud has contributed in a dozen different ways toward the development of our country. Perhaps his two major accomplishments are these:

1. *He is the godfather of the skyscraper*, for his invention of our modern system of underpinning made it possible to build skyscrapers and to excavate even in the most treacherous soil.

2. *He supplied New York City with water at a time when a water famine was imminent*, by building the New Croton Dam, which holds thirty-two billion gallons of water. This dam when it was finished was the largest piece of solid masonry work in the world, with the exception of the pyramids.

Mr. Breuchaud believes whole-heartedly in a diversity of interests and activities.

"The man who confines his mind and his energies to one thing is likely to grow stale, and fall into a rut," he said to me. "Not only in engineering, but in all other walks of life it is necessary to have the spirit fresh, the mind flexible. Keeping in a rut is the pace that kills."

JULES was born in New York City, on White Street, in 1857. His father was a merchant of Swiss birth. His mother was of the same nationality. A stanch, firm woman she was, with plenty of common sense.

For nine years the boy knew nothing but happiness. But one wild night, off Cape Hatteras, the ship "Evening Star" went to the bottom in a storm. She carried with her Jules's father—and every penny he possessed.

The elder Breuchaud was on his way from New York to New Orleans, and had taken all his funds with him, intending to employ them in a careful investment. But the money which was to clothe and feed and educate his son was, by some strange caprice of fate, sucked down to the floor of the sea.

Jules, his mother's sole remaining solace, was forced to develop a man's resourcefulness almost overnight. The only way he could earn money at that time was by selling papers on the New York streets after school.

"I was very proud," Mr. Breuchaud said, "when I could save a dollar and a half a week. Prouder, in fact, than when later I was able to bank a thousand."

Later on, forced to work in the daytime, the boy went to school at night. But at the age of fourteen, he was obliged to give up his night studies because of trouble with his eyes. This would have utterly discouraged many a lad. But it seemed only to spur Breuchaud forward.

JULES went to his mother for advice. "I'd like more than anything," he said, "to get work in Mr. Worthen's office."

William E. Worthen was at the time one of the most distinguished civil engineers in New York.

"That should not be difficult," his mother answered. "I'll ask your stepfather to speak with Mr. Worthen about you."

"No," Jules answered; "no, I would rather you didn't do that."

Jules was sincerely fond of Alphonse Fteley, an engineer of note whom his mother had married a short time before. But he didn't want to use his stepfather's influence in getting a start. So he refused to let his mother enlist Fteley's assistance.

Instead, he went to see Worthen on his own. And the great engineer was sufficiently impressed by the youngster's eager energy, to take him into his office. Here Jules acquired a comprehensive technical and practical knowledge of engineering. And he proved, once again, that it is not inside college walls alone that the gold of learning may be mined.

But let Mr. Breuchaud take up the narrative himself. As he talks, he sits in his office on the nineteenth floor of the Canadian Pacific Building, at Madison Avenue and Forty-third streets, New York. His outlook is magnificent—skyscrapers outlining their beauty against the flame of the evening sky.

Behind a low table, the builder Breuchaud sits, immaculately groomed, as he managed to be even in Billings years ago. Wiry, vital, sunburned, the forty-three years which have elapsed since his Montana days have served only to refine his mobile face. His hair is white; his eyes gray. They can be piercing if occasion demands. His voice is soft. But the snap can creep into it if a gang of men should need a good "dressing-down." His hands are beautifully formed, nicely kept. The hands of an artist.

"Early in my career," Mr. Breuchaud began, "I realized that an engineer's problem lay not in the earth but in himself. The glamorous outdoor life attracts many men, and because of this over-supply engineers are poorly paid. I have already said that I believe in diversity of activities for keeping a man's mind flexible and his ambition alive. Therefore, I decided right

When good faces get together

THE J. B. WILLIAMS COMPANY
GLASTONBURY CONN.—MONTREAL CANADA.

When good faces get together! Like seeks like. Faces old and young, that show love of sunshine and outdoors . . . . . regard for sound face care that spells *Face Fitness!*

Are you one of them? Then, to help keep *your* face *Fit* let your day begin with Williams.

First Williams Shaving Cream. Eighty-eight years of specialized experience have made it. Of triple distilled ingredients. Of absolutely uncolored purity. Supremely mild. Lather that makes razor blades seem sharper . . . . *cleanses pores* . . . . leaves skins refreshed . . . . satiny . . . . *Fit!*

Aqua Velva then. A generous splash of it in your hand worked gently into the newly shaven surface. Made just for that! There's facial tone and tonic in its touch. *It closes pores.* It cares for tiny nicks,—unseen mostly. Protects the skin all day from dust outdoors, dryness indoors . . . . keeps it flexible by conserving its natural moisture . . . . keeps it, in short, as Williams lather leaves it, buoyant and *Fit!*

Give Williams Shaving Cream and Aqua Velva a chance to prove themselves. They mean a lot to millions. They will to you.

JUST NOTICE THE FINE SKINS OF MEN WHO USE

It's NEW in 4 WAYS

to make teeth WHITER and correct brushing EASIER

Four improvements that will bring results you can see. The correct original toothbrush design—that brought whiter teeth to millions—now made doubly effective.

Cleans every crevice, angle and surface—inside, outside, between.

Smiles are made attractive by white, clean teeth. Certainly it's worth giving your teeth the best care possible. Try this, and see what happens. Replace your old toothbrush today, by getting a new Dr. West's. Your druggist has them, sealed, sterilized, and guaranteed.

© W. B. M. Co., 1928

Dr. West's *new* Toothbrush

at the beginning to get some contracting work to do as soon as I possibly could.

"Naturally, working for one engineer and living in the same house with another, I would hear various bits of engineering news, often even before they reached the newspapers. And one day I learned that the city of Boston was about to build new waterworks which were to cost five million dollars.

"Right away, I made up my mind to go up to Boston and try for a job. I didn't have much money and I didn't want to ask for a job under my stepfather's protection, so I left home quietly and took a train for Boston. There I applied to the chief engineer in charge of construction, and he gave me a chance as rod and instrument man.

"I stayed six years, saving my money and hunting some new way to branch out in contracting work. Those years seemed centuries to me. But, mind you, I knew even then that patience is an important part of any man's equipment for getting ahead.

"IN 1880, a friend of mine who was the engineer in charge of construction on the Northern Pacific Railroad offered me a job as assistant engineer on a twelve-mile section in Dakota and Montana. I accepted gladly. I had grown up on tales of the covered wagons—I was born only eight years after gold was discovered in California. The lure of the West was strong, so when the opportunity came to join the forces of the Northern Pacific engineers, I went, because I felt that here was a chance to branch out in my profession.

"A year later, I obtained my first contracting job, building a section of the Northern Pacific in Montana.

"The next year the luckiest thing that ever happened to me occurred: Miss Irene Gibbs, of Medford, Massachusetts, became my wife. And I want to tell you that lucky is the man who starts out with a good, intelligent woman to help him. Why, I've been in love for forty-five years"—and he chuckled—"but, mind you, with the same woman. And we've been comrades all that time. That first winter in Billings was enough to discourage any woman. But it didn't faze my wife.

"Why, that year the railroad hadn't even reached Billings. There were few respectable women in the town, as most of the men had left their wives and families back East. Our supplies were scarce; all goods had to be brought up the Yellowstone River as far as the boats could navigate. And then wagons drawn by oxen transported the food the rest of the way. The drivers of those teams were the bullwhackers, flesh-and-blood frontiersmen in those days, not characters in fiction.

"Buffalo were plentiful. We had range cattle, too, for meat. It was a wonderful adventure for most men, and for some women. However, one year of it would have sent many women, accustomed to the luxuries of the East, flying back home. But not Irene!

"It got cold, too. The winter before my son Jules was born I shall always remember. The thermometer hung around forty degrees below zero. But sometimes—just when you'd be wishing hardest for a little relief from the winter bitterness, a soft, balmy wind, the "chinook," would blow in from the Pacific through the Rocky Mountain passes. And the snow would disappear almost while you were looking at it.

"My wife and I had a two-room cabin. We had to hang up buffalo skins inside to keep the wind from coming in through the cracks. When we had our meals we would draw our chairs right up to the fire and eat off of tin plates which were on the stove, keeping the food warm. At night, we would pull our bed clear up in front of the fireplace in the bedroom, throw a couple of big logs on the fire and sleep warm—sometimes.

"The post office was at Billings. One day I went down to the office on an errand. I got there just as the stage coach dashed in from the north country. The four horses stopped. But the driver didn't seem in any hurry to get down off his high seat. Somebody went over and hailed him. But the man didn't answer. He was frozen—dead.

"Billings was the headquarters of the engineering force for the Northern Pacific. It had been named after the president of the railroad. After a few months, I got to thinking that we were paying taxes and weren't getting much for our money. So, in company with several others, we went up to Helena, the capital of Montana Territory. Montana wasn't a state then—not till 1889. And we asked to have Custer County—named after General Custer—divided in parts. This was done. Our part was called Yellowstone County, and Billings was made the county seat. The boys made me treasurer of the county.

"Things went along fine with me. My wife and I had a hundred and fifty acres of land and I was made deputy sheriff. This followed shortly after I was elected treasurer of the county. In my capacity as deputy sheriff I used to help arrest horse thieves. Horse stealing was a capital crime out there in those days. If a man's horse was stolen he was in a pretty bad fix, because no man could get far on foot in those great distances.

"Yes, things went along fine. And if we had stayed out there, I feel we would have fared well. But just at that time the city of New York had started building an additional water supply system. Heyman Clark, a good friend who had once lived in Billings, offered me a sub-contracting job at Yonkers, in New York State. I hated to leave the West, but it seemed the thing to do."

IT WAS in the year 1885 that Mr. Breuchaud returned to the East and settled with his family in a little house in Yonkers. And here two more children were born—two girls—Sunset and Elise.

Scarcely a year passed before the young contractor's work came to the attention of Joseph E. Pennell. Mr. Pennell invited Mr. Breuchaud to join his firm. Breuchaud, young as he was, immediately impressed his new associates. The name of the new corporation became Breuchaud, Pennell and Company.

For some time following his association with Pennell, the junior member of the firm built aqueducts, railroads, and bridges on pneumatic foundations—steel cobwebs spun across rivers, pyramids built of concrete, and railroads knitted to the mountainside. But this is not all of the story. On Sundays, on holidays, late

America's famous football coaches and officials line up for POSTUM

IN the great game of life, too, it takes steady nerves and an alert, wide-awake brain to reach the goal.

Safeguard your nerve power as football stars do theirs! Eliminate caffein from your diet—drink Postum with your meals instead. Try this simple diet change for thirty days—then judge!

Postum is made of roasted whole wheat and bran. No trace of any artificial stimulant in it—nothing to repel sleep, get on your nerves, or affect digestion. You'll enjoy Postum for its own sake, too. A drink with a rich, distinctive flavor that millions prefer!

Postum costs less than most other mealtime drinks—only one-half cent a cup. Your grocer has it. Or mail the coupon for one week's supply free, as a start on your 30-day test.

© 1928, P. Co., Inc.

"For fifteen years Postum has held an important place in the training diet of my teams. And not merely because it is my favorite mealtime drink. Steady nerves are a first requirement in football, and Postum is one hot drink that does not irritate the nerves. It never interferes with sound sleep either."

JOHN F. (CHIC) MEEHAN,
Head Coach, New York University.

"I don't think there's any drink for athletes that compares with Postum. It has a regular place in the training diet of my teams. Any man who wants to keep in trim will have a better chance if he sticks to Postum."

JESS B. HAWLEY,
Head Coach, Dartmouth College.

"Three times a day for fifteen years, Postum has been served at the training table of my football teams, and I think it has had much to do with the condition of my men."

H. J. STEGEMAN,
Director of Athletics, University of Georgia.

"Throughout my years of football, both as a player and as an official, I have been keenly interested in the effects of training table diet on playing ability. This personal study has convinced me that Postum is the best of all mealtime drinks for athletes. I drink it myself."

WALTER H. ECKERSALL,
All-America Quarterback, 1904-05-06, noted football official and sports writer.

"My work as an official in football games has brought me into contact with teams in every part of the country. From my observation, I am convinced that Postum is the ideal training drink."

TOM THORP,
Former Columbia University football star and prominent sports official.

at night and early in the morning, Jules Breuchaud was working on a secret invention. In the year 1896, this invention was made known to the world.

It bore the plain, factual title of "An Improved Method of Underpinning, by Jules Breuchaud." And in the United States Patent Office, it bore just a number —563,130. It might have been called by any one of a dozen more colorful names. For it made possible the development of America's greatest contribution to architecture, the skyscraper.

Didn't you ever look at a New York skyscraper, and wonder how it was humanly possible to construct to such an extraordinary height a building which would stand the strain of years?

If you asked somebody about it, you would probably get this answer: "Oh, New York is a rock island and, naturally, buildings of unusual height can be built upon such a firm foundation."

But that is only partly true. In the southern end of Manhattan, where many of the tallest buildings are erected, the surface of the ground is from five to fifteen feet above water level, and from fifty to one hundred and twenty-five feet above rock. And this rock is covered with layers of treacherous sand, saturated with water.

UP UNTIL thirty years ago, the majority of buildings in this vicinity were six stories or so high, with stone or concrete foundations, at or above ground level. Engineers realized that, in order to erect taller buildings, they would have to drive the foundations down below the treacherous soil to the firm rock level.

When the demand for skyscrapers in Manhattan arose, Jules Breuchaud was ready with his system of underpinning, which would make skyscrapers possible. He had foreseen the problem and its solution.

As one can readily understand, the first problem confronting engineers was to prevent the buildings adjacent to the site of the purposed new structure from caving into the excavation for the new foundation. Mr. Breuchaud solved this problem by providing buildings already standing with multiple legs of steel, which go down through quicksand, mud, and water, to solid rock. These legs are composed of hollow steel cylinders, which are driven down in sections by a hydraulic jack reacting against the weight of the structure on the old foundation. Successive sections are added until the cylinders penetrate to rock and develop adequate supporting power. The dirt and mud in the cylinders is finally excavated, the cylinders are filled with concrete, and connected permanently with the building which they support.

Is it any wonder that this ingenious solution of a very difficult engineering problem earned for Jules Breuchaud the title of the godfather of the skyscrapers? His invention was instantly successful. It was first applied to the underpinning of tall buildings adjacent to the Commercial Cable Building, and was immediately adopted for underpinning other structures. The Breuchaud method has also been applied to underpinning miscellaneous buildings of all heights, many of which are jeopardized by the deep excavations for subways in the treacherous soil on which their old foundations were con-

SHE BUILT
A $1,000,000 BUSINESS

The Sevillia

Mrs. Alice Foote MacDougall

owner of the famous New York Restaurants *shows with her own hands how to make her Marvelous Waffles*

STARTING 21 YEARS AGO with $38.00 for capital and three beautiful children for inspiration Mrs. MacDougall built up a lucrative business in roasted coffee.

She rented a tiny booth in the Grand Central Terminal and there every Wednesday afternoon she presided over a huge coffee urn.

One stormy and bitterly cold day as she watched the shivering people who streamed through the station Mrs. MacDougall felt a kindly whim to lessen their discomfort.

Impulsively she sent home for her waffle iron and the necessary ingredients, including Royal Baking Powder, and to all who came in to the little shop that afternoon, she served tender waffles and delicious coffee.

The glowing appreciation of her guests showed her that she had found a combination of foods with an almost irresistible appeal.

The Little Coffee Shop began to serve waffles and coffee, then in rapid succession Mrs. MacDougall opened the Cortile, the Piazzetta, the Firenze and the picturesque Sevillia.

"A WAFFLE is either a great delicacy or a dismal failure—there's no middle ground," says Mrs. Alice Foote MacDougall as she shows step by step how to make the waffles for which her coffee houses are famous.

"We use the best ingredients for all the foods we serve, the best cream, the finest maple syrup, the freshest butter and eggs—naturally we use the best baking powder, which is Royal.

"We have found that no other baking powder makes waffles which are up to our standard in lightness and tenderness. When you use Royal there is never any danger of dryness which spoils waffles and cakes. And, of course, you know most doctors, dietitians and home economics experts say Cream of Tartar baking powder is best.

"Personally, I think in all baking it is true economy to use Royal because it is so pure and dependable. As every housewife knows, the cost of the baking powder is almost negligible compared to the cost of the eggs and butter you use in waffles and in cakes."

Here is another favorite which The Alice Foote MacDougall Coffee Houses serve:

BLACK WALNUT CAKE

½ cup butter, 1⅓ cups sugar, ⅔ cup milk, 2 cups pastry flour, 2 teaspoons Royal Baking Powder, ⅛ teaspoon salt, ½ teaspoon vanilla extract, 5 egg whites.

Cream butter thoroughly. Add sugar slowly and beat in well. Sift the flour with baking powder and salt. Add alternately with the milk. Add vanilla extract and mix well. Fold in stiffly beaten egg whites. Bake in three well-greased layer tins in a moderate oven at 350° F. for 30 minutes.

WHITE ICING

1½ cups granulated sugar, ½ cup water, 3 egg whites, 1 cup black walnut meats.

Boil sugar and water together until syrup spins a thread or to 238° F. Pour slowly on to the stiffly beaten egg whites. Beat until it holds its shape and is of right consistency to spread. Put between layers and on top and side of cake. Sprinkle black walnut meats generously on each iced layer and on top and sides of cake.

All measurements are level.

Separate 4 eggs. Beat egg yolks well. Sift 3 cups flour with 4 teaspoons Royal Baking Powder and ½ teaspoon salt

Add alternately the sifted dry ingredients and 1 cup of milk; mix well

Add ½ cup butter, melted; fold in stiffly beaten whites of 4 eggs. Mix only long enough for thorough blending

Mrs. MacDougall serves her famous waffles on gay Majolica

Waffle iron should be heated 10 minutes. No greasing is necessary with electric iron. A gas heated iron is greased well before baking each waffle and turned once. Pour about 4 tablespoons of the batter into iron. Bake about 2 minutes

Royal, the Cream of Tartar Baking Powder. Absolutely pure.

Free—Nearly 350 carefully tested recipes for all kinds of foods.

The Royal Baking Powder Company,
Dept. K, 117 East 42nd Street, New York City.

I'd like to have a copy of the Famous Royal Cook Book.

Surprising

what this idea did for catsup

Wine of tomatoes gorgeously spiced!

NOTICE that delightfully different flavor of Snider's Catsup. The *mulling* does it.

How Snider, following its secret recipe, blends spices with tomatoes, is a story now forty-odd years old. But the effect on the appetite is always new—a surprising pick-up to the palate, an added zest to the most savory food.

All catsups do not taste alike. The person who relishes unusual blandness and mellowness specifies "Snider's", the mulled catsup. In the niceties of eating of course it is important to be selective.

People of good judgment prefer Snider's

structed. Since June, 1913, when the patent became public, it has formed the basis of practically all underpinning done in every large city in the United States.

IT WAS in 1896 that the water supply for New York City was about exhausted. The Catskill Water Supply System had been planned to meet the city's needs. The New Croton Dam was to be built as part of that far-flung network. It was to be the largest and tallest dam in the world—at that time. Three hundred feet high, its specifications read, and twenty-four hundred feet long. Its outside face was to be constructed of granite blocks, some of which were to weigh as much as twelve thousand pounds each! Eighteen miles long the reservoir was to be. And it was to hold thirty-two billion gallons of water. A colossal task!

But, meanwhile, the demand for water for New York City increased, as the supply decreased. Politicians argued, some contractors bid, procured bids, and then carried out their contracts inefficiently—if at all. The man who designed the dam and who was its chief engineer fell ill. Work lapsed. Money was lost. Subcontractors grew pessimistic and fearful. And the hundreds of workmen grew restless and dissatisfied.

Still New York begged for water. And after three years, what had happened? Nothing at all. Except that at the site of the dam there was a hole one hundred and sixty feet deep.

It was evident that the dam would be a failure. At least, that is what the troublemakers were saying. But Jules Breuchaud stroked his chin and held his tongue. Still young, still straight and handsome, but with his hair well graying, the forty-year-old contractor came forth with a plan:

If the contractors could not do the easiest part of the excavation at a profit, then it was obvious that they could not profitably perform the harder and deeper excavations and the building of the dam itself. As the digging went deeper, enormous quantities of water were encountered, which meant that powerful pumps must be operated both day and night for ten years to complete the work.

THE main contractors were discouraged, Jules Breuchaud decided to gamble his hard-earned money and his dearly bought experience for a one-third interest in the Croton project. His partners, Coleman and Coleman, agreed to put up the rest of the money. *But only provided that Breuchaud was permitted to have exclusive charge of the engineering work.* Breuchaud further stipulated that the system of subcontracting should be abolished to a large extent, and the entire project carried out into a unitary engineering force under his personal leadership.

His proposal was accepted.

Ten years later, the largest, tallest dam in the world was completed. And during all that time no workman ever saw Jules Breuchaud with a disarranged collar. What is more, no workman ever heard Jules Breuchaud give utterance to an uncouth phrase.

How did he do it?

First, he brought to the site selected for the dam on the Croton River his splendid engineer, J. B. Goldsborough.

Second, he cut off all telephone com-

We asked the doctors - 93% said "YES"!

We asked ten thousand doctors this question: "Do you believe that raw, natural, 100% bran is the best form of bran for the relief of constipation?"

93% of the answers were "Yes."

Pillsbury's Health Bran is the natural, 100% bran, unsweetened, unflavored, nothing added, nothing taken away. Doctors say it is the best form of bran for the relief of atonic constipation—bowel irregularity caused by intestinal sluggishness. Get a package from your grocer tomorrow, open it, and examine it carefully. Notice the large, clean, coarse flakes; chemists' tests show that this large unbroken flake plays an important part in the relief of constipation. Read the recipes on the package—you can use them to make thirteen pleasing foods, all delicious with the rich, nut-like flavor of natural bran. They are delightful to eat—an easy, pleasant way to stimulate regular and thorough elimination. Here is the health diet you need—Pillsbury's Health Bran—natural 100% bran, the kind that doctors recommend!

(There are more good recipes in our free booklet, "Fifty Prize-Winning Recipes for Pillsbury's Health Bran." Send for it today. Pillsbury Flour Mills Co., Minneapolis, Minn.)

I Said "Goodbye" to It All After Reading This Amazing Book -Raised My Pay 700%

When a man who has been struggling along at low-pay suddenly steps out and commences to earn real money—$5000 to $10,000 a year—he usually gives his friends quite a shock. But such things happen much more frequently than most people realize. Not only one, but HUNDREDS have altered the whole course of their lives after reading the amazing book illustrated at the right.

Where Shall We Send Your Copy FREE?

As an example of what this book has done, the career of R. B. Hansen of Akron, Ohio, is just a typical case. Not long ago he was a foreman in a factory at a salary of $160 a month. One day this remarkable volume, "Modern Salesmanship," fell into his hands. Today Mr. Hansen has reaped the rewards that this little volume placed within his reach. His salary runs well into the 5-figure class—actually exceeding $10,000 a year!

Another man, Wm. Shore of Neenach, California, was a cowboy when he sent for "Modern Salesmanship." Now he is a salesman making as high as $525 in a single week. O. D. Oliver of Norman, Oklahoma, read it and jumped from $200 a month to over $10,000 a year!

There was nothing "different" about any of these men when they started. Like many others, they subscribed to the foolish belief that successful salesmen are born with some "magic gift." But "Modern Salesmanship" showed them that nothing could be farther from the truth! Salesmanship has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet.

City and traveling sales positions are open all over the country. For years, thousands of leading firms have called on the N. S. T. A. to supply them with salesmen. Employment service is free to both employers and members.

SEE FOR YOURSELF why this *FREE BOOK* has been the deciding factor in the careers of so many men who are making $10,000 a year. No obligation. Just fill out and clip the blank below. Mail it now!

munication between the dam and New York City, so that the trouble-makers could not hamper the actual construction of the dam.

Third, he reorganized the entire project, so that nothing should be wasted. Formerly, when the rock was excavated it was thrown away, if no immediate need were seen. But Breuchaud conserved everything.

Fourth, the entire plant equipment was amplified. A vast number of additional pumps were purchased, to keep the ground dry during the operations. These pumps were duplex compound pumps that had to lift the water over one hundred and sixty feet, at the rate of more than a thousand gallons per minute. A million cubic yards of stone were quarried, and a large power plant was permanently installed a short distance below the dam.

No day passed without some untoward circumstance which would have harassed the spirit and broken the health and the nerves of any ordinary man. But the builder, Breuchaud, went on his quiet, imperturbable way.

Day in and day out, month in and month out, year in and year out, the nerve-racking work continued. Meantime, the water supply for the city became less and less adequate. And the need for the completion of the dam greater and greater.

ONE afternoon, with no word of warning, two thousand workmen went on strike. Work was at a standstill. The laborers demanded shorter hours and more pay. This demand could not be met by Mr. Breuchaud without a tremendous loss, for he had accepted the contract figured on the old wage scale.

Realizing that the situation had gone beyond the power of the local sheriff, quietly Breuchaud adopted extreme measures. While the two thousand men were milling around, swearing that they would destroy the dam, and some even threatening the builder's life and the lives of his family, Governor Theodore Roosevelt was sent for. He came down from Albany to New York and met Mr. Breuchaud and the sheriff.

An ideal man for such a crisis was this picturesque, forceful governor: "What's all this? What's all this?" he yelled, frowning over his glasses and twisting his mustache.

The situation was explained to him.

"Sheriff," bellowed the man who was afterward to become President of the United States, "what troops are available to send up to Croton now?"

"Troops A and B, sir."

"I'll send them," was the quick answer. "Get them there at once. And immediately on their heels, I'll send the whole Seventh Regiment."

The tense look faded from Breuchaud's face.

"But, Governor," interposed the sheriff timidly, "that would not seem necessary."

"I'm not sending those men up there to fight," he said, nodding to Mr. Breuchaud, "but to keep order by the very preponderance of their numbers. . . ."

With one crisis off Breuchaud's hands, another one immediately crowded on top of it, testing the builder's resourcefulness to the stretched limit of endurance. For the canteen of a great army was running dry. A water famine was coming nearer and nearer to the city of New York. And, no matter how intensely Breuchaud drove the men and the work, it looked as if the city would suffer.

"MUST I fail these people after all?" was his troubled thought one star-strewn night as he stood on the top of the dam breast. "Must I let them down?" Water for New York had become a human, not a technical, equation to him.

Below him, rugged and jagged, the dam wall stretched up. A small forest of derricks thrust their stubby fingers into the sky. The throb of pumps beat on unceasingly in the tenth year of their unfinished symphony.

He paced around the tremendous handiwork representing the brain and the brawn of two thousand men. "There must be some way of working it out," he thought, as again he started tramping, a sentry on the ramparts, guarding the sleeping city.

Just as his body was ready to crack with fatigue, a thought came to him as the midnight blue of the sky faded to a gentle gray. "I'll make this dam available for storing water, even if I can't actually finish it immediately. I can build the wall faster by putting steel towers in to carry the derricks in good positions. And then I'll build the masonry up and around the towers—permanently."

And so it was done.

The steel towers were not shifted as the wall rose, but were built in where they stood. The scheme not only saved considerable time but it added materially to the strength of the dam. One billion gallons of water was husbanded as the men worked above it, and the specter of drought was removed from the people of New York City.

In due time, the nine-million-dollar dam was completed, the largest, tallest dam in the world—at that time. And there it stands today, firm, unyielding, in its granite beauty:

> . . . carried to a gleaming height,
> As moved aloft by inward delight;
> Not as with toil of chisels hewn,
> But seeming poised in a mighty tune.

But it is not as a master of stone and iron and steel that Jules Breuchaud reaches the peak of his attainments. His highest achievement is an invisible structure, built of indestructible materials, and its foundations are sunk deep in the rock of understanding. This man—as great a builder as he is—is a greater philanthropist and his spirit rises like "a fragrant flame above the noises of the world." For he has thrown his life, his home, and his fortune open to others.

WHAT he has, he shares. No week passes but that he makes up parties of his employees and takes them from his offices and from his factories to his beautiful home at Olive, New York. There they swim in the open-air pool with his wife and daughter, play tennis with his son and his son's wife, inspect the prize Guernsey cattle which the builder raises as one of his hobbies, and the old Colonial furniture which he collects in his rare leisure moments. He and his charming, laughing wife share what they have from one year's end to another.

The time has come now for him to rest. But Jules Breuchaud is not resting. He

Borrowed from breakfast

Grape-Nuts Plum Pudding

1 package Lemon Jell-O
1 pint boiling water
Salt
¾ cup raisins, finely chopped
¾ cup walnuts, finely chopped
¾ cup cooked prunes, finely chopped
¼ cup citron peel, finely chopped
¾ cup Grape-Nuts
½ teaspoon cinnamon
¼ teaspoon cloves

Dissolve Jell-O in boiling water. Add salt to taste. When Jell-O is slightly thickened, add fruits, nuts, Grape-Nuts, and spices. Turn into mold. Chill until firm. Serve with whipped cream flavored with nutmeg, or with pudding sauce. Serves 8.

Grape-Nuts Cheese Salad

1 cup cream cheese (about ½ pound)
2 tablespoons Hellmann's Blue Ribbon Mayonnaise
1 large green pepper, chopped
¾ cup Grape-Nuts
Lettuce

Combine cheese and mayonnaise. Add pepper and Grape-Nuts. Roll into balls about 1 inch in diameter. Serve on lettuce and garnish with additional mayonnaise. Serves 4.

Grape-Nuts Stuffed Carrots

8 medium size carrots
¾ cup grated cheese
½ cup Grape-Nuts
2 tablespoons green pepper, chopped
1 tablespoon milk
¼ teaspoon salt
⅛ teaspoon pepper
1½ cups cooked rice

Scrape carrots. Cook in boiling salted water (1 teaspoonful salt to 1 quart water) until tender. Hollow out one side of carrot. Remove thin slice from other side so that it will rest firmly in pan. Add cheese, Grape-Nuts, green pepper, milk, and seasonings to rice. Stuff carrots with mixture. Place in greased baking dish. Bake in hot oven (400° F.) 20 minutes or until brown. Garnish with parsley. Serves 4.

Grape-Nuts Mock Hamburg Steak

1 cup lentils
1 cup Grape-Nuts
2 onions, grated
1 teaspoon salt
1 teaspoon powdered sage
1 tablespoon melted butter
2 eggs, well beaten

Soak lentils in water overnight. Cook in same water until soft. Drain and force through sieve. Add other ingredients in order given and mix thoroughly. Place by tablespoons in hot greased frying pan. Flatten with spoon into cakes and brown on both sides. Serve with brown gravy or tomato sauce. Serves 6.

...to play a big part in delicious dinner dishes!

SITTING at the breakfast table one morning, a woman looked thoughtfully at the dish of Grape-Nuts before her. She nibbled the crisp and tempting morsels with enjoyment, noting their wonderful flavor — nut-like, delicately tinged with malt sugar.

"They'd take the place of nuts in desserts and salad and sandwiches," she mused. "They'd take the place of croutons in soup. They'd be better than bread crumbs in escalloped dishes — Why, this breakfast food deserves to become An Ingredient!"

This was the beginning. Soon recipes were being created! And now Grape-Nuts *has* become An Ingredient, adding its delicious flavor and zestful crispness to a great variety of dishes.

Adding food value, too. For this famous food supplies certain vital elements often deficient in modern diet: Proteins for muscle and body building. Iron for the blood. Phosphorus for teeth and bones. Dextrins, maltose and other carbohydrates for heat and energy. And the essential vitamin-B, a builder of appetite . . . Eaten with milk or cream as a breakfast food, Grape-Nuts is, in itself, an admirably balanced ration. Added to other foods, it supplements their value and flavor.

Grape-Nuts is made from wheat and malted barley. It owes its delicious flavor, its crispness and its ready digestibility to the special, carefully-regulated baking process, by which these grains are prepared. No other food at all resembles Grape-Nuts. It is unique.

Try Grape-Nuts—both in the delicious recipes offered here and as a breakfast food. Your grocer sells it, of course—but wouldn't you like to accept the offer below?

Grape-Nuts is one of the Post Health Products, which include also Instant Postum, Postum Cereal, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate.

"travelo"
knit jackets & vests *for* men & boys
They hold their shape

When it's cold - - -
"travelo" *is warm*

IT costs more to have a cold than it does to buy a "travelo"—and prevent it. Snug . . . smart . . . handsome . . . economical. Sold and recommended by 11,000 good men's wear stores.

Write for "Portfolio of Styles" showing people you know in "travelo" knit jackets. Peckham-Foreman, Inc., 1911-1917 Park Ave., New York, N.Y. Makers of the well known "travelo" SwimSuits.

THE MARK OF A PECKHAM-FOREMAN PRODUCT QUALITY

Lido
KNIT JACKETS

The greatest value you can buy at less than the cost of a "travelo". Knit and tailored by the same methods and with the same painstaking care and skill that have made millions of wearer-friends for "travelo" Knit Jackets.

still has his boots on. No longer does he dig in the earth, sweating under the sun and freezing in the winter wind. But he is still working, and for that most intangible of all things, an ideal.

A few years ago, he decided to take a little holiday, his first one. He went South for a month. The next year he stayed a little longer. The next still longer. Now he remains in that pleasant country nearly half of the year.

But when he went South, he didn't pick out the usual millionaire's playground. He went around the west coast of Florida to a simple little town not far from Tampa. There he established himself and his home among plain, simple people. There in Inverness, on the shores of Lake Tsala Apopka, he found a village which had been in existence for years. And there he determined to make beautiful homes possible for the man of moderate means.

"Somehow, I have been building so long," Mr. Breuchaud said, "that when I decided to play, play didn't satisfy me. Building has become my recreation as well as my work. And I can't leave off. I determined to do what I could to develop a spot where men and women, tired of cold winters and unceasing work, could come and build their homes. Not many people, however, have either the wish or the ability to live without working. And it is for workers that I have tried to develop this community."

Jules Breuchaud has protected this part of Florida from land speculation. Here a man may take a few hundred dollars and buy a little farm, to satisfy the land hunger which seems to gnaw at the heart of the world.

Westward the course of Breuchaud first took its trail. Then eastward. And skyward. Now it is southward.

For Jules Breuchaud is still the Pioneer.

Queer Kicks About the Movies

(*Continued from page 45*)

Who would have thought, for instance, that people would be sensitive about the circus? Yet when it was announced that a certain book about the circus was to be filmed, an association of "circus fans" immediately objected.

"The book," said these lovers of the sawdust ring, "does the circus great injustice. The public will get the idea that all circuses today are like the one described."

The screen is a sister art of the speaking stage. But that doesn't prevent the latter from complaining loudly when she thinks her sister art has misrepresented her.

Here, for example, are bitter words from a man who says he is a theatrical manager:

"In every picture depicting stage activities, the manager or producer is represented as a scoundrel, attacking defenseless girls, etc. I demand from the motion picture producers a cessation of this libelous condition!"

Gradually, as you see, all the occupations, businesses, and professions are helping to swell the "we must protest" chorus.

Even the steam-laundry owners, through

Digitized by Google
Original from UNIVERSITY OF IOWA

their association, have become—well, quite steamed up, as it were. In a film comedy of a prize-fighter, a sub-title represented one of the combatants as saying to the other: "You're as careless as a steam laundry with a shirt!"

This brought a laugh from the spectators—but not from the laundry association!

In some pictures, jockeys have been shown "doping" run-down horses. The result was a protest from race-track officials, who asserted that this reflected on the honesty of horse-racing.

Newspaper editors are supposed to be past masters in the art of taking abuse. Yet even they, when it comes to the screen, appear to share the universal sensitiveness.

About fifteen years ago a play called "The Woman" was produced by David Belasco. Although some of its scenes dealt with journalism, not a single newspaper man, so far as I can discover, was moved to utter a protest.

But when a screen version of this same play was presented, under the title of "The Telephone Girl," at least half a dozen editors of influential papers declared that it was "a libel on the honorable profession of journalism."

One of them, however, did preserve his sense of humor, for he wrote as follows: "Something ought to be done about this sort of thing. But that is easy enough. Have Will Hays issue an edict that newspaper people must never, on the screen, be held up to ridicule and scorn. Why not? Every other group is doing it."

THERE you have the situation in a nutshell. "Every other group is doing it."

The trouble is that what seems "ridicule and scorn" to the aggrieved race, or religious sect, or profession, or business, seems quite innocuous to other people, including the men who make the pictures.

When they are called down because of some detail of a film they do considerable protesting themselves. They declare, and with unquestionable sincerity, that no slur was intended.

During the Florida boom, one of the sub-titles for a certain picture humorously stated that "dollars in Florida multiply faster than flies in a Greek restaurant."

People who saw the picture probably laughed at the phrase and promptly forgot it. Still, one can sympathize with our Greek friends over here, who protested that this sub-title "very injuriously affects a great order of business men, most of whom are American citizens."

Apparently there is no safety in distance, whether it be geographical or historical. Do you remember Jim Bridger in "The Covered Wagon"? To the millions who enjoyed that film he was just a picturesque character in the story. But to his descendants he was a real person—their own ancestor! They sued for damages because of alleged libel, due to what they claimed was a misrepresentation of his personal habits.

In one picture, a poor mountain girl was shown wearing silk stockings, the actress probably having forgotten to change this detail of her costume. Knowing from past experience that sharp-eyed spectators would spot these incongruous articles of raiment and write in about it, the subtitle maker attempted to explain in this

"May It Please The Court"

What stern judges they are! How quickly they note and approve clothes which have been skilfully tailored for you—to your "attitude," your posture — by this improved method!

PERHAPS your new suit seemed to fit perfectly, under the deft fingers of a skilful salesman. But what was the verdict from those before whom you always wish to appear at your best? After a few weeks' wear, did you hear about "bad wrinkles in the back" or "coat collar sagging at the neck?"

There's only one way you can be sure your clothes will pass that rigid inspection. Good style and fine fabric are not enough. Made-to-measure tailoring, *alone,* may not insure permanently perfect fit.

But the suit that is made to your measure, from fine fabric, smartly styled, and *in addition is cut, draped, balanced to your "attitude"—your posture*—will not pull out of shape with wear. It will keep you looking your best as long as you wear it.

That is exactly the way Ed. V. Price & Company makes suits—by an exclusive *Attitude Method* which makes exact allowance for each individual variation. It is *personal* tailoring in the highest degree.

Because of highly organized methods and tremendous buying power, Ed. V. Price & Company offers this unusual personal tailoring service at surprisingly low cost. Millions have bought Ed. V. Price suits for $35, $45 and $50 which they could not have duplicated for $55, $65 and $70, elsewhere.

You'll be delighted with the beautiful woolens offered by Ed. V. Price & Company—the smartness of the styles—the comfort and fit of the suit made especially for you.

The coupon will bring you further details and the name of our nearest representative.

That unruly collar—a common fault of hit-or-miss fitting. What a difference when it *always* sits snug at the neck!

Padding of Shoulders will not prevent underarm sagging of a poorly fitted coat. It must be cut and draped to fit the shoulder slope.

Another tell-tale mark of poor fit. Lapels roll gracefully only when the coat has been skilfully draped to your posture.

Only when they are cut expressly for the wearer can you be sure the trousers will hang correctly and fit comfortably.

humorous line: "Perhaps she got them in a missionary barrel."

The chances are that this would have caused a ripple of amusement at a missionary meeting. But it is a fact that when it appeared in a motion picture it offended some folks so much that they uttered the usual protest.

A good many people protest about movie comedies of college life. They seem to fear that young people will get the impression that college life is mostly play and little work.

The motion picture people, in reply, call attention to college magazines and papers, published by the students themselves.

Perhaps the greatest number of complaints are about pictures which have drinking scenes, or which even show a person taking a drink.

In regard to this matter, I was told that "the motion picture industry, early in 1922, went on record against any drinking scenes, the manufacture or sale of liquor, or the undue effects of liquor which are not a necessary part of the story or an essential element in the building of the plot.

"It did not go on record," the statement continues, "against *any* drinking scenes in pictures; because some pictures cover a period when there *was* drinking. It would be as illogical to say that bustles, which are no longer in style, should not be used with picture costumes of a period when they *were* the fashion.

"Despite this, there are people who want all drinking scenes eliminated, whether historically correct or not."

Another frequent complaint is about pictures showing cigarette smoking by women.

In reply to this protest, the film producers said: "The motion picture is simply a mirror of life. To destroy the mirror would not alter the facts which it reflects."

TWO California editors illustrate the curious differences in people's mental viewpoints.

"Too frequent'y," one of them wrote, "the police and the forces of law and order are held up to ridicule in film comedies. Policemen are represented to be dumb creatures, helpless before the witty antics of the comedian. It is mischievous to put these things before boys and girls and to let them grow up in an atmosphere of ridicule of the police and the courts."

But the other editor wrote: "As long as people enjoy farce, they will enjoy seeing all human pretensions held up to ridicule. They will enjoy seeing hard-boiled policemen, pompous judges, spread-eagle orators, big-business magnates, domineering husbands, and all other such human frauds, reduced to their lowest common denominators. We suspect that the experience is just as valuable as it is enjoyable."

PROTESTS are not confined to the pictures themselves. They deal also with the posters which advertise the pictures.

Some years ago, several cities in a Southwestern state had ordinances prohibiting the showing of firearms in posters. A motion-picture distributor, wanting to market a Western film, found himself in a serious dilemma, since one of the posters depicted a stagecoach being held up by robbers variously armed with rifles and six-shooters.

To get around this difficulty, the movie man hired an artist to paint bouquets in place of the rifles and revolvers! The spectacle of bandits using bouquets to hold up a stagecoach created state-wide laughter. The ordinance was later repealed; and perhaps this incident had something to do with it.

One of the commonest complaints is that the movies "teach our young people to be criminals." In reply, the producers say that the movie crook is always shown as a reprehensible character who "loses out" and is punished.

A New York newspaper published a story about a young kidnapper who blamed "the pictures" for his criminality. But a reporter for the same paper investigated the case, and found that the boy could not name a single picture as having given him the idea of crime.

About a year ago, a Boston newspaper printed an article about a woman who, at the age of eighty, had seen her first motion picture. It quoted her as saying: "If I had a daughter and she went to one of those picture shows, I would turn her over my knee and spank her! . . . It is no wonder the girls of today are as wild as they are, when they are allowed to witness such actions on the screen."

What reply could the motion picture people make to this vehement arraignment?

Why, simply this: The film she referred to was selected by, and shown under the auspices of the Woman's Christian Temperance Union of the town!

What I Don't Like About the Movies

Prize Contest Announcement

"I GO to the movies a great deal. On the whole I like them. But I wish . . ." Such phrases are constantly being bandied around wherever folks forgather. All right; what is it that you wish? Here is your opportunity to give vent to your own personal and private kick about the movies. Where do they fall down, in your opinion? What would you suggest in the way of improvement? Register your kick in a letter of about four hundred words. It will do you good to express it—and, besides, you may win a prize!

For the best four-hundred-word letter we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes November 20th. Winning letters will appear in the February, 1929, issue.

Address "The Movies" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

"ANYBODY will laugh when someone tells him a good story, or when he hears a really funny joke on the stage, but when he picks up a book, starts reading, and bursts out laughing . . . well, it's a remarkable book!

"That's just what happened to me. I was at a friend's house. He owns Mark Twain's works. I picked up a book at random, and opened to a little story called 'The Esquimau Maiden's Romance.' I give you my word I didn't know anything on a printed page could make me laugh so. The way he told about that mystery of the missing fish hook was nothing short of a riot. If there is a living writer who can make me laugh half as hard as Mark Twain, I wish he'd send me all his works C. O. D."

And this experience is the experience of thousands. Everybody has read some of Mark Twain. There are few who haven't delighted in the immortal "Huckleberry Finn." "Tom Sawyer" and "Pud'nhead Wilson" are everlasting favorites. But these are only the beginning of the—

"I never knew a book could make me — LAUGH SO HARD!"

Author's National Edition MARK TWAIN

His immortal works extend through volume after volume, each one a gem—each one a matchless epic of whimsical philosophy; satire; even pathos.

His side splitting story "The Connecticut Yankee in King Arthur's Court" has been used for a most successful moving picture. This same story is the plot of a scintillating musical comedy running in New York and other cities.

Says one Mark Twain critic: "Twain could not have flourished in any other clime. He is ours absolutely, the fictionist of Democracy, the outcome of America, the flowering of American institutions. And his humor is keen but free from sophistry and cynicism; it is gentle, kindly, loving, patient and most whimsical, most original."

25 Volumes—170 Stories, Essays, etc.

The works of Mark Twain are a gold mine. The Author's National Edition is the only uniform edition of his writings. Every delightful phase of Mark Twain is included—the short stories, the novels, the brilliant fighting essays—the humorous ones, the historical ones.

Furthermore these books were printed after Mark Twain made the statement "Let's make an inexpensive edition of my books so that everybody can have them."

And that's just what the Author's National Edition is . . . a beautifully printed and bound set of twenty-five volumes, yet priced so low that anybody can afford it.

And by the famous Collier Plan, you are offered the privilege of paying for these books in convenient monthly sums while you read and enjoy them.

An attractive little booklet "Your Friend Mark Twain" will be sent you without charge, and with no obligations attached. It describes Mark Twain's matchless writings, and contains a little collection of his inimitable humor. It tells how you can own Mark Twain, beautifully printed and bound, at a price so low and on terms so easy that you can have these wonderful books in your library at once. Merely clip and mail the coupon today.

The Art of Making Friends

(*Continued from page 9*)

of us. "You folks have been all over the place, but I do want these friends of mine to see it."

I went along. In less time than it takes to tell, the guests of honor were perfectly at home. The little old lady was feeling tapestries and curtains and silk bed coverings and reveling in their beauty. And the old man was chattering of by-gone days when the boy didn't have so much. They laughed together and they sighed together, and later they drank a little wine together for old time's sake.

They were no longer afraid of soiling new carpets and new curtains. There was no chasm between them and their host which he wouldn't help them across. He hadn't forgotten them. He was rich; but he was still the same lovable, happy-hearted boy who once sat at the table in the'r cottage. He was as fond of them as ever. They didn't have to be told that. They knew it.

It's an art to be able to make people happy. It's an art to be genuine and real and solid and worth-while. It's an art to dismiss everything that is petty and trivial and insignificant, and play the host and friend. And making friends is an art. But keeping them is a greater one.

And that is why everybody likes this man I've been telling you about. He has never discharged a friend as being no longer worth his notice.

NOT long ago, he and I were discussing a man we both know—a chap who apparently had cut away all the old ties and was seeking new alliances that would help him up the social ladder.

"It will never work," my wise young friend said. "He's going wrong, as wrong as the man who takes to drink. Money has spoiled him. He has begun to strut, and strutting is bad manners. He never sees his old friends any more. That's worse than bad manners. No man is so rich that he can afford to throw away a friend."

Oh, boy of mine, I saw you yesterday on the golf course and was proud of you. You had your arm about your caddie's shoulders. You were the employer and he was the workman. Chance had made it possible for you to play golf and chance had cast that lad for the rôle of your caddie. The two of you were laughing your way along that course, comrades in the game. I saw you, and I rejoiced in the sight.

Keep that attitude to the end of the road. Never give up a friend. One you think your friend may give you up; but let the fault be his, and his the loss. Never spoil your life by boasting. Confidence in yourself is one thing, but a haughty and overbearing manner is another. Take a lesson from your hero, Lindbergh. He went to New York a stranger, unannounced. To a few he was known as one of the flying group. He did no boasting in advance. He merely said that he had come to attempt the flight to Paris. Quietly he set about his plans. And then

THE PHOENIX MUTUAL LIFE INSURANCE COMPANY

Your face wants to know

USE BARBASOL ON ONE SIDE—ANY SHAVING SOAP ON THE OTHER

—Let your face decide

YOU may think soap is all right for shaving. But everyone who uses Barbasol thinks Barbasol gives a *faster, cleaner, smoother, cooler* shave.

Your face wants to know. Let your face decide!

Make This 3-day Test

Apply any shaving soap just the way you have to use soap—hot water, brush, rub-in, hot towels, more soap, more brush, more lathering, give Soap & Co. all the breaks—*but only on one-half of your face!*

Now wet down *the other side*—with hot water or cold. Then spread on a film of creamy, cooling Barbasol. No brush. No lathering. No rub-in. Just shave! Like this:

1—Wash the face (and leave it wet)
2—Spread on Barbasol (but don't rub in)
3—Shave!

Your face will decide for Barbasol. Because Barbasol shaves easier, cleaner, closer, faster. Barbasol shaves last longer—because Barbasol is 100% beard softener; no air bubbles. Barbasol leaves that fresh, cool, soft feeling, because Barbasol leaves the natural oils right in the skin.

Barbasol's a great protector of facial youth and freshness.

Get this one, too—New! Barbasol Skin Freshener, a great pick-up for the tired skin. Use it after shaving, after bathing, any time.

Let your face know Barbasol! Big tube of Barbasol 35c and 65c. Barbasol Skin Freshener 65c. All druggists.

THE
BARBASOL COMPANY
Indianapolis, Indiana

Barbasol

For Modern Shaving

one morning, the whole world knew that Lindbergh was on the way.

"Lindbergh has reached Paris!" came the cabled word.

"Who is this Lindbergh?" asked the world.

Today everybody in the world knows who Lindbergh is. Achievement is its own mouthpiece.

FORGET yourself. Think of others. Know what your rights are, and then forget most of them.

Herein lies friendship.

The art of making friends consists in doing graciously and quickly and cheerfully the things which will make others happy.

What is it we like in our friends? I think it is their understanding of us. They are familiar with our whims and fancies and shortcomings. They graciously accommodate themselves to us. That's why we cling to them. They have the power to wound and cut us to the quick, but they never do it. When they do remind us of our faults they do it with sympathy and not with ridicule. So we hold fast to them, and love them and struggle to be like them.

Well, boy of mine, the men and women out in the big, busy, crowded world are much like us. They want to be liked. They are sensitive to injury and to slight. They detest boastful people. They like attention from others. Little favors please them. A glad "Good morning" is sweet music to their ears and a smiling face delights them.

If you understand this and remember it, the art of making friends will become yours. Say to yourself as the stranger approaches, "Here is one I have never before seen. I don't know his name or his mission or his occupation.

Then if you treat him as you would yourself want to be treated, he'll go on his way saying to himself, "Well, at that spot I met a real fellow."

Look the crowd over again, son! You are going out in it soon. You told me just the other day about a boy who is always bragging, and you told me how the other boys dislike him for it. The crowd hates liars and cheats. Some of them may be liars and cheats themselves, but if you become one they'll hate you for it.

There's no secret about that throng. Every single one of them respects manhood; likes good nature; admires sportsmanship; and loves the decent things. They may not all do the decent thing themselves; but if you are fair and clean and kindly they'll recognize the fact and respect you for it.

There they are, millions and millions of them, men and women just like you and me and your mother and your sister. They reverence the same flag and they worship the same God. There are many creeds among them; but friends are the common need of them all.

THE art of making friends—is the art of being a gentleman. You'll never make a mistake if you treat the worst woman in the lot as though she were a lady, and the worst man as though he were a brother.

You can't know everybody. Even in a long and crowded lifetime, you can become a close friend to only a few. But thousands will cross your path. Many you

Digitized by Google
Original from UNIVERSITY OF IOWA

may see only for a minute, or an hour, or a day. But when you have gone your separate ways somebody has taken your measure.

You know the difference between "Good morning" and a grunt. So do the people you encounter during a day. Does the barber who cuts your hair try to do his best for you? If he doesn't, perhaps it's a proof that you haven't tried to show your best side to the barber. If he likes you, he'll try to please you. If he dislikes you, he won't. That's your way with people you like and with people you dislike. It's my way; it's everybody's way.

The man who has many friends has been a friend to many. He has understood the needs of many. He has known, without being told, that other people like to have attention shown to them, and he has shown that attention graciously and gracefully. He has slighted no man needlessly. He has walked the earth with all men as one of them. He has understood the need of all for laughter. The fellowship of joy and grief has been an open book to him. The chances are he has suffered sorrow, and he knows how deeply it cuts, and he remembers when another is in trouble.

We have different tastes and habits and customs and fancies, but in the main touches of life we are all alike. Birth, death, christenings, graduation, marriage, and again birth and the same round of joys and heartaches—make up the sum of human living. We never grow too big or too great to be above and beyond these things. And we never reach a point where we have no need of friends.

After a Year in the Spotlight

(*Continued from page 17*)

in the night, and as I was somewhat peeved at being called out of bed I made a refusal that stood for the time; but the next morning when I went to my store, a representative of the paper was waiting for me, having come to Fort Madison on the night train.

"He was trained in the art of getting the man he goes for, and I found I could make a refusal stand over the telephone that I could not get away with in person. He suggested that my family and I go to Chicago by airplane, and stop at the roof bungalow on one of the large hotels. We had no intention of doing this. He then suggested the trip be made by automobile; but we compromised by my going with him on the train and taking hotel accommodations on the fortieth floor of one of Chicago's large hotels, which was high enough, both in price and altitude.

"An automobile was kept waiting at the hotel door for me, day and night, and I couldn't move without a reporter and a photographer at my elbows. Every time I turned around or said anything, they put it in the paper. When I shined my own shoes, you'd have thought by the headlines that I had committed a murder.

"But, at that, they treated me pretty decently. All of the newspapers did. There wasn't any rough stuff in the way of wild exaggerations. The reporters became quite friendly. They took me through the

"Men *who are bald or have dandruff* look *old and ill-cared for, even if they aren't. We like well-groomed men about us!" say Washington debutantes. Stay in the preferred class. It's not difficult with this famous treatment.*

"Bald men or men with dandruff are unattractive," say Washington Debutantes

"At least men with thick, well kept hair are so much *more* attractive that we've little time for those who are bald. And dandruff seems inexcusable!"

Do the women you know feel this way about you? Don't let them.

This famous treatment, three minutes a day, *regularly*, every day, will kill dandruff germs—check baldness.

Every morning moisten scalp generously with Pinaud's Eau de Quinine. Then, with fingers pressing down firmly, move scalp vigorously in every direction, working the tonic thoroughly into every inch of scalp. Move scalp—not fingers. Brush your hair while moist. It will stay the way you want it.

Dashing Pinaud's Eau de Quinine over the scalp combats dandruff. Working it into the scalp deeply every day saves the hair.

You can find Pinaud's Eau de Quinine at any drug or department store.

FREE: ***generous sample bottle of the*** famous Pinaud's Eau de Quinine. Write today to Pinaud, Inc., Dept. A-4, 220 East 21st Street, New York City. In Canada, 560 King Street, Toronto.

Look for Pinaud's signature on every bottle

If he had *protected his hair how much more attractive his head would be! Just a slight hair-thinning became a sizable bald spot—while he waited.*

PINAUD'S *Eau de Quinine*

KEEPS YOUR HAIR HEALTHY, YOUR SCALP CLEAN

Digitized by Google Original from UNIVERSITY OF IOWA

Just what do the other wives mean

when they talk together about feminine hygiene?

WHY do the others seem to know so much more than she does about this delicate subject? Probably they do *not* know more of the actual facts. They only *seem to*. Unfortunately, in a matter so intimate as feminine hygiene, *any* piece of information is likely to be accepted as truth.

A few statements of plain fact

Physicians and nurses in general approve the feminine hygiene routine as a healthful practice for mature women. They approve the *practice*, but not the old-fashioned *methods*—methods which involve the use of caustic, poisonous germicides such as bichloride of mercury and the compounds of carbolic acid. The simple truth is that these deadly preparations are unnecessary. There is one antiseptic-germicide far superior for purposes of feminine hygiene — namely, Zonite.

Zonite is immensely powerful, actually far stronger than any dilution of carbolic acid that can be allowed on the body. Yet it is as safe in use as pure water. No hardened, deadened membranes. No areas of scar-tissue. No deaths through accidental swallowing. Zonite is a real godsend to women as millions already know, who have achieved comfort, surgical cleanliness and peace of mind.

New frank booklet

Send for free booklet about this remarkable antiseptic and its place in feminine hygiene. Zonite Products Corporation, 250 Park Avenue, New York, N. Y.

Use Zonite Ointment for burns, abrasions, insect bites or chapped skin. Also as a powerful deodorant in vanishing cream form. Large tubes, 50c.

In bottles: 30c, 60c, $1 *Both in U. S. A. and Canada*

ZONITE PRODUCTS CORPORATION 45-E
250 Park Avenue, New York, N. Y.

Please send me free copy of the Zonite booklet or booklets checked below.

big stores, took my picture shaking hands with 'Bill' Thompson and had me talk over two radio stations on different nights."

THE Average Man found nothing very fearsome about the microphone. His first talk was prepared in advance, but his second was made under rather trying circumstances. Yet he can't figure why "fellows like Will Rogers," who are accustomed to speaking in public, should be awed by the "mike."

"Honestly, there's nothing to it," he assured me. "It's not a bit more exciting than talking over the telephone."

On the occasion of his second talk, Mr. Gray didn't get an inkling of what was up until he was pushed in front of the microphone of one of Chicago's biggest radio stations and told to "shoot."

He explained:

"They took me up to the studio to look around and listen to them broadcast. Anyway, that's what they told me. Nobody said a word about my doing any of the broadcasting myself. I sat down by the door to watch how they did things, when the announcer spoke into the 'mike' and said that Roy L. Gray, the 'average citizen,' had just stepped into the studio. Next minute he was saying: 'Mr. Gray will now speak to you,' and somebody grabbed me by the arm, shoved me up before the microphone, and there I stood, with all those thousands of people out there waiting for me to say something. The only thing I could do was to talk, so I talked."

"Didn't you get frightened?"

"There wasn't anything to get frightened about," said Mr. Gray. "It was just as if the telephone had rung and it was up to me to answer it in a hurry. I don't remember what I talked about, but I kept going for three or four minutes.

"I understand that Will Rogers, who does more public talking in a day than I do in ten years, had to go through all kinds of coaching before he got up nerve enough to talk over the radio. I've read of a famous actress who fainted the first time she stepped up to a microphone. I can't understand that at all. These folks like Will must let their imaginations get away from them, or maybe they don't use enough imagination, I'm not sure which. It may be that they have to *see* the people who are listening and hear the applause in order to get going right. As for me, I'd just as soon not see them."

BUT though the Average Man felt no awe for the microphone, he didn't lose for one moment his awe for reporters.

"You can't tell what fool question they'll shoot at you next, especially the women," he said. "A woman reporter expects you to know a little about everything that ever was, and if you don't know it she puts you down as a dumb-bell. One of them asked me if I was a 'disciple of Freud,' and when I told her that the man was a stranger to me she got disgusted and went to interview my wife. Another wondered if I was a believer in the 'transmigration of souls' or if I had ever studied books by a man named Marx. It would have taken a college professor to answer all of their questions, and I'll bet some of his answers would have been wrong. A lot of the reporters acted as if I had been advertised as a noted scholar instead of as a plain average man."

One newspaper man asked Gray what he thought of Mussolini. He had just answered a list of twenty-six questions dealing with everything from the next Presidential election to the Locarno pact—of which he had never heard.

"Mussolini?" pondered Gray. "Now what should I say about him?"

"Oh, say he's got a good press agent," cut in the reporter, who was in a hurry—and down went that answer.

"Would you believe it," Gray exclaimed to me, "that a dozen newspaper editors took a crack at me in editorials for belittling Mussolini? It just shows how careful I had to be."

On another occasion, Gray was eating dinner in his Chicago hotel. The waiter brought in a broiled steak garnished with parsley.

"What's that green stuff?" a reporter who was present asked the waiter.

"Parsley, sir," was the reply.

"What's it for?"

The waiter explained that it was to make the dish look nice.

"You mean that it isn't to be eaten?" the reporter asked.

"No, sir. It's just decoration."

"By gosh! What d'yuh know about that!" said the reporter. "I've always wondered why they put that stuff around a steak!"

The conversation was printed in the newspapers—with the questions attributed, not to the reporter, but to Gray.

However, Mr. Gray smiles at the recollection. He has learned that it is best for the man in the public eye to smile at such trivial misrepresentations, and be thankful that it wasn't worse.

HE LEARNED something, too, about the modern science of newspaper photography as it is occasionally practiced. He was crossing a busy street intersection in the "Loop" district, a reporter and a camera man at his heels. It was the rush hour for traffic.

"Wait a minute," ordered the reporter, and stepped up to the traffic policeman on duty. "Say," he said, "I'd like to get a picture of a crowd here."

The traffic man held up both arms, and in an instant traffic halted. In another instant the jam of cars and pedestrians extended in all directions, while marooned in the center of it was Mr. Gray.

The camera clicked.

"Fine!" grinned the reporter. The policeman signaled, and traffic moved on.

And next day Mr. Gray saw himself pictured in the midst of a Lindberghian crowd that "jammed the streets to see the Average Man." There was no questioning the genuineness of the crowd, for it was there. Still, to his dying day, says Mr. Gray, he is going to be just a little bit skeptical of newspaper pictures of street crowds.

"There is one thing that impresses me about this business," said Mr. Gray. "Pictures of me were in the newspapers daily while I was in Chicago. For that matter, papers all over the country printed pictures. And yet, on the streets, not one in a hundred recognized my face. Passers-by would have newspapers in their hands on the pages of which were pictures of me, but they wouldn't so much as give me a

glance. I have since found that true in other towns I have visited.

"But let me mention that my name is Gray, and at once they look interested. If I stop in a hotel and register for dinner, the clerk recognizes the name Roy L. Gray almost at once, and asks me if I'm not the Average Man. Next day the name is in the papers.

"A few months ago I had to go to Chicago on business. It happened to be the day of the weekly Rotary Club luncheon, and as I am a member of Rotary I was expected under the rules to attend, to make up for my absence from the Fort Madison club's luncheon. The dining-room was jammed with men; probably seven hundred were present. I passed unrecognized until I pinned on the button bearing my name, which it is customary to wear at Rotary meetings.

"One of Chicago's leading ministers was opposite me. He asked, 'Are you Roy L. Gray, the Average Man?' I said I was. A moment later I noticed him speaking to the president, who was presiding. When it came to introducing the guests present, about two hundred of us stood up in a body. Then the president introduced me by name, and I had to stand up alone. But that never would have happened if I hadn't been identified by the name button."

THE thing for which Gray was most criticized was his attitude on prohibition. A minister interviewed him on such deep theological subjects as the origin of the world, predestination, and the future of th soul, and found that the Average Man's religious beliefs were sound enough to be the basis for a sermon, which was broadcast by radio. But both the "drys" and the "wets" were indignant about Mr. Gray's prohibition views.

In the original article in THE AMERICAN MAGAZINE, Gray had confessed his inability to come to any intelligent decision on the prohibition question. He saw in prohibition and Volsteadism features both good and bad. He decried the lack of "un biased facts" upon which the voter could form an opinion. Personally, he is an abstainer; but he is not so sure but that prohibition is responsible for the bootlegger and some other national ills; neither is he ready to condemn it.

The "drys" assailed him for this attitude; and just as vigorously he was assailed by the "wets." Each faction insisted that if he had any common sense he would be on its side, and a mass of contradictory statistics were hurled at him, editorially and by mail.

He also was criticized for being "standardized" and for his "complacency." Some writers did not like the fact that he had admitted being "average," while others commended him for it. He was denounced as a "menace" to the nation's progress, and acclaimed as a representative of that class which is "the backbone of America." One famous writer devoted an entire magazine article to Mr. Gray, in which he deplored that he had been held up as the Average Man. He saw "danger" in such wide-spread publicity.

"Yes; I read both sides of the argument," Mr. Gray told me. "Our local newspaper printed both the good and the bad."

He became serious.

PERHAPS it is because her protective instinct is stronger. Perhaps it is because she is closer to the youngsters and has more time to think about their future.

But, whatever the reason, the subject of life insurance protection is a matter of far greater concern to the average woman than she usually is willing to admit.

She *knows* how much it takes to shelter, clothe and feed on the basis of present-day living costs. She *knows* what education of children means in terms of dollars and cents.

Why not arrange *now* to put the matter of insurance protection for your family on a sound and common sense basis?

There's a Provident Mutual representative near you who will be glad to tell you about Provident Mutual insurance *planned* in such a way that it covers *all* your needs. If you do not know his address, write to the company direct.

An Exceptional Chance For You Now

AT THE first whiff of crisp November air, we think of plum pudding, turkey stuffing, Christmas trees, and of the joyful holiday season.

The shops will take on that alluring Christmas-like air—and unless we are prepared with dollars a-plenty we will be none too happy.

Wouldn't you, therefore, welcome a chance to earn $5 or more a day? You can, and I am prepared to tell you how. These are a few of the ten thousand happy women and girls who have followed my plan. You'll see they are delighted with membership in The Pin Money Club, a money-making department for American Magazine readers.

Mrs. Morton of Kansas, who lives in the heart of the famous corn belt, earned $15 in about a month's time. Rather nice considering that it was money earned in spare moments.

Mrs. A. C. Coyle of Illinois put $20.70 into her pocketbook. Who wouldn't be glad to do that once a week or even once a month?

Dorothy Sparks of California, a Club girl who holds a position in a newspaper office, received from the Club three gifts of handsome salad sets! One she gave her mother, another was a lovely birthday present for her married sister. The other, I hope, is carefully tucked in a corner of Miss Sparks' hope chest!

Mrs. Florence Marshall is a new member of our Club and you'll see how glad she was to receive her first gift. She writes:

"My Beehive Pin arrived yesterday and I was so interested in opening the package, I forgot the chocolate icing I had just started making with the result that five-year old Sonny asks for a 'piece of cake with that funny black stuff on top.'"

Come and Join Us

YOU surely want to know more about us and our work. Then sit down right now and tell me so. Even a card with your name and address will bring you a prompt reply. Not a penny are you asked to invest—and our way for making money is sure and fine. Address your letter to

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department Y
250 Park Avenue New York City

"I've discovered this: that the Average Man has more friends than he has enemies. The friends outnumber the critics by ten to one. And even the critics, in my case, weren't harsh. They said what they had to say good-naturedly. I read nothing against me that really hurt. I had to laugh at most of the unfavorable comments. I have no kick at the way any editor handled me.

"And here at home I made friends. I suppose I'm almost as well known in this town as the mayor himself. I see a change too in my customers. They are quicker to take my word. If I say, 'That's the suit you should buy,' they usually give it consideration. My opinion seems to be worth more to them than it was before.

"On the other hand, I've got to be more careful in what I do. Not that I haven't always been careful, but now, if I do anything at all out of the ordinary, it's in the papers next morning. If I were to step out into the street there this minute and start a fist fight with somebody, or if I were to get drunk and make a spectacle of myself, it would be in every paper in the country tomorrow.

"I like to drive out in the car on Sunday with my family. If I go any distance from home, or visit some neighboring city, the reporters find it out somehow. First thing I know some chap with a notebook in his pocket is asking me questions, or somebody is hunting me up to make a speech. Just the other day I got a letter asking me to talk over the radio and another asking me to write an article for a magazine. The editor of a newspaper in the Philippines, among others, asked me to write the story of my life.

"Letters? I've got all kinds. Over in Europe they evidently think I'm rich, for I've had letters from there asking for money. One young lady in Czechoslovakia wanted me to set her up in business. A convent in Ireland asked me for an endowment. For some reason I can't understand I got a lot of letters from very old people, like G. A. R. men, and women in old ladies' homes. Then a lot more have warned me against flappers and being lured by the night life of the big cities. And folks keep bringing up the question about my changing—everybody seems to be afraid I'll get a swelled head and 'step out.' Well, you can set them at ease: I haven't changed, and I don't expect to. It takes more than seeing my name in the papers to turn my head."

AS TO the Average Town, it's still the Average Town. But opinion is divided over the adventure it has had in the news. There is one element, and this is in the majority, it seems, which thinks that the "Average Man" story was the biggest thing that ever happened to Fort Madison. But there is a second element, almost as strong, which resents the classification of "average." These folks take the stand that Fort Madison is *above* the average. The third element is very much in the minority and it says little; it merely smiles and goes its way unacclaimed.

"Average?" said one of these, dryly. "This town isn't average. Whoever says it is promotes it."

But there aren't many such in Fort Madison.

George Wanted *Money*- I Pay Him --*Plenty*

Louis George
Illinois

$10,000 a year is what I paid Louis George, Illinois, for the last three years. This year he says he is going to earn $20,000.—And before he accepted our offer he was earning only $35 a week!

ANY MAN CAN GET This Money From Me

Ray C. Hahn
Sales Director

I paid L. D. Payne, Iowa, $4,500 for his first 200 days with me—he is still averaging from $500 to $650 a month. Putnam of a small Michigan town averages $600 every month. Many others averaging from $6,500 to $10,000 a year in this big pay field—*the field of Fire Prevention.*

AMAZING DISCOVERY

DOUBLES AND TREBLES INCOMES

Latest discovery by Fyr-Fyter chemists has doubled and trebled the incomes of our men and has made it necessary to make an immediate addition of 250 men to our sales force. No experience needed—no capital required. The successful applicants who can furnish good character references will be assigned to good paying territories at once—income to start immediately. Complete training, entire Fire Prevention working outfit will be furnished, and our whole organization will back you up with profit-making plans.

TELL THIS WONDERFUL STORY

As a Fyr-Fyter representative you will have a marvelous story to tell. Among our customers are such as Ford Motor Co., Diamond Match Co., Bethlehem Steel Corp., Eastman Kodak Co., International Harvester Co., Standard Oil Co., and thousands of other nationally known companies. The U. S. Government alone has purchased 260,000 Fyr-Fyters. Every store, garage, school, hospital, home, factory or farm is a prospect. Our national advertising helps you to make quick sales. National, State and City governments cooperate.

NEEDED AT ONCE

We must add 250 men at once! Send coupon today for full information and details of our generous money-making plan for men who have good character.

Give 5 Minutes a Day LOOK YEARS YOUNGER

Now every woman may have the glorious, fresh complexion once available only to wealthy patrons of expensive ultra-fashionable beauty salons. Through exercise of the tiny under-skin face muscles upon which beauty depends, you can regain or retain the youthful attractiveness that all admire.

Kathryn Murray's 5-Min.-a-Day FACIAL EXERCISES quickly strengthen weak, flabby muscles — the underlying cause of crow's feet, hollows, loose sagging skin, sluggish circulation, sallow coloring. Learn few simple rules at home. No creams — no massage — no straps — no treatments. Just your own natural beauty and 5 minutes a day.

Results Assured. Send for **Free** book today. Read the testimony of delighted women. Then start at once on road to glorious, youthful beauty.

Kathryn Murray Inc., Suite 1138, 5 S. Wabash Ave., Chicago, Ill.

Days of Drudgery Will Soon Be Over

(*Continued from page 25*)

of business—of course there were exceptions—was forced to its improvements. The tendency was to get a 'good thing' and to stick to it until competition forced a change. The experimenter and scientists, as such, had no place in business.

"Today the experimenter is the heart of business and he grows in importance with the company's size. There is hardly an industry that can afford to be without its research and experimental laboratories. The best technically trained men that the schools can produce are snatched up by eager corporations, who have learned that the essence of industrial progress is improvement. Millions are being expended yearly in experiment, and the whole world is being scoured for the better material and the better thing. That is what was going on at Whippany.

"And industry, in consequence, has gained a new and astonishing vision. As late as a quarter-century ago, when the Wrights were being ridiculed and Ford was called a visionary, there was a smug notion that man had just about reached the zenith of his progress. Had anybody talked then of television he would have been classed with Jules Verne.

"Today, in industry, we are inspired not by what has been done but by what there is yet to do. These experimenters who have come in with their scientific telescopes have given us glimpses into the infinite possibilities of the future. There was and is a very definite limit to what can be gained by industrial warfare between men, but there is no known limit to the results from the conquest of nature."

I KNOW of no executive better qualified to discuss the new in business than is Walter Sherman Gifford. Trained in modern business science, he himself is typical of the new leadership of which he speaks. A graduate of Harvard in liberal arts, he entered the employ of the Western Electric at the age of nineteen, as a clerk. At forty, he was elected to the presidency of the American Telephone and Telegraph Company.

Quiet in manner, cool, vigorous, a lover of the fields and hills, there is nothing of the old business czar about Gifford. A considerable reader and student, his tastes are well rounded and he has no fads. He spends many of his week-ends in a country farmhouse where the wood box still flourishes. His personal habits are simple. He squirms every time he has to make a speech. He "puts on no airs."

Leaving that strange broadcast in the night which had opened the discussion, Mr. Gifford talked on about this bigger theme—the utilization of natural forces to build a new type of civilization.

"Let's begin with something that we all use—gasolene," said Mr. Gifford. "Until a few years ago, a relatively small amount of gasolene was derived from crude petroleum. The residue materials, such as kerosene, heavier oils, paraffin, asphalt, and other products, consumed the bulk of our oil supply.

"We heard predictions of an early gasolene shortage, and the danger was real. Then, in the laboratory, the process known as 'cracking' was brought to light by our chemists. It enabled refiners to break or 'crack' the larger and heavier molecules of petroleum, and thus get more gasolene from crude oil. In 1926, approximately thirty-five per cent of all petroleum was converted into gasolene owing to this victory over nature.

"Take helium. Helium was found to be present in the sun by spectroscopic methods. Later, it was also found to be present in small amounts in the atmosphere of the earth. Scientists abstracted some of it, found it to be buoyant like hydrogen; but, unlike hydrogen, it would not burn. At once possibilities opened for its use in airships. It would reduce one of the airship's greatest hazards—fire.

"But it was impracticable to abstract helium from the air in quantities, and for years this element was almost a laboratory curiosity, displayed in museums. However, the search for other sources of helium went on. The discovery of it in natural gas and the method of extracting it, perfected in 1918, is another of the outstanding achievements of recent years.

"ANOTHER victory over nature, typical of the new trend, was the discovery and application of the flotation process in mining. When ground bituminous coal mixed with ashes is stirred up with fuel oil and water, the coal particles go into the oil and come to the surface, while the ashes stay in the water and sink to the bottom.

"This simple phenomenon is the basis and method used for extracting ores from rock. It has made profitable the operation of many ore mines which would not have been profitable under the old methods.

"In 1908, only fifty-five tons of steel were produced in the United States by the electric furnace. In recent years this has risen to upward of one million tons, due to improvements in the original furnace. It is now possible for our chemists to work with atoms and molecules in a way undreamed of just a few years ago. Such metals as vanadium, tungsten, and molybdenum, once considered as rare, have come into almost common use; and a whole new science of metallurgy has been created—thanks to the development of the electric furnace, which has enabled men to create temperatures equal almost to five times that of the sun itself.

"And so I might continue, mentioning the discoveries of insulin, vitamins, and of the mysterious agents which the chemist calls catalysts. The discovery of catalysts in industrial chemistry made possible the quantity production of nitrogen compounds invaluable in agriculture, and aided in a thousand other laboratory operations.

"In the field of communication, with which I am most familiar, there have been far-reaching discoveries. We have established transcontinental telephone service in America and have made it possible to talk, by telephone, between American and European cities. We transmit pictures

Digitized by Google
Original from UNIVERSITY OF IOWA

over wires and have demonstrated television. Radio broadcasts are carried over telephone wires to audiences of millions. And we have the scientific knowledge to do other things for which we have not yet the commercial solution.

"For example, it is now scientifically and technically possible for man both to speak and to see around the world.

"It is now scientifically and technically possible for the President, or any citizen, to speak simultaneously to an audience made up of all the 120,000,000 people in the United States, or, for that matter, of all the people in the world.

"These things, which would make the whole world a single community just as literally as your own town is a single community, are both scientifically and technically possible.

"BUT I would like to point out that there are two essential sciences to the utilization of nature by man. The first is discovered by studying nature. The second is discovered by studying man. After you have found out what you can do with nature, you then have to find out how to put that discovery to use for man.

"This second discovery is usually called business; but to my mind, when practiced in the right spirit, it is as high a science as any branch of the study of nature. For example, as I said, we know technically how to bring all the people of the world within sight and sound of one another. But the business task of doing this is far from solution. The first telephone words were heard across the Atlantic in 1915. Transatlantic telephonic conversation as a service to mankind began in 1927. Alcock and Brown piloted the first airplane across the Atlantic in 1919. When will that flight bring forth a passenger service?

"We are not even planning to make the whole world one telephone entity; but it is the purpose of the Bell System to connect with telephones in distant countries just as fast as it is economically practical.

"Nobody can guess how rapidly we are going to advance, but we know that the rate of advance is going to be many times more rapid than ever before in history. And there is a very tangible reason for this: Most of our great discoveries of the past, as I have said, were made by individuals who worked with very limited resources and often in an atmosphere of ridicule and discouragement. Today, in addition to these individual workers, we have large research organizations, supported by the great resources of industrial enterprise.

"Whereas, fifty years ago, Bell and an associate toiled alone to perfect the telephone, today thousands of specialists are working to improve it. You hear of an important discovery in chemistry; for example, the discovery of the various formulas that enabled America to manufacture its own dyes independently of the rest of the world; but when you follow this discovery to its source you may well find that not one man but hundreds of men working coöperatively in a great laboratory were responsible for it.

"Radio was a scientific reality twenty years ago. But one short year after it was introduced to the public as an economic and commercial reality every one of the first receiving sets sold was obsolete.

"What is back of these bonds?"

When you buy bonds from The National City Company you get something more than dependable income and adequate security of principal. You get a broad choice of issues, and personal contact with bond men well qualified to help you select suitable offerings; you get quick service through a chain of investment offices in over fifty leading American cities, offices interconnected by thousands of miles of private wires; you get ready access to up-to-date information on your various bond holdings; and, finally, you get the broad benefits which come from dealing with an organization having a background of over a century of financial experience and maintaining close contact with investment conditions throughout the world.

Show Card Lettering

HERE is the course you need if you want a good position as Show Card Letterer or a business of your own. It is complete and practical and especially arranged for the student who studies at home. Written by E. L. Koller, Principal of the International School of Art, member of the American Federation of Arts, and The National Society of Craftsmen.

H. L. Wood, a clerk, made more than $700 "on the side" before he had completed this course. William Whitman is earning *three times* as much as he did before enrolling.

Woman's Home Companion Radio Hour comes on alternating Wednesdays at the same hour from the same stations.

Baby's Own Bath and Dressing Table Combined

IF there is a greater gift for both mother and baby than the Trimble Bathinette we have never heard about it. It is so simple, so handy, so helpful, mothers cannot afford to be without it.

Every good idea is copied and cheapened. Mothers are urged to buy "sale" products but even the best is none too good for the new baby.

Bathinette folds compactly, is easily used in any room—wherever most comfortable for baby. Sold by department stores and specialty shops. Write for "Nurseryland"—a free book. It tells about Bathinette and gives hints on baby care.

OLD MONEY AND STAMPS WANTED

POST YOURSELF! It pays! I paid J. D. Martin, Virginia, $200 for a single copper cent. Mr. Manning, New York, $2,500 for one silver dollar. Mrs. G. F. Adams $740 for a few old coins. I want all kinds of old coins, medals, bills and stamps. I pay big premiums. Offer $100 for 1894 Dime, S. Mint; $50 for 1913 Liberty Head Nickel [not buffalo] and hundreds of other amazing prices for coins. Get in touch with me. Send 4c for Large Illustrated Coin Folder. It may mean much profit to you. Write today to

NUMISMATIC COMPANY OF TEXAS
Dept. 383 FORT WORTH, TEXAS
[Established 28 Years]

Today, though only a few years have passed, you can buy a better set for seventy-five dollars than you then could for one thousand dollars. This sensationally rapid development could not have been made without organized research.

"The first practical use made of electricity was for communication. The land telegraph came first and soon after it the submarine cable, connecting America with Europe. Then, for more than a half-century, the undersea telegraph art made little advance. During the World War, and until 1922, cables were much the same type as those of our grandfathers.

"Then the modern laboratory tackled the problem, and the outcome was one of the most outstanding achievements in the history of communication. Permalloy, which is a composition of nickel and iron, given special heat treatment, was discovered by G. W. Elmen, of the technical staff of the Bell Telephone Laboratories, to be a superlatively fine magnetic material. When the central copper core of the submarine cable is wrapped with a permalloy tape only a few thousandths of an inch in thickness, in a spiral manner, like the bass string of a guitar, the message capacity of the cable is greatly increased. At once a new type of cable was created that would carry as many messages in an hour as six of the old cables."

"Do you think the day of the individual inventor is passing," I interrupted.

"No," Gifford answered; "I still think that great discoveries will continue to be made by men who work alone. But continued progress is assured through organized research, which will come more prominently to the fore with every year that goes by."

"TO WHAT is this leading us?"

"Literally, to a new civilization. I have said nothing of what has been done, and of what will be done, in the fields of mechanics, engineering, transportation, medicine.

"I have said nothing of the research workers in pure science whose discoveries underlie all of our practical applications in these and all other departments of applied science. There is not one of the great technical achievements of American industry that would be possible were it not for the work of the pure scientist, conducted without the hope or even the possibility of pecuniary reward, and solely with a philosophic purpose and for the purpose of extending the boundaries of our knowledge and discovering new laws and principles.

"It has now come to be recognized that these workers furnish in their discoveries the raw material, so to speak, for our industrial laboratories. Unless the discoveries of pure science continue, the applications of science to our practical affairs would before long reach a limit. Bell himself could never have invented the telephone were it not for the scientific principles or laws discovered by Oersted, Faraday, Helmholtz and others. Our progress primarily depends upon the workers in pure science. They are to be found in most of our colleges and universities. They are often poorly supplied with research facilities, and frequently are overburdened with teaching and routine duties.

Digitized by Google Original from UNIVERSITY OF IOWA

"The new trend is evident in every field, and is largely due to the discoveries in pure and applied science, and the business science that puts these discoveries within the reach of everybody.

"Already, as a people, we are materially better off than any people in history have ever been. The eight-hour day has become almost standard, and there is talk of the five-day week. We are healthier and richer than ever before. Yet it is my belief that we have only started to go ahead!

"The housewife, more and more, is going to see her labor lightened and shortened by electricity. The farmer, who not so long ago toiled twelve and fourteen hours a day, is going to find himself with plenty of time on his hands in which to do other things than run his farm. Machinery will increasingly take the load off men's shoulders in our factories. Every one of us will have more chance to do what he will, which means greater opportunity, both materially and spiritually.

"COSTS, particularly for necessities and the commoner luxuries, are in the long run bound to become relatively less. This is going to give us more money to do with as we will. During the past ten years, owing directly to victories over natural obstacles, a saving of $650,000,000 has been effected in the Bell System. This saving now amounts to $100,000,000 a year, which telephone users otherwise would be required to pay to meet the costs of service. The savings total, through reduction of costs in industry, mounts into billions; it has made our present general prosperity possible; it has made possible the eight-hour day."

"How much of the savings to be made," I asked, "will go into the pockets of the people?"

"The bulk of them," was Mr. Gifford's reply. "The masses will profit immeasurably more than the wealthy. If a man has an income of $50,000 or $100,000 a year he is not going to be affected appreciably by what he has to spend for living necessaries; but the man whose income is but $150 a month is going to be vitally affected. If we can reduce *his* budget by as little as five dollars or ten dollars a month, we will have given him worthwhile assistance.

"On the whole, there is going to be more concern in business over reducing costs and improving products than in increasing profits. I believe business leaders are to put achievement above mere money-making.

"As it is easier and easier to make money, which comes with our control over nature, the premium on the ownership of money as compared with the other things of life grows less. Money now is less of a distinction in this country than it used to be.

"The second factor is the vanishing of the few from the ownership of big business and the entry of the many. The American Telephone and Telegraph Company is owned by 435,000 stockholders—and no one person controls as much as one per cent of the stock. A similar widely spread ownership is true of every large corporation, almost without exception.

"Additionally, the employee has become a stockholder by the tens of thou-

Hotels Need Hundreds of Trained Men and Women

Will you accept one of these big paying positions in America's 3rd Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

MANAGE AN APARTMENT HOTEL

Men and women needed as Managers for $200,000,000 worth of apartment hotels now being built. Interesting work, big pay. YOU can qualify!

CLIFFORD LEWIS, President
Lewis Hotel Training Schools

Formerly U. S. Gov't Hotel and Restaurant Expert, now Managing Consultant to over 225 hotels, who has qualified thousands of men and women for success in the fascinating hotel and institutional field.

These Students "Made Good"

Thru Mr. Lewis' efforts a Lewis Student was appointed Executive Housekeeper in a State Governor's Mansion. Another, without previous experience, became Manager of a large hotel—3 months after enrolling! A Lewis Trained woman is now Hostess and Manager of a fashionable apartment house—salary $3,600 a year, apartment included, while the man recently made Assistant Manager of a 15-story residential hotel in New York, knew absolutely nothing about hotel work before taking the Lewis Course! YOU can do as well.

Thousands Make $2,500 to $10,000 a Year

The Lewis Schools have qualified thousands of men and women for $2,500 to $10,000 a year hotel jobs. Get into this delightful profession—earn $45 to $125 weekly! Learn in your spare time at home. Many students obtained well-paid hotel jobs *before* finishing the course!

Big Pay—Fine Living—Fascinating Work

America's 3rd Largest Industry offers many big advantages. Salaries are liberal, meals and apartments usually furnished FREE—advancement quick!

I Absolutely Contract to Teach You

in my home study course all that leading hotelmen know about the business. Age is no obstacle—previous experience unnecessary. A common school education is all you need. I put my students in touch with positions everywhere!

BE A HOTEL HOSTESS

Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for *you!*

Our Free book, "YOUR BIG OPPORTUNITY," tells about the wonderful opportunities open to you in this fascinating profession and explains how you can quickly become a high-salaried hotel executive. Registration in our Employment Bureau FREE of extra cost! Send for this big, FREE book TODAY!

Your complexion takes on the hue of health and your eyes sparkle.

For a Clear Eye – a Clear Skin

THE greatest beautifier is a clean system. Ridding the body of waste poisons and keeping it free, purifies the blood. Your complexion then takes on the hue of health, with a smoothness and softness that no amount of external applications can even approximate. Your eyes take on a lustre that reflects glowing health.

Paramels, mineral oil in caramel form, is a foe to constipation. Eaten with your meals, it mixes with the food and passes along with it. Never ahead. In the intestinal tract the food residues remain soft and pliable. Elimination becomes normal and easy.

The oil absorbs and carries away the poisons that give rise to such a host of ills. Irritated or inflamed membranes are soothed and healed.

Paramels are so convenient to carry with you. One is sufficient. They are agreeable to the taste, which makes them easy for anyone to take. They never nauseate you. Your Health Food Center carries Paramels together with the full line of Battle Creek Sanitarium Health Foods. Secure a package today.

Just write your name and address on the margin of this ad and mail it today for a copy of "Healthful Living." This 60 page illustrated booklet written by a leading nutrition expert, outlines with recipes the famous Battle Creek Diet System.

sands. There are more than two hundred leading corporations, such as United States Steel, Bethlehem Steel, the Pennsylvania Railroad, Standard Oil, and others, which collectively represent the very backbone of American industry, in which employees own a substantial stock interest. The public, which, after all, is the user of the products of these industries, is even a bigger stockholder; it reaps the bulk of the profits, taken as a whole.

"I have called business the science of making our newly acquired knowledge of nature useful to man. I believe also that when this science is practiced to promote the maximum public welfare, business is a profession and can have as high a professional standard as any other.

"And some such spirit as this must come in American business. The knowledge of nature which has given us material well-being and leisure, will not have achieved fundamentally a new civilization, unless it is accompanied by a new spirit in business itself. I doubt if a man can be one kind of man in his leisure and another kind of man in his business. Leisure will give us time to cultivate the art of living, give better opportunity for the development of the arts, enlarge the comforts and satisfactions of the mind and spirit, as material well-being feeds the comforts of the body."

HAVE YOU EVER GIVEN or attended a party that's been a flop? Sure, you have. But there should be no flops this coming winter where The American Magazine readers forgather. The reason: Next month's article on games. The contents of this article alone will start and keep any party going, no matter how ossified it has become and a further delving into the matter of games—nonsensical, skillful, and witty—will guarantee a non-flop season to all party givers.

The Elephant and the Donkey Take the Air

(*Continued from page 15*)

they've been movin' 'em around all mornin', and now I think they set 'em up in that little box," pointing to the glass cabinet for the microphones.

The politicians deferred in every way to the microphone, and in return radio gave them, literally, the ear of the nation. I have not yet had time to go through all the huge pile of mail which poured in on me from radio listeners after the conventions. But I have managed to get through enough of it to know the extent to which radio brought our great national political battle into the homes and haunts of the people:

At Hartford, loud speakers were installed in department stores and shoppers divided their attention between bargains in merchandise and bargains in candidates. In Nashville, Tennessee, loud speakers were set up in front of the radio studios and shops, and the crowds before them jammed the streets and blocked traffic. At Buffalo, ladies gave porch parties all

Digitized by Google Original from UNIVERSITY OF IOWA

over town, with their loud speakers furnishing the entertainment. The Cleveland baseball team carried a portable receiving set around with them, and kept in touch with both conventions. At Cleveland, Denver, Portland, Rochester, patients in hospitals were supplied with head sets. Crowds gathered around receiving sets in Cuba, the Canal Zone, Porto Rico, and in far-away British Columbia—one of the most English of all Canadian provinces—listening throughout the day to the story of the convention.

These are points I have heard from, but they reflect what went on all over the continent. Our hook-up was capable of reaching forty million people. I have no doubt it did.

In 1924 we served twenty-four stations. This time, we served forty-two stations at the Republican and forty-four at the Democratic Convention, not counting those in Canada and South America and Europe, which got the story on the short-wave transmitters.

BUT a lot of people didn't get a part of the Republican Convention during the third day. In the afternoon for two brief periods reception in certain large areas was completely cut off. That was a mystery for a long time. And few, I think, have ever heard the real explanation. Well, it was because the cable serving those sections was cut and sections of it stolen by a lot of small boys in the Middle West.

Which puts on the best show—the Democrats or the Republicans? You will have to answer that question yourself. But the Democrats usually put on the most expensive show. This year the Republican Convention cost $1.07 per second to broadcast. The Democratic Convention cost $1.15 per second to send out over the air. The bill of the National Broadcasting Company for doing this job was $180,000—$105,000 for the Democratic Convention and $75,000 for the Republicans. And it didn't cost either party anything. Our company bore the whole expense.

But one thing I can say, the Democratic Convention cost me less in blood and flesh than the one they held in Madison Square Garden in 1924. If anybody thinks radio announcing is easy work, let me recall that that convention lasted fifteen working days of six hours each, and that when it was over I had lost twenty-two pounds. I try to be neutral in these political broadcasts, but I notice I generally contribute more pounds to the Democrats. I don't exactly contribute it. They take it out of me.

One impression has crept in on my mind as I look back at the political gatherings I have broadcast in the past four years. It is that our national form of humor is the wise-crack. The American loves a wise-cracker and fairly devours the wise-crack. It is particularly noticeable at the conventions. It is found in the speeches, the slogans, the banners, the signs in and out of the convention halls and in the conversation of the delegates and visitors.

Some of the visitors thought a Kansas City mortician might be indulging in a little subtle wise-cracking in his sign. All the stores had big welcome signs. This undertaker had one, like all his neighbors. But he had the welcome sign suspended just below his business sign, so that the

two read "Caskets Made to Order. Welcome, G. O. P."

Now, under these circumstances it is natural that at both gatherings the delegates and crowds should have expended their most cordial welcomes on the man who is, I suppose, our champion wise-cracker. That is Will Rogers. Will simply can't help it. He gets paid large sums for telegraphing one wise-crack a day to newspapers, for writing articles for magazines and delivering lectures. He runs his wise-cracks, so to speak, through a meter. But for all that he can't resist passing them out to his friends free. During both conventions, every now and then Will would send me a little note. Whenever this happened there was tremendous curiosity to know what gag Will Rogers had pulled. At Kansas City there was an argument about the delegates from Texas. Someone made the point that there was no law in Texas governing Republican delegates. Will sent me a note to this point. It read:

> They are arguing about Republican delegates from Texas. They say there is no law about Republican delegates in Texas. Of course not. Texas never thought she would get so low she would have Republicans enough to have a law about. She has no law about icebergs, either.

At Kansas City, the day after the farmers staged their demonstration, Will sent me another note just after the prayer of the preacher. It read:

> That was a good prayer but it will take more than prayers to put those farmers back in good humor.

AT KANSAS CITY, Rogers was very much outraged because there were no hot dogs to be had in the convention hall. You might as well try, he said, to hold a convention without delegates. In fact, Rogers allowed, it would be a whole lot better to have no delegates and plenty of hot dogs. And so he actually served notice on Jesse Jones, who managed the Democratic Convention, that there had better be hot dogs within reach in the Houston hall.

I suppose they must have paid attention to Will's plaint, because when I got to the convention hall in Houston on the first day of the convention I found a violent argument in full swing because hot-dog venders were allowed inside but the hamburger-sandwich men were kept outside. The hamburger men were in a state of indignation and threatening to bolt the Democratic Party. Finally, a lady delegate came along. She heard the argument and promptly lined up with the hamburger brigade. She turned out to be something of a wise-cracker herself.

"Why let the hot dog in and keep the hamburger out?" she said. "What is the difference between them. Aren't hot dogs and hamburger brothers 'under the skin'?"

But her wit availed the hamburger men nothing. They were kept out. But Will Rogers had hot dogs.

The farmer parade at Kansas City caused a lot of speculation and a lot of joking. I saw one detachment of the protesting farmers arrive. They came in flivvers. They had evidently come over very bad and very muddy roads, for their flivvers were covered with muck. A delegate, looking at the dusty and begrimed cavalcade, said: "Well, I'll say this for them: They're real dirt farmers anyhow."

Whether the parading farmers were real

Digitized by Google Original from UNIVERSITY OF IOWA

ones or just political farmers was a source of constant discussion. The first night of the convention I saw a small detachment of them parading along the street with hoes on their shoulders like pike staffs.

"Some of them fellers look like ringers to me," observed a man at my elbow.

Just at that moment the parade turned and marched into a large hotel.

"Come along with me," he said, "and I'll tell if they're real farmers in a jiffy."

I followed him into the hotel lobby. There was the parade moving militantly across the floor.

"Naw, sir," said my companion, with some disgust. "They ain't no farmers in that bunch. You never saw a farmer carry a hoe into a house. It's bad luck and no real farmer would do it."

On another occasion Chairman Moses had difficulty quelling a demonstration for one of the minor candidates for the Presidential nomination. The galleries were particularly noisy and finally, after much pounding and threatening to empty the galleries, Senator Moses succeeded in bringing the convention out of confusion and restoring order. A delegate in the front row piped up: "Well, Moses has brought us out of the wilderness." Another one shouted back: "That's right. Now let him show us the promised land."

THERE was one other impression I got from both these conventions: It is that the delegates simply love the mystery that hangs over them, and delight to think that behind the scenes deep and even dark intrigues are in progress and that, off in the shadows, men of preternatural shrewdness pull the wires. Every little thing that happens is given a tremendous significance. If a man like Secretary Mellon, for instance, so much as frowns, everyone immediately interprets it as the signal for some move of startling subtlety.

Most readers will remember that Senator Fess when making his keynote speech at the Republican Convention praised the deeds of all the great Republican Presidents, but left out all mention of Roosevelt. It might never have been noticed, but some Bull Mooser present yelled out, "How about Teddy?" Unfortunately, Senator Fess didn't hear this. But others did, and soon everybody was asking why Fess had left out Roosevelt. Next day all sorts of weird stories were built on this simple omission.

At the following session the senator announced that the omission was due to a slip of his memory, and then read the paragraph in his speech referring to Roosevelt. Here is why the paragraph slipped his memory: All the photographers and movie camera men were set to take pictures of the senator delivering his keynote address. They were ranged around like a battalion of machine gunners waiting for the great Klieg lights to be turned on. Just as Senator Fess reached the Roosevelt paragraph, there was a boom of flashlights and a deafening hiss of the great Kliegs brought into action. The camera men "shot" the startled orator. But when they got through they had shot a whole paragraph out of his mind.

Another thing which caused endless whispering was the attitude of President Coolidge. Would he take the nomination? Did he really mean to run again. Then came the dramatic announcements of

Makes Life Sweeter

Because of the way we live today, the things we eat, few are entirely free from acidosis. To help the system keep sound and sweet, take Phillips Milk of Magnesia.

Does a hearty meal give you an uncomfortable sense of fullness? Do rich foods disagree, or bring on sour stomach? Don't suffer, and don't diet. Try this universal sweetener that every physician endorses; that the public has found so helpful. It is a gentle corrective that every stomach needs at times; whenever a coated tongue, fetid breath, and acrid skin tells you the system needs sweetening.

Phillips is the genuine, prescriptional product; physicians endorse; the name is important.

Mellon and Butler for Hoover, and everyone knew Coolidge was out of it. But what had happened? What had Coolidge said to his friends? I cannot answer that question authoritatively. But I was pretty close to the place where things were being managed and I heard a lot not for publication. I give this therefore for what it is worth: The President sent word that his name was not to be voted on, and that he hoped *he would not have to issue another statement from the White House.*

One other thing I must mention. And that was the eagerness of delegates to get themselves into what we might call "the microphone picture" of the convention. Not only the obscure ones but a good many of very great importance wanted to be sure that the "folks back home" got a little peek at them over the air. At each convention at least one hundred and fifty persons must have come to me and asked for aid in uttering or shouting a few words, or just a word, through the radio. At Kansas City a very distinguished-looking man came to me the day before the convention.

"I am the chairman of the delegation from the state of———," he said. "Now, my seat is right over there—not so far from the microphone. I would like to ask if a man with a pretty husky voice could make himself heard over the radio at that point if he were to shout very loud."

I told him I thought he might. And during the convention I'll tell the world he gave as fine an exhibition of "loud shouting" as I ever heard.

Another man did the same thing: He would come as close to the mike as possible and shout—"Yaa-hoo!" And if the folks back home didn't hear him, they were the only ones who didn't. One man at Houston made a compact with his wife that when the convention got under way he would announce his presence to her by blowing a very shrill whistle. True to his promise, he chose a moment of almost absolute silence, after the prayer. Suddenly the delegate's whistle shrieked shrilly over the convention hall. There was a sudden rush of armed Texas Rangers to the spot and a great commotion, which gathered intensity and size each moment until something approaching a panic reigned around the startled delegate. Finally the man had to explain very meekly that he was merely sending a little "hello" home to his wife. And he continued to do it for the rest of the convention.

AT KANSAS CITY some of the delegates soon discovered a very effective way of getting themselves heard over the radio. It came on the balloting. All they had to do was to demand a roll call. Then the clerk would have to call their names, and they would have to answer in voting, and all this went out over the air. When the Georgia delegation was reached on the vote for the Presidency, a poll of the delegates was demanded.

The clerk began calling the names. The delegates, it soon appeared, were almost all black. Their names were impressive and well flavored from history—Jacksons and Washingtons. As each name was called the owner would rise and shout "H—O—O—V—A—H." Finally, the clerk called a name which sounded like George Washington Johnson. A very dark man rose, and in a voice that boomed out over the great hall and roared through the mike over the air and back over the fields of Georgia, he cried, "I votes NO."

THERE was one young man I permitted to get in a word over the radio. The first ballot at Houston was just about finished. It was late at night—to the listeners-in in the East it was early morning. Governor Smith lacked just a few votes of the necessary two thirds. The convention was in an uproar as delegates everywhere were clamoring for recognition to be the first to change their votes, and thus cast the deciding ballots for the New York governor. The air was electric with excitement.

Suddenly I became aware of someone behind me in the booth. I looked around and saw Eddie Dowling, the famous musical-comedy star. With him was a very young man about eighteen years old. His face was flushed, his eyes asparkle; he was tremendously excited, but holding himself with youthful dignity in check.

"Mac," said Eddie Dowling, "this is Arthur Smith, the son of the governor. He wants to be the first to congratulate his father." At that moment, doubtless half the population of America was listening in on this event. The name of Smith was in every mind. It was the supreme dramatic moment in that lad's life. And his heart had turned naturally to the home, two thousand miles away in Albany, where his dad sat listening to this clamor.

So I cautioned him to be calm and then introduced him for a brief word. And in a very manly, reserved way, with his excitement held down fast, he sent over the air a word of greeting to his father. Later that night, when the convention had adjourned, while all the exits were black with the crowds filing out, with all the seats vacant, a messenger handed me a telegram. It was a wire from Governor Smith. It thanked me for this little act, and expressed his appreciation of the whole broadcast, which had enabled him to follow the story of his nomination. A few days later I got a letter from him further amplifying his appreciation.

More and more, all the scenes in this great political drama of electing a President are coming to be important chiefly for the vast audience which listens-in over the air. This drama as at present arranged, and all its scenes, has been worked up over many decades for presentation to a single audience in a single building. Now that the audience is spread over the whole Union, it seems to me there are going to be some changes in the program.

And now, as I began this article with a prophecy, I will end it with one. It is this: That four years from now, we shall see some very extensive changes in the scenarios of the national conventions, and they will be made principally to meet the tastes and hold the attention of the great radio audience.

"WOMEN," says CLARENCE BUDINGTON KELLAND, "are either spendthrifts or tightwads!" . . . "Mr. Kelland doesn't know what he is talking about!" answers EMILY POST. It is a hot argument. It is in next month's magazine, and a good time will be had by all who read it!

Two I Love

(*Continued from page 33*)

fences, lamps lighted in windows of little houses, shadows of trees falling over them. Troona began to shiver, Jim put her coat, which he had been carrying, around her.

"You'll have to have a diamond wedding ring, Mrs. Randis," he said, and smiled down at her, young, slender—her head bare—her hair blowing against his sleeve.

That night at one o'clock, Hanson's grocery boy pounded on Granny Randis's door. Tod Buckles was dying. He wanted Jim. And then Granny found out Jim wasn't there! His bed was just as she'd left it for night—covers turned down, lamp lit, old Scotty on the floor, his nose over Jim's slippers—but Jim hadn't come home!

Granny didn't know what to do. Didn't know what could have happened that he hadn't come!

Then, from Jim's room, Scotty began to whine—soft, eager barks, and they heard Jim coming up the walk, whistling under his breath—quick striding steps.

SO JIM went back with Hanson's boy to Tod, stayed there while night slipped into dawn, held Tod's hand, wet his lips, shouted everything he wanted to know: Was there any heaven? Something—yes—somewhere! Didn't he think Peddlety's onion puller was a consarned fraud? Well, no. Peddlety pulled his own onions with it all right. Was it forty years Hanson's store had been goin'? Yes—forty-one Wa'n't it sunrise yet? Turn his bed around to sunrise. Who's comin'? Minister? What's Bascom comin' *here* for!

When Jim left Tod's, he went over to the pool hall, where two or three of the boys were waiting to hear about Tod, and from there he was starting on home when he heard wheels on the road by Hanson's store, heard the whinny of frightened horses as cruel hands jerked the bits, heard the chain of the hitch rack, a team being tied behind the store, and he knew Furm Peterson had found that Troona was gone!

Jim stood there till Peterson came out past Hanson's—ragged coat, brutal hands. The street was empty, only for Peterson and Jim Randis there in the flush of dawn. Jim walked out in the street toward the big Norwegian, whose body grew tense as Randis came closer.

"Peterson, if you're looking for Troona," Jim said, "I married Troona last night; and she's nothing more to *you*. If you want to know why you happened to meet me here, I'll tell you I've just been with Tod Buckles while he—died."

Furmil stood as if his senses had left him.

"Tod made a will a week ago before Judge Dawson"—Jim took a cigarette out of his case, lit it slowly—"and he left his little debts, his little credits, and his farm—to me."

Peterson's fists dropped open, his knees seemed to sag.

"I don't want any difficulty between—father and son," Jim went on, in his eyes irony perhaps, triumph perhaps. "So I hired a man about an hour ago to work the place and—well, to keep you there till you pay the back rent, Furm."

Soft Gums *need more than* nice flavor

This sterilized powder puts *results* ahead of taste . . . .

DESPITE faithful brushing with flavored pastes, gum troubles are steadily on the increase. Soft, easily-irritated gums need a dentifrice that concentrates on *results* instead of taste. Pyrozide Powder has been doing this for twenty-two years. Today, largely on dentists' prescriptions, more people than ever before are turning to it for gum protection.

Pyrozide Powder is not flavored. It contains *only* those ingredients that dental clinics have proved the most effective gum-stimulating and tooth-cleansing agents. It is medicated with Dentinol, used by dentists to promote gum healing.

The distinctive taste of Pyrozide comes from its Dentinol medication. This scientifically compounded powder allays irritated gums and aids in making soft gums firm and resistant. It keeps the teeth clean and white—removes the daily secretion of salivary deposits that harden and form tartar.

Use Pyrozide Powder at least once a day in place of your customary paste. Note the improvement in the condition of your gums. The economical dollar package contains six months' supply. At all drug stores.

Free sample sent on request.

The Dentinol & Pyrozide Co., Sole Distributors, 1472 Broadway, New York City.

He Tried Home-Study Training

In Seven Years It Multiplied His Yearly Income Seven-fold

Seems too good to be true—that a man can double his income just by devoting a few spare hours each week to home-study training—

"But—maybe it *is* true," said B. J. Mertz—*and within seven years home-study training had increased his yearly income better than 700 per cent!*

Mertz was principal of a rural high-school in Texas, at $80 a month, when the idea came to him to enroll with LaSalle for training in Higher Accountancy.

Upon completing the course, he first took a place as Assistant Bookkeeper, in Chicago—then joined a firm of Certified Public Accountants, chiefly to get experience. Then he became Office Manager and Acting Secretary of a foundry in southern Ohio. *Already—in only four years—his salary had increased 500 per cent.*

Today, he is Comptroller of the Buckeye Union Casualty Company, Jackson, Ohio, and in addition conducts a private accounting practice which brings him back the entire cost of his training every month in the year.

You Have the Same Good Opportunity

Why not resolve just to *double* your salary? Get the training—grasp your opportunities—and the future will take care of itself!

Two books placed B. J. Mertz on the path to greater earning power. They are "Ten Years' Promotion in One"—and "Accountancy, the Profession that Pays." LaSalle will send them to you *free.*

Your biggest opportunity is as near you as the point of your pencil. If you are determined to make progress, clip and mail the coupon NOW!

—Find Yourself Through LaSalle!—

Successful manufacturer teaches secrets of candy making in your spare time and shows how to quickly sell your candy at a big profit! Practically no capital required. We furnish tools. Write for fascinating FREE book.

Capitol Candy School

DEP'T. AG-327 WASHINGTON, D.C.

In the pool-hall window a hanging lamp, still lighted, shone pale against daylight. The door was open.

"Dave!" Jim called.

A man came out, a little heavier, a little shaggier than Peterson. Dave Evans—the big fellow the deputy swore in to hunt road robbers, ugly jobs like that.

"Dave, here's Peterson," Jim said. "You can go on out with him now."

The man who was Dave pulled a shapeless hat over his eyes, sauntered across the road to Peterson's team, rubbed their noses with a dirty hand as they shied away, and came leading them out.

Suddenly Peterson stiffened, swung his fist straight at Jim's face—drove a blow against his chest! Dave plunged at Peterson, caught his arm above his head, locked it behind him, shoved him against the buggy wheel, and heaved him—stumbled him into the seat!

"Are y' all right, Jimmy?" big Evans asked, squinting back over his shoulder at Jim, an arm's length from the buggy.

"Sure," Jim told him, wiping a trickle of blood from his face; and while the trees, pale with sunlight, turned from pink and lavender into blue, Jim watched that team go out on the road west, Peterson slumped in the seat like a lump of old clothes.

Old Tod! Poor old groping eyes. In pitiful gratitude, leaving all he had to pay for just the bare charity of kindness! Jim reached in his pocket for a handkerchief. On his cheek that splotch of blood was mixed with tears.

And out of his pocket with his handkerchief he also brought a crumpled sheet of paper. He read it there in the soft, pale light of morning—

. . . Be it known that I, Ansel Dawson, Justice of the Peace, have this day, by virtue of the power vested in me, united in marriage, James Robert Randis and Troona Mary Peterson, according to the laws of the state and—

THE old men in the store didn't know what to say about Tod and Jim and Troona and Peterson.

Overwhelmed, they wore their good clothes and talked in whispers for a week after Tod was gone.

The first time they saw Peterson after the farm belonged to Jim, he came in the store, sullen, ugly, looking at no one, striding to the scales with a side of bacon, Dave strolling after him.

"Get a sack a' corn meal, Furm, and fetch it to the wagon," Dave drawled, "and a barrel a' salt cod."

The store was as silent as though the old men had been puppets!

When Jim Randis would come in, they would be silent too. It seemed to make a silence for all of them that there was no longer anyone for Jim to shout at. They wanted to ask about Troona. No one had seen her. Nobody knew what Jim had done with her. But, somehow, nobody asked him. Not even Ansel Dawson.

Jim seemed different these days, came in—went out—went back to old Scotty, didn't go to the pool hall any more, didn't sit at Hanson's, seemed to have something on his hands beyond just Scarville and one day after another.

When a couple of weeks had gone by, the old men began to weigh and speculate. Where was Troona? What had happened? Some day Peterson would come in raving crazy and kill them all! What was Jim Randis trying to do? He'd said he was going to get everything Peterson had. He'd got Troona—he'd got the farm. What was he after now?

One Monday, Ollie Jensen came in and said Peterson was plowing his southwest forty, grubbing stumps out, setting out a new fence. Jensen said he had gone to Peterson's to drive back a hog that had got away, and had found Dave and Peterson in the barn, Peterson shouting that he wouldn't do what Dave told him, Dave chewing tobacco, leaning against the oat bin, Peterson raging till veins stood out on his head like lines marked there, shouting himself crazy and blind with defiance. Then Dave had quietly knocked him down, knocked him down again, and down again, and now Peterson was plowing the southwest forty.

ONE day while Peterson and Dave were plowing, Jim Randis took Dave's wife out to clean the farmhouse. In a box in a closet he found Troona's clothes—coarse things made with uneven stitches, thick, cheap, cotton dresses, still rounded with the curves of her shoulders and elbows. He unfolded them awkwardly, touched them as though they might still be Troona. Troona seemed to be watching him, looking at him from everywhere—pale flower against those sullen walls. He could feel her fingers, cold, frightened, in his. Her lips would have been like that if he had kissed her. And he *could* have kissed her . . .

. . . have this day by virtue of the powers vested in me, united in marriage James Robert Randis and Troona Mary Peterson. . . ."

Then, under Peterson's mattress, Jim found a dirty canvas pocket with fifty—sixty—a hundred—a hundred and thirty dollars in it!

"Tell Dave to bring Peterson to town in the morning," he told Mrs. Evans.

The Reverend Mr. Bascom still was praying, pleading, for shingles for the church. Rain had dripped through and swollen the windows, warped the benches, streaked the walls.

With Dave and Furm Peterson, Jim Randis went the next morning to Mr. Bascom's house, and in the little parsonage parlor, while Peterson's face worked with rage till the roots of his hair were crimson, Jim told Mr. Bascom that Furm Peterson would pay for the shingles of the church. Jim put the money into Bascom's hands. Mr. Bascom didn't know what to do—didn't seem to dare let the money stay in his fingers!

"Gentlemen," he said, "I can scarcely—this is really—the Lord has—"

Furmil Peterson's jaws were set like steel, his eyes seemed red with the fury that looked out of them.

"And Mr. Peterson will put the shingles on the roof," Jim said.

It seemed the four walls of that little house would burst with the passion of Peterson—his presence!

"Shall we—shall we go out and look at the roof, Mr. Randis?" the minister ventured, high, nervous voice.

Mr. Bascom and Dave and Peterson and Jim Randis measured the church roof.

September was white-hot. Ruffles of wavering air lifted out of roads and roofs. On the church, Furmil Peterson lapped

shingles one over the other, striding the ridge like a powerful creature above a helpless victim. Furiously, fiercely, he bent his thick shoulders down, brought his brutal hands down. Sweating, swearing, he thundered on, the sun soaking his clothes, streaking dirt down his face, while below in the shade, on the nail keg, Dave would sit with a chew of tobacco in one side of his mouth.

At first, nobody dared come by, remembering Peterson's hands at the bits of his horses, remembering the years of his cursing and bullying—no one dared come along where he crouched on the roof, iron hammer in hand. But then they began to see the vagary of Furm Peterson's roofing the church, Furm Peterson slaving, sweating in a gift to the Lord, and the old men from the store began to wander up and watch and chuckle. Members of the church began to come and carry away the old shingles for kindling; farmers began to take that road into town.

The last day of September, Peterson worked after dark and finished, Dave sitting on the roof holding the lantern.

"Well, I hate to talk soft, Furm," Dave said; "but I got to say I never seen a prettier job a' shinglin' than this here!"

Furm mumbled something, brought the hammer down like it would crash the roof. Mr. Bascom was waiting at the church door trying not to be afraid to say what he had come to say.

"Mr. Peterson, I cannot express the—"

Peterson strode past him to the water bucket, ignored the words, ignored the moment.

"IN TOMORROW night's prayer meeting," Mr. Bascom went on, voice high and nervous, "we wish to give a special service of praise for you, Mr. Peterson. Will you come at the usual hour, and—?"

"No," Peterson said shortly.

Dave spit out his cud of tobacco behind the minister's back.

"What time does th' gatherin' take place, Reverend?" he asked, removing his hat, holding it over two fingers. "I ain't versed on the hour of prayer meetin' exactly."

"Seven o'clock, Mr. Evans," Mr. Bascom said, his voice almost a whisper.

"He'll be there, Reverend," Dave grinned.

The old men who sat around Hanson's hadn't been to church for fifty years. At seven the next evening, when they creaked down to the brown oak front pew, they had to look sideways to find out if their hats should be off or on! Every seat in church was full. Extra chairs were full. The choir was full. Dave Evans, cleaned up somewhat, hair combed, no chewing tobacco, sat with Peterson and heard a sermon of example to other men. Members of the congregation rose with nervous praising words for Brother Peterson, men Furm had fought with and cursed and bullied all his life.

They gave him a song book. Dave didn't know anything about a tune, but he could read, so he sang, booming across the whole side of the church, grinning sideways at Furmil.

After the meeting, everyone came up to shake hands with Peterson, who stood there, foreign and rebellious to all of it, answering nothing, looking at no one!

Mrs. Quincy, who led the choir, came

310 Fifth St. Hoboken, N. J.

and put her hand out in such a way that he had to take it.

"You have done a wonderful thing, Mr. Peterson," she said, looking up at him with a nervous birdlike chirp—"you have done—why, Mr. *Peterson!*" She opened his hand and held the palm upside down on her own. "Why, your hand is *cut* and *blistered!*"—her voice that sharp, soft concern of a woman. "It must be bandaged! Martha, run over to your house for warm water and salve and a bandage for Mr. Peterson! It must pain *terribly!* Oh, it's so wonderful what you did for the church! The roof is wonderful! Oh, Mrs. Bascom, just look at this poor hand! Mrs. Tibbetts, see Mr. Peterson's poor hand! Where's Lucy Briggs? She knows exactly what to do! Mr. Shanks, open this box of salve, will you? There, that's soothing, isn't it? How many shingles does a roof take? Sixteen *thousand!* Oh, Mr. Peterson! And you nailed sixteen thousand shingles all alone! Susie, hold Mr. Peterson's fingers while I put on the salve and the bandage! Sixteen thousand shingles! Oh, Mr. Peterson!"

It was ten-thirty when they got back to the farm.

"Well, ain't *you* the hero," Dave chuckled, cackling like an old woman. "Want me to cut them rags off your hand?"

"No," Peterson said.

THURSDAY, Dave and Peterson went to town.

"Well, boys, here comes Deacon Peterson," Seth announced. "Get out the song books! Must be Furren Mission meetin' today. Furm's in town."

Peterson stopped half way to the back of the store—faced Seth, his chin thrust forward.

"If you've got any damn thing to say, you can—"

Facing the door, his hands threatening, he suddenly stopped in the middle of his words, let go his strained muscles and turned back to the counter, as in Hanson's front door came Mr. Bascom and Mrs. Quincy and Lucy Briggs—rustle of fresh gingham.

"Lucy, I a'ways think peas and lamb are—Oh, Lucy, here's Mr. Peterson! Oh, Mr. Peterson let me see your hand! Did you keep the bandage on exactly as I told you? Doesn't the church look wonderful in the bright sunlight, Mr. Peterson?"

Furmil took off his hat with his left hand as Mrs. Quincy reached for his right.

"Yes, ma'am," he said.

And that afternoon there was somebody new in Scarville—Furmil Peterson. People spoke to him on the street, the editor of the Scarville "Eagle" called him to read what the paper said about him. The children who passed him would look up with a shy, "How-do, Mr. Peterson."

Mr. Tibbetts kept the hardware store. Peterson went to buy a scythe. Tibbetts slapped him on the back, and said he was just the man they wanted to see. Mrs. Tibbetts had sent down a pan of baked beans, and apple cake and brown bread to give Mr. Peterson!

Who can live in the world for himself? No one can. The weeds in the other man's field seed on your ground, your weeds seed on his. Scarville was new to Peterson, because Peterson was new to Scarville. He told Mr. Tibbetts, when he came to town again, he would bring him a slab of the best bacon in Caul County!

When Dave and Furmil got back to the farm, Jim Randis was there with a clothes basket on the ground by the door. Dave looked in to see what it was. Five spaniel pups on an old piece of blanket were tangled together, rooting against each other, blind eyes, tiny, quivering tails.

"They haven't any mother, Dave," Jim said. "They've got to learn to drink milk. I brought them out for you and Furm to take care of."

So that night at twelve o'clock Dave shouted Furmil Peterson awake, to get up and warm milk for five whimpering dogs. They could have all been choked to death or crippled with one grip of Peterson's hand; but Dave kept them back of his own bed, watched every move Furm made while he fed them, watched them cling to his fingers, push against his hands.

Six times every day the next two weeks, and once every night, Furm Peterson fed those weak, tiny things. One night, one of them got hold of his ear and wouldn't let go. He laughed out loud.

"Dave, call off this dawg," he said.

One afternoon Jim came out with mail. Two letters for Dave, one for Furm. He heard them in the barn mending harness.

"Yes, I oughta been a sailor," Dave was saying. There's nothin' I love like ships."

"Homesteadin's what I want," Peterson said. "Land for hogs and cattle."

"Say," Dave broke in, "I forgot to tell ya' this mornin' I seen the rye comin' up on that forty we plowed!"

"Comin' even?" Peterson asked.

Then they saw Jim standing in the door.

"I brought some mail out," he said. "It's in the house."

Furm went after it. Two letters for Dave Evans, one for Furmil Peterson, and in the one for Furmil Peterson was a check for two thousand dollars! Furm stared at it—stared at the letter pinned under it . . . coal mine stock he'd given up for worthless, ten years before!

And then under *Dave's* letters, Furm Peterson saw a letter that belonged neither to himself nor to Dave—a letter that Jim Randis must have put down with the others by mistake—a letter addressed in Jim's writing, stamped, sealed, and ready to mail.

To
Mrs. James Randis
Blue Ridge Villa,
Maze, Virginia.

PETERSON went back to the barn. "Randis," he said, "at the bank in town this afternoon, I'll pay up all I owe you."

Jim looked up in quick surprise, then saw the check in Peterson's hand.

"All right, Furm," he said. "Will you stay on the place—or leave?"

Peterson looked out along the plowed southwest forty, covered with an almost invisible net of green, looked down by the cottonwood stumps to a weathered row of tombstones—his brother, two infant sons, his wife.

"I'll . . . stay," he said.

Dave and Furm and Jim drove to town, and at the bank Furm paid Randis eleven hundred and ninety dollars, and drove back to the farm—alone.

Two days later Jim went to Ansel Daw-

MURINE FOR YOUR EYES

Your Church Society—

CAN EASILY RAISE BIG MONEY

The Crowell Church Service Bureau's dignified, pleasant, fund-raising plan for churches and church organizations has been adopted and successfully carried out by over 1000 churches of all denominations.

To meet unexpected church expenses, you need not ask for donations, or spend tedious hours rehearsing or selling tickets for entertainments.

Let us show you how a large number of other church organizations are swelling their treasuries by introducing THE AMERICAN MAGAZINE and other Crowell publications in the community.

Full details furnished without cost or obligation. WRITE TODAY.

250 Park Avenue New York, N. Y.

son. "I'll be going away soon, Judge," he said. "I want to have the farm deeded to Troona. I want a new house built and the place made right for her."

Dawson pushed the ink bottle against the rim of his desk, tipped his chair back and looked at Jim from under shaggy brows. "Jim," he said, "if you're goin' away why ain't your wife goin' with you? Why ain't she with you now?"

"I'm going to free her," Jim said, standing at the window, looking out at the yellow drowse of Main Street. "That we married is nobody's concern but hers and mine."

The judge sat there in that little office, studying the handsome fellow by the dingy window.

"Jim, there ain't many girls as good as Troona," he said slowly. "She ain't beautiful maybe, but—"

"Yes, she's beautiful," Jim interrupted; "she wears white chiffon—her arms full of red roses—she's marvelous. She's—" He seemed suddenly aware that he was *talking*, not *thinking*. He faced around from the window.

"I want the deed made out in her name," he said abruptly.

THAT night Jim Randis asked Dave to drive him in the car from the livery stable to take Peterson the blue prints for a new house.

He left Dave in the road and went up to where a light shone out around the open door—went up and looked in, and what he saw was Furm Peterson, his lap full of tumbling little dogs, one tucked in his vest, one clinging against his neck. He was feeding them warm milk, laughing, talking out loud to them.

Jim stood there a minute, lazy eyes, lazy smile—then he went back to the road and put the blue prints in the mail box.

"Didn't go in, Dave," he said. "There's nothing more to see Furm about. I've got what I came back to Scarville for. I'll let him build the house the way he wants it, and I'll leave—tomorrow."

Dave stretched shambling arms along the door of the car.

"Say, what you been tryin' to do around here?" he asked, looking at Jim with half-shut eyes.

Furm Peterson had heard them, had come down the lane in the shadows, stopped back in the darkness, where Jim, in the circle of the headlight from the car, couldn't see him or hear him.

"Well, Dave," Jim said, standing with his hat in his hand, thick dark hair brushed back from his forehead, "Once Furm Peterson did a brutal thing I knew I'd never forget till I paid him. I told him that some day I'd get everything he had! I came back to Scarville to keep my word, and I've done it. I've got everything he had—that's all!"

"Got what!" Dave said—hoarse vagabond voice. "You're treatin' Furm Peterson like a piece a' royalty!"

"Dave," Jim said, and smiled a little, "don't you know Furm Peterson didn't have anything to *get* but meanness and brutality and selfishness? Haven't I got them all?"

Dave stared at Jim—then he worked his mouth into a grin—pulled a dirty calico handkerchief out of his pocket and mopped his neck inside his open shirt.

"Well, I'm damned!" he chuckled.

Helmet and Armor Gloves of the 14th Century

If You Were Making It

HOW would *you* make a vault to *positively* protect the remains of one of your loved ones?

First, you would plan it according to the immutable law of nature that water can not rise inside an inverted vessel.

Then, you would want material that would not allow water to seep through. Therefore, you would use metal.

To insure rust-resistance you would select Keystone Copper Steel or Armco Ingot Iron.

And in making the vault, only double-welding of the seams would satisfy you. You would use oxy-acetylene on the outside, and electric on the inside.

Finally, in the finer grade you would have it plated with pure cadmium, and for the very finest you would use indestructible Solid Copper 10 gauge.

And you would test the vault by submerging it under thousands of pounds of water before finishing.

All of these things are done for you in the Clark Grave Vault. That is why leading funeral directors recommend it.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT CO.

A FIFTY-YARD dash down the sideline to a touchdown! The game is won! You can be the lucky chap to do this in football togs and with a dandy pigskin ball that cost you nothing.

Here's How!

We need a boy in your neighborhood to deliver The American Magazine, Woman's Home Companion and Collier's, The National Weekly, to regular customers. You need no experience—we teach you how—and it takes only a small part of your spare time. You can earn your own spending money and many dandy prizes.

Just Mail the Coupon Now!

You can be the first boy in your neighborhood to start if you mail the coupon today. Fill in your name and address and put it in an envelope. We will send you all necessary supplies and our Big Book of Prizes.

"Who'd a-done a thing like that fer a buzzard like him!"

Down the road a yellow harvest moon was like a lantern above the horizon.

"I DIDN'T do it for Peterson, Dave," Jim said, "I did it for two I love—Troona and a collie dog!"

Dave stopped laughing—looked at Jim oddly.

"What d' *you* care fer Troona?" he said. "All you wanted Troona fer was to hog-tie her pa! Ain't you figurin' right now how to get out and leave her?"

Jim turned to Dave, his voice steady, his eyes serious.

"Dave, I live in Brazil," he said. "I own a coffee plantation—I'm—I'm rich enough to give Troona everything she wants. Night and day I think of what will make her happy—so I'm going to free her. She trusted me, married me because I told her I'd save her from her father. I'd be a dog to hold her—and I won't; but I—I worship her, Dave! Peterson could have killed me that night before I'd have left her here!"

Dave came across to Jim so close their eyes met in the dark.

"Jim," he said, "what are you talkin' about, lovin' her when you don't even know where she's at!"

"Of course I know where she is, Dave," Jim answered. "She's in Virginia. Those days I was gone, while Furm shingled the church, I went to see her. She's wonderful. The night she married me, I sent her to my partner there. I had his wife buy her everything—I wanted her to learn to be happy. I'll take care of her always, but I won't keep her bound to me because of that once when she trusted me. I'll go back to the plantation, and she can stay in Virginia or come here or—"

"Jim, she ain't *in* Virginia," Dave said with that dry little chuckle. "Day before yesterday Furm sent her a telegram to come back. She's standin' three feet behind you with her pa!"

HER hair was pinned around her head, her dress so sheer and white it seemed almost part of the moonlight. Her hand was in her father's, her head touching his shoulder.

"Troona," Jim said, "Why—Troona!" He couldn't believe it! He didn't know what to say to her!

"Jim," she said, coming toward him, "if you wanted me that night because you loved me, don't you know that's why I wanted you too? Don't you know—"

Suddenly she was in his arms, and he *did* know.

"Have a chaw, Furm," Dave said.

Furmil Peterson didn't chew tobacco; but he took Dave's plug and bit off a chunk to get his face out of sight—such a hulk to have tears in his eyes!

Freedom means nothing to the free. Only to those who have been in prison.

Are You Asking Too Much of Life?

(*Continued from page 40*)

a capital method of expression; that it is the steam in the cylinder that turns the wheels, not that which is blown through the whistle. He asks me how I compare Macaulay with John Richard Green, and why Browning should be repudiated by the latest coterie of Intellectuals.

Such men as this one do not expect the prizes of honest striving to drop unbidden at their feet, and are not at odds with God and the universe because occasionally they draw a blank. They do not, in a phrase, ask too much of this life we live, which, when it is fretfully quizzed rather than earnestly addressed, usually grants us so little.

If correspondents of the opposite kind would but reflect that imagination only retains its vitality by being related with what is actual and operative around them, they would spare themselves and their friends much complaint and unhappiness.

Many of the letters I receive are unhappy ones from souls who sometimes seem to hug their griefs to keep them warm. None may speak to them of comfort, for they talk of graves, worms, and epitaphs, and inscribe sorrow across the front of everything. Naturally, a correspondence column is the Mecca to which these pilgrims of the doleful road repair. There they deposit their wrongs, soured loves, ardent hates, and the cynicism that blisters the cynic. Yet, side by side with these bewildering results of expecting too much from life are stimulating examples of sacrificial people who challenge life and find it good at the core. They count their benefits and discount their hardships.

The messages these correspondents transmit to me are as refreshing as a perfect day in June. They have that vision of the unseen which relates it to the seen, and enables them to utilize its stabilizing forces for society.

IT IS needless to observe that many are curious to learn the chief impressions derived by me from my contacts with my correspondents. They are curious to know, too, the conclusions I have drawn. They are as numerous as the types producing them, but the one that predominates over all others is what, for the want of a better term, I shall call the Mismanagement of Desire.

Most of us, at some time or other, have looked before and after, and sighed for what is not. Grown-ups, as well as children, cry for things as unattainable as the moon. This may explain why Buddha, the Hindu sage and teacher, was shrewd enough to make absolute extermination of *desire* his primary condition of discipleship. Thus, at a single stroke, he eliminated the chronic cause of most of life's discontents and conflicts.

What, then, is essential to a victorious outcome to this life we live?

First, that we analyze whatever disturbs or disables us in living a full and useful life.

Perhaps you wonder why we as a people reveal a tendency toward self-expression which at times becomes bombastic, whereas otherwise we are as reasonable as mealtime. Allow me to indicate two contributory causes to the American propensity for ask-

ing too much of life: The first is embedded in our traditions as a people. The second springs from self-aggrandizement. We have been trained to think in superlatives, to scout the improbable, even the impossible, and to cry: "It shall be done!"

Why not? Americans are the chosen race of this age. They do not have to harbor the exclusive castes and privileged groups which time sanctions in older countries. Every native-born baby boy is a potential President of this republic, and every baby girl may yet marry the heir to aristocracy or wealth.

The nation's far-flung territory, its geographical detachment, its abundant resources, its amazingly fortunate history, its rapid growth in population, in possessions and in world power, foster in our citizens that bold positivism which astonishes foreigners. They comment freely on our unalterable belief in ourselves, and hint that we have not heeded the sound of the stream of tears and blood which falls darkly through the shadows of their own complicated life.

Well, granting the plea of the joyous one-hundred-percenter that we have the finest, freest, richest, biggest, broadest, and best of everything conceivable, it follows logically that many live, move, and have their being in a wonderland of dream and vision. This idealism is profitable when it is kept within bounds. It spells the difference between Tibet's stagnation and Chicago's hustle. It helps to create the dynamics as well as the mechanics of the period; the buoyancy, the freshness, and the vigor for which we Americans are notable the world over.

BUT there is another side of the burnished shield. More haste can be worse speed; and in the rush for the front many are pushed off the track altogether. In the hurry to get there, wherever "there" may be, wrong demands frequently are made on life. The dismay, the confusion, the back-tracking can be traced to our fatal knack of asking too much of life at the very start.

This assertion holds equally true of religion. "Two men I despise," said Mahomet: "the fool in his devotions and the atheist in his blasphemies"—and our United States, it would seem, produces both in some quantity. Religion, rightly interpreted, is the cement of society; but we know to our sorrow that it can be thwarted by bigotry, corrupted by superstition, and degraded by needless divisions.

Twenty per cent of the questions put to me by my correspondents, for instance, revolve around religious issues—theories, cults, and denominational creeds. Some show that the questioners are aware of a new era of oneness and coöperative service in religion. Others evince an unshaken resolution to find in their faith the satisfactory answers to life's difficult doubts and queries. Still others dwell on the social and moral relationships which both Judaism and Christianity sustain toward industrial and international problems. Devout believers who fear for the Church and the Bible want to know if a man can be a Christian and accept evolution or reject the miracles of the two Testaments, without destroying the credibility of the Scriptures as a whole.

Of course a moment's thought might convince these inquiring souls that divine

Setter

He's A Loyal Friend. Guard His Health

Your dog is faithful and true to you. You should be the same sort of a friend to him.

Your dog is always on the alert to warn you of hidden dangers. You should be just as watchful to guard him against the dangers of disease.

At this time of the year particularly, you should be careful of your dog's health. If he is listless or lazy, if he is sluggish, has no appetite or is irritable don't blame it on his disposition. He needs Sergeant's Condition Pills.

Do You Know?

Do you know how to keep your dog in good condition? Do you know the symptoms of the diseases that kill thousands of valuable dogs every year? Do you know what to do for your dog when he is sick? Every owner owes it to his dog to find out these things. It costs you nothing to get this information. Moreover, there are now effective remedies for all dog diseases and it is a simple matter to know when and how to use them.

SERGEANT'S Dog Food
A balanced ration containing a large proportion of freshly cooked *Beef*. For dogs and puppies of all breeds.

Famous Dog Book Free

We urge you to write for your free copy of Polk Miller's famous Dog Book. It contains the accumulated experience of more than fifty years. In clear, non-technical language it tells the symptoms of all dog diseases and explains the best treatments for each. There are useful articles on feeding, breeding and raising dogs. This book has been the guide for millions of dog lovers. It is revised yearly and kept strictly up-to-date. It has saved the lives of untold thousands of valuable dogs. It is free.

Expert Advice Free

If your dog develops a condition not fully explained in the Dog Book, *write us at once*. State age, breed, sex and all symptoms. Our expert veterinarian will answer personally, sending, without charge, complete instructions for care and treatment. Sergeant's Dog Medicines and Dog Food are on sale at dealers everywhere. If you cannot obtain them, write direct.

Young outdoor men wanted

Interesting, vigorous outdoor work in a growing organization where merit wins advancement. Good starting wages. Permanent positions and a real future for men who make good. Our present field force of Davey Tree Experts cannot meet the increasing demand. So we are selecting now, to enter our employ, a few sturdy, clean young men, thorough Americans, single, between 20 and 30 years old, free to travel, industrious, with good practical education, and able to give good references. Write for qualification blank to serve in place of personal interview. The Davey Tree Expert Co., Inc., 128 Federal Bldg., Kent, Ohio.

revelation is certain to contain many truths beyond mortal apprehension. No form of religion can answer all questionings or silence all qualms—nor should it be required to do so. And yet the net result of the letters I receive on the issue demonstrates the unspeakable values of the religion of sacrificial service for the regeneration of mankind.

THE second source of the Mismanagement of Desire, as I have frequently seen it demonstrated, is egoism in its manifold forms. It has a very extensive wardrobe at its command, but usually it prefers to dress up in the feelings that favor its own self-consequence. The incompetent person who rides in automobiles is likely to lord it over his real superiors who have to walk. And so money is the god of the multitude, because it means power, or they think it does, which amounts to the same thing for those who want to burglarize life and take from it more than it was intended they should have.

"I am thirty-five years old," a man writes, "am married and have two children. I am worth just ten thousand dollars, and mean to be worth a million when I am forty-five."

The writer then transmits his plan in considerable detail, wonders what I think about it, and advises me to get in on the ground floor. I had to tell him that swag would be a better name than profits for what he proposes. Thousands of men are now in jail who are not criminals either by instinct or habit. They had to be confined for the safety of society, because their feelings stole a march on their conscience and judgment.

Many letters I scan come from households which receive, let us say, four thousand dollars a year for upkeep, and spend forty-two hundred. As the genial Mr. Micawber sententiously observed, the next result is misery. Yet weak husbands and wives expect happiness as the outcome of their pretensions to style, and frequently they ask me with tremulous insistence why it has deserted them. Of course, when income and outgo are out of gear, outgo assumes the lead and love frequently flies through the window.

Everybody is aware of these consequences. Nevertheless, stimulated by unleashed desire, misguided couples resolve to be as good as their neighbors, cheerfully spend more than they earn, and just as cheerfully anticipate a "good time." It arrives in full fig, but not as they pictured its coming.

OTHER correspondents speak of their delight in meritorious pictures, a choice play, a lyric by their favorite poet, a bit of beauty from some master of prose. Their quiet ways of living link the days and nights together with pieties and pursuits that have no price in the marketplace. And God bless them for it!

Once men and women forget that their possibilities must always be advised by their limitations, they begin to falter and moan. Ideals pitched too high may be hitched to a comet instead of to a star, and organized efforts to place yourself and your concerns ahead of everybody and everything are fraught with the greatest danger.

Protests and complaints from aggrieved sweethearts, outraged wives, or despondent husbands are an endless stream across my desk. Usually there is but one answer to their problems—a failure to find a divine sense of humility through the abnegation of self and the true joy that comes from a sacrificial service for others.

Some letters I receive are the effusions of out-and-out rebels against the existing social order—anarchists who clamor for the downfall of pretty much everything that's "up"; while others are patient, plodding, and praiseworthy. Occasionally there comes a letter from some poor soul who is yearning hungrily for something and seeking a way to satisfy that hunger. I quote at length from just such a letter:

I suppose I have a too vivid imagination, for it carries me away from everything and keeps me troubled. I am naturally a student, not of one thing but of everything; of course leaving out the things I dislike. I read philosophy, criticism, poetry, news, comments and fiction. I've a fever for writing. It is a turmoil inside of me—not to write cocktail and burning kisses stuff but something decently worth while, something that brings in human feelings and human impulses.

So I read and study through the classics, almost get on fire delving into history, and go through a large New York Sunday newspaper absorbing information from all over the world. The result is I am transported out of my present existence. I burn up with desire to wander all over the globe, browsing around ancient or historic spots, studying the differences in living conditions, racial characteristics and habits of people, seeing life as it is, marveling at the works of nature and of man, and I actually suffer because I realize my imagination must suffice. I want to sit on the bow of a boat in mid-ocean alone and think and dream and enjoy it as it appeals to me.

Then, too, I yearn to become clever enough to talk to accomplished men who are informed, and who know and think about things in the big way. Religion is something I want to talk about, the establishment of a proper conception of God, for I am a follower of Rousseau, and I found many of my thoughts expressed in "A New God for America," by Herbert Parrish. When I discuss my thoughts and feelings with people I run up against, I have to battle with narrow-mindedness, obstinacy, and brains incapable of reasoning or respecting reason.

I'm always striving for expression, but not quite expressing the something that gnaws at my soul's roots. I am inspired for something I can't define. I feel poetic, I am often thrown into despair or into keen delight with the poets, but I can't produce even a simple rhyme. I stand enraptured in front of a beautiful painting.

I see industry and am astounded and want to be in it. I see a tramp-steamer slowly, silently, easing out of the harbor and wish I were on it. I see the names of big cities, cities far away and made up of strange people, and I want to wander around their streets and feel the pulse of them. I want to see nature in the woods, streams, and farms. I pass a book store and the books and their titles captivate me, for I want to see some of my own works there, too, not drivel, but something beneficial to human thought and reasoning. I read history and wish I could have lived since the world began, so that I could know all the splendid people of the ages and their times. I yearn for a thousand things I can't express, and attempt to put it all in words.

Yet what can I do? I am married, happily so; young, twenty-two; and a clerk earning a pitifully small salary. I was forced into this one particular job because of hard times and employment conditions. Oh, I enjoy my books, my thoughts, the news of other people and the opinions of other people; in fact, every truth and every beautiful thought I read I try to keep some record of. I can't even read all I want to. I write stuff, and get it back usually, possibly

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

Learn to Write Scenarios

Ballard MacDonald, Author. Former Director at Fox Studios says: "The Hollywood Academy Course in Motion Picture Play Writing is a monument in the Motion Picture Field."

Put yourself in the big pay class. Become a trained Scenario Writer. Fascinating work. Producers, everywhere, in market for ideas. because to me writing is an Art and not a Trade.

My confinement to this one town irks me, which is natural. It doesn't require intelligence to be possessed of the wanderlust, but I meet but few intelligent people here. Don't ask me, "Have you tried looking for some?" I have. I went to a semi-retired doctor among others. He is philosophically inclined and a great reader. Rather uncertainly (I knew what I wanted and not how to go about it) I suggested that we get together sometime, and just discuss things, thinking he might be interested in what a young man thought, while I was interested in the opinion of an older, experienced man. I was rebuffed.

I've tried to find a man who will give me some time of his; but in every case he is indifferent or too busy or not interested. I simply wanted to find out what they thought of various things, human nature, modern trend of thought, behaviorism, science, government, youth, education, the soul, literature, and hundreds of other things on which I am anxious to compare my thoughts with those of other people.

I guess I am too blunt. One has to make friends to be able to chat, and I find that many older men of the type I want to talk to do not want friends. I am not repulsive-looking or dirty, nor do I smell of grease. I feel that I am intelligent enough not to be a smart-alec, although I realize that most of our one hundred and ten or twenty million people are too busy looking out for themselves and are too cranky and indifferent to bring up sane topics. So I speak over their heads and insult their intelligence or ignorance. I don't know which.

What can I do to make myself more satisfied with my own little existence and corner, or is there any way a young man can force an opening by which he can get in on things that are happening? If I have talent and no opportunity, must it waste itself away? I can't go roaming over the face of the earth: I am happily or unhappily, for my desires, forced to earn a living for my wife and myself.

THERE is much more of this moving epistle. What can I say to so interesting a citizen twenty-two years of age who has a good wife, is happily married and enjoys excellent health, and yet who protests so vigorously at his lot in life? I know I should counsel him to be content with his numerous blessings; but I have a certain memory of my own youth that knew something of the same peculiar loneliness, and so I shall tell him to remember that the higher one climbs in mind the more solitary is the wayfarer, and that no man need wholly despair of his lonely lot in life while there are good books to read and good deeds in which to express the impulses of one's soul. And I shall advise him to cultivate the faculty of concentration, of bending all of his faculties toward one specific end.

Those who force their passage beyond dreamland have to make at least one dream *real*.

The next letter is sent from a humble room in Brooklyn by a single woman alone in the loneliest place on earth—a great city. Observe the bravely confident attitude with which she faces the future. She writes:

Like the proverbial penny I am coming to light again, because, though very late, I wish to tell you how glad I am that you are safely back from your summer vacation. I have visualized your reception and your friends demonstrating their gladness in happy ways, and because Poverty stalks always beside me with grim, unlovely countenance I can only wish that I too could bring my "gold and frankincense." But please believe me none gives you "welcome home" more sincerely than

Cars Kept
Beautiful with SIMONIZ
are Always Beautiful

Everywhere you go you see thousands of beautiful cars—kept so by Simonizing—and many of them are two and three years old. Simoniz solves the problem of keeping cars new and beautiful, as well as making the finish last longer and keeping the colors from fading.

In fact, Simoniz and Simoniz Kleener are regarded as almost indispensable in the care of Duco and lacquers, for they make it possible to retain the lustre and beauty of these motor car finishes for years.

There is no excuse for anyone driving a cloudy and dull looking car, for it is so easy to get wonderful, lasting results with Simoniz and Simoniz Kleener. Simoniz Kleener quickly restores the lustre and color by removing all grime, discolorations and blemishes. Then Simoniz gives lasting beauty and weatherproof protection.

The sooner you Simoniz your car, the better. NEW CARS should always be Simonized.

Insist on Simoniz and Simoniz Kleener—they make the finish last longer.
